TERMS OF ANNUAL SUBSCRIPTION

In the United States, Canada, Philippine Islands and Mexico . . . \$2.00
In all other countries in Universal Postal Union . . . 3.00

Subscriptions are payable in advance, and in default of written orders to the contrary are continued at our option.

Entered at Chicago Postoffice as Second Class Matter.

Advertising copy must be received five days in advance of publication date. Advertising rates on application.

ASSOCIATION MEETINGS.

National Hardwood Lumber Association.

The tenth annual convention of this association will be held on Thursday and Friday, May 23 and 24, 1907, at Atlantic City, N. J.

National Lumber Manufacturers' Association.

This organization will hold its annual meeting on Tuesday and Wednesday, May 28 and 29, at the Auditorium on the Jamestown Exposition grounds, Norfolk, Va.

Editorial Announcement.

On May 1 the offices of the HARDWOOD RECORD will be moved a step skyward, to the seventh floor of the Ellsworth Building, 355 Dearborn St., the modern, fire-proof structure in which they have been located for the past twenty-eight months. The greater portion of this floor has been leased for a term of years, where hereafter THE BARREL AND BOX and ROCK PRODUCTS, now located at Louisville, Ky., will be published jointly with the HARDWOOD RECORD. This combination, which will be known as The Trade Press Alliance, has been under negotiation for some time, and plans have now been consummated whereby the three publications, putting out five issues monthly, will all be under one general management. This arrangement is by no means a consolidation of the financial affairs of the three papers, as the business of each one will be conducted separately; but, owing to joint interests of the publishers, it has been decided that considera-

ble economy in cost can be effected and that the scope of all the papers can be much widened and their character improved by this plan.

THE BARREL AND BOX is in its twelfth year, and is the foremost publication of its kind in the country; it is devoted to boxes, shooks, cooperage, staves, heading, hoops, head liners, woodenware, baskets and wood specialties. Hereafter it will be printed on the 15th of the month.

ROCK PRODUCTS is a semi-monthly publication with two distinct editions. The issue of the 5th of the month is known as its "stone edition" and is devoted to stone and products manufactured therefrom. The issue of the 20th is devoted to manufactured rock products. This paper is four years old and has become the leading exponents of the interests it represents in the United States.

The HARDWOOD RECORD will continue to be published on the 10th and 25th of each month.

In addition to the publication headquarters at Chicago, branch offices will be maintained at New York, Philadelphia, Minneapolis, St. Louis, Memphis, Louisville and Barre, Vt. Readers of any of the papers will always be welcome callers at the Chicago office or at any of the others.

It is intended that this new arrangement shall in no wise affect the policy or personnel of the several publications, but such a community of interests should prove of mutual advantage.

General Market Conditions.

There are no new features in the hardwood trade. The demand continues very strong, and stocks are bought well up to green lumber. Ash and hickory are well nigh out of the market, and there are insistent calls from all sources for more of these woods. Oak is in good call, but there is a large quantity being manufactured and the general trade is being fairly well supplied. Quartered white oak is doing about the same as during the past year, while the demand for red is increasing, with a corresponding accretion in value. Poplar, cottonwood and gum in all grades are in excellent demand. The good end of these three woods is being marketed as fast as it is fit for shipment, and box people are making insistent calls for the coarse end of every variety of hardwoods.

In the north country stocks are well sold up. The average manufacturer has sold a goodly portion of his proposed season's cut. Rock elm and black ash are practically out of the market, and values are strengthening in birch and basswood. Thick maple, which was in oversupply a year ago, is now short, and the demand exceeds the supply.

The hardwood flooring trade remains strong, and the factories are all busy. The capacity of veneer and panel plants is tested to the utmost, and some are running extra hours to keep up with demand.

The call for mahogany seems to increase in quantity every month, and there is a gradual accretion in price. The call for cherry and black walnut is normal, but the limited quantity of these woods seems to be consumed about as fast as they are manufactured into lumber.

Possibilities of Universal Hardwood Inspection.

The working out of plans looking toward unification of all systems of hardwood inspection and of a method of application in all parts of the United States, is a good deal more of a problem than

it appears on the surface. This subject has been approached in many different ways for more than a decade, and thus far all efforts have proven futile. In the specific text of rules governing hardwood inspection there is a wide difference not only in various parts of the country but in the same sections.

Every one who has the interests of the hardwood lumber business truly at heart has now come to recognize the permanent and valuable results that would accrue if there were one basis for hardwood inspection. This sentiment has been one of gradual growth, and it has now crystallized into an almost universal determination that it shall be accomplished. Active in this agitation is the president of the National Hardwood Lumber Association, who less than eight months ago, while doubtless believing in the value of the work, deprecated any attempt to abrogate the well-known and historical "Buffalo agreement" of his association, which provided that no change in National rules should be made until December, 1908. Joining with him in this movement is the chairman of the Inspection Rules Committee of the same association, who up to within a short time ago has been strenuous in using his influence against the suspension of the alleged agreement governing a set of rules that are now confessedly archaic.

The first genuine and wholesale expression of public opinion on this subject manifested itself at the annual meeting of the Hardwood Manufacturers' Association of the United States, held at Memphis last January, when this desideratum was advocated by the presidents of both the national hardwood associations. Since that time conferences between inspection committees and meetings of several state and national organizations have been held, and while nothing has as yet been definitely accomplished, the spirit of conciliation and compromise from all sources is abroad in the land, and there is a possibility that this just work may soon become an accomplished fact.

With regard to the difficulty of accomplishing universal hardwood inspection, it must be recalled that ten years ago the jobbing trade of Chicago, recognizing the chaotic condition of inspection affairs covering lumber reaching this market, decided that they needed a general overhauling, and that there was necessity for national rather than numerous trade-center systems of inspection; and through their influence the National Hardwood Lumber Association was organized. It was hoped that the power gained by cementing together even a few markets in a mutual agreement on inspection, would induce all other sections of the country to follow, and that the rules might thus be made universal. This association put forth a set of rules to cover wholesale purchases of lumber—transactions between manufacturers and jobbers. The movement was then strongly dominated by the jobbing element. This association has succeeded in standardizing and generalizing its system of inspection to a considerable degree, but it has thus far signally failed to make it even approximately universal.

Some five years ago a large element of the National Hardwood Lumber Association resigned from it and formed a second and purely manufacturers' organization, known as the Hardwood Manufacturers' Association of the United States. Since that time both bodies have flourished, but their systems of inspection have always varied to a considerable extent. The method thus far employed by the national element has called for grading from the back or poorer face of the board, and in measurement has given the odd three-fourths inch and more to the seller, and less than three-fourths inch to the buyer. On the other hand the manufacturers have insisted that inasmuch as the greater portion of hardwood lumber in its finished state shows only one face, both sides of a piece of lumber should be taken into consideration in determining the grade, which practically calls for inspection on the face or good side of the board. This association has also pursued the give-and-take half inch measurement in determining the quantity.

While these two sets of rules will show a difference in value on a thousand feet of lumber of from \$1.50 to \$3.00 under strict interpretation their general application as regulated by supply and demand and by custom will not show any vast difference in net results.

It should be recalled that normally all men are selfish. It therefore happens that every manufacturer of lumber naturally seeks to

dispose of the lowest possible quality of a given grade at the highest possible price. On the contrary the jobber and wholesale consumer strenuously seek to secure the highest possible quality of a given grade at the lowest possible price. Here, thus far, has been the parting of the ways. The Hardwood Manufacturers' Association is entirely made up of manufacturers of lumber. The Michigan Hardwood Manufacturers' Association is also exclusively a manufacturers' organization. In Wisconsin there are two hardwood associations, one composed of manufacturers only and the other of manufacturers and jobbers. The Indiana association is also made up of both elements. The New York Lumber Trade Association, which makes some pretense of having a hardwood inspection system, is largely dominated by the jobbing element, as are the various other lumber exchanges in the great trade centers of the country.

It is a singular fact that the lumber business is the only manufacturing enterprise in which the manufacturer does not regulate to the last degree the grading of his own product. This comes about from the necessity that he make qualities suitable to the requirements of the consuming trade. Up to this time hardwood inspection usages have been quite largely dictated by jobbers, because they took the initial steps in the formation of the parent organization and the local exchanges. Today, however, it is asserted that the majority of members of the National Hardwood Lumber Association are either jobbers and manufacturers, or manufacturers exclusively. This being the case, it should not be a difficult matter for the hardwood lumber manufacturing element of the country, as represented by all the various lumber exchanges and associations, to get together on a uniform system of hardwood inspection, and promulgate it by very preponderance of numbers.

It has become an axiom that value cannot be legislated into a grade; if the grade is high a high price will follow; if the grade is low, a low price will obtain. Up to this time, through local association pride, and through each association having had its own way about inspection matters, there has been altogether too much stress laid upon what should constitute a specific grade of lumber. It really does not make much difference what the grade is so long as it suits the trade for which it is intended.

There is no doubt of the integrity of purpose of the president of the National Hardwood Lumber Association in attempting to perfect and make universal a logical system of hardwood inspection. In this movement he should have the endorsement and assistance of every hardwood manufacturer, merchant and consumer in the land. The HARDWOOD RECORD bids him Godspeed in his mission, and if he succeeds, as it is hoped he will, the hardwood trade of this country will owe him more than it does any other man who has ever attempted to better its conditions.

The Michigan Meeting.

The meeting of the Michigan Hardwood Manufacturers' Association, held at Grand Rapids April 17, was marked by the first logical action that has thus far transpired looking toward actual results in the establishment of universal hardwood inspection. This association appointed a committee to treat with other associations on the subject of a uniform set of grading rules, and beyond that, gave this committee *full power to act* in the premises.

From time immemorial associations have appointed committees to treat with other associations, but never before has an association "got down to brass tacks" and delegated a coterie of members to act in its behalf.

Much may be expected from the impetus the hardwood manufacturers of Michigan are giving to the overhauling of inspection systems. They are being ably seconded in their efforts by Wisconsin producers, who are equally anxious for up-to-date methods.

If the other associations of the country will follow this example, universal hardwood inspection will soon be in sight. There are not years enough left in this century for a general body of association members, meeting at odd times in various parts of the United States, to get together on this proposition, but competent committees representing these bodies can do it, and do it to the satisfaction of all, within a week.

AMERICAN FOREST TREES.

FIFTY-FIRST PAPER

Pignut.

Hicoria glabra.—Britton.

The pignut has an exceedingly extensive range of growth, being found from the southern sections of Maine and Ontario southward to the Indian river district of Florida, westward through lower Michigan to parts of Nebraska, Indian Territory, Eastern Kansas and Eastern Texas.

The tree is known as pignut in New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Pennsylvania, Delaware, West Virginia, North Carolina, South Carolina, Florida, Alabama, Mississippi, Louisiana, Texas, Arkansas, Kentucky, Missouri, Illinois, Indiana, Wisconsin, Iowa, Kansas, Nebraska, Minnesota, Ohio and Ontario; it is called bitternut in Arkansas, Illinois, Iowa and Wisconsin; black hickory in Mississippi, Louisiana, Arkansas, Missouri, Indiana and Iowa; broom hickory in Missouri; brown hickory in Delaware, Mississippi, Texas, Tennessee and Minnesota; hard-shell in West Virginia; red hickory in Delaware; switch-bud hickory in Alabama; white hickory in New Hampshire and Iowa.

The bark of the pignut is light grey; it is coarse and rough, but very close, and is not given to scaling off or becoming shaggy, as do other species of this family.

The leaves are alternate and compound; they grow from eight to twelve inches in length, and consist of from five to nine sessile leaflets, wedge-shaped and pointed at the apex, the lower pair smaller than the others; they are dark, greenish-yellow, smooth on top, and glabrous at maturity.

The staminate flowers grow in axillary catkins four to seven inches long, and are usually in groups of three; the pistillate form in terminal spikes containing from two to five flowers; their color is greenish-yellow. The time of bloom is April.

The fruit is an oblong nut, with smooth thin shell; the kernel is small and usually bitter. This nut is contained in a globose husk, reddish brown, hairy, thick or thin, which is divided in four sections, opening partially to disclose the nut, which matures in October and November.

The wood is of slow growth, brown, tough, elastic, hard and heavy; the heartwood is variable in color, while the thick sapwood is nearly white. It is very close grained, and is difficult to distinguish from that of

shell-bark hickory. In the making of tool handles, agricultural implements, etc., it is highly valued and almost indispensable. A cubic foot of seasoned wood weighs fifty-six pounds.

In general appearance the pignut is a stately tree, tall and slender, growing to a height of from fifty to more than a hundred feet, with narrow, round head, and

any other variety except the pecan. It is most common in Missouri and Arkansas; the latter State is the home of all the twelve known species of the hickory family. These trees are distinctly North American, and none are now native to any other section of the world. There is one Mexican species, and the remaining eleven are confined to that portion of the United States which lies east of the Rockies. Scientists have shown that many members of this family once inhabited parts of Europe and Greenland, as well as the western part of this continent, but that they were all destroyed during a certain geological era, and the only traces of them remaining today are in rocks belonging to the Tertiary period.

So valuable and ornamental a tree as the pignut is unfortunate in being known commonly by so insignificant a name; one botanist has named this species *porcina*, hence pignut, because the nuts were a favorite food for pigs, which were often turned into the woods to graze in the old days, and because they are distasteful to most persons, while those of the shagbark are eagerly sought.

The hickories possess as high physical qualities as any group of American trees; their wood is exceedingly valuable, so much so that it is almost impossible to find satisfactory substitutes for it in certain lines, while for fuel it is unexcelled in heat-giving and brightness of flame. Even the nut is commercially valuable. When the trees are cut and manufactured into lumber, the buyer rarely attempts to distinguish the particular variety, merely asking whether he is purchasing virgin or second growth. Second growth is peculiarly well adapted to the manufacture of light vehicles. The spokes of carriage wheels, the bent rims, axles and bolsters, running gear, poles, shafts, foundation frame-work, etc., are made of the wood whenever possible. Ash and maple have often been substituted for inferior-grade work, but a very little rough handling or usage will

show the deception.

Rogers says: "With wood equal to the best in its genus, exceptional merits as a shade and ornamental tree, and promise of developing orchard varieties that will rival the shagbarks as nut trees (experiments are now in progress looking toward the improvement of the fruit, by grafting), the pignut seems to be one of the 'coming

TYPICAL PIGNUT GROWTH, INDIANA.

pendulous, irregular branches. The trunk is usually from two to four feet in diameter, and is often forked. The tree thrives best upon hillsides and along dry ridges, and reaches its maximum development in the basin of the lower Ohio river. It ranges southward farther than do the other hickories, extending down into Florida; and grows farther to the southwest than does

BAY CITY, MICH.

LEAF AND FRUIT OF PIGNUT.

trees' in the Eastern States. It is to be hoped that the popular name will be abandoned and the more suitable one 'smooth hickory' substituted. This is the literal translation of its scientific name.'

The photograph of pignut, from which the halftone accompanying this article was made, is from the collection of William H. Freeman, secretary of the Indiana State Board of Forestry.

Builders of Lumber History.

NUMBER XLIII.

Walter Dickson Young.

(See Portrait Supplement.)

Walter Dickson Young was born in Albany, N. Y., Sept. 25, 1855. His father was George Young, of Stewarton, Scotland; his mother was a resident of Albany. The boy attended the academy there until the family's removal to Bay City, more than thirty years ago, and he received his entire business training in the latter city.

His first employment was as clerk in the Bay City Bank. He next entered the coal and ice business as a member of the firm of Young Brothers; and in 1887 organized and managed the Michigan Log Towing Company, which was engaged in towing logs from Georgian Bay to the Saginaw river. Mr. Young acted in this capacity for five years.

In 1892 he entered the hardwood lumber and maple flooring business, establishing the house of W. D. Young & Co., of which he is the sole owner at the present time, and it is to the affairs of this concern that he devotes most of his energy and attention, although largely interested in several other important enterprises. Among these is the Young Brothers' Building Company, of which he is secretary; the Colonial Building Company, of Bay City, which he serves in like capacity; he is a director of the Bay City Bank and of the Colonial Trust & Savings Bank of Chicago; and is vice president of the German-American Sugar Company of Bay City, one of the largest producers of beet sugar in the state of Michigan.

Mr. Young has a double band saw mill and an immense flooring plant at West Bay City. He does a general hardwood manufacturing and wholesale business, but makes a decided specialty of maple flooring, and is recognized as one of the most important

factors in the maple flooring trade of the United States, as well as in the foreign markets; his company exports a large quantity each year. Only recently the plant was improved and made up-to-date in every particular; it is equipped with the latest and best machinery to be had. The Young factory has long been noted for the excellence of its product, and it is one of Mr. Young's characteristics that he never does anything by halves.

Mr. Young has been twice married—the first time to Miss Florence Blanchett, of Detroit, who died in 1887; the second to Miss Elizabeth Ambrose, daughter of George H. Ambrose, one of Chicago's pioneer lumbermen. He has four children, Fanny May, Walter Dickson, Jr., Florence Ambrose and Francis Little.

Although exceedingly domestic in his tastes, and caring little for politics, Mr. Young is very popular in a social way—as he is also with business associates. He is a member of the Bay City Club and of the Union League Club of Chicago.

It is a pleasure for the *HARDWOOD RECORD* to add the portrait of Mr. Young to its gallery of Builders of Lumber History, to which his enterprise, sagacity and success in lumber operations in Michigan fairly entitle him.

Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the *HARDWOOD RECORD* clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Asks for Information.

CHICAGO, MISS., April 15. Editor *HARDWOOD RECORD*: The report of "American Forest Trees" as published in the *Record* has greatly

interested me. Was pleased to note the reference you made to the coffee tree in one of your Boston parks, known as the Fens. Enclosed you will find a leaf of this tree, and also one from a red maple and balm of Gilead. My life has been spent in association with the trees. For years I have been trying to form a collection of the leaves of forest trees, but have difficulty in preserving them any length of time. Would be pleased to have you advise me of some formula to preserve them.

Am sending you under separate cover a remnant of a tree that is very hard, and would like to have you classify it. This tree was located in north latitude 45 degrees, west longitude 53 degrees, on an ocean mountain known as the Grand Bank. It is not known how many trees there are to the acre in this ocean forest, as no cruiser has ever returned to make his report, but it has stood a mute witness to the dying wail of many a whole ship's crew. In walking through this forest one would find the whitened bones of thousands of men who went down to the sea in ships. When I first came into possession of this tree, some dozen years ago, it was about two feet high, but continual knocking around has broken off its trunk and branches so that today it would not break any records in using a Doyle scale.

C. B. ROGERS.

I am unable to identify the little piece of wood or coral that the writer sends. Referring to the subject of the preservation of leaves in their natural form, I have never been able to accomplish this result satisfactorily. My method of preserving an accurate record of leaf forms is to put freshly plucked leaves in an ordinary photographic printing frame between a piece of plain glass, to hold them flat and firm, and a sheet of sensitized paper—thus employing the leaf as a negative. This process will make an absolutely accurate leaf print, which can then be toned in the usual way, making a more permanent and satisfactory record than any other I know of.—EDITOR.

Thanks The Record.

ASBURY PARK, N. J., April 9.—Editor *HARDWOOD RECORD*: We want to thank you very much for the help you have given us concerning the short pieces of hickory. In view of the information we have gained we think we can cut our wood to much better advantage in the future.—Yours very truly, CANN & TAYLOR.

Wants Market for Hickory.

RURAL HALL, N. C., April 13. Editor *HARDWOOD RECORD*: We notice an article on page 20 of the March issue of the *Record*, containing a question you have been asked before, but the same interests us. We expect to be in the hickory business and want to get a market for dimension stock, short lengths, second growth hickory. You will please give this place in the next issue of your paper and oblige. We enclose \$2 check for the *Record*. — COMPANY.

The above letter is self-explanatory and persons interested in securing this stock may have the address of the writer on application to this office.—EDITOR.

Wants Second-Hand Rails.

DURHAM, MISS., April 17. Editor *HARDWOOD RECORD*: Will you please give me the name of parties who handle second-hand rails for tram roads? I want to buy or lease one and a half miles for immediate use. — & Co.

Anyone interested in this inquiry can have the writer's address by applying to this office. — EDITOR.

American Forest Trees.

WEST CHESTER, PA., April 20.—Editor HARDWOOD RECORD: Referring to the articles under the title American Forest Trees, published in your paper, will you kindly advise us when these articles will be printed in book form? We should like to get a copy.—Yours truly, HOOPES BROS. & DARLINGTON, INC.

There are upwards of 300 varieties of com-

mercial forest trees growing in the United States. Of this number the HARDWOOD RECORD has published articles covering only about sixty. It is our intention to eventually edit this series of articles and put them into book form. The first volume will probably be issued some time during 1908.—EDITOR.

The Care of the Glue Pot.

The glue pot has more to do with the success of the factory than the average woodworker supposes. Some of the important points of this branch of the industry are too often neglected. The methods of heating glue for veneering and other work in many shops and mills would surprise the average artisan in the woodworking line. In some cases the glue pot is any old kind of kettle or pot that happens to be available. One sometimes sees glue pots in operation on masses of coal, coke and charcoal, the glue coming in direct contact with the interior of the kettle, resulting in its piling up, baking and gritting into a mass as illustrated at a, Fig. 1, which is a sectional sketch of the glue pot with partly burned and clogged glue adhering to the sides of the metal utensil. This is a most imperfect way to dissolve it and it is invariably burned.

Some of the utensils employed for working the melted glue are not kept in proper order. In many instances the melting pots have the appearance of not having been cleaned for ages. In one mill, where much veneering work was in process, the writer noticed that glue melting apparatus was quite submerged, together with burned and clogged matter, refuse and slime. The lids of the pots failed to close, due to hardened masses of glutinous matter on the hinges.

No effort seems to be made in some establishments to care for the gluemaking outfit, although the power plant may boast a polished engine, a clean floor, machinery in perfect running order, with shafting and belts in good condition. In these same factories may be found a careless boy or two making glue in crude utensils, rendered unsuitable because of neglect, and even the floor besmeared with the gummy stuff. Just why this department should be so often overlooked, it is difficult to understand. However, some of the woodworking plants have installed very desirable systems of glue-preparing apparatus and invested considerable money in them. Often old apparatus which is defective in some particular point is changed at slight expense into a suitable device. For example in Fig. 2 is shown one of the single pots altered so that there is a boiler inside, thus preventing the glue from coming into direct contact with the metal that is next to the fire. There is no chance for the glue to get burned in the inner kettle, providing that the proper amount of water is kept in the exterior kettle at all times. A melting pot of this description can be used to good advantage in dissolving common glue.

The brushes and the mode of applying them are worthy of special note.

There are instances of using crude brushes made of a rag tied on a stick, and instances in which worn and broken brushes are utilized, but the majority of users of glue depend upon common bristle brushes. The camel's hair brush cannot be used long before the fine strands become clogged and torn. The stubby bristle brush will not do, and the user of glue finally hits upon the common hog-bristle brush of the character exhibited in Fig. 3. Of course he often seeks to alter the original condition of the brush and sometimes ruins it this way. In one shop a glue worker had his brushes bridled with wire as at b. This shut off just that much action of the bristles. In other places, while the glueman did not put his brushes "on the bum" by binding up the bristles with wire, he went at the work in such a way that he ruined his brushes early in the game, besides doing defective work in the meantime. Some glue-

the work, without jamming the bristles as in the previous case.

Many brushes are put out of working order prematurely because of their use in grooves of work to be joined, as at e, Fig. 6. Wide and full brushes are often squeezed into narrow grooves. The best way is to have an assortment of glue brushes, and in this assortment there should be some small ones, the bristle combination of which should just fit the width of the grooves of the work in hand. This will prevent tearing and wearing the bristles on the grooves. Then the brush is often worn down unevenly by constantly dragging it over the work at an angle, as shown in Fig. 7. While the inner side of the brush slides over the surface, the outer drags irregularly as at f, and the result is that the unequal pressure makes the brush crooked in a short time. Much depends upon the manner of holding the brush.

Of course all manner of schemes for heating the pots are invented by ingenious glue-makers in the shops. In one the resourceful glueman introduced a complete Bunsen burner device. He got gas from the main by running a rubber tube from a jet to the gas pipe, as shown in the diagram. Then he rigged up a little fan blower motor, attached a tube and secured an air blast therefrom. When the air and the gas were combined in the Bunsen burner at g and intense heat was obtained from the flame.

Fig. 9 shows another kind of glue pot. The object of this contrivance is to enclose

men apply the glue to the work by grasping the brush as in Fig. 4, exerting more than necessary pressure in the direction of the arrow c, thereby reducing the bristles to a flattened condition. Many glue brushes are prematurely ruined by this method. A better way to operate is exhibited in Fig. 5. The brush handle is grasped with the forefinger, the thumb on the stem as shown. The forefinger d is not brought down hard upon the brush head. This gives opportunity for a clean sweeping of the brush to and fro on

the heating chamber. Coke, charcoal or other fuel is employed and ignited just beneath the pot, which is constructed with an inner boiler for the glue.

There are many different kinds of glue melting and working devices in use in woodworking mills. The large veneer and furniture factories have special glue rooms, carefully fitted up, where all gluing is done, for this department of any shop of importance is worthy the best appliances and the attention of an expert.

Meeting Michigan Hardwood Manufacturers' Ass'n.

There was a rousing meeting of the Michigan Hardwood Manufacturers' Association, held at Grand Rapids, Mich., April 17. Although the association was only organized in July last, this is the fourth meeting that it has held. The attendance at every meeting seems to be growing larger and is indicative of the interest that is being manifested in the association. Already the organization has systematised plans for gaining an accurate knowledge of stocks of lumber and logs on hand, both sold and unsold, and many details that put every hardwood manufacturer in Michigan in possession of facts essential to a thorough knowledge of the conditions of the business in the state. This information is collated by the association's secretary at frequent intervals and distributed to every member. It is safe to say that there is no body of lumbermen in the country who are bet-

tion and while our association has not made very much stir or excitement, we feel that its work has been very effective.

The last statistics which our secretary sent out were gotten up in splendid shape. They reached nearly every manufacturer and I think had their effect.

The work of this meeting today, as I look at it, is to consider fully the rules that have been drafted by the different committees and if found to be satisfactory, adopt the same and put them into effect in say thirty or sixty days. This would give our committee a chance to confer with the committee of the National Hardwood Lumber Association, as I understand it is the wish of the National Association that our Grading Committee meet their Grading Committee and go over the rules question. If their committee approves of the rules which our committees agree on, and agrees to recommend their adoption at their annual meeting to be held at Atlantic City in May, on maple, beech, birch, ash, elm and basswood, so that these products could be shipped on one set of rules known to the trade, I feel that we would have accomplished a great deal. We want a set of rules that cannot be manipulated and in order to have such a set of rules we will have to consider the board from both sides.

I am very desirous of seeing the defects in boards placed according to the amount of feet in each board, instead of according to the width and length. I am also very desirous of seeing a uniform inspection—I mean one set of inspection rules. Every member here should give this rules question serious thought because when it is decided upon now it should be left so for some time.

The marketing committee has a very important task to perform, and I hope they have given their work sufficient thought to enable them to state to this meeting the market conditions as they are today, and the chance for maintaining the present prices for our stock or of advancing prices in the near future. We also want to discuss fully the amount of stock on hand, compared with last year, and the amount of stock sold and unsold at the present time. We want to look into it carefully and outline a policy for this association to pursue, taking into account the amount of money it will require to run it successfully, and make provision for raising the amount today or when it will be needed. For the best interests of this association it is going to require lots of attention and work in the future. Your secretary deserves a great deal of credit for what he has accomplished in the short time he has had to do it. Taking into consideration his own business interests I cannot see how he can continue this work and do either himself or the association justice after the close of our year, which will be in July, unless he or some one else gives the work their full time and attention.

Every member of this association should have a list of stock on hand every month; namely, each kind of hardwood lumber, as well as the thickness, also the market conditions and the price at which lumber is selling at the central points, so that every manufacturer will be posted on the true condition of the market and know whether the supply of material is increasing or decreasing the demand. Products in which members are interested should be considered even if not controlled by the association, such as bark, seats and other forest products, and whatever information the secretary may have in his possession should go out to the members and he should keep in touch with them. If a member is not sure on any point on which he thinks the association might give information, it is his duty to write the secretary and try to find out the true facts as they stand. We are all busy men, perhaps too busy to give this association work the time it needs. Everybody is willing to do what they can, but this is an important work and a work that is going to have its results if properly looked after.

The matter is now in your hands and I hope we will have a good meeting.

At the request of the chair Secretary Odell read a synopsis of the minutes of the last meeting, which was approved.

Chas. A. Bigelow, chairman of the grading committee, stated that a conference had been held between his committee and the grading rules committee of the National Hardwood Lumber Association in Chicago some time ago, and that they had received courteous treatment at the hands of the National repre-

sentatives and that a report of this conference would be furnished later.

President White invited W. H. Russe, president of the National Hardwood Lumber Association, to address the meeting on the subject of the National Association's joining the Michigan Association, or the Michigan's joining the National. Mr. Russe responded as follows:

W. H. Russe's Speech.

Mr. President and Michigan Millionaires: I think the request of your president is very embarrassing when he asks if Michigan shall adopt the National rules or the National adopt the Michigan rules. At Buffalo we made an agreement not to change the rules for three years, but I, for one, feel there are some changes which should be made. You will all bear in mind in making rules, when we hear from all sections of the country, that Michigan will not get just what it wants, that Wisconsin will not get just what it wants, and Indiana will not get what it wants, because we do not all think alike, and that is true on any legislation on any subject. Any legislation you might carry out

WILLIAM H. WHITE, PRESIDENT.

ter posted on facts of such essential interest in assisting just values for their product as the members of this organization.

Beyond the information collated and disseminated as above noted, the association has formulated a set of inspection rules and endorsed them, which it hopes to make the standard of the entire country on northern hardwoods. The membership has grown to about seventy in number, and represents about eighty-five per cent of the total hardwood output of Michigan. The initial meeting of the organization was held at Ottawa Beach on July 13 and 14 last. The second meeting was called at Mackinaw Aug. 8. The third took place at Traverse City on Oct. 31.

The Grand Rapids meeting was called in the auditorium of the Hotel Pantlind at 10 A. M., with President William H. White in the chair, and Secretary Bruce Odell at his desk. President White after calling the meeting to order, delivered the following address:

President White's Address.

GENTLEMEN: This is the fourth meeting of the Michigan Hardwood Manufacturers' Associa-

W. W. MITCHELL, VICE PRESIDENT.

here in your organization will not meet the approval of all your members. You must get together for the general good. I was present at Ottawa Beach when you were organizing this association. I am glad you have made such progress. Association work is a good thing. It is a good thing if you don't go any farther than to know each other, for then you have accomplished good work.

The market has been on our side of the fence for two years and I would like to see it continue for five years longer. Whether it will or not I can not say. In Memphis just at present we are getting good prices. A man comes into an office and we add a couple of dollars and another man comes in and we add a couple more. Conditions have been such that stocks have been kept at a minimum. The demand has been greater than the supply and while these conditions exist you are going to get good prices for your lumber.

Getting back to the rules, the National has always stood for and worked for uniform inspection, and by that we mean we hope some day to have one set of inspection rules governing the country. I believe the time is ripe now to get together on the proposition. The markets are with us for any changes. We are all manufacturing lower classes of material. I have always held our prices naturally will follow the quality of the goods we ship and if we make them too low we can not get as much money, but we should have universal inspection. They ought not to be Michigan rules, Wisconsin rules, or National rules, but we ought to have only one set of rules. In fact, the very existence of different rules has brought into effect the National association. Originally we had a great many exchanges and systems of inspection. Chicago,

St. Louis, Buffalo, New York and other cities had rules. When we made quotations on lumber they asked us, "What rules are you going to measure it by?" Then we got together and made a set of rules.

We have made wonderful progress. The success of the National association proves that despite the fact that this year there has been more agitation in manufacturing centers in regard to changes in the rules the association has made a large increase in membership and the inspection force has measured more lumber than ever before. The National association never has been in better condition than it is today. Still we have not attained the idea we started out for—universal inspection. I believe that with conservative action, and every man giving the other man credit for being honest in what he says, while we may not agree with you, by giving and taking we can get together and make a set of rules that will suit all of us. With the different interests at stake this will be the best thing that can be done.

I am not familiar with your northern woods. I do not know just what changes you feel should be made, but I know there are a few changes we of the south want and feel we should have. On the other hand, I do not believe in rescinding the Buffalo agreement—taking it out and throwing it overboard. I believe we can suspend the Buffalo agreement and make the changes necessary for the changed conditions and let the Buffalo agreement go right along until it has expired.

I am glad your association has invited the inspection committee not only of our association but also of the Indiana and Wisconsin associations, because I believe these committees

Let us meet with a determination to get together. If you conflict you will never get together. Some of our members have felt that they do not get what they are entitled to. If you will bear this in mind there is no reason under the sun why we should not get together, and I believe we will.

General Discussion on Inspection.

The chair next invited Frank F. Fish, secretary of the National Association, to speak. Mr. Fish stated that his time was given very largely to carrying out detail work and that he was not a practical lumberman and was not competent to pass an opinion on inspection rules. He urged attendance at the forthcoming annual meeting at Atlantic City and hoped that every Michigan manufacturer would be present to further the interests of that section of the country.

President White then gave Theodore Fathauer, chairman of the Inspection Rules Committee of the National Association, an opportunity to speak. Mr. Fathauer said:

The question of inspection always seems to be a prominent one in a meeting of lumbermen. When first the subject was broached, ten or eleven years ago, the National Hardwood Lumber Association took great pains to enlist the support and cooperation of hardwood lumbermen. At that time they extended a general invitation to attend a meeting held in Chicago. Michigan was approached by personal efforts and Mr. White was among the first to attend the meeting. He is as conversant with the importance of the achievement as any of us. The dealers and manufacturers of hardwood lumber should and must get together. In a measure the dealer reflects the necessities of the consumer. Manufacturers, on the other hand, know what a log will produce and it would be the height of folly were they to adopt inspection rules which would not be practicable in the manufacture of hardwood lumber. You who have followed the work of the National Hardwood Lumber Association know that Michigan through its representative sawmill men has been represented on this committee. The inspection rules necessarily must represent the custom of the trade, and the inspection rule through its grades must take care of the entire product of the log. You gentlemen can answer the question far better than anyone else whether or not the National rules would take care of the entire product of the log with the exception of slabs, sawdust and edgings.

Personally I have always felt that to change the rules every time you have a meeting is a grave mistake. Not only are universal inspection rules desirable but uniform application of the rules. You cannot change the rules and expect the inspectors to apply them as well as if your inspectors had opportunity to apply them for a year or two.

We will fight for the rescinding of the Buffalo agreement if for no other reason than to show we acted in all sincerity. This is the position taken by the Chicago Hardwood Lumber Exchange. We will send a strong representation to Atlantic City for this purpose.

I might say, however, that we will have opposition and if you gentlemen are interested, which you are—at least I think you are—it devolves upon you to attend the meeting in person. Proxies are not accepted. Whichever way you vote, for or against, goes and you must be there to voice your sentiments. The National Hardwood Lumber Association for at least ten years has endeavored to have its rules adopted in the eastern markets and about a month ago it was successful. I simply mention this fact to show you with what diligence the work is carried on. Also I wish to state to you that if any radical movement is on foot to change the rules for grading lumber you will lose the support which we now have and frustrate the efforts of ten years.

Carroll F. Sweet, a director of the National Association, spoke in substance as follows:

The subject of inspection rules your committee is very much more capable of handling with the committee of the National and other associations than it is possible to do here, and far better results can be secured through committee action. One point that is essential is to have a large attendance at the Atlantic City meeting. Last year Grand Rapids sent a big delegation to Memphis, which I got up, and I have been requested to repeat the program this year.

Your secretary has had bouquets thrown at him, so I think he can stand a little criticism. I called Mr. Odell up on the 'phone and he said he did not see any use in going. Now I want to tell you one thing—anything we don't get doesn't do us any good. Anyone who is dead doesn't get any good out of life.

Mr. Sweet further said that he was the excursion manager of the Grand Rapids members of the National Association and proposed to charter a special car to take the local lumbermen to the Atlantic City meeting of the National Association, and invited all members of the Michigan Association who could make it convenient to join the party to go with them.

Mr. Russe then cordially seconded the invitation given by Mr. Sweet.

The chair invited Geo. H. Chapman, a delegate from the Wisconsin Hardwood Manufacturers' Association, to address the convention. Mr. Chapman spoke as follows:

I would like to touch upon one question which has been brought up, largely because of the remarks I made at the Traverse City meeting and because there has been some misunderstanding in regard to the position which has

BRUCE ODELL, SECRETARY.

have given inspection rules so much thought that they can go over the entire list far better than a general convention. Naturally when you go in a general convention the different sections handle different woods and it is hard to reach an agreement. For instance, I would not give any consideration as to what changes Michigan needs, because I would not be in a position to give them any advice. I do give thought to the woods we handle personally. Your chairman would not consider the woods you do not handle. There will come in differences of opinion again, but if we simply will wipe out sentiment and merely bear in mind that we are there not only for our own good but for the general good, and whenever you help the general good you will find you are helping yourselves, you will remove the obstacles and you are bound to put money in your pocket when you help the general good of the lumber business.

I feel that the movement here has been a wise one and I hope that when the committees get together one won't insist on having a certain speck removed, but by giving and taking they will be able to get together and when they get there we will be satisfied and then let the matter rest under the Buffalo agreement until it has expired. The National Association has always had that one idea in view; that is, universal inspection. You must bear in mind that with a membership of more than six hundred we have differences of opinion. We have differences of opinion in our club at Memphis, in which we have 116 members, but we try to get the best of the ideas advanced adopted. I find I am not infallible in my views and other people find out the same thing.

CHAS. A. BIGELOW, CHAIRMAN GRADING COMMITTEE.

been taken by the manufacturers of Wisconsin, especially those who have taken an active part in the formation of our new association. A good many of the wholesalers and others have given it to me pretty hard because they think we want to make it as hard as possible for wholesalers to do business. There is no such intention. We do not want to do anything that would be detrimental to the business of our friends and we want them to understand that the formation of this new association is for the purpose of taking up questions that our friends are not interested in. We intend to maintain both associations over there. There are questions which both can handle. There are questions that either one or the other could not handle. We recognize that their branch of the business is necessary to us. We will not under any circumstances take any action that will be detrimental to their affairs and those in other lines of the hardwood lumber business.

We have given this question of grading a great deal of thought. Mr. Fathauer said that the rules should be so written that they would cover the entire product of the log. This includes the low grade stock which is being sold for scoots, crating and other purposes. If the logging is closely done and the sawing properly done some provision should be made for this low grade product. For this reason we are advocating a grade which will take care of it. We think it should have a better name, however.

We are heartily in favor of uniform rules. We do not care who gets the credit for them. We are willing to keep up the fight until we get what we want. So far as continually changing the rules is concerned I do not favor too

much of that, but it seems to us that the great trouble with the hardwood lumber business has been and is today because we are working on antiquated plans. The first hardwood rules ever written were written in Wisconsin. They were used as the foundation of the National rules. They were written fifteen or eighteen years ago in a great deal of haste. We all of us know that conditions in the lumber business have changed within the last ten or twenty years. I do not know of a single set of rules that have not been changed materially within the last ten years. Shop common and pine rules are as radically different from what we had years ago as is possible. Changes were made in order to give sash and door factories what they wanted and then put on an adequate price. The rules were changed probably fifteen years ago. To make these changes there were conferences between the bureau of grades and the sash and door concerns tributary to the Mississippi river territory.

I don't see what objection there can be to making changes in the rules provided they are needed. I don't see that anything can be gained by changing gradually. Hardwood lumber as graded out is not as a rule satisfactory to the users of lumber. In a great many cases it is necessary to make special grades. I think all of you can recognize where that comes in. I think the basis—that is, the ground work of the present National rules—is not right. We do not think they cover the wants of the users of hardwood lumber. We don't care what it does to the manufacturer, because you can make a grade and put the price on it, but there may be a hardship on the user because he may not be able to use our grade. You are not going to change the real value of your lumber by changing the grade. We feel conditions are such that a radical change can be made. There are only slight differences which would enable us to give a man who is cutting up good lumber something that can be used to advantage.

On invitation Chas. H. Barnaby, president of the Indiana Hardwood Lumbermen's Association, spoke as follows:

I came here to represent Indiana in the joint conference on rules and am greatly pleased to find the Michigan association in session. We had a conference several years ago and we went to Chicago and tried to get changes but did not get anything. The next year we went to St. Louis, fought good and hard and got what we wanted. If we are going to get anything now we must fight for it. We have met four times, our Indiana committee, and suggested such changes as we think are right. We are going to Atlantic City in a body and are going to fight hard to have the Buffalo agreement suspended and have adopted such rules as we can have recognized by the National inspection committee.

Now, gentlemen, the chairman of the inspection committee cannot change these rules. It is the majority of the entire convention that will change them. If you want them changed you must go down there and fight for it. Now you speak about the manipulator. He will manipulate some way if he is a smooth citizen regardless of rules. Why, there is a fellow in our town who makes good money by manipulating and he will keep on just as long as he can do that. I hope Michigan will send a strong delegation and fight for the suspension of the Buffalo resolution.

W. C. Hull of Traverse City responded to Mr. Chapman's address as follows:

I do not know that I have anything to say until the discussion of the rules comes up. I was quite interested in the remarks of the gentleman in regard to grades. The gentleman who spoke at length says one cut of the log is not provided for. He advocates another grade and doesn't seem to like the name scoots. A No. 3 now is a very poor board. They only require 25 per cent sound cuttings and a board that will cut less than 25 per cent sound certainly is not entitled to a much better name. Should we change the name to No. 4 the result would be that one-half of the boards which the inspectors now put into No. 3 will go into No. 4.

On motion of D. H. Day a vote of thanks was given to visiting members of other hardwood associations for their attendance.

The Hart Cedar & Lumber Company of Hart was admitted to membership, whereupon the grading committee and the delegates from the National, the Wisconsin and Indiana associations went into session, as

well as the Market Conditions Committee; recess was then taken until 2:30 p. m.

AFTERNOON SESSION.

Secretary Odell submitted the following statement as a report of the Market Conditions Committee:

Report of Market Conditions Committee.

From the stock reports of January 1, 1907, and such other information as your committee is able to obtain, stocks of all kinds of northern hardwoods are very light, probably lighter than at any time in several years. In the opinion of your committee the following prices can be obtained for northern hardwoods over rail or by vessels:

BIRCH.				
4 4 red.	First and second.	No. 1 common.	No. 2 common.	No. 3 common.
4/4	\$29	\$21	\$15	\$13
5/4 and 6/4	31	23	15	13
8/4	33	25	17	
10/4	37	27	17	
12/4	40	30	20	
16/4	45	35	25	
MAPLE.				
4/4	\$25	\$20	\$15	\$13
5/4	26	21	15	13
6/4	27	22	15	13
8/4	28	23	16	
10/4	30	24	17	
12/4	32	26	18	
16/4	35	28	19	
Log run.				
Ash		No. 3 common.		\$30
Basswood				16
Peech				13
Soft elm				15
Rock elm				15

BRUCE ODELL,
A. W. NEWARK,
W. L. MARTIN,
W. N. KELLEY,
S. G. MCCLELLAN,
W. C. HULL.

R. Hanson said that the prices recommended by the committee were already being secured in most cases and gave a very optimistic view of trade conditions. The sentiments expressed were confirmed by both W. W. Mitchell and F. A. Diggins. On motion the report was accepted and adopted, and the meeting adjourned until 8 p. m.

EVENING SESSION.

Chas. A. Bigelow, chairman of the grading committee, submitted the following report:

Report of Grading Committee.

Your committee submits the following modifications and changes in the rules of inspection of the National Hardwood Lumber Association, as its report, which, if incorporated in their rules, will, we earnestly believe, result to the advantage of all concerned. We ask that a committee be appointed by you to meet the inspection rules committee of the National Hardwood Lumber Association in Chicago, prior to the meeting of that association in Atlantic City the latter part of May, as we believe the present time most opportune in which to further our efforts for a uniform inspection of hardwood lumber.

No. 1. Reference paragraph 2, general instructions: Both sides of the board shall be taken into consideration by the inspector, except as otherwise stated.

No. 2. Reference paragraph 3, general instructions: Instead of the words "and square ends" use the words "all ragged and bad ends" shall be trimmed off. Tapering lumber in standard grades to be measured one-third the length of the piece from the narrow end.

No. 3. Reference paragraph 4, general instructions: In the measurement of lumber in miscellaneous widths, all fractions one-half foot or over, as shown by the board rule, shall be added to the next higher figure, and all fractions under one-half foot shall be dropped.

No. 4. New paragraph, general instructions: All lumber grading firsts on the best side of the piece and No. 1 common on the reverse side shall be classed as seconds, and admitted into the grades of firsts and seconds.

No. 5. Standard lengths: Fifteen per cent of odd lengths to be admitted and measured and classed as such; 25 per cent of 8 and 10 foot to be admitted in the grade of firsts and seconds, not exceeding 10 per cent under 10 feet.

No. 6. Standard thicknesses of lumber are 3/8 inch, 1/2 inch, 5/8 inch, 3/4 inch, 1 inch, 1 1/8 inch, 1 1/2 inch, 2 inch, 2 1/2 inch, 3 inch, 3 1/2 inch, 4 inch, 4 1/2 inch, 5 inch, 5 1/2 inch and 6 inch.

No. 7. Stain that will surface off in dressing to any standard thickness shall not be considered a defect.

No. 8. All lumber less than 1 inch in thickness shall be measured and counted the same as lumber 1 inch thick when sold as such.

No. 9. Wane: Wane on edge of inch board not exceeding one-half inch in width on face side of the piece, running not to exceed one-third in length, shall not be considered a defect. Inch and a quarter and thicker lumber will admit a proportionate amount of wane.

No. 10. No. 1 common: Width, 3 inches and wider; lengths, 6 feet and longer. This grade is a cutting up grade, and must work two-thirds clear face cutting in not exceeding three pieces.

No. 11. No. 2 common: Width, 3 inches and wider; lengths, 4 feet and longer. This grade is a cutting up grade and must work 50 per cent clear face, cutting in not exceeding four pieces.

No. 12. No. 2 common in soft elm shall conform to the general rules of all No. 2 common, except that the rules shall read "sound cutting" instead of "clear face cutting."

Your committee recommends further that copies of this report be furnished the secretaries of the Wisconsin Hardwood Manufacturers' Association, the Indiana Hardwood Lumbermen's Association; and again we ask that a special committee be appointed to confer with members of the associations previously named.

Respectfully,

CHARLES A. BIGELOW,
F. A. DIGGINS,
HENRY BALLOU,
D. H. DAY,
R. J. CLARK.

On motion of F. A. Diggins the report as read was approved.

R. Hanson then addressed the association as follows:

I make a motion that the committee which had in charge the making of the specifications submitted be continued; that it be instructed to attend the National convention which meets at Atlantic City in the near future for the purpose of having these inspection rules adopted. It is a well recognized fact that in order to make these inspection rules of any benefit to us it will be necessary for us to have them recognized by the National association. I do not mean by that to say we should join the National association, but in dealing with people in different cities we become international, in a sense, and for that reason want rules recognized by the general trade as the standard inspection rules. We would have hard bumping to inaugurate our system in our part of the country. I do not mean to say that we cannot enforce our inspection rules in a measure, but it will be a great deal better to have them adopted by the National association. I cannot see that we would gain anything by joining the National association, but I know we will profit materially by having them recognized as the standard of inspection, or in other words that our inspection rules agree with theirs. We are an association that does not come in contact with the other manufacturers' associations. We deal in lumber in which they do not deal. They should recognize our inspection as the standard inspection. I would recommend instructing this committee to attend the National association conference and, if possible, having it secure the incorporation of our inspection in their rules.

By having an organized association and taking a positive stand and adopting certain rules and regulations by which we want our lumber inspected they will listen to us and modify their inspection of that grade of lumber to harmonize with ours. Indications are they want us to be part of their body, but this I do not favor, because our interests are not common to that extent. If we were taken in as a body in that association they would have to supply us the same inspectors as are used in that body, and that I believe we can accomplish with a great deal more readiness than to attempt to fill the same positions they have to fill.

Let us stand outside of the association and hold the same relative position to their organization as the states hold to one another in the federal government. I am right, I believe. We should proceed along the line I have stated and appoint a committee with full power to act. I think we should send a committee down there with power to make reasonable concessions. If we do not give them that power then I do not think there is any use to send a committee.

Secretary Fish was asked to name a convenient time for the proposed conference with the Grading Rules Committee of his association, and suggested May 9.

F. A. Diggins interposed an objection, stating that he understood that the National committee was to meet with the Indiana Hardwood Lumbermen's Association's committee on May 8, and stated that he would like to have the committees of all the associations meet together at one time.

This suggestion was accepted by Mr. Fish, whereupon Mr. Hanson offered the following resolution, which was adopted:

Be it moved that the president and the members of the Grading Committee of the Michigan Hardwood Manufacturers' Association meet with the grading committees of the other hardwood associations in Chicago on May 8, or at any other time that would be agreeable to all, and attend the annual meeting of the National Hardwood Lumber Association at Atlantic City on May 23 and 24, and that they have full authority to act in the matter of devising satisfactory and uniform inspection rules to govern the grading of northern hardwoods.

This committee consists of C. A. Bigelow, D. H. Day, F. A. Diggins, Henry Ballou, R. J. Clark and President White.

Secretary Odell read a financial statement of the condition of the association's affairs, showing that the total receipts up to this time had been \$1,185 and disbursements \$1,106.77, leaving a balance of only \$78.23 on hand. He stated that the organization would require some additional funds to pay existing indebtedness and carry on the work, and referred to the provisions of the constitution relating to dues, which provides that an assessment on shipments not in excess of 2 cents per thousand feet might be made. The secretary introduced the following resolution, which prevailed:

Resolved, That the secretary be instructed to levy an assessment of 2 cents a thousand feet on all shipments of hardwood lumber shipped from January 1, 1907, the same to be paid quarterly, each member to render a statement promptly on blanks to be sent out by the secretary, which are to show the amounts of the different kinds of hardwood lumber shipped between the dates of January 1, 1907, and March 31, 1907, that being the first quarter of the year.

C. R. Duggan asked the secretary if it would be possible to compile a statement showing stocks on hand at more frequent intervals. In reply the secretary stated that he had encountered extreme difficulty in getting these reports as often as he had and did not think it would be possible to secure stock report statements from members oftener than quarterly, and doubted if it would be possible to secure them oftener than semi-annually.

The secretary was instructed to issue a circular letter to all members noting the invitation to be present at the annual meeting of the National Hardwood Lumber Association at Atlantic City, and urging that all attend.

On motion it was decided to hold the first

annual meeting of the Michigan association at Cadillac some time in July, the date to be fixed by the president and secretary.

The meeting then adjourned.

The attendance was as follows:

Henry Ballou, Cobbs & Mitchell, Inc., Cadillac.
Charles A. Bigelow, The Kneeland-Bigelow Co., Bay City.
C. H. Barnaby, Greencastle, Ind.
Frank Chickering, Grand Rapids.
E. C. Groesbeck, Stearns Salt & Lumber Co., Ludington.
George H. Chapman, Northwestern Lumber Co., Stanley, Wis.
W. T. Christine, American Lumberman, Chicago.
R. J. Clark, Peninsula Bark & Lumber Co., Sault Ste. Marie.
C. R. Duggan, Tindle & Jackson, Pellston.
F. A. Diggins, Murphy & Diggins, Cadillac.
H. E. Davies, Hackley-Pheips-Bonnell Co., Grand Rapids.
H. P. Dutton, Worcester Lumber Co., Ltd., Chassell.
C. E. Davis, Perkins Lumber Co., Grand Rapids.
D. H. Day, Glen Haven.
G. B. Dutton, Thos. MacBride Lumber Co., Buckley.
Theodore Fathauer, Theodore Fathauer Co., Chicago.
Frank F. Fish, National Hardwood Lumber Association, Chicago.
M. J. Fox, G. von Platen, Boyne City.
L. E. Fuller, Lumber World, Chicago.
Henry H. Gibson, HARDWOOD RECORD, Chicago.
William F. Gustine, A. F. Anderson, Cadillac.
Bruce Green, Williams Bros. Co., Cadillac.
W. C. Hull, The Oval Wood Dish Co., Traverse City.
H. S. Hull, The Oval Wood Dish Co., Traverse City.
E. S. Harris, Dalton Lumber Co., New Dalton.
R. Hanson, Salling, Hanson & Co., Grayling.
W. W. Johnson, Johnson & Crowl, Petoskey.
Paul Johnson, North Shore Lumber Co., Thompson.
E. L. Klise, A. B. Klise Lumber Co., Sturgeon Bay.
A. B. Klise, A. B. Klise Lumber Co., Sturgeon Bay.
W. N. Kelley, Kelley Lumber & Shingle Co., Traverse City.
J. M. Longnecker, Oval Wood Dish Co., Traverse City.
S. G. McClellan, Earle Lumber Co., Simmons.
R. E. Morris, Lumber Mutual Insurance Co., Ypsilanti.
W. W. Mitchell, Mitchell Bros. Co., Cadillac.
W. L. Martin, Embury-Martin Lumber Co., Cheboygan.
A. W. Newark, Cadillac Handle Co., Cadillac.
John F. Ott, John F. Ott Lumber Co., Traverse City.
Bruce Odell, Cummer, Diggins & Co., Cadillac.
A. R. Owen, John S. Owen Lumber Co., Owen Wis.
R. G. Peters, R. G. Peters Salt & Lumber Co., Manistee.
W. P. Porter, East Jordan Lumber Co., East Jordan.
M. J. Quinlan, Menominee Bay Shore Lumber Co., Soperton, Wis.
W. H. Russe, Russe & Burgess, Memphis, Tenn.
C. F. Sweet, Merchants' Lumber Co., Strongsville.
J. Sullivan, Cedar.
L. L. Skillman, Skillman Lumber Co., Grand Rapids.
R. W. Smith, Louis Sands Salt & Lumber Co., Manistee.
W. Tillotson, inspector National Hardwood Lumber Association, Grand Rapids.
George S. Wilkinson, Van Keulen & Wilkinson Lumber Co., Grand Rapids.
W. H. White, W. H. White Co., Boyne City, Mich.
George F. Williams, Williams Bros. Co., Cadillac.
H. Widdicomb, Jr., Halladay Lumber Co., Grand Rapids.
John S. Weidman, J. S. Weidman, Weidman.

celved into the National Association and three others promised to join if their colleagues were willing.

President Clark called the meeting to order and stated its object, going on record himself in favor of hearty support of the National Association and of securing a local National inspector. W. C. Bailey said that as northern hardwoods were being cut out it was more necessary to have an inspector for the Twin Cities to give good service on southern stock.

W. H. Russe explained the National inspection service and said the association desired to locate inspectors wherever needed. The service is maintained as near uniform as possible, and is giving very general satisfaction. The buyer will like it better even if not always suited, because he will know what he is going to get. Mr. Clark explained that, while at Buffalo two years ago a resolution was adopted not to change the grading rules for three years, there is some talk now of change and it will come up at the annual meeting May 23 and 24.

F. F. Fish, secretary of the association, said that beginning five years ago with three inspectors, they now had twenty-one. They are paid \$1,200 to \$2,100 a year, and are under

D. F. CLARK, PRESIDENT NORTHWESTERN HARDWOOD LUMBERMEN'S ASSOCIATION.

bond. If on a reinspection there is a difference of more than four per cent the association mails a check to the buyer or seller, as the case may be, and takes it out of the inspector's bond. There are now 580 members; there are only six in the Twin Cities and there should be twenty. O. O. Agler said that National inspection had gained the confidence of buyers now so that they were satisfied to take it in nearly all cases without question.

A. E. Peterson of St. Paul thought the owner or buyer should be allowed to have a man on the pile with the inspector. Mr. Fish said that nine times out of ten this man would try to influence the inspector. Theodore Fathauer of Chicago, chairman of the grading rules committee, said that in Michigan no man thought of going on the pile, and the inspectors would be "very impolite" to a man who tried it. Michigan shipped 400,000,000 feet under National inspection, he stated, and as a buyer he had such confidence in it that he never reinspected. W. C. Stanton of St. Paul wanted to know whether parties not members of the association could call for a reinspection. The reply was that they could if the lumber had been sold subject to National inspection. J. V. Stimson of Huntingburg, Ind., said he had formerly paid little attention to anything but the social

News Miscellany.

Inspection Conference at Minneapolis.

Six officers of the National Hardwood Lumber Association headed by President W. H. Russe on April 19 visited Minneapolis for the purpose of getting in touch with the hardwood wholesalers of the Twin Cities and enlisting enough of them as members of the National Association to justify locating a National inspector there. A meeting of the Northwestern Hardwood Lumbermen's Association was called by President D. F. Clark for the purpose of talking things over with the

visitors. It was held at the Commercial Club and was followed by a dinner, at which Mayor J. C. Haynes welcomed the guests to Minneapolis.

It was the sense of the meeting that the local hardwood men should join forces with the National Association, whose inspection rules they have long been using, and that they should endeavor to use all honorable means to have a universal inspection system adopted for the whole country. Seven new members were re-

side of the association, but now he was fully reliant on National inspection, and in the few cases that were reinspected for him the results were perfectly satisfactory. C. H. Barnaby of Indianapolis, president of the Indiana Association, spoke briefly and said he had learned some things from the discussion. F. H. Lewis of Minneapolis asked whether a National inspector for the Twin Cities would instruct the local inspectors. Mr. Fish said he would be directed to do so.

Dinner was then served in one of the small club dining rooms. D. F. Clark presided. After dinner Mayor Haynes was introduced and extended the visitors welcome to the city, speaking at some length. Messrs. Russe, Stimson, Fathauer, Agler and Barnaby all responded briefly and spoke in complimentary terms of the Twin Cities and of their meeting with the local hardwood men.

Those present included the following:

W. H. Russe, Memphis, president N. H. L. A.
F. F. Fish, Chicago, secretary N. H. L. A.
O. O. Agler, Chicago, first vice president N. H. L. A.
Theo. Fathauer, Chicago, chairman rules committee, N. H. L. A.
Charles H. Barnaby, Indianapolis.
J. V. Stimson, Huntingburg, Ind.
D. F. Clark, C. F. Osborne, Grant Osborne and H. E. Walker, Osborne & Clark, Minneapolis.
A. H. Barnard, Minneapolis.
W. H. Sill, P. R. Hamilton, Minneapolis Lumber Company, Minneapolis.
A. E. Peterson, Peterson-Moore Lumber Company, St. Paul.
S. H. Davis, Henry Levine, S. H. Davis Lumber Company, Minneapolis.
R. H. Grinstead, Pacific Timber Company, Minneapolis.
F. H. Lewis, Minneapolis.
I. P. Lennan, I. P. Lennan & Co., Minneapolis.
E. Payson Smith, A. S. Bliss, Payson Smith Lumber Company, Minneapolis.
W. C. Stanton, George De Long, Stanton-De Long Lumber Company, St. Paul.
G. W. Everts, C. A. Mayo, G. W. Everts Lumber Company, Minneapolis.
H. M. Halsted, Halsted & Booraem, Minneapolis.
T. D. Jones, G. W. Jones Lumber Company, Appleton, Wis.
W. C. Bailey, Minneapolis.
E. H. Hobe, Hobe Lumber Company, Minneapolis.
A. A. Rotzien, W. C. Meader, Hawkins Lumber & Manufacturing Company, Minneapolis.
F. W. Buswell, Buswell Lumber & Manufacturing Company, Minneapolis.
N. C. Bennett, N. C. Bennett Lumber Company, Minneapolis.
T. T. Bartelme, Minneapolis.
J. F. Hayden, secretary Northwestern Hardwood Lumbermen's Association, Minneapolis.
Platt B. Walker, Minneapolis.
Mayor J. C. Haynes, Minneapolis.

Indianapolis Machinery House.

The patrons of the HARDWOOD RECORD are introduced in the advertising pages of this issue to the veteran sawmill and special machinery manufacturing house—the Sinker-Davis Company of Indianapolis. This concern was founded in 1851 by Edward T. Sinker and operated under various firm names until 1871, when the firm of Sinker, Davis & Co. was incorporated, and in 1888 reincorporated under the style of the Sinker Davis Company. Perhaps the company is best known through its line of "Hoosier" sawmill machinery, and its specialty in this line is its "Gold Dust" band sawmills, in 7 and 8 foot sizes, and its new "Hoosier" 6-foot band sawmill. It also makes a full line of circular sawmills, gang edgers, lumber trimmers, engines and boilers.

One of the company's famous machines, which is illustrated in its ad, is the "Hoosier" self-

feed rip saw. This machine is of special interest to manufacturers of furniture, flooring and cut-up material, and is one of the best types of feed-in and feed-out rip saws that has ever been made. Its value is attested by the numbers of these machines that already have been sold, and its popularity seems to be general with the trade.

The officers of the Sinker-Davis Company are J. H. Hooker, president; H. R. Bliss, secretary and treasurer, and John N. Steely, superintendent. These gentlemen are all very popular with the hardwood lumber manufacturing and remanufacturing trade, with whom they particularly come in contact.

The plant of the Sinker-Davis Company is very close to the downtown district of Indianapolis. It consists of a machine shop and foundry, a millwright shop and pattern storage house, and is located at the intersection of Kentucky avenue and Missouri street and the Union Railway tracks, and the structures run through to West street. The shops are fitted with the most modern types of iron and steel working tools and the employees of the house have been brought up with it and are skilled machinists.

The machinery of the Sinker-Davis Company is pretty well scattered over the entire United States, but particularly through the South and Southwest, and has achieved a splendid reputation wherever it has been sold.

Indian Territory Hardwoods.

O. M. Bruner, president of the Owen M. Bruner Company, wholesale lumber dealer of Philadelphia, has recently returned from a trip to Indian Territory. Mr. Bruner supplies the RECORD with the accompanying picture of an

A FINE COTTONWOOD LOG CUT IN INDIAN TERRITORY.

Indian Territory cottonwood log scaling 1,500 feet, cut by Burgoyne Brothers of Hugo. Mr. Bruner makes a very alluring report of the hardwoods he finds in that district, and thinks that that region will become an eventful source of supply for a considerable quantity.

Annual National Hardwood Lumber Association.

The eastern members of the National Hardwood Lumber Association, represented by a committee of arrangements consisting of C. E. Lloyd, E. A. Beckley and B. C. Currie, are out with a handsome little booklet containing valuable suggestions and requisite information for members and others who contemplate attending the annual meeting, which will be held at Atlantic City, May 23 and 24.

Members and guests attending the convention will be entertained by the eastern contingent, which hospitably invites all hardwood lumber manufacturers and wholesale hardwood dealers to be present, and announces that special arrangements have been made for ladies, so that it is hoped a large number will attend. The committee recommends that visitors arrive as early as Wednesday evening, if possible, that everyone may be on hand promptly the opening day of the convention.

The headquarters and meetings will be on the Steel Pier, admission to which will be insured by showing the badge or button to the business meetings; at other times by ticket. A representative of the committee will be at the entrance to the Pier during the entire convention, to give information, tickets, etc., and to register all members and guests. It is urged that all register promptly, as soon as located at any hotel; all tickets for meetings, smoker, ladies' entertainment, etc., will be presented at the time of registration.

Special railroad rates have been secured for this convention, on the certificate plan; the method of procedure is to purchase a straight ticket to Atlantic City, over the route by which one intends to return home, and get with it a certificate from the agent which will entitle one to one-third fare returning; the tickets will be on sale from the 19th to the 27th of May. For members wishing to stop at Philadelphia, New York, New England points, or the Jamestown Exposition on their return, stop-over privileges at Philadelphia have been arranged for, the side-trips to be taken from there. Whatever route is decided upon, it should be borne in mind that tickets must be routed the same both going and coming, in order to insure securing the low rate.

Atlantic City is noted for its fine hotels, and the committee has selected eight of the very best for recommendation to prospective visitors; they are the Chalfonte, the Dennis, Haddon Hall, the Marlborough-Blenheim, the Rudolph, the St. Charles, the Strand and the Traymore. In writing for accommodations, which should be engaged in advance, mention the National Hardwood Lumber Association.

The following programme of events has been decided upon:

Wednesday, 22d: Committees will meet in the evening, time and place to be determined upon by their chairmen.

Thursday, 23d: Morning and afternoon sessions of convention on the Steel Pier. Regular business and speeches on important and interesting subjects will be heard.

Thursday evening: Smoker and entertainment will be tendered the members and guests at the Rudolph Grotto, at 8 P. M. Lunch and "other good things" will be served. Entertainment for the ladies will be furnished on the Pier at 8 P. M. Music, special attractions, and a "cake walk."

Friday, 24th: Morning and afternoon sessions on Pier. Morning excursion for the ladies along the bay and sound to Somers Point. In the evening there will be entertainment for all on the Pier, with music and a basketball contest.

Building Operations for March.

Building operations for March, as given in the report of the American Contractor of Chicago, while showing a gratifying and widely distributed building activity and a gain in thirty-one of the principal states of the United States as compared with the corresponding month of 1906, indicate a loss in twenty-one cities. This aggregate loss amounts to only three per cent, however. The greatest decrease reported is in the Manhattan and Bronx districts of New York, while Brooklyn shows an increase. Chicago shows a gain of thirty-three per cent. The total for March, 1906, was \$56,072,937, as compared with \$54,222,677 for March, 1907.

New Chicago Hardwood House.

The R. A. Hooton Lumber Company is the name of a new and desirable addition to the wholesale hardwood fraternity of Chicago. The company is under the management of R. A. Hooton, and has opened headquarters at 1052 First National Bank building. It will specialize in poplar and chestnut. Mr. Hooton has had long experience in the lumber trade, both in the retail and jobbing business, and made his headquarters for many years at Danville, Ill. He will be heartily welcomed by the wholesale contingent of Chicago.

Lost, Strayed or Stolen?

A further instance of slow delivery by railroads, which has of late become a serious menace to trade, has just come to hand, and as it is even more remarkable than any of the tales of woe yet told by lumbermen, it is worthy of repetition.

A carload of lumber—the Southern Pacific railway's No. 17228—arrived at Malden, Mass., April 9, which has evidently been a wanderer over the face of the earth for nine years. It has been offered to one firm after another, but has been unable to find a home up to date, although it is now being temporarily sheltered by hospitable yard hands in Malden. In identically the same box car in which it was first loaded, in 1898 at Bangor, N. Y., the lumber rests unmolested, with the original seal unbroken. It now bears the name of the Sweezy Lumber Company of Malden, but that concern disclaims all knowledge of the shipment, and of course refuses to accept it, basing their contention that the car is not for them on the ground that they were not in business nine years ago, and the bill of lading shows that it was consigned September 12, 1898. The following day it put in an appearance at Rouse Point, N. Y., bearing a tag addressed to the J. A. Shepard Lumber Company—which no one there knew, or had ever heard of. So once more it started on its weary way. On October 5 of that year it appeared in Burlington, Vt., but nobody wanted it, so it "went right in and turned around and went right out again." From that day to this it has traveled hither and thither—nobody knows where—until its sudden appearance in Malden.

The value of a load of lumber of the size and quality contained in the mysterious car would have about doubled its value in nine years, in addition to the fact that it would have become thoroughly seasoned. At the same time the use of it for so long a time would doubtless run up a pretty bill with the railroad companies, so it is a question whether the original consignee, should he ever step in and claim his own, would have a diamond mine or a gold brick on his hands.

Important Decision.

The supreme court of Virginia, sitting at Richmond, handed down on April 6 an important decision in the case of J. A. Wilkinson of Bristol vs. Norfolk & Western Railway Company and Old Dominion Steamship Company, deciding a hitherto adjudicated point and establishing a judicial precedent of incalculable benefit to shippers not only in Virginia but all over the country.

Mr. Wilkinson shipped a considerable amount of high class hardwood lumber to New York over the Norfolk & Western and Old Dominion lines. The lumber was delayed and when it reached New York the prices had dropped so that Mr. Wilkinson sustained a heavy loss. He brought suit in the law and chancery court at Norfolk against the Norfolk & Western and Old Dominion Steamship Company for damages. The companies would neither disclose upon which line the delay occurred and on a well established principle of law which they have hitherto plead successfully called upon the plaintiff to prove his case and show which one of them had caused the delay. This he could not do, as he was without proof, and the power of discovering this did not lie with him. He won the case in the lower court, being the first time that a state court had repudiated the doctrine that a defendant cannot generally be made to disclose facts to his own detriment. The case then attracted the attention of shippers everywhere. The defendants appealed to the supreme court and the decision affirming the judgment of the court below was rendered by Judge Cardwell April 6, and in commenting on the case he used these words: "It would be a denial of justice, as it seems to us, if the law withheld from ship-

pers, in such a case as this, the right of recovery, where from the nature of the case he is powerless to trace the negligence to the particular carrier concerned, and where, perhaps, by agreement between them, or collusion, each declines to introduce evidence to establish its own freedom from negligence, because the establishment of this freedom from negligence of the one would place the fault on the other."

The court further held that where a plaintiff establishes by evidence that there was a delay, this is a prima facie case against the initial carrier and it must show itself free from negligence.

The holding of the appellate tribunal is a very important one to shippers everywhere and will be cited in other states in analogous cases as a precedent upon this point which has heretofore been without the light of judicial construction.

A Big White Ash.

W. T. Schnauffer of the Crescent Lumber Company, Marietta, O., supplied the photograph from which the halftone reproduced herewith was made. This white ash tree, which was 5 feet in diameter two and one-half feet from the ground, is a specimen of the timber growth on the Crescent Lumber Company's new timber holdings in West Virginia. The company pur-

A BIG WEST VIRGINIA WHITE ASH.

chased a few months ago 8,000 acres of timber land in Clay county, West Virginia, the preponderance of growth on the property being poplar, oak and chestnut. The company is already planning to commence active milling operations. Incidentally, the Crescent Lumber Company is engaged in moving its offices from Harmer street in Marietta to the First National Bank building, in which it has secured a handsome suite on the fifth floor, consisting of five rooms.

The Fischer Lumber Company.

The Fischer Lumber Company has been incorporated at Kewanee, Ill., to manufacture lumber and wholesale it from its sawmill, to be located about twelve miles from Sikeston, Mo. The company will be thoroughly organized in the immediate future, and will first establish a large mill on property which it owns on the main line of the Frisco railroad, about a hundred miles south of St. Louis. Upon the land owned by this company cypress, oak, gum, ash, sycamore and other hardwoods grow in abundance. The demand is such that the company already has offers for all the lumber it can make. A switch from the Frisco line will be installed to facilitate shipping. The incorporators of the new company are John Fischer, W. E. Gould and F. H. Davis of Kewanee.

Maple Sugar Production.

When the early spring days come on, followed by the usual cold nights, the sap begins to flow in trees, and the maple sugar season is "on." In olden times the farmers made thousands of

"spiles" of willow, mountain ash, alder or other wood with a pithy center. These spiles were sticks about six inches in length, cut and shaped so one end could be driven into a hole made in the tree, while the other end was cut so as to form an open spout. The farmers and their help worked at odd times all winter forming these tools and burning out the pith with hot irons. Then when the weather indicated a run of sap men would go through the woods and tap the selected trees a few feet from the ground. A hole an inch or more in diameter was bored to receive the spile, and a bucket placed to receive the drippings. Ancient as is this method of tapping, some farmers still employ it, although now there are galvanized iron spouts on the market which fit into the tree at one end and into a covered pail at the other.

Every night and morning sleds drawn by heavy draft horses and containing large tubs or tanks pass around among the trees; the drivers take the pails and pour their accumulated contents into the tubs, which are returned to the boiling cabin. After gathering up the sap in the morning, the teams are usually kept busy hauling wood for the fires, which must be kept at a steady heat day and night during the whole process of making the sugar.

For many years farmers boiled the maple sap in the open air, in kettles supported on rocks; later they adopted a cabin made of rough logs, or merely a sort of shed with bark thatch. At the present time throughout the maple forests in New England may be found well equipped sugar houses, containing huge kettles set in brick, over open furnaces or fireplaces, and connected by a conveyor pipe running across them. The sap is poured into a huge vat, also in the circuit, and the conveyor is provided with valves which permit its distribution into all or part of the kettles, as desired. Benches and tables are provided for the comfort of occupants, and the fires under the kettles keep the abode warm and pleasant. An expert sugar maker is usually in charge of each boiling house, and never leaves it until the end of the season. Each vessel has to be carefully and continually watched; if the maker does not stir the boiling sap enough, or correctly, or if he stirs it too much, the result will be disastrous in that the sugar will be burned or otherwise ruined. It takes a trained and practiced eye to recognize the precise moment when the boiling mass should be run off into moulds and hardened for the sugar market, for if syrup be too thin it will not command a good price, and if too thick the unnecessary loss will be considerable. When the expert decides that the liquid is "right"—which he does by testing large spoonfuls of it in pans of snow till the right consistency appears—he draws it off into moulds, each of which holds just the amount to make the proper sized cake of sugar, or into tin cans with corks and screw tops to hold the liquid form.

It is a well known fact that many manufacturers make their actual maple product go twice as far as do others, by purchasing large quantities of brown sugar and boiling it up with the sap—thus often using only one-third or even less of the genuine product. Of course, their output is very materially increased in this way, but the experienced buyer can detect the fraud, and they cannot command nearly so high a price for their goods as do manufacturers who put out "the real thing." The new pure food law should tend to curtail this practice to a great extent, as it will now be necessary for makers to label their product so that the exact percentage of adulterating material contained therein may be seen by a glance at the wrapper or can; it should also prevent retail buyers having to pay a fancy price for adulterated map'e, which the expert wholesale buyer has obtained at its real value from the manufacturer.

The maple sugar and syrup industry is much

more extensive than is commonly known. Vermont produces the largest quantity—nearly 5,000,000 pounds a year. New York comes next, with an output of about 4,000,000 pounds. Pennsylvania makes about 1,500,000 pounds; Michigan, Massachusetts, New Hampshire and West Virginia come next, in the order given, each producing several hundred thousand pounds. For the year 1903 the maple sugar and syrup product of this country aggregated a market value of \$2,636,774.

Removal Lumber Insurance Companies.

Six years ago the organization of an insurance association to be devoted exclusively to the purpose of insuring lumber and woodworking risks, was commenced in a very modest way at 66 Broadway, New York. The idea took very rapidly with the lumber trade, with the result

trade for over \$20,000,000 insurance liability on lumber and woodworking risks.

During this period of development the companies have extended their office space until a large part of the twelfth floor of the Manhattan Life building at 66 Broadway has been taken for their offices. Over a year ago, however, it appeared that the companies would unquestionably outgrow the available space in the Manhattan Life building, and it being considered desirable to locate in the insurance district, a floor in the Royal Insurance building, then in process of construction, was leased. The new Royal Insurance building has now been completed and it is worthy of mention that having been constructed by one of the greatest fire insurance companies in the world, it is quite natural that every feature of construction looking toward fire prevention has been installed in the building. It is a fine modern fireproof building, sixteen stories high. The twelfth floor has been finished with special reference to the requirements of the Lumber Insurance Company of New York and the Adirondack Fire Insurance Company, and these companies will take possession of their new quarters April 20. It is quite fitting that these two specializing companies, organized on a financial basis on a par with many of the general insurance companies, should have for their permanent home the finest lumber insurance office in the world.

With 5,000 feet of floor space, private offices for all officers and heads of departments, large, light rooms for clerical work and stenography, the new quarters of the lumber insurance companies have been laid out with a view to permanency and to accommodating a business which will ultimately attain very large proportions.

America has been foremost in the movement for specializing insurance, and it is a credit to the lumber trade that no single trade or industry supports insurance companies of its own equal in size and strength to those maintained by the lumber trade.

Utilization of Electric Power.

Everyone has heard about the utilization of the vast electric power now being developed through the aid of Niagara Falls, and that the street car system and nearly all other immediate users of power at Buffalo employ this wonderful force. Among others who have recently installed electric power for driving their plant is the E. & B. Holmes Machinery Company, the demand for its line of tools having outgrown the steam power formerly employed. The company has installed a full equipment of electric motors and April 8 turned on the new power to run its plant. The company figures that this new equipment will enable it to increase its facilities to such an extent that in future it will be able to make even more prompt delivery than formerly. In this issue of the Record the E. & B. Holmes Machinery Company advertises one of its best known appliances, its gang ripping and straightening machine, which is of especial interest to hardwood users.

Removal of Page Lumber Company.

The R. G. Page Lumber Company of South Bend, Ind., manufacturer and wholesaler of all varieties of hardwoods and of dimension stock, has moved its main offices and extensive yards to Ashland, Ky. Rollo G. Page, head of the house, will move to the new location, as will also C. E. Wilson, traffic manager. This move was considered necessary on account of the company's big timber interests in Kentucky and West Virginia and in view of the fact that for more than a year it has been operating yards and office at Ashland. It is thought that the entire business can be handled with greater dispatch and advantage from a point in close proximity to these interests.

Mr. Page located in South Bend about eight years ago, and was a member of the firm of

Martin & Page. A little over two years ago the firm dissolved and Mr. Page operated under the name of the R. G. Page Lumber Company. Yards were maintained on South Main street and offices in the American Trust building. The former will be closed out, but a sales office in charge of John Martin will be continued in the same location.

An Endorsement.

A concern which is constantly receiving the most flattering testimonials from well known lumbermen regarding the excellence and utility of its product is the Gordon Hollow Blast Grate Company of Greenville, Mich. Recently the J. B. Galloway Company of Clarendon, Ark., installed a set of their grates, which they have thoroughly tested, and unhesitatingly say is especially well adapted to burning all sorts of refuse, thus saving their wood, and effecting a saving of from \$1,000 to \$1,500 a year; they also find that it is an easy matter to keep ample steam with "any old thing in the shape of fuel" and explain that their two boilers run five engines, the capacity of the boilers being just equal to that of the engines, without any surplus whatever. To say that they are highly pleased with their investment in the Gordon grate is to put it mildly, and they unhesitatingly recommend it.

Removal of Headquarters.

The American Woodworking Machinery Company, whose general offices have been at 136 Liberty street, New York, for several years, has removed to a permanent location at 596 Lyell avenue, Rochester, N. Y. The company's new and principal manufacturing plant recently completed at Rochester is the largest woodworking machinery plant in the world, and covers ten acres. The company operates six other important factories.

Atkins Saws for Alaska.

E. C. Atkins & Co., the Silver Steel saw people, have just secured a very interesting order through their Seattle branch. This consists of the complete saw equipment for five sawmills which will be constructed and placed at different points along the line of the Alaska Pacific Railway & Terminal Company, in southeastern Alaska. The saws were shipped from Seattle on the steamer Yucatan and will be taken into the country over snow and ice. Many large trestles will be necessary in the building of the road and piles and pile drivers will be used extensively. Piers are now in the course of construction at Catalla and other points. The road opens valuable territory from the Marten islands through the Copper river country to the Yukon river, a distance of 500 miles.

Miscellaneous Notes.

The Ford Lumber & Manufacturing Company of Ford, Ky., filed suit recently against the L. & N. railroad for nearly \$12,000 as damages. When the first tide in the Kentucky river came last fall the run of logs was one of the largest in the history of the river. At that time the railroad company was building a new bridge across the river at Ford. The false work supporting the bridge caught the floating logs and caused an immense jam of nearly 100,000 logs. The lumber company alleges that its booms were crowded out of the river by this jam and that it lost thousands of logs in consequence.

The Swarthmore Lumber Company of Parsons, W. Va., has purchased the interests of J. Scott Bell, including three tracts and a lumber plant on the Dry Fork railroad, in Tucker county, for \$162,831. The purchasing company, which was formed last February, will operate the plant on an extensive scale. Summerfield Baldwin, a prominent capitalist of Baltimore, is at the head of the company.

The exceedingly high prices of standing timber at the present time have induced farmers and land owners to sell their holdings, and little mills have been busy this season cutting on

THE NEW ROYAL INSURANCE BUILDING,
NEW YORK, HOME OF LUMBER
INSURANCE COMPANIES.

that an unprecedented support was accorded the new organization and very rapid growth ensued.

From this small beginning there were subsequently organized three stock insurance companies, two of them under the New York state laws and one under the laws of the state of Ohio. These are the Lumber Insurance Company, capital and surplus \$300,000; the Adirondack Fire Insurance Company, capital and surplus \$300,000; and the Toledo Fire & Marine Insurance Company, capital \$100,000.

These companies are under the management of the Lumber Insurers' General Agency. Through the support of the lumber trade throughout the United States and Canada the companies have developed to such an extent that they now have aggregate assets in excess of \$1,000,000, and stand responsible to the lumber

small lots of trees throughout the north country. This has been quite a feature of the lumber industry in the vicinity of Saginaw, Mich., where a great number of small mills were in operation on farms and wood lots.

The Standard Parlor Frame Company of Chicago has filed an amendment to its charter increasing its capital stock from \$9,000 to \$26,000.

Leonard L. Shertzer has recently engaged in business at Mobile, Ala., where he will market a fine line of hardwoods which are manufactured at his mill at Merrill, Miss.

The Timpson Handle Company of Timpson, Texas, has been incorporated with \$10,000 capital stock to manufacture handles and wagon timbers. The company started operations March 1 in a new and thoroughly equipped factory. H. R. Fory is manager.

The Boice-Grogan Lumber Company, whose plant at Lexington, Ky., was destroyed by fire recently, plans the erection of a new saw-mill and veneer factory on which will be expended \$30,000. The plant will have a daily capacity of 20,000 feet.

Fire destroyed the plant of the W. E. Williams Company, large manufacturers of maple flooring at Traverse City, Mich., recently. The loss is estimated at \$60,000, with \$29,000

insurance. The property destroyed included the manufacturing plant proper, a considerable amount of valuable machinery, four dry kilns, and large quantities of maple lumber. It is announced that the plant will be rebuilt and will be ready for operation in about three months.

The Peabody Lumber Company of Columbia City, Ind., has bought of Henry Smith a 232-acre farm in De Kalb county, paying for it \$18,200. The land is heavily wooded with black walnut.

The United Walnut Company of Ft. Smith is shipping two car loads of walnut logs a day for export to Germany, where they are made up into furniture. Black walnut is more highly prized abroad for this purpose than in the United States, especially the wood which shows a curly grain; only about one stump in two hundred supplies this variety, however.

The Southwestern Lumber Company of Lake Charles, La., lately purchased 32,000 acres of fine hardwood timber land in Calcasieu and Avoyelles parishes, the consideration being something over \$300,000. The property is said to contain some of the finest hardwood timber in that section of the country.

opportunity to display his energy and ability. His connection with the concern is thought especially advantageous at this time owing to the prolonged illness of Mr. Wolfe, secretary of the company, and to the inability of Mr. Heath, president, to give his attention to the details of business because of his long absences from the city. Mr. Wolfe is steadily improving in health, and although he is able to be out, he is not yet strong enough to superintend the sales department, which is his special duty.

The steamer Louis Pahlow and consort Delta, belonging to the Edward Hines Lumber Company of Chicago, were driven ashore at Clay Banks, near Sturgeon Bay, Wis., April 15, during a snowstorm. An alarm was sent to the life-saving station at the latter place, and the crew went out overland for the wreck. They succeeded in saving the entire crew without loss of life, although the steamer is totally wrecked. The Delta escaped serious injury.

A new concern in Chicago is the Chicago Wood Turning Company, recently incorporated with \$10,000 capital stock.

Secretary Fish of the National Hardwood Lumber Association is figuring on arranging for a special train to run from Chicago to Atlantic City over the Pennsylvania lines, to carry those who wish to attend the annual meeting May 23 and 24. The plan is to have visitors from northern Indiana, Wisconsin and Michigan join with the local contingent and go to the eastern meeting in a body. On the basis of the plans now contemplated the special train will leave Chicago at noon, May 22.

John N. Penrod, the black walnut king of Kansas City, was a Chicago visitor on April 23.

Oscar H. Babcock of E. V. Babcock & Co., Pittsburg, was in Chicago last Tuesday.

John N. Bonnell, treasurer of the Hackley-Phelps-Bonnell Company of Grand Rapids, Mich., spent last Tuesday in the city on his way home from a Pacific coast trip that has occupied several months. During his absence Mr. Bonnell has cruised a good many thousand acres of timber in Oregon, and is figuring on timber deals of considerable magnitude in that state.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, is in the South on association work.

Upham & Agler, the well known Chicago jobbing house, of the American Trust Building, has practically concluded purchases of its season's stock. Between its northern and southern lumber holdings the company has secured an aggregate of nearly 40,000,000 feet, which puts it in a very enviable position in the market.

F. E. Creelman, who was recently defendant in a suit in which he was charged with assisting in the wrecking of the Bank of America, has been declared by the jury not guilty. The president, vice-president and cashier of the bank were declared guilty, and the first two will receive a penitentiary sentence, while the cashier will escape with a fine.

Boston.

Boston wholesalers state that several large consumers of hardwoods are carrying such small stocks that their purchasing agents have visited Boston personally which, in several instances, is unusual. Among the buyers were those from the Heywood Bros. and John A. Dunn Sons, Gardiner. The purchasing agent for the latter concern stopped in Boston en route for New York.

The hardwood division of the Metropolitan Exchange of Boston held its meeting in the rooms of the exchange, Tuesday, April 23.

Frederick B. Cole, treasurer of the National Wholesale Lumber Dealers' Association, visited Boston last week.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

W. E. Douglass of the Crosby & Beckley Company, Columbus, O., was an agreeable caller at the RECORD office on the 24th inst.

O. B. Law, who has been engaged in the sale of timber lands for several years at Detroit, Mich., and is one of the well known and successful operators in this line, has concluded to widen his opportunities by a removal to Chicago, and has opened an office at 85 Dearborn Street. Mr. Law's specialty is handling going yellow pine and hardwood operations.

L. P. Arthur of the Arthur Hardwood Flooring Company of Memphis, well known producers of oak flooring, has been spending the last ten days in Chicago, organizing plans for the distribution of his product in this market.

Paul Johnson of the North Shore Lumber Company, of Thompson, and S. G. McLehlan of the Earle Lumber Company of Simmons, Mich., two Northern Peninsula operators, were welcome callers at the RECORD office this week. Both these gentlemen are specialists in birch production and are much pleased over the advancing prices this variety of lumber is commanding.

Charles H. Barnaby, the hardwood lumberman of Greencastle and president of the Indiana Hardwood Lumbermen's Association, was a Chicago visitor last week.

W. H. Russe, president of the National Hardwood Lumber Association, spent some time at the association's headquarters in this city last week.

R. J. Clark of the Peninsula Bark & Lumber Company, Sault Ste. Marie, Mich., was in town last week. He reports that the largest part of his hardwood and hemlock stock on hand has been sold.

Among recent Chicago visitors from Wisconsin were A. R. Owen of Owen, George H. Chapman of Stanley, and M. J. Quinlan of Soperton.

Theo. Schneider, northern purchasing agent for the Brunswick-Balke-Collender Company, spent several days in Chicago last week.

Joel B. Ettinger, manager of the Chicago branch of the S. A. Woods Machine Company, spent several days in Michigan last week, and met with his usual success in making sales of the high-class machines manufactured by his house.

Charles F. Braffett, vice-president of the Simonds Manufacturing Company and manager of its Chicago saw factory, is absent on a southern trip for business and pleasure.

George Greer, purchasing agent for the Joyce-Watkins Company of Chicago, is south on a buying trip.

Lewis Doster, secretary of the Hardwood Manufacturers' Association of the United States, has just issued a revised edition of the inspection rules of his association, which for the first time includes the new rules of the Michigan Hardwood Manufacturers' Association covering northern hardwoods. These books are supplied free on application to the association headquarters—First National Bank Building, Chicago.

Jerome G. Leavitt, vice-president of the Leavitt Lumber Company, returned last week from an extended southern trip.

The RECORD is in receipt of a letter from John H. Lank, secretary of the Lumbermen's Exchange of Philadelphia, announcing that a vote of thanks was extended to the HARDWOOD RECORD for copies of the paper furnished the Exchange during the past year.

Ryan & McParland have removed their yards from the corner of Blue Island Avenue and Robey Street, where they have been located ever since they started in business, to Twenty-second and Laflin Streets, the site of the John O'Brien Land & Lumber Company's old yard.

The John O'Brien Land & Lumber Company is now nicely situated in commodious offices at 185 Dearborn Street.

Owing to the illness of his brother, Ben W. Davis, who superintends operation of the John R. Davis Lumber Company at Phillips, Wis., John R. Davis of this city has been spending most of his time at Phillips personally overseeing work at the big plant.

Irvine McCauley of the McCauley-Saunders Lumber Company, Fisher Building, this city, has left for a fortnight's visit to the cypress mills of Louisiana.

Clarence Boyle, an expert hardwood lumberman who has long been connected with the trade of this city, has recently resigned his position with the Chicago Car Lumber Company and has obtained an interest in the Heath-Witbeck Company of the Willoughby Building. As vice-president and manager of the company Mr. Boyle will have sufficient

Charles W. Leatherbee of the C. W. Leatherbee Lumber Company, Boston, has returned from a southern trip.

The firm of H. A. Grimwood & Co. of Providence, met with a fire recently, which destroyed their stock of sash, doors and blinds. Messrs. Grimwood, senior and junior, have been in the West buying to replace this stock.

The plant of the Greenwich Sash & Blind Company, Greenwich, Conn., which was recently destroyed by fire, will be rebuilt.

F. W. Henry has been appointed manager of the Pittsfield branch of the Blakeslee Lumber Company of Albany. This company has recently decided to open a branch in Pittsfield.

New York.

The Wayne Lumber Company, wholesaler in hardwoods at Manhattan, has removed to more commodious quarters in the Importers and Traders' Building, 24-26 Stone street, city, where it has much better facilities for taking care of its increasing business.

J. W. Hussey, well known hardwood lumber and log exporter, who for years has been located at 1 Broadway, Manhattan, has removed to 59 Pearl street.

The forthcoming second annual golf tournament to be held by the Lumbermen's Golf Association at the Baltimore Country Club, June 12 and 13, is going to be a fine affair, and Secretary Henry Cape of 1 Madison avenue, New York, urgently requests all lumbermen throughout the country who are enthusiasts of this sport to enter the contest this year by sending in their applications to him. W. D. Gill, the prominent Baltimore lumberman, is president of the association and has been made a committee of one for the entire arrangements for the approaching contest. A large number of handsome prizes will be played for and handicaps arranged on such a basis as will give every one an excellent opportunity of winning.

Francis E. Southard, well known lumberman of this city, on April 6 committed suicide at his residence in the Rhinelander Apartment. He has been in ill health for several years.

Brooklyn is the banner borough of Greater New York in the matter of building activities for this year. For the first three months of 1907 the gain over 1906 was about \$4,500,000.

Hamilton V. Meeks, head of the Gardner & Meeks Company, Weehawken, N. J., accompanied by his wife and daughter, arrived on April 10 after an extended European trip.

Hugh McLean of the Hugh McLean Lumber Company, Buffalo, N. Y., has been spending several days in town during the fortnight in the interest of business and visiting with his local representative, C. B. Cox.

F. J. Cronin, eastern representative of the Yellow Poplar Lumber Company of Coal Grove, O., has been in town on one of his regular selling trips. He reports the poplar market as very active, with prices stiff.

Gilbert H. Shepard, cypress wholesaler of 29 Broadway, announces his removal to the Brunswick Building, Twenty-sixth street and Fifth avenue.

John Bossert, Louis Bossert & Son, big Brooklyn house, has just returned from a pleasure trip to the popular Florida winter resorts.

J. C. Turner of the J. C. Turner Cypress Lumber Company, 1123 Broadway, has just returned from an extended tour of the south in the interest of business.

Thomas A. Murphey of the Murphey-Hardy Lumber Company, Newark, N. J., arrived in port last week after a two months' Mediterranean tour, accompanied by Mrs. Murphey.

S. F. Minter, hardwoods, 1 Broadway, is maintaining a branch wholesale hardwood distributing yard at Asheville, N. C., which is a convenience greatly appreciated by his customers.

The New Jersey State Senate passed a new

railroad demurrage bill on April 11, providing that when owners or consignees of freight refuse to accept the same and pay charges the railroads may after three days impose a charge of not more than \$1 per day for detention of each car or for the use of the track occupied. Sunday is not included in the demurrage limitations and the companies are allowed one hour a day for the moving of cars for train operation purposes. The railroads are also to have the right of lien of property where demurrage charges are not paid, although in disputes the property may be removed by the filing of a bond.

The regular annual meeting of the New York Lumber Trade Association was held at the association rooms, 18 Broadway, on April 10 and was largely attended. The Hoban & Curtis Lumber Company, 1 Madison avenue, was elected to membership, and the membership of the Hull Lumber Company was transferred to G. H. Perley & Co. New committees were appointed by the president and were confirmed by the board of trustees. A fitting resolution of condolence was passed concerning the death of the late Russell Johnson of Johnson Bros., Brooklyn, who was for many years a respected member of the organization and of the board of trustees. A committee was also appointed to nominate officers for election at the annual meeting in October next.

John Woyka of John Woyka & Co., Limited, extensive mahogany timber and veneer merchants, Glasgow, Scotland, arrived in New York last week to visit the principal manufacturing points in the United States and Canada, buying poplar, walnut and oak.

Philadelphia.

The annual meeting of the Lumbermen's Exchange was held on April 11. The attendance was large and the usual zest was manifested in all the proceedings. Edwin B. Malone of Watson Malone & Sons was elected chairman of the meeting and John H. Lank secretary. Business reports were read by the different committees, after which the secretary, John H. Lank, read an exhaustive history of the association during the two decades of its existence. A most interesting report of the year's doings then followed by George F. Craig, the retiring president. The officers elected for the coming year are William L. Rice of T. B. Rice & Sons Company, president; Frederick S. Underhill of Wistar, Underhill & Co., vice president; Charles P. Maule, treasurer, and John H. Lank, secretary.

The annual banquet of the Lumbermen's Exchange, an exceptionally brilliant affair, was held at the Union League on April 11, with 139 guests present. The banquet was followed by an address by the ex-president, George F. Craig, who then introduced William L. Rice, the new president, who responded with an interesting talk, interspersed with humorous anecdotes. Martin G. Brumbaugh, superintendent of public schools, was orator of the evening. His address was particularly interesting, as he had spent his youth in a lumber camp and was thus able to discourse eloquently on the secrets of the lumber trade. Justin Peters, manager of the Pennsylvania Lumbermen's Mutual Fire Insurance Company, followed with an interesting and instructive speech. E. F. Perry, secretary of the National Wholesale Lumber Dealers' Association, spoke next, after whom Frederick S. Underhill, the newly elected vice president, wound up with a humorous address.

A synopsis of the history of the Lumbermen's Exchange taken from the interesting report of the secretary, John H. Lank, shows the first meeting to have been held on Feb. 13, 1886, and a charter was granted under the present style on April 17, 1886. Laws were adopted May 20, 1886. These were revised in 1888, 1898 and 1906.

The first election of officers was on May 27, 1886, and resulted as follows: For president, William M. Lloyd; first vice president, Charles

W. Henry; second vice president, Charles M. Petts; treasurer, Edwin H. Coane. The total number of members at this time was 49; since then 193 have been added, but 106 have withdrawn, leaving the present membership 136, the largest in its history. Of the original members, 27 are still associated with the exchange, 25 as active and 2 as honorary members.

John W. Coles has recently been on a stock hunt in the South, where he made some connections for North Carolina pine, also contracted for some good hardwoods in Bristol, Tenn. He is receiving considerable of his goods by water and is expecting some barges of lumber from North Carolina in a few days.

Wistar, Underhill & Co., always in the front row of hustlers, have no fault to find with trade conditions. R. W. Nixon of this firm is on a selling trip in New York City and H. E. Bates has just returned from New York state, bringing in a good bunch of orders. This firm recently made a deal to handle the entire output of the Pigeon River Lumber Company near Newport, Cocke county, Tenn., which will run about 25,000,000 feet of poplar, oak, chestnut, spruce and hemlock per annum.

Among the recent visitors to the city are George A. Mitchell of White, Gratwick & Mitchell, Incorporated, of North Tonawanda, N. Y., and George B. Breon and John Coleman of Williamsport, Pa.

The many friends of George Nass of George Nass & Son will be sorry to learn that he is confined to his home with typhoid fever. A speedy recovery is hoped for.

E. B. Hayman of W. H. Fritz & Co. has been confined to his home for some time, it is reported, threatened with typhoid fever. As he is possessed of a strong constitution it is hoped that he will throw off the trouble.

R. M. Smith & Co. do not seem inclined to push for orders. They are confining themselves mainly to clearing up back orders as fast as railroad facilities will allow. Their mills are actively preparing stock. B. C. Currie, Jr., Philadelphia manager of this concern, reports things moving along a little quietly at this time; he is watching developments as the spring opens.

A large quantity of timber was recently destroyed by forest fires near Pottsville, Pa., and through the lower section of Schuylkill county. The loss will be heavy.

Fire in the plant of the Keystone Cabinet Works at Chester, Pa., on April 13, caused a loss estimated at \$15,000.

A report comes from Reading, Pa., that the 480 acres of timber land owned by A. Thalheimer, which is being cut at the rate of 30,000 feet daily, will be converted into cigar boxes.

Two hundred acres of timber land were recently destroyed by fire on the Nescopee Mountain near Bloomsburg, Pa.

The Shamokin Wagon Works, an adjoining planing mill and some dwellings at Shamokin, Pa., were recently destroyed by fire, causing a loss estimated at \$75,000.

Fire destroyed the woodwork manufactory of William Russell of this city on April 17, completely gutting the plant; the loss is placed at \$20,000.

The Bruce-Bock Lumber Company was incorporated under Pennsylvania laws on April 11 with authorized capital \$10,000. Principal office Conway, Pa. Incorporators are C. R. Bruce, H. J. Bock of Conway, Pa., J. A. Davis, W. A. Reader of Baden, Pa., and J. A. McNutt of Freedom, Pa.

Owen M. Bruner of Owen M. Bruner Company, a very busy concern, has no complaint to make in the way of business complications. The company has engaged J. A. Finley as salesman to look after the Metropolitan and Baltimore territory. Mr. Finley was formerly with Henson & Pearson. He will handle specially maple flooring and yellow pine timber. Mr. Bruner and

Mr. Finley have recently returned from an extended tour in the South and Northwest, visiting their various connections and familiarizing themselves with stocks and conditions. Mr. Bruner reports the mills all active and that he is looking forward to good summer trading.

The Paul W. Fleck Lumber Company has removed its office from 704 Real Estate Trust building to 322 North American building.

The Philadelphia & Reading Railroad Company recently issued a notice that on account of the proposed elevating of its road through the upper section of the city the freight yards at Huntingdon and Broad streets, and Tenth and Berks, will be abandoned on June 1. They have since announced that it is probable a yard will be opened at Seventeenth street and Indiana avenue. At the railroad company's office they assert that it has not been decided as yet as to whether the same privileges at the old yards will be allowed at the new one; but nothing definite can be ascertained for a week or two.

The National Hardwood Lumber Association is looking forward to a big time at its tenth annual convention to be held at Atlantic City, N. J., on May 23 and 24. The committees have been hard at it under the able leadership of C. E. Lloyd, Jr., and B. C. Currie, Jr., of the committee of arrangements which has issued a neat booklet containing programme, excellent views of Atlantic City scenery, board walk, hotels, etc., together with full information as to railroad tickets, hours of departure from New York and Philadelphia, rates per day at all the leading hotels, etc., supplemented with a concise history of the National Hardwood Lumber Association.

Baltimore.

In compliance with action taken at the last annual meeting of the National Lumber Exporters' Association in Norfolk, Secretary E. M. Terry has sent to members the draft of a letter which they are asked to use as a model in communicating with their correspondents abroad relative to the shipping of lumber on consignment. The letter asks that members request their European representatives to desist, and use their best efforts to influence others to desist from soliciting consignments from mills and wholesale merchants in this country; also that they stop the promiscuous circulation in the United States of brokers' circulars. It was the opinion of those present that sending out this letter as a copy for exporters to follow in communicating with foreign brokers would be more effective as a means of combatting the practice of shipping on consignment than any other that might be attempted. A meeting of the special committee on Liverpool measurement is to be held on April 26 in the rooms of Secretary Terry. The committee includes George D. Burgess of Russe & Burgess, Memphis, Tenn.; Harvey M. Dixon of the Dixon Lumber Company, Norfolk, Va., and George M. Spiegle of George M. Spiegle & Co. of Philadelphia.

Michael S. Baer of the hardwood firm of Richard P. Baer & Co., in the Keyser building, this city, is away on a trip to the mill operated by the firm at Mobile, Ala. He will return by way of Cincinnati and other cities, paying close attention to the business situation in each place visited. The mill at Mobile is now running full time, and lumber is being turned out to the limit of its capacity, there being orders in hand for all the stocks that can be obtained.

William M. Burgan is at Eddy Lake, S. C., looking after the operations of the Eddy Lake Cypress Company, in which he is largely interested. He may also stop in North Carolina, where he has extensive interests in connection with the Pigeon River Lumber Company. In consideration of his services rendered to the Retail Lumber Dealers' Association Mr. Burgan has been presented with a handsome mahogany desk and office chair. Mr. Burgan, though a

wholesaler, took a deep interest in the work of bringing the retailers together and largely through his efforts the organization was effected.

William B. Tilghman, one of the most extensive lumber and sawmill operators in Maryland and head of the William B. Tilghman Company of Salisbury, Md., died there on April 13, after an illness of several years. He had been active in business until his last sickness, but continued to take a great interest in the affairs of the company, which conducts a sawmill at Salisbury and operates other enterprises. Mr. Tilghman was twice married and leaves seven children, William B., Jr., being the only son. The deceased organized the Salisbury National bank and otherwise worked hard to build up the town.

On April 14 fire in the chair factory of James McDonough & Co., 744-746 East Lombard street, this city, caused a loss of \$15,000, and for a time placed the National Casket Company's big plant, just across the street, in danger. The loss is fully covered by insurance.

Pittsburg.

The Pittsburg Hardwood Door Company, which was organized three months ago from the business of the Paine Lumber Company, Ltd., and A. G. Breitwiser & Co., is carrying a stock of 10,000 hardwood veneer doors in its quarters in the big Terminal warehouse on the South Side. The company occupies seven floors, 20x155 feet each, and in addition to its stock of doors has a large stock of rails, balusters, molding, etc.

The Clay-Schoppe Lumber Company is in its new offices at 1015 House building, where it has much better quarters than in its former location. The W. E. Terhune Lumber Company has moved to the ninth floor of the same building and J. E. McIlvain & Co. occupy a handsome suite of offices alongside of the Terhune quarters.

J. W. Selvey of Grafton, W. Va., and J. T. Caveney of the same place are at the head of a company which has purchased 2,000 acres of timber land in Randolph, Barbour, Preston and Tucker counties, West Virginia. A big sawmill will be established at once.

George W. Nicola, president of the Nicola Lumber Company, has bought one of the finest sites in the Schenley Farms allotment in the Oakland district and will erect on it a \$20,000 residence.

The Crescent Lumber Company has moved from the Whitfield building in the East End to the fifth floor of the Machesney building in Fourth avenue below Wood street. Its president is R. A. Wolf, and W. A. Kessler is secretary and treasurer.

The Flint, Erving & Stoner Lumber Company reports business active. The company now has over 10,000,000 feet of lumber on sticks and can't get enough cars or permit of loading as fast as it is cut.

The A. M. Turner Lumber Company will move into its big suite of offices in the 20-story Union Bank building May 1. Mr. Turner has just returned from an extended trip through the South.

The Kendall Lumber Company has sold nearly all its hemlock bark and at much better figure than was realized last year. The Ohio Lumber Company, in which the Kendalls are largely interested, is cutting a fine lot of oak, and the Outcrop, Pa., mill near by is making 35,000 feet of hardwood lumber every day. J. L. Kendall is still in Roseburg, Ore., where he is picking up some more choice timber land in preparation for the big operation which the Kendalls will start there in the fall.

At last the Carter timber lands on West Hickory creek near Tionesta, Pa., will be brought close to market by reason of a new railroad for which surveys are now being made. This will run up West Hickory creek, near the mouth of which a big sawmill will be built. There are

about 15,000,000 feet of lumber on the tract, which will require fully two years to cut off. Oak, birch, chestnut and hemlock predominate.

The Stewarton Lumber Company has been organized by Otto and August Stickel of Mills Run, Pa., and J. A. Guiler of Connellsville, Pa. It will develop a large tract of hardwood and hemlock near Stewarton, Pa.

The Linehan Lumber Company is pushing out "strong" in the hardwood floor business in which it took a hand only recently. J. J. Linehan has been south again and finds stocks of hardwoods only fair in most places.

The Herman H. Hettler Lumber Company is having a rushing trade in hardwoods at its Pittsburg office. Manager C. W. Cantrell got hold of some mighty nice business while on a recent trip to Cleveland and only wishes that everything in lumber was as good as hardwoods at present.

The Interior Lumber Company, whose plant at Oneida, Tenn., was burned recently, will open a sorting and distributing yard there and another in Georgia and will make a specialty of rough lumber for a time. J. G. Criste will be Pittsburg manager as formerly and President J. R. Edgett will look after the buying in the south.

The Nicola Building Company has received a contract from the Pennsylvania Lumber Company for the erection of a reinforced concrete sawmill near Kane, Pa., in Warren county. It will cost \$50,000 when complete and will have spans on the sides of 60 feet. This will be the first mill of its kind in Pennsylvania and is causing no little interest locally.

The Pittsburg-Kanawha Lumber Company of Buckhannon, Pa., has been incorporated with a capital of \$10,000. Its incorporators are: Charles Campbell, H. B. Cooper, C. W. Heavner, H. W. Jackson and J. M. N. Downes, prominent capitalists of Buckhannon.

I. F. Balsley of the Willson Bros. Lumber Company, who is looking after the Pittsburg end of the finances for the National Hardwood Lumber Association's convention to be held in Atlantic City May 23 and 24, is enthusiastic over the outlook. He believes there will be a large attendance from this end of the state and says that many subjects of great interest to hardwood men are going to be fully and fairly discussed.

Wholesalers in northern Ohio are devoting much time this month to getting out piling for use at the Lake Erie docks at Collinwood, O., where are located the big shops and yards of the Lake Shore & Michigan Southern Railroad Company. Most of the stock is used by this company in improvements, although the government has been a liberal buyer also.

The Cheat River Lumber Company has bought 700,000 feet of gum, and is selling it off rapidly for boxing.

The American Lumber & Manufacturing Company is pushing its hardwood department for all that it will stand. President W. D. Johnston is anxious that this shall be the best hardwood year in the American's history and General Manager J. N. Woollett is enthusiastically aiding him in bringing about this desired result. Charles Cruikshank of the hardwood force is touring New England; Samuel Dunseith is looking after business in Canada; A. T. Ash is buying stock in West Virginia; T. C. Clark is selling hardwood out west; W. T. Robertson has been permanently stationed to look after southwestern hardwood purchases in Arkansas.

Buffalo.

Buffalo lumbermen are anxious to get their new clubrooms in the Chamber of Commerce ready for occupation, as the move will solve the problem of a permanent home for them. The new building was formally opened April 18, but it will be some weeks before the lumbermen's clubrooms will be finished.

There is some improvement in the car situation locally, but the complaints of shortage in

this time of the year, but manufacturers are encouraged over the more favorable conditions recently experienced.

There is some improvement noted in the car situation. There are more cars available for lumber interests and this means larger shipments out of this city as well as increased receipts of both timber and lumber from interior points. Lumber firms engaged in manufacturing are better supplied with timber now, taken as a whole, than they have been for some months.

New Orleans.

The sensation caused here last week by the announcement that a receiver had been appointed for the big lumber exporting firm known as the W. A. Powell Lumber Company, Ltd., had hardly subsided when William A. Powell, head of the company, was arrested and charged with embezzling a large amount of staves and lumber belonging to two New Orleans banks. The first charge of embezzlement was preferred by the German-American National Bank, which charged that Powell had embezzled 22,000 pieces of French claret staves intended for export and on which the bank had advanced something over \$1,000. The value of the staves was set at \$1,825. The Hibernia Bank & Trust Company then preferred charges against Powell, alleging that he had embezzled 400,000 feet of lumber, valued at \$12,000, on which this bank had also advanced money. It was alleged in both instances that the bank had paid the money advanced on the staves and lumber to Powell expecting to secure the receipts and bills of lading when the lumber was delivered on shipboard. These bills of lading were never received and the charges were consequently preferred. Powell was arraigned in one of the inferior criminal courts and his bond was fixed at \$10,000 on the two charges. The Whitney-Central National Bank, Canal-Louisiana Bank & Trust Company and the Cosmopolitan Bank & Trust Company are also said to have been victimized by Powell. His operations in this particular line, it is stated, represent between \$200,000 and \$300,000.

The receiver for the Powell Lumber Company was appointed on the application of Stahl & Son, lumbermen of Rotterdam, who alleged that the company's affairs were being mismanaged. It was set forth in their petition that the company's liabilities would exceed \$450,000, while its assets were less than \$350,000. In accordance with the representations of the petitioners Judge E. D. Saunders in the United States Circuit Court named the Commercial-Germania Savings Bank & Trust Company as the receiver. This institution is now in charge of the affairs of the company. Several interventions have since been filed in the suits.

A good deal of interest is being manifested in the vigorous campaign which lumber exporters of this territory are making to secure better car service from the railroad companies. Several conferences of exporters have taken place recently and briefs have been prepared setting forth cases where the railroads are charged with having made discriminations against certain shippers. The lumbermen will ask the railroad officials to remedy certain conditions and if nothing is done the matter will be taken to the Interstate Commerce Commission. The statement that some of the lumber exporters are forced to pay a bribe of from \$2 to \$5 per car to secure a supply has created something of a sensation. It is said by a number of lumbermen that bribing the officials is the only way to secure cars from some of the railroad companies.

The largest timber deal that has been consummated this year in the Calcasieu district was closed the other day at Lake Charles

when 32,000 acres of hardwood timber belonging to the Orange Land Company and J. B. Watkins were transferred to the Southwestern Lumber Company of New Jersey, which was represented by President Sam Parks of the Industrial Lumber Company. The price paid was \$271,580. The tract lies adjacent to the proposed route of the Louisiana extension of the Santa Fe railroad, several stockholders of which are identified with the Southwestern Lumber Company. This concern has made several other big purchases in this vicinity and will erect a big hardwood mill there.

The Sabine River Lumber Company, a new hardwood company, has been formally organized at Lake Charles with an authorized capital of \$200,000. All of the stockholders in the company are Illinois people, and all but one reside in Illinois. The exception is W. Scott Matthews, president of the Matthews Hardwood Lumber Company of Ouachita parish, who moved to Louisiana from Illinois several years ago. Mr. Matthews is the head of the new concern. The others on the Board of Directors with Mr. Matthews are: W. K. Murphy, Pinckneyville, Ill.; C. B. Cole, Chester, Ill.; Judge George W. Wall, DuQuoin, Ill.; John B. Jackson, Anna, Ill.

The Caddo-Rapides Lumber Company, one of the leading enterprises in the hardwood section of Louisiana, has increased its capital stock from \$12,000 to \$100,000. The following are the stockholders: Hugh Corry, J. E. Thirsell, W. D. Luny, A. L. Ducate, G. W. Bolton, J. W. Bolton, A. W. Looney, J. W. Alexander, Hugh Corry, Jr., James Corry, John R. Hunter, all of Alexandria, La.; C. H. Teal, Earl Roberts and J. W. Duncan of Colfax, La.; T. C. Bush of Fairmount, La.; F. W. Offenhauser of Texarkana, and T. H. Garrett of St. Louis.

The Bay Springs Spoke & Manufacturing Company has filed a charter in Mississippi. It is domiciled at Bay Springs, Jasper county, and has an authorized capital of \$25,000. The incorporators are: L. L. Denson, W. J. Shoemaker and others.

Louisville.

The car situation here is better, and it is now not only possible to get cars, but lumber is moving quite freely. How it happened, what caused it, or how long it will last, are questions unknown, as all are too busy to ask questions and are only hoping it will last long enough to let them get their order books cleared up a little.

The W. P. Brown & Sons Lumber Company has a different story to tell now from that of a month ago. At that time stock was moving out of its yard here so much more rapidly than it was coming in as to give cause for worry. Now, however, they have it coming in pretty lively and it is keeping all hands busy to take care of it.

Edward L. Davis reports busy times and says there is nothing to find fault with now but the price of oak timber. All hardwoods are in good demand and his company has its hands full taking care of trade and getting fresh timber supplies.

E. M. Overstreet of the Southern Lumber Company says that just a few more days of nice weather will put them on the sunny side of the street with their hardwood business. They have about 3,000,000 feet down at their mills which they are now moving out. Cars are more plentiful and Mr. Overstreet has been booking some more nice business lately, and says that both demand and prices are good.

The Louisville Point Lumber Company's mill and all the other mills on the point are busy these days and have more business than they can take care of. It is simply a question of getting the logs and sawing them into lumber, as the market practically takes care of itself.

Chas. Kitchen of Vansant, iKitchen & Co., Ash-

land, Ky., was in Louisville a few days ago looking after the shipping out of some lumber his firm has here.

Charlotte, N. C.

Lumbermen of this section are gratified over the action of the legislature which recently closed on matters relating especially to their business. The Corporation Commission was given wider jurisdiction over complaints coming from lumber shippers in all parts of the state, asking for influence in their behalf against discrimination in freight rates. The lack of transportation facilities was given due consideration and the commission was given power to demand the railroads to build spur tracks and double tracks to accommodate their patrons.

The plant of Ashbury & Finger of this city was totally destroyed by fire a few days ago, the loss aggregating \$22,000. About 300,000 feet of well-seasoned lumber, including several lots of mahogany, bird's-eye maple, cherry and other hardwoods, was a complete loss. The shop will be rebuilt at an early date.

The Trenton Buggy & Manufacturing Company of Trenton, N. C., has been organized with \$150,000 authorized capital. The company will begin operations with a small capital, but expect to do a lively business. R. L. May, T. D. Warren and others are the incorporators.

H. C. Clark and others are the incorporators of a new Safe & Table Company, recently organized to operate at Statesville, N. C., with a capital of \$50,000. Kitchen safes and furniture will be turned out.

High Point manufacturers have decided to have an exhibit at the Jamestown Exposition. There are about sixty hardwood manufactories at High Point and no city in the state has a more progressive set of business men behind the industry. A large sum has already been donated to make the exhibition attractive.

The Bell Lumber Company of Mt. Olive, N. C., suffered the loss of their establishment a few days ago. It was a small plant, the loss amounting to about \$3,000.

The officials of the Waynesville Wood Manufacturing Company of Waynesville, N. C., are considering the advisability of turning out hardwood mantels only. The company has been manufacturing table tops, legs and other products for some time, but the demand for mantels of the class it is making is so great that other work will probably be excluded.

The Camp Lumber Company in Dinwiddie county has sold to the Butterworth Lumber Company a large tract of hardwood, the price paid being \$50,000. The tract contains about 15,000 acres.

The Ingleside Lumber Company has been granted a charter, with principal office at Raleigh. It is capitalized at \$35,000 and will manufacture hardwood products. J. D. Boushall, W. H. Pace and others are the incorporators.

The largest cargo of lumber ever sent from this state went out this week from Wilmington, the cargo being consigned to New York. It was shipped from the wharves of the Cape Fear Lumber Company and the total amount was more than 1,000,000 feet.

A tract containing some of the finest hardwood in the state, lying in Graham, Clay and Cherokee counties and comprising 55,000 acres, has been optioned by M. E. Cozad and others to Bailey & Chapman, who operate particularly in the western section of the state. The property is known as the Belding timber tract and is one of the largest and most valuable pieces of timber land in the entire state. The consideration is said to have been \$625,000.

Minneapolis.

Trouble in the building trades, which was threatened here for a couple of weeks, has been averted. The carpenters struck for an increase in wages, and were about to call the

other trades out on a sympathetic strike, but the Retail Merchants' Association brought about conferences which finally led to builders and carpenters appointing committees with power to act. They settled on a compromise basis of 42½ cents an hour. Sash and door factories and flooring men were not buyers during the trouble, as there was danger of their being left with a lot of repudiated contracts on hand.

The Hobe Lumber Company has engaged Charles C. Covell, formerly of Pittsburg, as sales manager. Mr. Covell is experienced particularly in the hardwood line, and will emphasize that branch of the business of the company more in the future. The company also handles a line of pine and hemlock.

P. H. Hammer of the Red Birch Lumber Company, Catawba, Wis., was a business visitor in Minneapolis the other day, inquiring into the spring situation as to supply and demand.

F. W. Buswell of the F. W. Buswell Lumber Company is back from a visit to the company's mill and logging camp in northern Wisconsin. He says that because of the deep snow and abundance of thawing weather the log product was lower than was figured on. High cost of labor and provisions also contributed to the greater expense of logging. He also reports a great deal of trouble in getting cars to fill orders.

W. H. Sill of the Minneapolis Lumber Company is braving the jibes of his friends who take a lively interest in the Sill chicken farm. Mr. Sill has been devoting considerable thought and attention to an incubator, which he loaded with 350 eggs, and when the said incubator came off the nest the other day with only two chickens the childish glee of Mr. Sill's friends knew no bounds. They put him on the entertainment committee for the doings of April 19, with especial injunctions to furnish the chicken for the table. Mr. Sill is not at all discouraged, as last year he only drew one chicken out of the incubator and thinks a 100 per cent increase is certainly encouraging.

John Hein, Jr., of the John Hein Company, Tony, Wis., brought his young son down a few days ago for an operation in a Minneapolis hospital. At last reports the lad was doing very well.

A. A. Rotzien, with the Hawkins Lumber & Land Company, hardwood and hemlock manufacturers, is back from a short business trip into northern Minnesota.

Toledo.

The railroad situation remains about the same, but the chances are that relief will be felt in a short time, since the Interstate Commerce Commission is conducting an investigation of the car shortage situation in Toledo on complaint of the Toledo Produce Exchange. It seems that the members of the Produce Exchange are of the opinion that the local grain market has been badly discriminated against in favor of the other markets. Acting on this basis, President Fred Mayer of the Produce Exchange filed formal complaint with the Interstate Commerce Commission at Washington. As a result of his communication, Special Agent Ralph M. McKenzie was sent to Toledo to make a thorough investigation. The natural and probably the correct inference is that the car shortage in other lines is being probed, and it now looks as though everybody interested in shipping may expect some relief in the very near future. In fact, it may be stated that the past few days have shown a decided improvement in the car situation.

Kenneth McLeod, president of the Cache Lumber Company, returned from St. Louis recently, where he went to arrange the details for the purchase of 25,000 acres of territory, including a large mill, in northeastern

Arkansas. The Cache Lumber Company already controls a large lumber tract in that section. The company has also received a proposition to purchase 12,000 additional acres lying to the north of its present holdings, and the matter will be brought before the board of directors at its next meeting.

The Brooke Lumber Company, capital of \$25,000, was recently organized at Pataskala. The company takes in the Henry Brooke Lumber Company, the planing mill of E. Frankenberg & Bro., and the business of W. S. Hanna. The new company will engage in the wholesale and retail lumber business. Henry Brooke was elected president; A. Frankenberg, vice-president; H. H. Baird, secretary; Emil Frankenberg, treasurer.

Twenty-three local lumbermen were indicted by the Lucas County grand jury, charged with conspiracy in restraint of trade and violation of the Valentine antitrust law. Some sixty plumbers and nine brick manufacturers are also included in the list. The lumbermen are justly indignant over the action and are resolved to fight the case hard.

Indianapolis.

The Showers Bros.' Company, operating a large furniture factory at Bloomington, Ind., is preparing to build a large veneer plant to be run in connection with its present factory. It will cost approximately \$50,000 and will be ready for occupancy within a few months.

Within the last few days the Brown, Martin & Phillips Lumber Company has been organized at Salem to deal in a full line of lumber, including hardwoods. The capital stock is \$15,000 and the directors are S. D. Brown, F. A. Martin and H. H. Phillips, men well known in the Indiana lumber trade.

There is a ray of hope for the solution of the car shortage proposition by the announcement that railroads centering in Indiana will probably appoint car distributors, to assure the just distribution of cars in compliance with the Indiana shippers' law. These distributors, it is understood, will have control of the distribution of all cars on the various lines and will have a large corps of clerks under them. The Pennsylvania railroad is the first company to make such an appointment.

The Walnut Lumber Company of this city has a number of good sized orders on hand and is expecting a phenomenal business this season. While some difficulty is being experienced in getting new stock, the officers of the company were far-seeing enough to order early in the season, and as a consequence orders are being cared for with little delay. Some improvements have recently been made at the company's plant.

Win Runyan and Wallace Caswell have formed a partnership and will establish a furniture and cabinet works at Huntington, in the northern part of the state. The men were formerly in charge of the Syracuse Grille Company's plant at North Manchester and have had several years' experience in the business.

The McIlvaine Lumber Company has been incorporated at Vincennes with a capital stock of \$40,000. John A. Cox, Joseph L. Ebner, William B. Robinson, William H. Davenport, Heathcote R. McIlvaine, Frank E. Sheldon and Mason J. Niblack have been elected directors.

The Paoli Spoke Company will manufacture spokes, wooden handles, and sell a line of hardwood lumber at Paoli, according to articles of incorporation filed last week. With a capitalization of \$15,000 the company expects to carry on an extensive business. Among those interested in the new venture are Ernest Stout, Oscar Ellis and Ellen M. Stout.

Due to prospective building contracts amounting to nearly \$4,000,000 during the season, all local dealers are paying special

attention to the hardwood branch of the trade. From lack of a local organization of dealers there is sharp competition for business, although there cannot be any great price cutting due to market conditions.

An effort will be made to ascertain what lands are best suited for the growth of timbers used for manufacturing purposes, and the relative strength of each kind of timber, by Will H. Freeman, secretary of the Indiana Board of Forestry. The tests, which will be started this summer and will likely be continued for several years, will be started in several counties of Indiana. Mr. Freeman believes that sooner or later forestry will be driven to the cheap lowlands of the state and that the tests will show timber grown on waste lands to be as good for manufacturing purposes as that grown on the best ground. Samples of wood will be obtained from various regions selected for tests, and will be shipped to the government experiment station at Purdue University. Timber will be tested when both green and cured, under similar conditions, either in sun or kiln. Both physical and chemical analysis of soil will be made, as well as a study of insect pests that infest woods. The three kinds of timbers to be used in tests will be oak, hickory and ash, and the timber for experiments will be procured in the hilly lands and bottom lands of different sections of Indiana. In addition to tests of timbers used for manufacturing, similar tests will be made with the twenty best Indiana timbers.

Ashland.

There has been a big output of logs, mostly oak and poplar, from both the Big Sandy and Guyandotte rivers the past few days. The timber is reported as being of the best quality, and is bringing fancy prices.

A tragedy that resulted in the death of Virgil Fannin, a nineteen-year-old boy, occurred at Normal, Ky., and Marion McPeak, timber guard for the Nigh Lumber Company of Ironton, is held under \$500 bond charged with the boy's death. Young Fannin and a companion were detected by McPeak stealing chain dogs from the company's property boat. When they saw McPeak they started to run and he, armed with a shotgun, started in pursuit. Fannin carried some chain dogs in his hand, but dropped them, McPeak says, and pulled a revolver. McPeak immediately fired, the heavy charge entering the boy's back and neck. The coroner's jury rendered a verdict of killing in self-defense, but McPeak was bound over by the grand jury under a \$500 bond.

T. N. Fannin of the Keyes-Fannin Lumber Company has returned from a month's stay in Arizona, where he has large copper interests.

Chas. Kitchen, Jr., of Leon, son of Chas. Kitchen of Vansant, Kitchen & Co., is very low with typhoid fever in a hospital in Louisville. His father and two sisters are at his bedside. The young man was taken sick at the winter home of the family at Eagallie, Fla.

Barboursville, W. Va., at the mouth of Guyandotte river, is soon to have a new furniture factory. It will be quite an extensive affair, employing a large number of men.

The Ironton Tool Handle Manufacturing Company has been formed in Ironton, Ohio, for the manufacture of all kinds of tool handles. The incorporators are: F. J. Ginn, D. C. Davies, T. J. Gilbert, F. E. Deidrick and F. J. McConnell. The capital stock is \$15,000. They will operate the Deidrick plant in South Ironton.

W. L. Watson is here from Mahan, W. Va., for a brief visit to his family.

B. E. Fannin of Paintsville, Ky., a successful lumber and tie dealer, is in Louisville looking after a big lumber deal.

The main offices of the Page Lumber Com-

pany have been removed to this city from South Bend, Ind. R. G. Page, head of the big enterprise, and C. E. Wilson of the traffic department, with their families, are already here. The company has a large lumber yard

here and extensive interests throughout north-eastern Kentucky and West Virginia, and in order to handle the business to better advantage it was thought best to have the main office in proximity to its large timber lands.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

There seems to be a slight slackening in local sales to the consuming trade. It is considered on all sides that this is only temporary, and is occasioned very likely by what seems a pretty high scale of lumber values which buyers now have to pay for their stock. Many figure that already top-notch prices have been reached, and that by delaying purchases they will not have to pay any more money and may possibly buy at slightly lower prices.

There are some varieties of hardwoods that are in such short supply at sources of production as to make them remarkably good sellers when a buyer succeeds in locating any of the stock. For example, dry basswood, of which Chicago is the largest consuming market in the country, is practically exhausted. Very few manufacturers or jobbers have any to offer. The result is that the price on this wood has advanced from \$6 to \$8 in the last eight months. Some sales of firsts and seconds are reported in this market as high as \$40. Birch is undeniably doing better, but there is still a considerable quantity of this wood unsold. Thick maple is in good call locally, and what little there is will surely command more money. Rock elm and black ash are practically out of the market. Nearly all the southern woods are in fair demand. There are many more inquiries for high grade poplar than there is stock. Cottonwood and gum are also doing exceedingly well, while the demand for oak still keeps in excess of supply, and the call for the coarse end of all hardwoods for crating and box material remains active and prices have materially advanced. Last fall \$9 to \$10 was a high price for miscellaneous No. 3 hardwoods, and today manufacturers located along the upper lakes sell culls as high as \$12, and in many cases are asking more. The local situation is entirely healthy, with every prospect for a strong season's demand.

Boston.

The market for hardwoods in Boston has developed quite a degree of activity of late. Prices are firmer in nearly all instances, but this does not appear to have checked the inquiry. While the demand was fairly active during March, it is much better this month. Wholesalers find it difficult to get dry stock. Advices from some of the largest mills in the country indicate that their stocks are small. The reports of the better conditions have evidently reached mill points, as asking prices are higher on nearly every lot offered. The furniture manufacturers are very busy. Their stocks are moderate only and many buyers are "hungry for lumber," as one dealer puts it. Several out of town buyers who have seldom, if ever, called upon the trade in Boston for supplies have been here lately.

A fair demand for plain oak is reported in this market. Values are high, but all dealers are not getting outside prices. Quartered oak shows considerable activity and prices are tending upward. Offerings are small and dealers find it difficult to place new business at satisfactory prices. A moderate demand for plain oak for export is reported. Walnut is in very small offering, with the demand of larger proportion than for five years. Offer-

ings of white ash are of very small volume. Brown ash is scarce and firm. The call for cypress is not of large volume, but there is enough business to keep prices steady. White-wood is very firmly held. Dealers have small stocks to offer and yards are not heavily supplied. All advices from mill points indicate that values will continue firm for some time. Maple is well held with the demand for flooring moderate.

New York.

The situation in the hardwood trade in the Metropolitan District continues active with prices bullish throughout the entire list. The market is in the hands of the seller in view of the marked shortage at producing and wholesale sources, especially in the better grades of hardwoods. There seems to be less hardwood available at mill points than there was three months ago, notwithstanding the spring log tides. The poplar situation is particularly acute and all grades are readily salable. Ash and birch are similarly situated. In chestnut, sound wormy has first call, ones and twos common having eased off slightly in demand. Inch maple seems fairly plentiful, but thick stock is scarce and in good call. Beech and gum are more than holding their own, and the oak situation is almost entirely in the hands of the seller. The situation is exceptionally good all along the line with the exception of the dearth of supplies.

The wholesale mahogany trade in the local market is firm and active. The arrivals of logs from foreign ports during the month of March were far less than in either January or February, and a large part of such arrivals, together with a large portion of the logs on hand a month previous, has been sold, leaving the market almost bare of wood in first hands. This, together with the fact that consumption continues normally active, makes early shipments of good wood necessary. Prices are still ruling from 6 to 12 cents per foot with the average close to 9 cents, the higher prices being selling values for laguna, Santiago and the choice stock.

In foreign cedar there were more ports represented in the arrivals in March and more logs were received than in any month for many years. Notwithstanding these heavy arrivals stocks have only been added to in comparatively small amounts, and prices have eased off about one cent a foot owing to the heavy receipts. The large increase in shipments is explained by the railroad development in Cuba, which has necessitated the extensive cutting of timber and consequently heavy shipments. It is authoritatively announced that such cutting is about completed, with a result that the market will undoubtedly resume a normal basis in the next thirty to sixty days. Prices on cedar rule firm at from 8 to 12 cents a foot, according to quality, with the average about 10½ cents.

Philadelphia.

Conditions in the lumber market for the last fortnight have been rather perplexing. A quietus is felt generally along the line. Opinions in trade circles as to the probable cause vary. Some are inclined to think the backward spring has much to do with it. It is conceded by all, however, that there has been entirely too much contention as regards the doings of the large public corporations both in the newspapers and legislative bodies, creating a want of confidence,

and in consequence a holding off of investors. One thing is sure, money is tight at this time, and the bulk of operation work depends on loans, as do also all large public enterprises. It is possible that the opinion expressed by the more conservative trade element that the slump is only temporary, and that conditions will right themselves as soon as the weather settles, is the correct one. The eastern furniture factories, interior finish works, sash and door mills, and veneer and cigar box makers, are all affected more or less by this wavering feeling as to future business, for although things are humming right along, and they have a fair stock on hand, they prefer to wait for developments before buying ahead. Yardmen feel the depression also. Some of the hustling firms, however, in the face of all this disquietude, seem to have all the business they can handle and make no complaint whatever. Permits for large structures are being applied for right along, as also for operation work for rows of dwellings.

Among the hardwoods, ash, chestnut and basswood hold front rank in values but are still very scarce. Poplar has retreated somewhat as to volume of sales and in some quarters is superseded by cypress, the latter being so much cheaper. Oak is somewhat uncertain. It was thought this wood would advance in price; instead there is a downward tendency in values, which may be only temporary, however. Cherry and maple hold old status; maple flooring keeps steady and in good demand; gum remains firm.

Baltimore.

There is no change of consequence to be reported in the hardwood business of this section. Stocks are in strong demand and prices are firm. All the dealers report that they have numerous inquiries and that they are unable to fill orders for want of supplies. The mills are being operated to the limit of their capacity and their output is taken up as fast as it can be made ready for the market at figures that tend to stimulate operations. Especially is this true with respect to oak, which wood is being called for in large quantities not only to meet the needs of the domestic market, but also to fill orders for foreign consumption. European buyers are at present disposed to meet the terms of shippers and they also manifest a tendency to aid the American exporters in their efforts to stop the practice of shipping on consignment. The situation abroad is very much improved and an excellent feeling now prevails. Poplar is also called for in large quantities, though some exporters allege that manufacturers are forwarding stocks at lower figures than they can be bought for in the domestic market, and that this expedient is employed for the purpose of preventing a break in the market here. However that may be, the fact remains that poplar is in strong request and that stocks are sold in large quantities. The trade is evidently prepared to take all the lumber which the mills can turn out and the supplies in the hands of local dealers at the present time are lower than they have been for many months. Other hardwoods are in equally good shape and there is every prospect that the prevailing state of affairs will continue.

Pittsburg.

The call for hardwood lumber continues very active. There is an increased call for ash and hickory which are used largely by the implement and carriage and wagon manufacturers. Straight grained white ash, dry enough for use, is a much prized article in the market just now and is bringing the wholesaler's price. There is little of it in stock for the country mills of western Pennsylvania and Ohio have not been able to deliver their usual quota of dry lumber owing to the extremely unfavorable weather and resultant bad roads preventing them from getting logs into mill. Most of the West Virginia

ash is sold under contract and it is very hard to pick up any in that state. Practically the same may be said of hickory. Every car of hickory that is heard of is snapped up almost before it is off the saw. Basswood is in better demand and some good orders have been placed lately. Several dealers have had good inquiries for elm lately, most of them coming from the hub men of eastern Ohio. There is a better inquiry for maple—both flooring and two-inch planking. Oak finish and timbers are still among the best sellers on the local list, the bulk of the orders coming from out of the city. Dealers are finding it hard to get ties, especially white oak and switch ties. Although there is less river work being done this year than last and a few of the railroads are cutting down their outlay for improvements, heavy timbers and piling are making a good showing on the order books and are bringing satisfactory prices. Considerable beech has been sold through this market lately for piling. Sound wormy chestnut holds a front place in the inquiries and is being sold at slightly higher figures than two months ago.

The local trade is somewhat dull. Building is "coming up" a little in Pittsburg, but does not show the activity that was expected. Architects and owners are very slow in awarding contracts and the yard men are accordingly tardy in getting their stocks out to contractors, which makes them timid about giving large orders. House building bids fair to be good after the weather opens up, but so far operations are greatly delayed. The market shows no weakness in prices and in general the outlook for higher prices is better than March 1. Reports from the mill owners everywhere indicate that they are working hard to keep up with orders and the present cut of logs is already spoken for in most cases.

Buffalo.

There is special report just now from some of the hardwood dealers of activity in maple, which is bringing satisfactory prices. It is going so fast that a new supply will be needed soon.

Another wood that is much wanted is chestnut, though dealers find it harder every season to get supplies of it. If they find a lot of it they take it these days without much reference to anything but the price, for it will always sell.

The oak supply is unsteady, though there seems to be enough at present for all needs. A few dealers found for some time that they could not get rid of their plain red oak, but they can sell it all now and more if they had it. Quartered is now scarcer than plain. Prices are considerably higher than last year.

Every possible effort is being made to keep up the stock of birch, for it is always needed and if there is plenty of it there will always be at least one good wood that will answer for almost anything. It is in fair supply now and there will be a good lot brought down by lake, when lumber traffic starts, which will probably be early in May.

It now looks as though there would be a better sale of elm and basswood than there was, as these woods have been laid aside for some years on account of the high mill prices.

Saginaw Valley.

Local conditions are more satisfactory than they have been in some years. The market has developed much strength during the year and prices have increased all along the line. There has been a good trade and dry stocks of most kinds of wood are scarce. Basswood, oak and ash are particularly strong. Maple is doing materially better and elm and birch are stronger. Beech has also advanced. Some large lots of the latter No. 2 common have sold within ten days at \$16 and \$17. Beech and maple culls are bringing \$12 and \$14.

Basswood culls are firm at \$18 and elm culls at \$13 and \$14. Maple firsts and seconds are strong at \$24 and Nos. 1 and 2 range from \$12 to \$18.

Asheville.

The hardwood market in western North Carolina remains firm. There is a slight slump noticeable in prices for the best grades of oak, which is attributed to the vast quantities of this wood which are now coming out of Arkansas and Mississippi. Prices for best grades of poplar remain at the top notch. Chestnut is stiff, with the demand greater during the past few weeks and prices better than for many months past. Great quantities of inferior chestnut are going to the tannic acid plants in this section, while the commercial chestnut is in good demand. Recently a representative of the National Casket Company was in this section. This concern, which uses 20,000,000 feet of chestnut annually, has purchased its year's supply from the West Virginia forests, but owing to the inability of loggers to get the wood to railway stations and also the car shortage, it has been forced to buy stock elsewhere. The car shortage in western North Carolina is no longer a menace to the trade and the hardwood men are in high spirits. Lumbermen are being quite liberally supplied with empties and only at times is there anything like a shortage. This condition, however, has only prevailed during the past several weeks, and dealers are taking advantage of the situation.

Bristol, Va.-Tenn.

The past fortnight has seen little or no change in hardwood conditions. The mills are nearly all in operation and the conditions in the rural districts are more propitious to the manufacturer than they have been at any time this year.

The car supply is not as good as it should be—indeed, many shippers report that they are still handicapped by inability to get cars. In many instances gondolas are being boxed up and used for box cars.

The weather has been fair for the past few days, though the month as a whole has seen much rain, to the detriment of business.

Cincinnati.

The volume of business transacted during the last fortnight showed an increase compared with the two weeks previous, and this is largely attributable to the railroads furnishing better shipment facilities. The car shortage that has hampered business for several months has to a certain extent been relieved and many of the orders that had been on file for weeks have been filled. The lumber yards at present fully bear out the strain they stood in the last few months, being almost stripped of the most desired lumber such as poplar and oak. A good demand continues for these woods. Oak is holding its own and the same might be said of cypress, gum, hickory and mahogany. The furniture dealers have been doing a better business this season than for some time, and this has caused the market on mahogany and other woods used for its manufacture to take on a decidedly firm tone. The spring trade has been fairly well supplied, but still large orders for immediate delivery are coming in. The market as it looks at present will be held at the same tone for some time to come.

Chattanooga.

The demand for lumber in this section is much greater than the supply. Dry stocks are snapped up promptly at good prices. Poplar is perhaps as scarce as it has ever been in this vicinity. Chestnut is in great demand and oak is still strong.

The export trade is active. Expressed in

the words of one of the local lumbermen, this is a sellers' market.

The car situation is a little easier than it has been for some time and lumber is being shipped out of the city and logs into the city at a fair satisfactory rate.

St. Louis.

The market in hardwoods in St. Louis continues active, and a record business would be transacted were it possible to obtain ample supplies to meet the inquiries which are urgent for all classes of hardwood. Some of the dealers here report that the demand for certain items of stock, especially those in which there have been advances recently, is not quite as active as it was in March. A like statement is made regarding some of the higher class woods, which prior to the beginning of March sold without effort. However, the general volume of buying seems to keep lumbermen busy and to absorb practically everything in desirable stock quickly.

Price advances on several items are confidently expected before the month is out. The increased cost and difficulty of getting out poplar, ash and cottonwood make them very strong items and they will never be as cheap as they have been in the past under any reverse. Oak continues firm, with prices strong on all classes of stock. Gum is showing steady improvement and is selling readily at satisfactory prices.

Nashville.

The local market continues stiff and firm, with an upward tendency. The feature during the past few days has been the advance in quartered oak. There has been a tendency recently to use more of this wood than perhaps any other, unless it be poplar. Poplar will bring today in this market almost anything a dealer chooses to ask for it. The demand for plain oak has not been so noticeable during the past week or so, but it is not dragging. No one seems to have large stocks of it on hand, and for that reason it is not moving so briskly. The recent and incessant spring rains have served to retard logging and sawmill operations in the country. The roads are still impassable in many places, and this has produced a shortage in the amount of timber that should be coming to this market in the spring.

Memphis.

There is very little change to report in hardwood conditions. There is no decrease in the demand while there is very little if any increase in the amount of dry lumber available for immediate use. Buyers are having difficulty in covering their requirements and they are quite willing to pay full prices for whatever is offered. On the other hand, holders, while realizing that there is some increase in the quantity of lumber going on sticks, understand that there is nothing that points toward even a moderate stock of dry lumber for some time and they are therefore indisposed to make concessions on what they have on hand. Thus firmness characterizes every item on the list.

Ash is perhaps the strongest feature, the demand for this being so large that it cannot be properly taken care of. Even the firms which make a specialty of handling this wood are having a very hard time getting all they need for their customers. Plain oak is firm in all grades and the same is true of quarter-sawn stock. The scarcity of low grade gum and cottonwood is a feature which continues, while the demand for both is exceptionally large, owing to the activity in box making circles. The higher grades of these woods, however, are finding ready sale around top prices of the year. There are only moderate offerings of cypress and poplar and everything

placed on sale is taken at full value and with little loss of time. It is the consensus of opinion that general market conditions, aside from the scarcity of dry stock, were never more favorable at this season of the year.

New Orleans.

The market here is not altogether satisfactory and the general condition of the trade shows the effects of the small European demand for lumber. Exports have dwindled

away to little or nothing, while the interior demand is said to be less active than a fortnight ago. The mills are still cutting a good deal of lumber, but have been hampered in their logging operations during the last two or three days by the heavy rain and hail storms which were general over the state. Prices are fair.

Louisville.

The Louisville hardwood market is in excellent shape. There is not only more stock being cut, but better time is being made getting it to the railroads and, best of all, there seems to be a decided improvement in the car situation. It puts the millmen in good humor and makes additions to their order books, and of course it makes the buyers feel better, for while they still have to do a little shopping around, they can now generally get what they want any time they are ready to pay the price. There is, and always will be, more or less dickering about prices. On poplar it is not much trouble to get full list, especially for dry stock, but oak prices are always something of a bone of contention.

In addition to the good factory trade for hardwoods, and a splendid call for car stock, the mills report quite a local call for structural material, bill stuff, framing and siding, and at many of the country mills quite a nice retail trade is being done in building material, especially where planers and resaws have been put in so as to enable the mill to turn out bevel siding. Gum is getting to be quite a factor in this trade, and there is also quite a call for resawed common gum for box and crating purposes. For that matter there is a good call for everything on the hardwood list, which, together with the fact that receipts are now more plentiful, gives the trade a lively air.

Charlotte, N. C.

Local hardwood dealers declare that the price of goods at present is all that could be expected. There has been no material change in quotations for some months, but lower prices are believed to be not far off. The fact that the congested freight traffic has kept much lumber from being brought in is one reason assigned for the good prices that prevail. The car shortage is being rapidly relieved and lumbermen are getting better service than they have been able to secure in many months. With improvement in weather conditions and in the supply of cars, the hardwood men of this city do not conceal the fact that they believe lower prices will prevail. Poplar is bringing the best price of any wood just at present. This is due primarily to the fact that it is becoming so scarce.

Minneapolis.

The chief interest in the market is now centered on contracts for the new cut, which are being taken at a pretty lively rate. There is very little dry stock left except birch, which is also running low, and the low grade stuff is well cleaned out. Mills which can get cars to do any business at all are shipping green stock, especially in basswood, which is active in demand and with no dry lumber to be had. The factory trade is not heavy, but with conditions as they are it is hard enough to satisfy dealers. Conditions are bright for the summer in the twin cities, as the carpenters' strike started two weeks ago has been settled and the men are all back at work.

The yard trade is good, most of it coming in mixed car orders. The supply of southern stock is a little better than it has been this spring, but delivery is still slow and uncertain, and the volume of business is not what it would be if there was a free supply. In this as well as in northern stock it is not so much a question of orders as getting the stock and shipping.

Toledo.

Firm prices and a fair demand for the better grades of hardwood are the features of the local market. Ash, chestnut and oak are selling well and there is not much of an oversupply of any of these items. Poplar is also a prominent feature in the market and higher prices are expected.

Indianapolis.

In all parts of Indiana the hardwood market is especially active at the present time. Stocks are arriving slowly, although there seems to be sufficient supplies on hand to fill orders with some degree of promptness. The heavy building and manufacturing demands are causing a steady demand, but as yet prices have not been raised. The shortage is probably more acute in southern than in central and northern Indiana, but conditions in the southern portion of the state are improving.

Liverpool.

The mahogany sales last week were without incident and prices ruled much on the last sales low level. The turn of the quarter gives an admirable opportunity of viewing the future position of this market.

A prominent shipper is authority for the statement that there is no more wood of any consequence coming from the west coast and that much higher prices will be seen at the next sale. Of course, a statement like this must be taken with reserve, as it is to this shipper's interest to make a bullish report. On the other hand, however, several things point to higher prices. First, the high price of poplar, which can be so easily faked by cabinet-makers. Second, the cabinetmaking business which has been so depressed here for so long, shows signs of improvement. And lastly, there seems to be a growing tendency toward a better class of wood being used by consumers. Not so much imitating is being indulged in, as buyers now prefer the genuine article. Having thus weighed up the situation, it would seem wise for buyers to cover their requirements for some months to come, as the next sale will probably show higher prices.

Other hardwoods are much in demand. Hickory and first growth ash logs (of large size) are wanted, and can safely be shipped in large quantities. Second growth ash, on the other hand, should not be shipped except on order, as there is a large stock here.

Oak planks and boards are good stock and are finding a ready sale. Oak logs are firm and popular logs are increasing in strength, both following the recent rise in the price of the lumber. Large maple logs are badly wanted, but shippers should be careful only to ship logs suitable for this market—anything under 22 inches in diameter at small end is absolutely useless here. Ash planks are still as before, but birch, both logs and planks, are firmer and will probably be higher.

London.

As is usual just before the Easter holidays, there is no great amount of business passing, although the arrivals have been larger during the past fortnight, but being goods ordered on firm contract these are going into direct consumption.

In whitewood there is a good demand for all grades at top prices, but the cull grade is arriving freely.

Plain oak boards are still in good request and are sold immediately on arrival at fair prices; planks are also wanted. There seems to be more activity in quartered boards, which have been difficult to sell for some time past. Planks are in good demand.

Satin walnut arrivals are small, but what does arrive is sold at good prices. There is an increasing demand for good, medium and prime grades of walnut at full prices.

Mr. John W. Woyka

Managing Director of

John Woyka & Co.

Limited

Mahogany, Timber
and Veneer Merchants

Glasgow, - - Scotland

is presently on a tour through the hardwood centers of the States and Canada, purchasing Hardwood Lumber.

Mr. Woyka is also selling African Mahogany in the log and will be pleased to meet or correspond with interested parties, especially those whose manufactured goods are of interest to Cabinet-makers and Ship Builders.

RED BOOK

Published Semi-Annually
in January and July

It contains a carefully prepared list of the
buyers of lumber in car lots, both among
the dealers and manufacturers.

The book indicates their financial stand-
ing and manner of meeting obligations.
Covers the UNITED STATES and MANI-
TOBA.

The trade recognizes this book as the au-
thority on the lines it covers.

A well organized Collection Department
is also operated and the same is open to you.

Lumbermen's Credit Association

ESTABLISHED 1878

1405 Great Northern Building, : CHICAGO
18 Broadway, : NEW YORK CITY

MENTION THIS PAPER

A machine that declares saw mill dividends

AUTOMATIC SWING SAW GAUGE.

FRANCIS MARSHALL, - - Grand Rapids, Mich.

☐ An inexpensive little device
that *saves a dollar a day* and
upwards.

☐ Stops one of the biggest
profit leaks at the mill. Pays
for itself several times over
during a year.

☐ Isn't it worth investigating?

Improved Automatic Band Saw Sharpener

All Machines Fully Guaranteed

☐ This machine excels all others for single cutting Band Saws from 8 to 14
inches. Its construction is mechanically correct, simple and durable, and
does not possess any of the intricate complicated parts that confuse the op-
erator. The head is adjustable so that straight wheels can be used with the same
results as concave.

☐ This represents just one type of machine. We make in addition a com-
plete line of modern tools for the care of saws.

For particulars address

Matteson Mfg. Co.

120-128 S. CLINTON STREET, - - - CHICAGO, ILLS.

Veneered Columns and Shafts

We have unequaled facilities for perfect Veneering in all kinds of hard woods. Our Veneering on Columns and Shafts for Bar Fixtures, Dining Room Tables and all kinds of Furniture will not warp, split, come off or lose its color.

Our stock of Veneers represents the choicest cuttings from the finest logs. Each piece is handled with the greatest care. The strips are clipped, worked to size and finished by the most skilled and painstaking workmen.

You cannot get more durable or more beautiful Veneering than is done in our factory.

Koll's Patent Lock Joint Columns

Are made in all hard woods, Veneered or Solid Stave. They are perfect architecturally and can not come apart.

We make a hobby of executing all orders with unfailing promptness.

POWER and SPEED are strong points with the

McGIFFERT Log Loader

Its heavy steel construction and great power were designed for constant strain and big lifts. Its ability to stop and switch its own cars increases its speed in loading. It can skid logs out 1000 feet each side of track.

Ask for booklet

CLYDE IRON WORKS, Duluth, Minn.

ATKINS Silver Steel SAWS

cost more than other Saws, because they are BETTER. The First cost of a Saw does not count for much. What you want is your Money's Worth. Isn't it better to pay a fair price and get the best rather than a low price and get poor goods? Try an ATKINS SAW. They're better.

SEATTLE

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

ASSOCIATION MEETINGS.

National Hardwood Lumber Association.

The tenth annual convention of this association will be held on Thursday and Friday, May 23 and 24, 1907, at Atlantic City, N. J.

National Lumber Manufacturers' Association.

This organization will hold its annual meeting on Tuesday and Wednesday, May 28 and 29, at the Auditorium on the Jamestown Exposition grounds, Norfolk, Va.

General Market Conditions.

Reports from the chief lumber consuming centers of the United States, as reflected in the market reports in this issue of the HARDWOOD RECORD, indicate that there is a slight diminution in demand for hardwoods in nearly all parts of the country. It is not of enough importance to warrant shading prices in the least and they are still very firm on all varieties of woods. This condition is no exception in the great consuming district of Chicago. Weather conditions prevailing in the South are again very bad. There has been a continuous fall of rain for more than a week, and a large portion of the southern hardwood producing section is afloat. This militates against active log supply, and it is estimated that the average saw-mill is at least thirty days behind the output of a year ago, which was small enough.

There seems to be no disposition on the part of either manufacturers or jobbers to worry in the least over trade slackening a bit, and they feel as though they would like to have an opportunity to catch up with business a little and get the order books fairly well cleaned up, which they have been unable to do for a long time.

In the Chicago district the furniture trade constitutes a large percentage of hardwood buyers and manufacturers have not had as large a trade as they expected, hence are holding off on placing lumber orders. This is one feature that contributes to the lessening of the local trade. The situation is the same in Grand Rapids and Rockford, other large furniture manufacturing centers. In the wagon trade several associations are advising their members to sus-

pend buying, in hopes that the market will be broken and that they will soon succeed in placing orders for less money.

As a general proposition the hardwood situation is very strong and will remain so, even if buying falls off to a considerable extent, as stocks in every producing section are remarkably short and there seems no likelihood of an accumulation of a normal amount for months to come. Buyers can bank on the prophecy of the HARDWOOD RECORD that general hardwood values will not be less than they are at the present time for a good while.

Northern hardwoods are in just about as short supply as are southern, and there is very little dry stock of any variety offered. Basswood, thick maple, black ash and rock elm are exceptionally short. There seems to be an increased call for mahogany, and the trade in cherry and black walnut is even better than usual. The veneer people are as busy as ever and many orders have to be returned because of inability to execute them. This is true of sawn, sliced and rotary-cut stock, as well as of panels and other built-up stock.

Flooring manufacturers are all remarkably busy, and these institutions are up against considerably increasing values of rough lumber without a compensating increase in the price of their flooring product. Those engaged in this line of production who are not stumpage owners are having their margins whittled down to an unsatisfactory basis. A marked example of this condition is oak flooring, which does not command a price commensurate with the high price of oak lumber.

Timber Supply of the United States.

The United States as a whole consumes each year between three and four times as much wood as all its forests can produce in the same interval. The average acre of forest in this country grows about ten cubic feet annually instead of the thirty or more which it should in order to keep pace with the drain upon it. Since the year 1880 more than 700,000,000,000 feet of timber have been cut for lumber alone, including 80,000,000,000 feet of coniferous timber more than was estimated to be standing in the entire country by the census of 1880.

The Forest Service, which has just issued a circular dealing with the timber supply and with stumpage estimates as furnished by important authorities, is sponsor for the startling statements made in the above paragraph. A study of the document will lead to the usual conclusion that forest products of the United States are being consumed far too lavishly, and that the inevitable result will be a timber famine unless the government lays a heavy hand upon such depredations.

With regard to hardwoods, the amount of stumpage is very ind definitely known, and is determinable only with difficulty, owing to the scattered and uneven stands. It was estimated at some 435,000,000,000 feet in 1880 and at about 300,000,000,000 in 1900; although as late as 1905 other than government authorities placed it at 400,000,000,000. Whatever it may be, that which is fit for the saw is rapidly decreasing. In 1900 the hardwood cut was 8,634,000,000 feet; in 1904, 6,781,000,000 feet. The present annual cut of hardwoods is estimated at about 5,000,000,000 and consists of approximately forty-three per cent oak, twelve per cent poplar, nine per cent maple and lesser amounts of numerous other timbers in this class.

Lest it be assumed that the rapid depletion of forest resources is sufficiently accounted for by the increase in population, it should be noted that statistics show the increase in population since 1880 to be half the increase in lumber cut during the same period. At present but one-fifth the total forest area of the United States is embraced in National Reserves, the rest remaining in private hands. The average age of trees felled for lumber this season is not less than one hundred and fifty years, so that it is obvious the stumpage owner must wait at least a hundred years for his land to produce another such crop, but Americans are too strongly addicted to the get-rich-quick habit to have patience with such investments, so that the nation and the states individually must look toward the protection of coming generations and future industries.

Railroads and the Freight Problem.

One of the most pleasing signs of the times is the fact that the leaders in thought and management of railroad affairs are at last falling into line, and now seem to be willing to cooperate with the public in correcting transportation abuses.

A notable exhibition of this spirit was manifested by Melville E. Ingalls, chairman of the Big Four System's board of directors, in a speech made before the Pittsburg Traffic Club, in which he declared that President Roosevelt is about the only and probably the best friend the railroads have. He emphasized the fact that they might as well quit fighting and submit to regulation, and said, "Any man who is not prepared to manage his railroad as a public institution in accordance with the law should resign and seek some other business." More than three hundred prominent railroad men and a large gathering of manufacturers and shippers listened to Mr. Ingall's speech. This sort of spirit on the part of even a few as prominent in railroad affairs as is Mr. Ingalls will very soon bring about more satisfactory and certainly much more amicable relations between the railroads and the shipping public.

Another striking evidence of this spirit of conciliation, and one that promises to be a foremost movement in the history of transportation, is the recent organization by Secretary W. G. Hollis of a car service department for the Northwestern Lumbermen's Association. At a conference between members of this organization and the railroads the former agreed to submit to the association all its claims and complaints against the roads, which the new department will investigate, passing over to the railroads at interest only such claims as it deems worthy. The railroads on their part agree that such cases, with attached evidence, shall be accepted in good faith as the basis of adjudication. This agreement has been entered into by all the roads centering at Minneapolis and St. Paul.

The Hardwood Buying Situation.

The struggle between jobbers and manufacturers of hardwood lumber goes on. The jobbers are making strenuous attempts to buy round lots of desirable stock at a price that will leave them a margin of profit, but manufacturers, even down to the owner of the small ground mill, are very independent.

A feature of lumber trading that is particularly in evidence at this time is the unwillingness of manufacturers in the South and Southwest to sell lumber on the basis of the rules of the National Hardwood Lumber Association. Prominent St. Louis hardwood men state to the RECORD that the best grades of half-dry and green stock they can secure today from manufacturers are fully 10 per cent below National standards and that when the depreciation of re-handling and seasoning is taken into account the grades stand fully 20 per cent lower.

As a matter of fact, in the purchase of round lots and mill stocks it has come about that trades are consummated on the basis of a mutual agreement on joint inspection. If the buyer's inspector can "keep house" with the seller's inspector, the shipments are made. On the contrary, if there is a disagreement between them the trade is off. After making one of these trades a buyer is entirely at sea as to whether he will get the stock or not. This same condition concerning the purchase of southern and southwestern stocks is

reported by jobbers at Chicago, Memphis and Cincinnati, and doubtless prevails to a considerable extent over the entire south country.

In Michigan and Wisconsin these conditions obtain to a very limited extent, as the greater portion of lumber sold in those sections is shipped strictly on National Association grades, or their exact equivalent—those of the Wisconsin Hardwood Lumbermen's Association. This divergence in conditions in the North and South is perhaps explainable from the fact that the grading rules of the Hardwood Manufacturers' Association are a good deal in evidence in the latter section, and manufacturers have learned that these grades are satisfactory to a considerable portion of the consuming trade. There never has been any quantity of northern lumber sold under the rules of the Manufacturers' Association. These varying conditions are a further argument for the unification of all hardwood inspection rules, so that they may be made universal throughout the country.

The Time for Cutting Hickory.

As is known to the trade at large, hickory stumpage, throughout its entire range of growth in the United States, is becoming extremely scarce. Hickory is a wood for which thus far there has not been found a satisfactory substitute. Its rapid diminution is an absolute menace to the very important industry of vehicle production, and the situation is looked upon with concern by everyone interested in this great branch of American commerce.

The HARDWOOD RECORD is in receipt of a communication from a prominent wheel manufacturing concern of central Ohio, which suggests that it would be a good idea to ask all manufacturers of hardwood lumber to make it a rule to saw hickory only between September 1 and January 15. This is the best and only logical time for the felling and sawing of this valuable timber. The writer contends that well toward twenty per cent of the hickory now produced in the country is going to waste on account of its being sawed too late in the spring, when the atmosphere causes checking and discoloration of the wood.

The above is certainly a pertinent piece of advice, for too great care cannot be taken in order to make the modicum of hickory stumpage remaining last as long as possible.

States' Increasing Interest in Forestry.

It is encouraging to see that legislators of several states are waking up to the woeful forest conditions prevailing within their boundaries, and are passing laws that will contribute materially to the advancement of the interests of forestry. At least nine states are now endeavoring to make the most of their timber resources and are availing themselves of the information furnished by the Forest Service, which has been gained by the national government through years of experiment and investigation.

These states are New York, New Hampshire, Maryland, Wisconsin, Missouri, California, Kentucky, Rhode Island, Delaware and to a considerable extent Pennsylvania, Indiana and Michigan. Maine has discovered that its chief forestry problem is the protection of cut-over lands from fire, and a law has been enacted with the result that the fire damage in 1906 was only about \$21,000, which is less than one-third of what it has been in former years. This state is undertaking the utilization of the national Forest Service plans. The states of Delaware, Kentucky and Rhode Island are of late interesting themselves in forestry, and the Kentucky legislature has recently provided for a forestry commissioner and made a small appropriation for the study of the work.

Outside of its timber reserves the government can accomplish little for individual states in forestry work save giving them the benefit of its exhaustive experiments covering the protection of existing forests and the regrowing of abandoned lands and depleted forest areas to timber. The individual states must do other work very largely for themselves, but such legislation can be passed as will make it possible and even profitable for both states and individuals to engage in forestry pursuits on varying scales.

Pert, Pertinent and Impertinent.

Down and Out.

The man who wins in the fight for fame,
Who wins in the war for gold,
The welkin rings with his lauded name
Wherever his deeds are told.
Not mine to jeer when I hear him bailed;
I'm proud of his heart so stout—
But what of the fellow who tried and failed,
The fellow that's "down and out"?

Shall naught be said for the man who tried
The goal of his hopes to gain;
Who faced the battle with patient pride
And fought though the fight was vain;
Whose spirit in one weak moment quailed,
Who fell at the last redoubt?
Ah, many a hero heart has failed
So here's to the "down and out"!

The man who wins, oh, honor him well,
And give him the praise that's due,
But don't forget the other who fell
Ere ever his dreams came true;
Yes, honor the man whose will prevailed,
Who baffled despair and doubt—
But give one thought to the man who failed,
The fellow that's "down and out"!
—DENIS A. MCCARTHY.

WELCOME TO THE BOARD WALK!

Scene at Atlantic City: Tenth Annual Meeting National Hardwood Lumber Association, May 23 and 24, 1907.

What's the Use?

Doubtless early to bed
And early to rise
Will do very well
For sick folks and guys;
But it makes a man miss
All the fun till he dies
And joins other stiff
Who have gone to the skies.
Go to bed when you like,
And lie at your ease—
You'll die, just the same,
Of some Latin disease!

Rare.

Hail to the graduating girl!
She's sweeter far than some;
For she's allowed to use no slang
And chew no chewing gum.

A Bad Rep.

Many a man has been ruined by accidentally getting a reputation for being a good fellow and trying to live up to it.

Canceled.

If you lend money here and there
To friends both far and wide,
When you pay nature's last great debt
They'll all be glad you've died.
—HOUSTON POST.

No Pass.

The editor
Sat in a train
And murmured in
A tone of pain:
"Of all sad words
In times like these,
The very worst
Are 'tickets, please!'"

Virtue.

"Virtue is not known by its exemption from trial, but by its victory in trial."

Life.

The life of every man is a diary in which he means to write one story, but invariably writes a far different one.

To Be Old.

Drink from when
You start to walk,
Chew from when
You start to talk.

Eat whatever
Strikes you right,
Frolic and
Stay out all night.

Be one of
The careless throng,
Wine and woman,
Rout and song.

These hundred-
Year-old duffers say
That they all
Spent life that-a-way.

—HOUSTON POST

The Little Hindoo.

Here's to the little Hindoo,
Who does all that he kin do;
Away off there with naught to wear,
He makes his little skin do.

AMERICAN FOREST TREES.

FIFTY-SECOND PAPER

Pin Oak.

Quercus palustris.—Muench.

Pin oak ranges from certain sections of Massachusetts, notably the Connecticut river valley, and near Amherst, westward as far as the southeastern part of Missouri; on the south it is found along the lower Potomac river in Virginia, through Kentucky, northern Arkansas and southeastern Indian Territory.

It is known by the above name in the states of Massachusetts, Connecticut, Rhode Island, New York, Pennsylvania, Delaware, Virginia, Maryland, Arkansas, Missouri, Illinois, Wisconsin, Iowa and Kansas; in Arkansas and Kansas it is called swamp Spanish oak; in Rhode Island and Illinois it is often known as water oak; in Pennsylvania, Ohio and Kansas as swamp oak; in Arkansas as water Spanish oak.

The term pin oak is one of the names which are used interchangeably for so many species of the genus *Quercus*, but the subject of this sketch, *Quercus palustris*, is the only variety to which it rightly belongs. The name *palustris*, which is the Latin for swampy, has been given to the tree because of the fact that its preferred habitat is the borders of swamps and river bottoms where the soil is deep, rich, and moist; while the term "pin" is applied to it because of the appearance of the tiny twigs set in its trunk and limbs, which are so crowded together that they never develop into anything larger. Pin oak reaches its maximum development and is most abundant along the rich bottom lands of the lower Ohio and tributary streams, while in New England it is much less plentiful, and is of small size.

The bark of a mature tree is dark gray or brownish-green; it is rough, being full of small furrows, and frequently cracks open and shows the reddish inner layer of bark; on small branches and young trunks, it is smoother, lighter, and more lustrous.

The staminate flowers grow in hairy aments two to three inches long; the pistillate on short peduncles, and have bright red stigmas.

The fruit of pin oak is a small acorn which grows either sessile or on a very short stem; sometimes in clusters, and sometimes singly. In shape the acorns are nearly hemispherical, and measure about a half inch in diameter; they are enclosed only at the base, in a thin, saucer-shaped cup, dark brown, and scaly.

The leaves are three to five inches long; they are simple, and alternate. They are

broad, and have from five to nine lobes which are toothed, and bristle-tipped on the ends. The sinuses are broad and rounded, and extend well toward the midrib, which is stout, and from which the veins branch off conspicuously. In color the leaves are bright green above and lighter below when young, becoming thin, firm and darker green at maturity; late in autumn they turn a rich, deep

attained an average height of thirty feet, although they were planted only about twenty-five years ago. They now measure about twelve inches in diameter, but when planted were only an inch and a half. Frequently the pin oak, though tapering and symmetrical in form when young, becomes irregular and uncouth when old. The branches are pendulous and are a prominent distinguishing mark of the species.

Pin oak is often cultivated as an ornamental tree in the eastern part of the United States and in some countries of Europe. In the city of Washington one may see a fine avenue of pin oaks on the way from the capitol to the navy yard, which, though very young, are already excellent shade trees. In Flushing, Long Island, the pin oak is a favorite ornamental and shade tree, and many are the handsome specimens to be seen there.

The wood of this tree is heavy, hard, strong, coarse-grained, and tough. The heartwood is light brown and the sapwood nearly white; the medullary rays are numerous and plainly marked. The wood is apt to check and warp badly in seasoning, but is used extensively for shingles, clapboards, cooperage, interior finish and construction. A cubic foot of seasoned wood weighs about forty-three pounds.

Oak-apples are the round excrescences formed on the limbs by gall-flies and their eggs. They seem particularly fond of this species and specimens are often seen which are literally covered with them; the worms which live inside seem to flourish particularly well on the food they imbibe from pin oak.

The photograph from which the accompanying illustration was made is among the collection of William H. Freeman, secretary of the Indiana State Board of Forestry.

Yate Wood.

Recent tests of the hardwoods of western Australia have revealed the extraordinary properties of yate. Its average tensile strength is 24,000 pounds to the square inch, equaling that of cast iron. Many specimens are much stronger, and one was

tested which showed a resistance of seventeen and one-half tons to the square inch, which is equal to the tensile strength of wrought iron. The sawn timber of yate is probably the strongest in the world. The tree grows to a maximum height of one hundred feet, and occasional specimens have been found which had a diameter of two and a half or even three feet.

TYPICAL FOREST GROWTH PIN OAK, INDIANA.

scarlet. They are coated below with pubescence, and have large tufts of pale hairs in the axils of the veins.

Pin oak reaches a height of from seventy or eighty feet ordinarily, although in thick forests it sometimes becomes 120 feet high. In Fairmount Park, Philadelphia, there is an avenue of handsome pin oaks which are remarkable for their symmetry, and which have

JOHN WHEATLEY LOVE
NASHVILLE, TENN.

Builders of Lumber History.

NUMBER XLIV.

John Wheatley Love.

(See Portrait Supplement.)

The city of Nashville, Tenn., numbers among its industries some of the most important in the country today. The greatest of these is its hardwood lumber trade, which is of such magnitude as to make the city one of the foremost hardwood markets in the United States. Its location in the heart of the timber district of Tennessee, upon the Cumberland river, which taps the magnificent forests of that state and contiguous territory, makes it naturally a great operating and distributing point for lumber products, but in addition to this the prowess, public spirit and energy of its lumbermen-citizens have largely contributed to making Nashville the important factor it now is in the lumber business.

Notable among these "captains of industry" is John Wheatley Love, whose portrait his many associates and admirers in the trade will be glad to receive at the hands of the *HARDWOOD RECORD*.

Mr. Love was born in Nashville, April 30, 1866, of Virginia and Kentucky ancestry, being a lineal descendant of Col. James Love, of Revolutionary fame. He was reared in that city and received his education in the public schools there. His first acquaintance with the lumber business came when he entered the employ of his kinsman, Theodore Plummer, who then operated at Nashville under the style of Sutherland & Co. This first position was a very humble one—that of office boy.

In 1886 Mr. Plummer organized the Nashville Lumber Company, and gave young Love a position with the new house under another prominent Nashville man, M. F. Greene, of the Davidson-Benedict Company, who was then associated with this concern, as general bookkeeper. Shortly after making this change Mr. Love entered the office of the Edgefield & Nashville Manufacturing Company, manufacturers of lumber and furniture, as bookkeeper, but was obliged to give up his work in 1888 on account of failing health, which necessitated a change of climate. A year's sojourn in San Diego, Cal., proved of great benefit to him, and in 1889 he returned to act as manager for the Edgefield & Nashville concern.

In 1890 Mr. Love decided to enter the lumber trade on his own account, and accordingly organized the firm of J. W. Love & Co., to do a general lumber jobbing business. His next step was to buy out the Scottsville Lumber Company, located at Scottsville, Ky., a concern which manufactured large quantities of oak and poplar, and operated several small mills. These interests demanded that he move to Scottsville, where he lived for five years, or until 1895, returning at that time to Nashville, which he made headquarters for the management of the

Scottsville district operations and the jobbing business.

In 1899 the house of Love, Boyd & Co. was organized, with J. W. Love, his brother, Hamilton Love, and John W. Boyd as principals; some years later James D. Read was admitted to membership in the firm; all four gentlemen are still connected with it, acting as general manager, sales manager, timber expert, and sawmill superintendent, respectively. The company maintains a general office at Nashville, but operates largely in Kentucky, having yards at Scottsville, Ky., Westmoreland, Hartsville, Bon Aqua and

LEAF AND FRUIT OF PIN OAK.

Nashville, and producing about 100,000 feet of hardwood lumber every day. This output consists of poplar, oak, chestnut, hickory, ash, sycamore and red cedar, with quartered oak the specialty. The main yards are located at Scottsville, where the company carries from 5,000,000 to 10,000,000 feet of lumber in stock at all times, and a like quantity distributed among the various mill yards.

Mr. Love is president of the Nashville Tie & Cedar Company, large handlers of red cedar poles, posts, piling and railroad ties. Associated with him in this enterprise are the other members of the firm of Love, Boyd & Co., John B. Ransom & Co., and Walter Keith; the two first-named concerns handle out about 3,000 cars annually. Mr. Love is also president and principal owner of the Green River Coal & Coke Company of Island, Ky., which concern produces seven to eight hundred tons of coal daily; he is interested in other lumber enterprises, but the indus-

tries above named require most of his attention and energy.

A concern entirely outside the lumber field, of which Mr. Love is president, is the Markland Company, Limited, of Markland, Cape Forchu, Nova Scotia, which owns some very valuable property in that section, which it intends to develop into a seaside resort that will be second to none. A handsome hotel or "Summer Home" will be maintained, and the company operates a safe line of steamers between Yarmouth and Markland; many other advantages are offered for building cottages on the property. The promoters intend to beautify the land until, with its natural scenery, it shall be the garden spot of Nova Scotia.

Mr. Love was married in 1891 to Miss Wade of Kentucky; they have three children—Jack, Eleanor and Mary Hamilton. He is exceedingly domestic in his tastes, and to quote his own words, "can be found at home most of the time," when business does not absolutely demand his attention.

On meeting Mr. Love one is impressed with his bright and pleasing personality, and on better acquaintance invariably finds him to be the embodiment of energy and integrity. These characteristics have justly brought him to the high position he now occupies in the affairs of his native city, and in the confidence of his fellow lumbermen the country over.

The Hoo-Hoo Annual.

Chairman Jerome H. Sheip of Philadelphia, ex-officio head of the various committees of eastern Hoo-Hoo, having in charge the reception and entertainment of the order at Atlantic City in September next, has notified all committees to start active work in the matter of arrangements for the annual, which will occur Sept. 9, 10 and 11. The time intervening between the Philadelphia meeting in February, at which these committees were appointed, has been spent by Mr. Sheip and the various committee members in formulating general plans so that all arrangements can start off right foot. Mr. Sheip has just concluded a week's visit at Atlantic City and reports with much pleasure that he has secured the use of the Steel Pier at that famous watering resort for \$150. This is a big concession. The Bureau of Publicity & Information will also furnish Mr. Sheip with 5,000 booklets descriptive of Atlantic City—its various hotels and places of interest—which he will immediately distribute among the members of each Hoo-Hoo jurisdiction. Of course, Atlantic City requires no formal introduction in any section of the country, as its fame is world-wide and the annual will afford them an opportunity to spend a week or two at this popular resort.

In the next thirty days the Committee on Accommodations and Entertainment will meet and pass on the Steel Pier proposition, but it practically goes without saying that the convention will be held there. The finance and the other general committees will proceed with their work at once in order that plans may be pretty well matured before the summer vacation time.

Chairman Sheip will hold another big conclave in Philadelphia about the middle of May. The enthusiasm of the eastern members of the order for the success of the forthcoming annual is active and it is hoped that in view of the opportunities afforded for a good time through both the meeting and the resort at which it will be held there will be a large attendance of members of the order from all sections of the country.

How Things Have Changed.

By VAN B. PERRINE

Out here in Indiana, say some thirty years ago,
When you had cut your logs all up, to Chicago p'raps you'd go,
And there you'd sell your lumber to a jobber on the spot,
Who'd clean you up—buy everything—no matter what you'd got!
He didn't care about the wood, or how the boards were made;
He had the money every time—the cash, spot down, he paid.
Of course, they had inspection rules to measure lumber by,
You read them up, you read them down; you'd try and try and try
To figure out how you were "done"—the more that you reflected
The plainer the solution seemed—'twas "how it was inspected."

Next time you'd send your lumber East, most any place that way,
But soon you'd get a kick, in which commission men would say
That yard men found it graded low, but that, without a doubt,
They'd sent a bigger payment if you'd left the common out.
Next car you'd send the same old place, encouraged by such talk,
And mark the feet on every board, real plain, with nice, white chalk.
'Twas cherry lumber, clear and wide, that is, 'twas clear of knots,
But in New York they'd cull it down just for a few gum spots,
You'd ponder long on what was sent, and why it was rejected,
The sole idea your thinking brought—'twas "how it was inspected."

Next, to old Philadelphia, to Quakers good and square,
You'd send your lumber—but alas, they had inspectors there!
The man who put his rule across your boards, so clear and wide,
Could always find a knot or two, when turned the other side;
And then a little split, you know, would sometimes longer get;
However perfect stuff you sent, they'd find a flaw, you bet,
No matter where you shipped your boards—to this town or to that —
Though measured by a Quaker man, who wore a broad-brimmed hat,
Or by a Yankee, long and lean! Of course, there's no reflection
Meant on any town or rules—'twas "diff'rence in inspection."

INSPECTION AS SHIPPED.

INSPECTION AT DESTINATION

Next time, you shipped to Boston town, where Yankees are so smart,
But didn't find it paid you more than any other mart,
(Tho' let me say right here and now, for fear I might forget,
That Boston is a d—— good place to send your lumber yet.)
You shipped your product here and there, and shifted all around,
In hopes that finally, perhaps, some market could be found
Where rules were not in use that made your meagre profit flit
By grading down a board each time for tiny knot or split;
Where worm hole merely visible was worse than "standard knot,"
And boards that showed a little stain would "soon begin to rot."

Of course, all this I'm talking of was many years ago—
The mill man was an "easy mark," and also somewhat "slow."
Of the last attribute, I grant, sometimes he's still accused,
But for his "easy" traits, I'm sure he's rarely now abused.
He used to book some special bills, so mighty hard to get,
That if compelled to fill them out, he'd been a-sawing yet.
They called for lumber wide and long, the sawing quite correct,
And ended with the usual phrase—"Stock free from all defect."
For this, of course, was years ago, before the man reflected,
But now he turns them down, you know he's seen a few inspected.

Of late, things have been changed a lot—associations made—
The mill man and the dealer, too, can sell on National grade,
And ship his lumber anywhere, to North or South or West.
The question's not locality, but where the price is best.
'Tis so in case he sends it East, as every place, you know —
In old New York or down in Maine—the National grades will go.
They only want their money's worth—they know what grades will be,
Inspection hasn't changed so much, as any one can see,
Now, read the next line very slow, and say it with inflection,
The National grade that goes to-day's old Indiana inspection!

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Information About Hotels.

GRAND RAPIDS, MICH., April 19.—Editor HARDWOOD RECORD: Will you suggest to me the name of a desirable hotel at Atlantic City to patronize during the annual meeting of the National Hardwood Lumber Association? I shall be accompanied by my wife.

My wife and myself have spent a part of each summer at Atlantic City for many years, and have lived at many of the leading hotels. In my opinion the Hotel Strand, located at the end of Pennsylvania avenue, and within one block of the Steel Pier, where the convention will be held, is the best hotel for the money in Atlantic City. It is a modern structure, the table is bountifully supplied with well-cooked food, and the service is faultless. The rooms, though not large, are well-furnished and immaculately clean. The rates in this hotel for one person are from \$3 to \$4 per day; double rooms, \$6 to \$8 per day; rooms with bath, \$2 a day extra. These rates include both rooms and meals. There is no bar connected with this hostelry and hence ladies are not subjected to any possible offense by reason of this usual hotel appendage.—EDITOR.

P. S. There is a very good "coaling station" within a square of the Strand. I know the distance because when before dinner my wife goes to her room to primp, with the observation that she will be back in ten minutes, I am always able to meet her in the ladies' parlor on time. I know I can walk a block and return in six minutes, and I don't spend all the time walking. I'll show you the place, but if you can't find me, ask Clem Lloyd.

P. P. S. Another good feature about the Hotel Strand is H. L. Fairbairn, its manager. He is the easiest boniface in Atlantic City to coax money away from, and any man who goes to Atlantic City and don't have to get a check cashed before he gets away is a freak.—EDITOR.

Piling Wagon Stock.

SHENANDOAH, IA., May 3.—Editor HARDWOOD RECORD: There has been some question in the minds of some of our yard men as to the better way of piling green wagon stock, wagon axles in particular—some insisting that it is best to pile the axles all one way, with thin crossbars between; others insisting that they can be piled crosswise on each other with equally good results. Our method of piling is to pile them crosswise, but to elevate the outside axles about a quarter of an inch at each end, so that the weight of the pile is carried on the extreme corners at all times and there is a complete circulation of air around the axles except at the ends where they cross the elevated ones. Please give us some information through the medium of your publication relative to your

opinion of the matter. We would also like to know where we can dispose of short hickory squares, as in our work we are able to furnish quite a lot of 2-inch stuff in squares up to 6 feet in length.

COMPANY.

It is essential that wagon stock be made ready for use with a minimum of checking, and hence it must be seasoned slowly. There is no particular choice in the way axles are piled, between being cross-piled and put up on stickers. However, it is almost essential to paint the ends of axles with heavy red ochre or some equally good material, and that the piles are carefully roofed and the sides enclosed to protect them from the sun, at the same time leaving sufficient air space for ventilation. Again, it is best to have the stock piled well off the ground, with plenty of air underneath the piles. If a manufacturer has an operation for which he has a timber supply sufficient to last a number of years, the cheapest way to provide for seasoning the stock is to build sheds for the purpose.

We have supplied above correspondent with names of a few hickory buyers, and any others who can use the above described material should send in their names.—EDITOR.

Wants to Buy Locust.

HELENA, MONT., April 29.—Editor HARDWOOD RECORD: Can you advise me of a location where locust wood abounds in such quantity as to admit of the purchase of 1,500 to 5,000 cords at reasonable figures?

COMPANY.

The original center of growth of black locust was in southern Ohio, but today, the

The Financial Aspect of Forest Management.

Dr. C. A. Schenck of Biltmore, N. C., has recently issued an interesting booklet on Forest Management. Used in a limited sense this term deals with forest working plans only, or the determination and regulation of the sustained yield of timberlands. The author believes that American forest management should be considered along broader lines. It should determine upon the ways and means by which the desire of the owner relative to the use of his forest (for revenue, timber supply, shelter, pasture, ornament, water protection, game preserves) can best be accomplished. In the majority of cases the owner desires to draw from the forest the largest possible revenue. As a consequence American forest management will have to deal usually with the various means by which given forestal investments can be developed in a manner producing the highest dividends in the long run.

The rapidity of development depends upon the owner's financial ability to make desirable moves at proper times.

In many instances development is possible only with the help of money borrowed

center of the chief stand of this wood is in northern West Virginia. Of course, locust never grows in a pure stand, but is always intermingled with the oaks, chestnut, poplar, etc. Anyone interested in the above inquiry, or able to furnish the required stock, may have the address of the writer on application to this office.—EDITOR.

Wants Glued-Up Stock and Dowels.

WASHINGTON, N. J., May 3. Editor HARDWOOD RECORD: Please give us information of firms who make a specialty of making glued-up stock, as we wish to get into correspondence with them.

COMPANY.

LONDON, ENGLAND, April 20.—Editor HARDWOOD RECORD: We have inquiries for considerable quantities of built-up panel (3-ply) stock in various woods, also for white birch, maple and beech dowels, both for London and Liverpool, and we should feel much obliged if you could put us into communication with likely suppliers of such. If you print our inquiry in your "mail bag" do not mention our name, but kindly refer any inquirers to us. Yours truly,

COMPANY.

We have supplied the above correspondents with the names of several reliable houses manufacturing both panel stock and dowels. Any others wishing to communicate with them may have the addresses on application to this office.—EDITOR.

Wants Ash Oars.

ANTWERP, BELGIUM, April 18.—Editor HARDWOOD RECORD: We should be thankful to you if you could give us the address of some firms making boat oars out of ash.

COMPANY.

The writer has been supplied with a list of ash oar manufacturers, but any further addresses sent in will be forwarded.—EDITOR.

by the owner. Borrowed money frequently proves a curse to the owner of forests after the lapse of a few years. His policy of development is handcuffed by the necessity of meeting the indebtedness, year in and year out, irrespective of market and labor conditions. Forestry, in such cases, must be destructive. It must pay the bonds as they mature out of the substance of the forest.

Dr. Schenck has covered the many phases of the subject of forest management in his usual masterly and comprehensive manner; and, because of his thoroughly practical demonstrations of the theories which he promulgates, has come to be regarded as the Solon of forestry affairs in this country. Parts of two chapters—those on Financial Considerations and Forestal Investments—are herewith presented:

FINANCIAL CONSIDERATIONS.

Three kinds of increment compose the latent gross revenue obtained from any wood which is left to itself or which is placed under forestal care:

1. The quantity increment, depending solely on the amount of wood fibre formed.
2. The quality increment, depending solely on the difference of price shown in the same year

by logs of different diameters, per unit of contents.

3. The price increment, depending solely on the difference of value which the same log will exhibit in different years. This latter increment is influenced by increase of population and wealth, cheapened facilities of transportation, exhaustion of the virgin woods and declining purchasing power of gold.

As an illustration of price increment, the following figures may be of interest:

Wholesale Prices of Yellow Poplar, 4/4 Lumber, at Baltimore, N. C.

Quality.	In 1896.	In 1907.
Fas.	\$21.00	\$43.00 to \$52.00
Saps.	16.00	33.00
C. 1.	12.00	28.00
C. 2.	6.50	16.00

The expense of production, with modern mills and improved transportation, is as high in 1907 as it was in 1896, viz.: \$9 per 1,000 feet b. m. Assuming that certain trees have turned out 25 per cent of fas, 25 per cent saps, 25 per cent C. 1 and 25 per cent C. 2, the stumpage values in such trees was per 1,000 feet b. m.,

in 1896.	\$ 5.00
in 1907.	22.00

and has increased, consequently, at the rate of 30 per cent (simple interest, equalling 14 per cent of compound interest) per annum.

The increase in the value of many other forest products has been similarly phenomenal; and the question arises: Why is the owner of forests unwise enough to reduce this stumpage as long as the rise continues to be phenomenal—in excess of any dividend derivable from other investments? The answer frequently lies in three words: poverty, impatience, ignorance.

The enormous increase of gold production during the last twenty years promises to continue and to become more phenomenal. The director of the United States Mint reports (in 1904, p. 41) that the rise of wages does not act as an automatic check to gold production, and that the tendency of the expense of gold production continues to be downward. The effect of increasing gold supplies on commodity prices, wages, land values, mortgages, bonds, etc., is easily perceived. The owner of bonds and mortgages sinks to a lower level of revenue, whilst the owner of forests and farms remains (at least) equally wealthy.

The question will be asked, naturally: Does it pay to strive towards the establishment of an "ideal forest" towards the establishment of an impossibility? European foresters are apt to answer the question by an emphatic "Yes." The American forester might consider, before answering, four points:

(1) The great variety of conditions existing in the various sections of the various states from which the financial prospects of conservative forestry depend.

(2) The fact that conservatism in the forest cannot be expected, in the long run, to be as remunerative in this country as it is abroad unless the forest is rendered as safe as the German forests from fire, taxes and whimsical legislation.

(3) The fact that an ideal forest represents a large investment yielding a small rate of surplus revenue.

(4) The possibility that a forest now considered "ideal" as to rotation, composition, species, roads and so on, is apt to be considered deficient when the lapse of years has caused a change of the economical conditions surrounding the forest.

As long as our country develops by leaps and bounds, as long as the immediate future of our forests is dark, as long as other investments seem safer, simpler, better than forestal investments, the time has not arrived to strive toward "ideal forests."

The American forester can consider the forest only as "so much money invested." That forest is ideal which can be expected to yield, for a long time and perhaps forever, a safe, steady and high dividend on every dollar invested. In such a forest the various items of value (as trees, soil, roads, sawmills) appear as proper shares of the aggregate value.

The following may serve as an illustration:

	Per acre.
Value of stumpage.	8 7/15, or 77 1/2 per cent
Value of soil.	1.00, or 10 per cent
Value of roads.	.50, or 5 per cent
Value of sawmills.	.75, or 7 1/2 per cent

Total investment....\$10.00, or 100 per cent

The form of the ideal revenue depends on the owner's wish. The owner may or may not prefer an annual revenue of 40 cents per acre, obtained without decreasing the value of the stumpage, to a revenue of \$2, exhausting the forest in a dozen years. The owner alone can decide whether a dividend is safe enough, steady enough and high enough; his decision is based, naturally, on a comparison between forest reve-

nue and revenues obtainable from other investments.

The investor stakes his money on that enterprise in which he has the greatest confidence; and it is usual that the farmer puts his money in farms; the miner in mines; the railroad man in railroad stock; and the lumberman in forests.

The American lumberman is apt to consider investments in forestry (be it destructive or conservative) as ideal investments; outsiders are not prone to share this view.

As long as this country abounds in merchantable woods, the lumberman has an easy chance, after exhausting the stumpage on a given tract completely, to shift his capital to another tract, purchasing the stumpage thereon out of the moneys obtained by his operations conducted on the preceding tract. Usually he prefers, for obvious reasons, the purchase of timber to the purchase of the forest in fee simple. Under such conditions, the lumberman cannot be interested in the production of a second growth, nor in operations merely withdrawing trees working at a small rate of revenue.

The owners of the fee simple—farmers, town-folk, aliens—do not command any knowledge of forest investments; having paid the taxes on the land for a number of years without any returns, they embrace readily the first chance at obtaining "big returns." These big returns usually exceed the price by far at which the land was bought. Nevertheless, and just as usually, such "big returns" are a mere pittance.

The Forest Service of the United States has before it an enormous task; the task of proving to the owners of woodlands, who are ignorant of present and of prospective value of timber, the advisability of conservative lumbering.

Unfortunately, there do not exist anywhere associations of forest owners through which the members might be enlightened.

FORESTAL INVESTMENTS.

In the United States, no private activity having the forest for its object (*id est*, any forestry in a broad sense), is conceivable which does not mean to result in good financial returns. Forestry is business, and in business there is no room for sentiment. That forestry must be considered best which pays best.

Compared with other investments in realities (e. g., farms, mines, houses), forest investments show several undesirable features. They are difficult to control; they fail continuously to yield annual cash dividends; they are endangered by fires and cannot be insured against destruction; their products are not as absolutely indispensable to mankind as farm products, mine products or the shelter of a house; subdivision, joint ownership, sale in fee are difficult to arrange; mortgages or bonds on forests are hard to secure, and theft of timber is hard to prevent.

There are, on the other hand, many factors speaking in favor of forest investments: Notably the phenomenal increase in the value of timber brought about by an increase in population and continuous prosperity; the certainty of wood production, year in and year out, with which fires only can interfere; the strong possibility of more extended use of wood products in the manufacture of paper, packages, yarns, alcohol, sugar and food stuffs; the fact that the forest stores its own products away, free of charge, until it may please the owner to place them on the market; the rapid advance in the value of soil, etc.

According to the location of the forest and in a higher degree, according to species of trees and age of trees, the disadvantages connected with forest investments vary from case to case. They seem to weigh heavily on a second growth which yields no dividend whatever, is seriously endangered by fire, contains assets of prospective value only and offers no chance at extraordinary results. There exist in the United States enormous areas covered with second growth forests: What sense can there be, consequently, in investments tending to produce still more second growth?

It is obvious that the chances of first growth to be remunerative are, generally speaking, very good. This first growth does not increase in volume, the death rate of timber offsetting the birth rate; its increase in value, however, is certain; heavy logs are getting scarce, and they alone furnish lumber commanding the highest price; the degree to which the trees are utilized without waste increases from year to year; the difficulties of transportation are declining continuously. Is it to be wondered at, then, that many investors—and notably all lumbermen—are eager to invest in first growth whilst utterly unwilling to stake their money on second growth?

The question might be asked: Why are the owners reluctant to practice "conservative lumbering," a modus of logging which tends to secure the maximum sum total formed of net present returns and prospective values left? To take an illustration from the South: Why does the owner insist on cutting every pine making a log of over 6 inches at the small end? Why

does he refuse to leave all trees having a diameter under 20 inches and yielding over seven per cent of latent annual interest?

The explanation lies in the following points:

1. No seer can actually foretell the latent annual interest which trees of various diameters will yield in the immediate and in the more distant future. The forest dividend consists largely of price increment; the price increment of big trees is (vener business!) particularly good. There is little financial advantage in the utilization of big trees (if they are sound), as long as an annual price increment of ten per cent and more can be counted upon. A big tree having a stumpage value of \$12 per 1,000 feet b. m. is not mature *per se*. The fine poplars, oaks and chestnuts of the Southland must be considered immature, since their value is absolutely sure to increase at an annual rate of over ten per cent.

The assumption of the principle is wrong, it seems, that conservative lumbering should leave the smaller trees and remove the big trees; or that maturity can be determined by diameter limits.

The owner of woodlands (and the forester) can only venture a forecast, guessing at the future condition of the lumber market; big trees have—to say the least—the same chance with small trees to be money makers. And it is natural that the owner is inclined to either remove or to leave *all* of his trees.

2. Let us suppose that the owner leaves in the course of lumbering all trees having under 18 inches diameter representing a stumpage of 1,500 feet per acre. The reduction of the cut by 1,500 feet per acre has increased the logging expense per 1,000 feet of stumpage removed—an increase which can be considered only as a new investment added to the value of 1,500 feet per acre left.

For a number of years to come the small trees are non-removable, since it cannot pay in the near future to remove a handful of inferior lumber from an acre of ground. In the meantime, the property must be watched and taxes must be paid.

The owner leaving small trees embarks in a new venture which cannot be countermanded nor altered, for years to come, without serious loss; and which is subject to more serious dangers than the old venture.

Small trees form, prior to the removal of the big trees mixed with them, a tangible, merchantable asset. After the removal of the big trees, however, they can be considered only as an intangible asset, an asset of merely prospective value, an asset impossible to realize on.

3. After lumbering, small trees left are much more endangered by fire, windfall, insects, fungi than before lumbering. Where fires cannot be controlled at a reasonable expense, conservative lumbering is, under almost any circumstances, absolutely absurd.

4. The soil on which small trees are left—in order to grow into better dimensions and in order to act as seed trees for a third growth—cannot be used for pasture without interference with the object at stake.

5. Conditions may arise, before a second growth of small trees becomes merchantable, rendering the soil occupied by them valuable for farming purposes. In that case the small trees must be removed without any benefits accruing to the owner from such removal.

6. The taxes on land completely stripped are lower than the taxes on land conservatively lumbered. When a long number of years is required to convert a second growth left into a merchantable stand, the taxes annually paid "*ad valorem*" and increasing at a compound ratio, form a countercharge against the slowly increasing value of the second growth difficult to countenance.

Considering these various points, the financier cannot be called unwise when he prefers investments in first growth forest to those possible in second growth.

Many a man in the United States and in Canada has made a fortune by clever investments in first growth, whilst no one, practically, has had a chance to show dividends obtained from second growth forest (exceptions: farm wood lots; second growth pine in Virginia).

Under what conditions, it may be asked, can or does conservative lumbering pay in primeval woods?

The conditions are those under which any business proves to be remunerative. It may be a livery business, a hotel, a railroad or a music store; that business alone can be remunerative in which the parts composing the business investments are at hand in proper proportions; that business alone can be remunerative which is established in an economically proper site; that business alone can be remunerative which is safe from overtaxation and—by insurance or otherwise—safe from accidental destruction of its assets.

Properly arranged within, properly arranged without; properly insured against accidents a business *must* be remunerative. Applying this logic to conservative lumbering as a business it

is safe to state that it must be remunerative where its components are properly balanced and where an economic site is obtainable for its conduct.

The components of a business investment in conservative forestry are partly derived from nature (natural gifts, natural powers) and partly made by man. The natural components are usually at hand in primeval forests—which does not mean to say that they are at hand in proper amounts. The components made by man are added to those made by nature and consist, above all, in investments permanently employed for forest utilization.

In the case of well-stocked virgin woods, the aggregate final investment is likely to be lower than the original purchase price of the forest, when the virgin forest contains a surplus of mature timber exceeding in value the expense required for the establishment of the essential artificial components.

In the American forests, after the usual lumbering operations, very little is left of the natural components; as a consequence, relatively heavy additional investments are required (as a rule without a chance of deriving immediate revenue) in order to make the aggregate, in time to come, a permanent source of revenue.

The conclusion is simple: Unless the owner, before he begins to operate primeval woods, decides to embark in conservative forestry, the chances are slim that he will ever embark in it.

In German working plans the necessity of ascertaining the most opportune amount of capital to be invested in forestry is invariably overlooked. The explanation lies in the following:

1. The value of the growing timber and of the soil comprises, say, ninety-five per cent of the investment.

2. The means of transportation are already at hand, developed at a time at which financial considerations were not made in forestry.

News Miscellany.

Pending Mercantile Tax Bill in Pennsylvania

About two months ago twenty-four of the representative mercantile bodies of Philadelphia met in the Lumbermen's Exchange rooms and inaugurated a movement looking to the abolishment of the mercantile license tax, which they consider an objectionable one for several reasons. An allied association was accordingly formed by the various committees, with W. C. MacBride of Haney-White Company as chairman and Robert G. Kay, secretary, since which meetings have been held at various periods, which have been well attended by representatives of every trade organization in the city, and the result of which has been submitted to the committee of ways and means in Harrisburg, impressing upon this committee the universal opinion of the mercantile bodies in Philadelphia and throughout the state that the bill is a most obnoxious one, and for these reasons: It requires every business man to make public his private affairs; it returns to the state a too small proportion of the amount collected; and it was instituted at a time when the state needed the money, which condition does not now exist. The bill has passed a second reading before the House, and it is believed will pass the third; it will then go before the Senate, where it is surmised it will meet with some opposition.

A well attended meeting of the Allied association was held in the rooms of the Lumbermen's Exchange on April 30, at 1:30 p. m., William C. MacBride in the chair and Robert G. Kay, acting secretary. It was unanimously agreed to send representatives to appear before the senate committee having charge of this bill, and that the chairman and secretary be authorized, in event of the bill passing the House, to make arrangements for a day to be set aside when the representatives of this allied association could appear and be heard on this matter.

Belgian Furniture Business.

The most important industry in Belgium is the manufacture of furniture as carried on at Malines, writes Consul Atwell from Ghent, but its future seems to be dubious owing to the fact that large quantities of American lumber are imported annually for use in this business and prices are now reaching such a high altitude

The "period of installation" should cover as many years as are required to obtain the proper total and the proper composition of the forestal investment.

It is unfortunate that the period of installation in conservative forestry must comprise a number of years; whilst other investments can be fully installed in the course of a few weeks or a few months. Whosoever has traveled in recent years through Germany with an eye to the forest cannot be in doubt that every state and every county offers innumerable sites at which conservative forestry can be conducted as a remunerative business. Indeed, economic sites are at hand in Germany wheresoever the trees do not happen to occupy farming soil. Such was not the case in Germany two hundred years ago; and such is not the case in Russia, Canada and the United States today. Economic sites are those where stumpage values range high; where natural reproduction is easy; where the danger of fires is small; where the land is unfit for agriculture; where forest taxes are low. These conditions prevail, particularly, in the pineries of the coastal plains and in the hardwood forests of the higher Appalachian region.

It must be clearly understood that these conditions did not—or did not all—prevail some twenty years ago; further, that the absence of such conditions in the West *anno* 1907 does not render conservative forestry in the West for all times impossible. It is unfortunate, indeed, that the majority of these conditions arises only at a very late hour, to-wit, invariably after the general disappearance of the primeval woods. No man in the United States has had, so far, sufficient confidence in conservative lumbering to postpone the tapping of his primeval woods until the "economic site" for conservative lumbering had locally arisen.

The man who does well never live to regret his confidence.

that the cost of furniture production is greatly increased. Not only is this true of the lumber, however, but of other supplies entering into furniture manufacture—iron, copper, varnish, turpentine, glass and glue. Oak, walnut and mahogany have increased from thirty to forty per cent, according to kind and quality, and manufacturers, with a few exceptions, are without stocks on hand. Thus it is that with the increased prices necessarily demanded for the furniture itself, retail dealers are going very slow on purchases, with the result that many smaller manufacturers will be obliged to close down their factories for lack of orders, and this in turn will mean that nearly 3,000 workmen will be thrown out of employment.

New Oklahoma Hardwood House.

Announcement is made of the formation of the Jurden-Akin Lumber Company of Muskogee, Okla., with general offices in suite 5, Colorado building. The company is composed of R. L. Jurden, recently with the Penrod Walnut & Veneer Company of Kansas City, and Benjamin Akin, late with the K & P Lumber Company of Cincinnati. The company will manufacture and deal exclusively in hardwoods, making a specialty of oak, ash and cottonwood. It controls considerable stumpage and a number of mills, and announces that it will be able to give customers prompt shipments and honest grades.

The Grading Rules Conference.

According to plans announced in the last issue of the RECORD, a protracted conference between the inspection committees of the National Hardwood Lumber Association, the Indiana Hardwood Lumbermen's Association, the Michigan Hardwood Manufacturers' Association and the Wisconsin Hardwood Manufacturers' Association took place in the rooms of the National Hardwood Lumber Association this week. The sessions are still in progress as the HARDWOOD RECORD goes to press. However, it is understood that before adjournment on Wednesday evening an agreement was reached which contemplated recommending for adoption at the annual meeting of the National association, May 23 and 24, rules that will take into consideration

both sides of a piece of lumber in its inspection; the injection of a new grade between firsts and seconds and No. 1 common, to be known as selects; a give-and-take system of measurement on the half-inch basis, and the admission of 15 per cent of odd lengths in all grades. The only matter remaining unsettled for Thursday morning's session was specifications covering the poorer side of Nos. 1 and 2 common. It is regarded as certain that the representatives of the various associations will come to an amicable agreement and will go to Atlantic City fully pledged to attempt to secure the adoption of these recommendations.

Representing the National Hardwood Lumber Association at the conference are Theodore Fathauer of Chicago, H. C. Humphrey of Appleton, Wis., and D. F. Clark of Minneapolis. Representing Michigan are C. A. Bigelow of Bay City, F. A. Diggins of Cadillac, D. H. Day of Glen Haven and R. J. Clark of Sault Ste. Marie. Representing the Wisconsin manufacturers are M. J. Quinlan of Soperton, A. R. Owen of Owen, G. E. Foster of Mellen, B. W. Davis of Phillips, F. H. Pardoe of Wausau, B. F. McMillan of McMillan, E. J. Young of Madison, J. T. Barber of Eau Claire and Daniel Arpin of Grand Rapids. Representing the Indiana association are C. H. Barnaby of Greencastle and J. M. Pritchard of Indianapolis, respectively president and secretary of the organization.

Program N. H. L. A. Meeting at Atlantic City.

Secretary Fish of the National Hardwood Lumber Association has made public a most interesting program which will be carried out at the forthcoming annual meeting of his organization at Atlantic City, May 23 and 24. It is as follows:

THURSDAY, MAY 23.

- 11 a. m.—Reception of members and guests in convention hall at Steel Pier.
- 12 noon—Opening session. Address of welcome by Mayor Stoy of Atlantic City. Reports of officers.
- 1 p. m.—Intermission for luncheon.
- 2:30 p. m.—Reports of standing committees by respective chairmen. Address on "Associate Obligations," by Earl Palmer; on "A School of Inspection," by B. C. Currie, Jr.; on "Cherry Inspection," by W. L. Sikes.
- 8 p. m.—Smoker and entertainment for members at Rudolph Grotto.
- 8 p. m. Entertainment for ladies at Steel Pier.

FRIDAY, MAY 24.

- 9 a. m.—Members will reassemble.
- 10 a. m.—Call to order; report of committee on officers' reports; address on "The Wholesaler; Why He Is Necessary," by Robert W. Higbie; on "Forestry," William L. Hall; on "Rivers and Harbors," John A. Fox; introduction of new business.
- 1 p. m.—Intermission for luncheon.
- 2:30 p. m.—Unfinished business.
- 4:30 p. m.—Election of officers and directors.
- 5:30 p. m.—Adjournment.
- 6 p. m.—Meeting board of directors.
- 8 p. m.—Entertainment on Steel Pier for all.

Meeting National Lumber Manufacturers' Association.

It should not be forgotten that the annual meeting of the National Lumber Manufacturers' Association will be held in the Auditorium of the Jamestown Exposition grounds near Norfolk, Va., on Tuesday and Wednesday, May 28 and 29. The hotel headquarters of the delegates will be the Hotel Chamberlin, at Fortress Monroe, from which point they will be transported to the exposition grounds by steamer. Delegates to this convention from the Hardwood Manufacturers' Association of the United States are R. H. Vansant, Ashland, Ky.; John W. Love, Nashville, Tenn.; W. M. McCormick, Philadelphia, Pa.; J. W. Oakford, Scranton, Pa.;

Wm. Wilms, Chicago, Ill.; W. A. Gilchrist, Memphis, Tenn.; John B. Ransom, Nashville, Tenn., and Lewis Doster, secretary, Chicago, Ill.

Those from the Wisconsin Hardwood Lumbermen's Association are F. H. Pardoe, Wausau, Wis.; Edw. J. Young, Madison, Wis.; M. J. Quinlan, Soperton, Wis.; Geo. E. Foster, Mellen, Wis., and A. E. Beebe, secretary, McMillan, Wis.

All the other manufacturing lumber associations of the country affiliated with this organization will be represented by delegates.

Building Operations for April.

Building statistics from fifty-four leading cities throughout the country, officially reported to the American Contractor, Chicago, and tabulated show a gradual increase as the season progresses over similar reports for the same month in 1906, showing a widely distributed building activity for April. In the aggregate the gain, as compared with April, 1906, is a trifle over 5 per cent. Twenty-six cities show gains ranging from 6 to 199 per cent, and twenty-eight show a loss varying from 2 to 77 per cent.

City	April, 1907, cost.	April, 1906, cost.	Per cent gain.	Per cent loss.

Old Knoxville Landmark Gone.

One of the first structures built in the city of Knoxville and the first sawmill built in

Tennessee has just been torn away to permit the erection of a part of a modern mill plant, which will house the business of the T. M. Michaels Lumber & Manufacturing Company. This firm has been using the old mill as one of three until it was decided that its great age made it no longer safe.

It was built by George Harris, a mill man, also known as the author of the humorous book "Sutt Lovingood." John Craig used it for some time, and it was long known as "Craig's sawmill." Later it was taken over by S. T. Atkin, a pioneer lumber dealer and manufacturer, who occupied it for several years. During the flood of 1867—a well remembered epoch to those who lived along the Tennessee river—the old mill was partially carried away by the tide, as was also one of the planing machines which it contained. It was later removed further from the river bank and became the nucleus of the present Michael plant, several buildings having been placed around it, so that the original structure could not be seen by the passer-by.

During the long and honorable history of this old mill, great masses of woodwork have been turned out for all sorts of building purposes—from rough boarding and shingles to mantels and doors. The old structure is being torn down to make room for another more modern department.

Filer Hardwood Lumber Company.

The Filer Hardwood Lumber Company, a concern capitalized at \$1,000,000, was organized April 18 at Detroit, Mich. The company has acquired title to 80,000 acres of timber land in Arkansas, consisting of ash, cypress, pine, hickory and other varieties, the oak greatly predominating. This tract is said to be one of the finest hardwood propositions remaining in that section, and the cruiser's estimate shows nearly 800,000,000 feet of standing timber. The incorporators are: Frank Filer, James E. Danaher, B. A. Scott and F. F. Tillotson of Detroit; Edward L. Reel and F. W. Clements of Springfield, Mo., and Sidney Tremble of the banking house of Devitt, Tremble & Co., Chicago.

Important Timber Deal.

R. M. Smith & Co., the prominent hardwood lumber manufacturers of Parkersburg, W. Va., on April 23 completed negotiations with the Indiana Realty Company of Indianapolis whereby they come into possession of 20,000 acres of timber land in Louisiana. The purchase price was \$350,000, and it is estimated that there are about 100,000,000 feet of hardwood upon the tract. R. M. Smith & Co. intend to clear about 1,000 acres every year, and will commence operations at once.

Advance in Rates on Eastbound Freight.

It has been authoritatively stated by prominent railroad men that on and after June 1, 1907, a new schedule of rates on freight going from or through Chicago to eastern points will be put into effect, which will mean an advance of from ten to thirty per cent on lumber shipments. Commodity rates on lumber and other forest products have been eliminated and the rates of Class 6 have been substituted. An advance of 1 cent in the freight rate on hardwood lumber means that the transportation charge will be augmented by from 40 to 60 cents, while an increase of 5 cents a hundred is equivalent to a difference of from \$2 to \$3. These advances are based on minimum weights of 4,000 pounds and maximum 6,000 pounds to the thousand feet, and under this prospective classification all forest products will be listed and charges assessed on the basis of Class 6 rates, with the exception of valuable cabinet woods, no distinction being made on various kinds of lumber.

The rate from Chicago to Toledo and to Detroit will be advanced from 9 to 10 cents; to

Cincinnati and to Cleveland, from 10 to 12 cents; to Pittsburg and to Buffalo, from 12½ to 15 cents; to Philadelphia, from 18 to 23 cents; to Baltimore, from 17 to 22 cents; to New York, from 20 to 25 cents; to Boston, from 22 to 27 cents.

New North Carolina Enterprise.

One of the largest real estate deals made recently in the state was consummated at Wilkesboro, N. C., this week, the Giant Lumber Company, a newly organized concern, purchasing from T. B. Findley over 10,000 acres of fine timber lands. This property contains white pine, oak, poplar and chestnut of fine physics, and lies at the foot and in the coves of the Blue Ridge mountains on the Reddles river.

The lumber company is preparing to construct a flume from the railroad at North Wilkesboro up the river through the land. It will cost over \$30,000. When the lumber is sawed at the mill it will be floated to the railroad in this flume, a distance of eighteen miles. At least \$30,000 additional, and probably a much larger sum, will be put in sawmills, planing mills, box factories, etc., which the company will establish. Within a few weeks the company expects to expend on the work more than \$150,000. It will bring a large number of northerners to the section to engage in logging, cutting, fluming, manufacturing and selling the timber on this property.

The Giant Lumber Company is composed of J. M. Barnhardt and W. J. Palmer of Lenoir, N. C.; F. G. Harper of Peterson and E. P. Wharton of Greensboro, all men of prominence and wealth. The company will conduct a lumber, timber and sawmill business. Mr. Barnhardt is one of the pioneer lumbermen of the state and has been very successful in the business. The personnel of the company is altogether capable of making the enterprise one of the leading concerns in North Carolina. The capital stock is placed at \$125,000.

N. W. L. D. A. Committees.

Among other committees which President Hastings of the National Wholesale Lumber Dealers' Association has appointed is a hardwood inspection committee, of which J. V. Stimson of Huntington, Ind., is chairman, and the other members are: J. L. Lytle, Pittsburg; J. E. Stark, Memphis; R. F. Kreinheder, Buffalo; W. M. Weston, Boston, and H. P. Wiborg, Cincinnati. F. R. Babcock, who has served the railroad and transportation committee as chairman so admirably during the past year, has been reappointed to that office. M. P. Wheeler of Endeavor, Pa., becomes chairman of the forestry committee, with R. C. Lippincott as chairman of the advisory committee to the American Forestry Association.

Embarrassment of Cincinnati Company.

W. A. Bennett has been appointed receiver of the Pease Company of Cincinnati and announces that the financial embarrassment of the Standard Millwork Company has produced this similar condition with the Pease Company. The creditors of the Standard Millwork Company have agreed upon a plan by which that business is to be continued under the supervision of a creditor's committee. In order to protect the interests of all creditors alike, the common pleas court of Hamilton county has appointed Mr. Bennett receiver of the assets of the Pease Company, with authority to carry on the business as a going concern pending a sale of the property. The appointment was made on application of C. H. Pease, president and large stockholder of the company. An inventory is now in preparation and the receiver states that he will soon be able to make a correct statement of the assets and liabilities.

In the light of present information Mr. Bennett feels justified in making the statement that the claims against the Pease Company will be

paid in full and that a balance will be left to go to the stockholders. Creditors are requested to file their claims, duly verified, with the receiver on or before June 28.

Change in Prominent Hardwood House.

That veteran and sterling hardwood lumber concern, the Heath, Witbeck Company, has been changed in its personnel by the addition of

to make the shipments with the "picks all in." Its specialty is mixed carloads for direct and prompt shipment to the trade.

In the change of affairs of the Heath, Witbeck Company noted, this concern takes over the stock and business of the Evansville Lumber Company formerly located at Evansville, Ky., and discontinues entirely the Chicago yard. The individuals associated with the Heath, Witbeck Company are almost too well known to need

Largest Order for Boilers.

The largest order for water tube boilers ever let by the United States government was awarded during the closing hours of Congress to the Atlas Engine Works of Indianapolis. It was for the boiler equipment of the new central power plant located in Garfield Park at Washington, which when completed is to furnish heat, light and power for the Capitol and surrounding buildings—the new Senate and House office buildings, and the Congressional Library. The purchase includes sixteen high-pressure Atlas water tube boilers of approximately 600 H. P. each. They will be erected in groups of two and will be equipped with Roney stokers and Foster super-heaters, necessary because of the exceptionally high degree superheat called for in the special turbines to be used. Deliveries will commence on August 1 and it is expected the plant will be ready for operation by the first of the next year. J. G. White & Co. of New York were the government's consulting engineers on this work.

Miscellaneous Notes.

The Bay City Colonial Porch Column Company of Bay City, Mich., will erect a large plant there.

The Chippewa Falls Chair Company of Chippewa Falls, Wis., has been formed by George Ganser and others and will erect a new factory.

A. L. Davison of Beaver, Mo., proposes to establish a large spoke factory at Rolla, Mo.

The Oklahoma City Desk Manufacturing Company has been incorporated at Oklahoma City, Okla., with a capital stock of \$250,000 by Alvin O. Bowers and others.

A new furniture factory with a capital of \$25,000 has been incorporated at Allegan, Mich., by Fred I. Chichester and others. It is to be known as the Allegan Furniture Company.

The Twentieth Century Casket Company of Findlay, O., is planning to enlarge its plant. John D. Renshler is manager.

The Cream City Casket Company of Milwaukee, Wis., has been incorporated by Joseph J. Rademacher and others with a capital stock of \$35,000.

Fire destroyed the planing mill of the Swann-Day Lumber Company at Jackson, Ky., recently.

The Buchanan-Brewster Furniture Manufacturing Company of Kansas City, Mo., has been incorporated with a capital stock of \$100,000. I. J. Buchanan is one of the incorporators.

The Smith & Nixon Piano factory at Louisville, Ky., was destroyed by fire a few days ago.

The Sioux City Casket Company is erecting a large plant at Sioux City, Iowa.

George A. Myers and others have incorporated the Aurora Mantel Manufacturing Company at Aurora, Ill., with a capital of \$25,000.

G. M. Basler of Bloomfield, Ill., will erect a factory at Jonesboro, Ark., for the purpose of manufacturing hubs. The plant will cost about \$25,000.

The Paoli Spoke Company of Paoli, Ind., has been incorporated with a capital of \$25,000. Ernest Stout is one of the incorporators.

The Boyertown Burial Casket Company of Boyertown, Pa., will erect a new factory to cost \$180,000.

The Commercial Vehicle Manufacturing Company of Springfield, Ill., has been incorporated with a capital stock of \$60,000 by Harry Goodman and others.

One of the finest exhibits shown at the Jamestown Exposition is that of the Virginia Mineral & Timber Association, which was organized at Roanoke on November 24, 1906, for the purpose of exploiting the resources of Virginia and to show the progression of her mineral and timber operations. The railroad companies, the mine owners and the timber producers joined their efforts with those of Governor Swanson, and the coöperation and liberal responses which have been forthcoming have been productive of the splendid exhibit which is now being shown.

Four carloads of maple logs were recently shipped to Glasgow, Scotland, from Nashville.

EDWARD HEATH, CHICAGO.

CLARENCE BOYLE, CHICAGO.

Clarence Boyle, who has acquired an interest in the company, and brought about some official changes. C. H. Wolfe has resigned as secretary and the officers of the company are now as follows: Edward Heath, president and treasurer; Clarence Boyle, vice president and purchasing agent; C. H. Wolfe, assistant treasurer and sales manager; C. F. Holle, secretary. The general offices will be continued at Room 408-9,

recurring mention. Edward Heath has been in the hardwood trade in Chicago for well toward twenty years, and associated with him during nearly all this period has been C. H. Wolfe. Clarence Boyle has for years been a well-known figure in Chicago hardwood circles and Mr. Holle, the most recent ally of this concern, was brought up in the lumber business in Colorado, but has served four years' apprenticeship with

C. H. WOLFE, CHICAGO.

C. F. HOLLE, CHICAGO.

Willoughby building, corner of Michigan and East Madison street, and the general assembling yards of the company have all been consolidated at Thebes, Ill., where it carries a stock of about 15,000,000 feet. The company's specialties are oak, gum, ash and cypress. It maintains a dry kiln at its Thebes plant and is in a position to ship either air or kiln dried stock, but from the fact that it operates no planing mill guarantees

the Heath-Witbeck Company at its various distributing yards.

The company in addition to its large domestic trade has an excellent foreign business and Mr. Heath spends a part of each year in Europe. It is his intention to sail for Liverpool about January 1 and he will spend the greater portion of the summer in adding to the foreign clients of his house.

Mich. They will be used for rolls in large wall paper manufacturing institutions. The design for the paper is engraved on the maple cylinder and the process of reproduction is similar to that of ordinary printing.

A new and handsome imported wood, which bids fair to be very popular for fine cabinet work, is the Tasmanian myrtle. It is of a rich pinkish color, hard and close grained.

The Red River section of Texas is shipping considerable walnut timber to the Liverpool market. A large quantity of the wood, purchased from farmers in the neighborhood, was shipped from Annona last month. The Zeigler Saw Mill Company of Richmond, Tex., recently shipped a fine lot of ash timber to the Houston market.

The Lansing Veneer Company has purchased over two carloads of black walnut from farmers in the vicinity of Chelsea, Mich., which are being delivered to the Michigan Central for shipment.

The Grand Rapids-Oregon Timber Company has been formed at Grand Rapids, Mich., for the purpose of dealing in timber lands. It is capitalized at \$80,000. The stockholders, all of Grand Rapids, are as follows: A. G. Dickinson, F. I. Nichols, W. E. Cox, C. H. Walker, J. H. Walker, J. R. Taylor, J. H. Haak, C. A. Coyle, Adrian Otte, Edward Ansonge, F. H. Nichols, P. H. Travis, C. L. Grinnell, L. T. Wilmarth, W. E. Gill and B. B. Luten.

Consul-General Richard Guenther of Frankfurt, Germany, reports that near Algiers, Morocco, there is a large plantation of soap trees, from which several thousand tons of berries are gathered annually. This fruit is used for making an extract which may be destined to be of great service for domestic purposes, since it will clean linen, silk and colored embroideries much better than ordinary soap.

The Southwestern Lumber Company, a New Jersey concern, has purchased 32,000 acres of hardwood timber land in Calcasieu parish, Louisiana, for the sum of \$271,580. The land was the property of the Orange Land Company and J. B. Watson.

The Virginia Timber Company has commenced operation near Kilbourne, Ill. A sawmill plant and other necessary machinery for the manufacture of hardwood lumber will be installed and a mile of railroad track built. The company owns 1,000 acres of timber land along the Sangamon river.

The Henry Quellmalz Lumber and Manufacturing Company has been formed at St. Louis, Mo., to manufacture and deal in wagons, woodwork, etc., and to establish sawmills; the capital stock is \$100,000.

The St. Louis Woodwork Manufacturing Company has been organized at St. Louis with a capital of \$10,000. The incorporators are E. P. E. R. and C. A. Maule.

The Pennsylvania railroad will expend in the neighborhood of \$4,000,000 for wooden cross-ties this year.

The Straus sawmill, near Coleman, Wis., was destroyed by fire recently, entailing a total loss of \$5,000.

The Chicago Tie and Timber Preserving Company has been incorporated in that city by E. E. Gray, C. P. Tallmadge and E. Murray. It will deal in and treat railroad ties and timber and is capitalized at \$60,000.

Nineteen girls employed in the clothes pin department of the Oval Wood Dish Company's plant at Traverse City, Mich., went on a strike week before last, which necessitated shutting down that branch of the big concern. They demanded a "raise" of 10 cents a day, but were refused, although they were offered their old positions back again at the same wages. The girls refused to take them, however, and were replaced by new employees.

Another buried forest has just been brought to light near Peterborough, England. Oak trees, which have been buried for perhaps two thousand

years, have been discovered at a depth of seven feet. The wood is extremely hard, as is usually the case with these buried timbers, and can only be worked by machinery, as it turns the edge of an ax.

The H. M. Hoskins Lumber Company of Bristol, Va., which was incorporated April 4 with a capital stock of \$25,000, elected H. M. Hoskins president, C. A. Rebyburn vice-president and general manager and F. W. Kelly secretary. The company will erect a band sawmill of a capacity of 25,000 feet per day and three circular sawmills, each of a capacity of 10,000 to 12,000 feet.

C. C. Hagemeyer of Butler, Ky., H. L. Mickle of Highlands, Hall Hagemeyer of Covington and Lurancy Mickle of Highlands have incorporated the H. L. Mickle Lumber Company at Covington, Ky., capitalized at \$50,000.

The Alabama Black Locust Pin Company has been organized at Fort Payne, Ala., with E. Cochran as president and J. G. Bohling as secretary and treasurer. A factory has been built and the concern is now manufacturing locust and oak insulator pins and oak brackets.

The Nelson Lumber Company has been incorporated at Johnson City, Tenn., with a capital of \$50,000 by J. A. Summers, Guy L. Smith, L. W. Missimer and others.

The Sunflower Lumber Company will establish a sawmill at Sunflower, Ala., with a daily capacity of 25,000 feet to develop 4,000 acres of pine and hardwood timber lands. They propose to add a kiln and planer. C. L. Flora, formerly of Tiffin, O., is general manager.

The Genessee, New York, valley is a natural black walnut belt, but the great demand for trees for the German export trade is causing them to be rapidly cut down. They are used abroad for veneers, and are given a very high polish in the construction of fine furniture. For large black walnut trees as much as \$100 has been paid, although the price of average trees is about \$35.

The Sabine Lumber Company of Lake Charles, La., has been formed with a capital stock of \$200,000 to saw hardwood from 16,000 acres of land recently acquired from the receiver of the Chicago-Texas Land & Lumber Company. This land lies in the Sabine bottoms in the western part of the parish. With the purchase was included a hardwood mill at Merryville, on an extension of the Santa Fe. The company will improve this mill and make a specialty of quarter-sawed oak.

The Cadillac Veneer Company of Cadillac, Mich., is now running twelve hours a day three days in the week, and still cannot keep up to its orders for panels. At present eighty men are on the pay roll.

The veneer factory of Mulholland & Co. at Sundridge, Ontario, was totally destroyed by fire recently. The plant was valued at \$16,000 and only a small portion of the loss was covered by insurance.

The Chandlerville Hardwood Lumber Company of Chandlerville, Ill., has decided to move its offices to Springfield, where it will have quarters in the Booth Building. A large tract of timber near Havana will be purchased and the mill moved to that point as soon as the supply of timber near its present site is exhausted. E. A. Williams is president of the company.

The Seamans-Kent Company of Meaford, Ontario, is establishing a woodworking plant which will make sash and doors, blinds, hardwood flooring, etc. It will cost in the neighborhood of \$100,000 and will employ 100 men.

The Underwood Veneer Company, of Wausau, Wis., cut 1,250,000 feet of hardwood logs during the last winter, in addition to the large supplies which it purchased from others. This will insure keeping the plant busy during the coming summer.

The principals of the Paddock Lumber Company of Pana, Ill., have returned from a trip

to Arkansas, where they purchased about 9,000 acres of fine timber land which contains about 10,000,000 feet of hardwood and 60,000,000 of yellow pine. They will develop the property at once, it is understood.

F. W. Teal and Felix Teal, formerly of Owosso, Mich., but late of Baltimore, have returned to the former place and will enter into the manufacture of veneer. They are experienced in this line, having been with the Estey Manufacturing Company before its destruction by fire a year ago.

Of the total area of Ireland, about 1.5 per cent is wooded. The latest return shows 301,132 acres of forests, of which 44,227 are larch, 31,281 fir, 16,201 spruce, 3,230 pine, 22,536 oak, 7,521 ash, 9,533 beech, 2,756 elm, 2,613 sycamore, and 161,244 "mixed."

The name of the Kenova-Portsmouth Rim & Spoke Company of Kenova, W. Va., manufacturer of quarter-sawed oak veneer, thin lumber and hickory spokes, has been changed to the Three States Manufacturing Company. There is no change in the institution other than in name. John T. Breece continues as president, G. E. Breece as vice-president, J. W. Breece as secretary, and W. W. Breece as treasurer and manager.

Judge A. M. Post, the referee appointed by the Nebraska Supreme Court to take testimony on the alleged lumber trust in that state, made a report recently, finding that the Nebraska Lumber Dealers' Association, as now maintained, is not contrary to any of the state laws relating to trusts. The judge made a thorough investigation, covering several months' time, and if the Supreme Court supports the referee the suits will of necessity be dismissed.

City Forester Boddy, recently appointed to that position by the city of Cleveland, O., has commenced the planting of trees along the streets. A large shipment was received last week and planting started on both the East and West sides. The public square will be beautified by the addition of several handsome specimens.

A correspondent in Bellingham, Wash., writes that the foreign trade shows an increase of 105,000,000 feet of lumber over the exports of 1905. The heaviest buyers were Australia and China. The former imported 110,000,000 feet and the latter but little less. Australia increased its importations by 47,000,000 feet, Siberia by 5,000,000 feet. Japan's receipts, however, show a loss of 2,900,000 feet, and it appears that trade with that country has passed from the hands of Pacific coast lumbermen. Japan has invaded Manchurian forests, from which it evidently intends to supply its needs and those of China. The loss of Chinese trade would be deplorable, for it has been constantly increasing. Hawaii, Alaska and the Philippines substantially increased their imports, and the outlook for their business continues excellent.

One of the new and progressive lumber concerns of Wisconsin is the Blodgett-Booth Lumber Company of Marshfield, manufacturers and wholesalers of hardwood and hemlock. The company was incorporated in November last and is made up of C. E. Blodgett, president, N. E. Blodgett and George D. Booth, secretary and treasurer.

J. W. Romine has recently engaged in the wholesale hardwood lumber business at Parkersburg, W. Va., with offices in the Citizens' National Bank Building.

The Bayspring Spoke & Manufacturing Company has been incorporated with \$20,000 capital stock to engage in the manufacture of spokes and other articles of hardwood at Bayspring, Miss.

The Forestry Commission of the province of Quebec has planted nine million forest trees along the Ottawa river.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

D. S. Hutchinson, sales manager of the Nashville Hardwood Flooring Company, has just returned to Nashville from an extended sales trip as far as the chief cities of the Pacific coast, where he had an exceptionally good business for the Acorn Brand of flooring.

F. R. Babcock of Pittsburg, chairman of the railroad and transportation committee of the National Wholesale Lumber Dealers' Association, suggests that there will likely be some advances made by railroads on lumber rates in the near future, and that it is advisable for every lumberman to protect his interests as far as possible. He therefore thinks it would be wise in making sales or naming prices to endorse with a rubber stamp all such documents with the notation, "All quotations made and orders accepted are based on present freight rates." This notation, he contends, will properly safeguard lumbermen's interests and provide for proper distribution of an increased cost of transportation. The suggestion of Mr. Babcock seems an eminently wise one.

W. M. Piatt, formerly associated with W. E. Barrett & Co., has gone into the wholesale and commission lumber business on his own account. His office is Room 928, Stock Exchange, Chicago. Mr. Piatt is a gentleman whose business methods have always been clean-cut; he has had considerable experience in the lumber business and his many friends wish him the greatest possible success in his new undertaking.

The HARDWOOD RECORD had a call a few days ago from E. A. Armstrong, the well-known hardwood salesman of Kokomo, Ind.

A. F. Anderson, the hardwood operator of Cadillac, Mich., dropped into the HARDWOOD RECORD office last week on his way home from an extended Pacific coast trip. Mr. Anderson has been engaged for some time in rounding out a large timber purchase in Oregon, and has now secured about 10,000 acres. He has three or four years' more cut of hardwoods in the Cadillac district, after which he expects to remove to the coast and enter lumber operations there. On his recent trip Mr. Anderson was accompanied by his family.

W. A. Gilchrist of the Three States Lumber Company of Memphis was registered at the Annex May 8.

Among the Chicago visitors within the last few days were C. A. Gilbert and Arthur Boutell of the Saginaw Manufacturing Company of Saginaw, Mich., the foremost makers of wood split pulleys.

W. A. McLean of the Wood Mosaic Flooring & Lumber Company, New Albany, Ind., was in town Wednesday.

Bliss & Van Auken of Saginaw, the well-known producers of the Wolverine Brand of maple flooring, have sent monthly calendars out as an advertising medium for several years. This season they portray the Teddy bears in various exploits, and make unique and attractive advertising mediums.

A few days ago the HARDWOOD RECORD had the pleasure of a call from John W. Woyka of John W. Woyka & Co. of Glasgow, Scotland, who is making an extended trip throughout the United States and Canada, not only making direct purchases of lumber for his Scottish trade, which includes many varieties of hard and soft woods, but has also purchased high-class veneers extensively. Mr. Woyka also is marketing in this country mahogany logs and lumber and incidentally is introducing to the jobbing trade a three-ply veneer made of alder wood which his house produces in Russia. The wood has the general appearance of basswood, but is almost as dense and strong as birch. This three-ply stock is cemented together with waterproof material and is an excellent piece of laminated work. It is particularly well suited to drawer backs and bottoms, mirror backs, etc. The surprising feature about the material is that it can be laid down in this country, in spite of an import

duty of 25 per cent, at slightly above \$20 a thousand feet, in 3-16 thicknesses. This is the fifth trip to this country that has been made by a member of Mr. Woyka's concern. Mr. Woyka reached New York on April 15, and since that time has visited Baltimore, Cincinnati, Columbus, Louisville, Indianapolis and Chicago. He will continue his tour to Ottawa, Montreal and Quebec, and will sail for home within the month from New York.

A pleasant caller from "the other side" on April 27 was Ralph Shirley, a director of the Timber Trades Journal of London.

Two new inspectors have been appointed for the Chicago market by the officials of the National Hardwood Lumber Association, making three resident inspectors for this city. They are F. R. Burk of Lexington, Ky., who formerly covered eastern Tennessee inspection for the association, and George Kelley, a well-known inspector and lumberman of Chicago.

The Henry Sanders Company of this city, a large manufacturer of built-up columns, recently increased its capital stock from \$25,000 to \$75,000. This concern enjoys a wide trade in its line which is the direct result of its expert manner of manufacture.

Victor Thrane of the well-known house of J. D. Lacey & Co., timber brokers at Chicago, New Orleans and Portland, Ore., has recently been east on business connected with the purchase of large Oregon properties by W. W. Mitchell, Cadillac, Mich. Mr. Thrane discussed in an interesting manner the coming timber shortage of the country and said that at the present rate of cutting based upon the standing timber now left in the country only about a quarter of a century would elapse before something would have to be found to take the place of wood, unless the government enforces a vigorous reforestation policy.

Frederic Wilbert, president of the Southern Cypress Manufacturers' Association, has called a meeting for all members for May 15 and 16, at the St. Charles Hotel, New Orleans, the first session to be called at 10:30 a. m. A large number of important matters will be under consideration, and all members are strongly urged to attend the meeting, although in case of necessary absence proxies may represent them, but no member may vote more than two proxies. Changes in grading rules will come up, and it is essential that there be a full attendance.

A meeting of the executive board of the Hardwood Manufacturers' Association of the United States will be held at the Grand Hotel, Cincinnati, on Saturday, May 11. It is expected that the meeting will be attended by every member of the board.

The HARDWOOD RECORD acknowledges receipt of an invitation to be present at the forthcoming Atlantic City meeting of the National Hardwood Lumber Association, May 23 and 24, at the hands of W. H. Russe, president.

The RECORD is in receipt of a very handsomely printed and illustrated booklet from T. G. Winnett, general freight and passenger agent of the Detroit & Mackinac railway, whose headquarters are at Bay City, Mich. The book describes and pictures the scenery along the line of the Turtle Route, and gives a large amount of information that would appeal to everyone interested in gun or rod. Copies of this handsome book may be obtained on application to Mr. Winnett.

Apparently owing to the fact that some of the lumber mutual insurance companies have removed their headquarters from 66 Broadway there has been a rumor that the location of the Lumber Underwriters' offices has been changed. Such is not the case; they have not moved from 66 Broadway, where they have been located for more than eight years, but on the contrary have recently renewed their lease and enlarged their

offices because of increased business. The management of this company remains with E. F. Perry, attorney in fact; Lewis Dill, Robt. C. Lippincott and Robt. W. Higbie continuing as executive committee.

Milton Miller of Miller Brothers is spending some time at their mills in Macon, Miss.

John M. Dawson has joined the force of Schultz Bros. & Cowen. He left the city this week for a trip through the South on the company's business.

Park, Richmond & Co. have moved their offices from 410 Monadnock building to 926 in the same building.

A. W. Wylie, wholesale dealer whose offices are in the Fisher building, reports that business is very good with him. Mr. Wylie makes a specialty of oak, gum and yellow pine. He says that dry stock is hard to get just now.

F. S. Hendrickson of the Hendrickson Lumber Company, whose offices are in the Masonic Temple, states that business is in splendid shape, though the rains in the South make logging difficult.

James C. Cowen leaves the early part of next week for a trip through Virginia, where the Schultz Bros. & Cowen mills are located. He will take in the Atlantic City convention on his way home.

John Schoen of the Columbia Hardwood Lumber Company states that business has eased off some this month. Speaking of the railroad situation, Mr. Schoen said that switching charges have been advanced. A short time ago they paid twenty cents per ton and are now compelled to pay sixty cents for the same work. Situated as their yards are on the north side of the city and on a railroad it sometimes takes longer to switch a car after it has reached Chicago than it does to get it from the mills.

R. A. Hooton, one of the latest wholesalers to enter this market, states that he now has his business in shape to handle hardwoods. All the buying will be at the home office. The yellow pine end of the business will be handled by the Interior Lumber Company of St. Louis, Mo. The office of this allied company is located at 1208 Wright building. The officers of the company are: R. A. Hooton, Chicago, president; J. F. Oldham, St. Louis, vice president and general manager, and L. D. Walker, St. Louis, secretary and treasurer.

Fred Jeffries of the Chicago Car Lumber Company in the Pullman building said that business was good. The car situation is considerably better than it has been, he says; especially this is true of the shipments from the Coast. This company has just secured a tract of 51,000 acres of high quality timber in Louisiana and will erect a mill at Forest. At present the lines of the tract are being surveyed and the details of the mill have not as yet been decided. The timber on the property consists of oak, ash and gum. W. B. Peckman will be manager of the plant. They will commence building the railroad very soon.

A. H. Ruth, Chicago manager of the G. W. Jones Lumber Company of Appleton, Wis., has just returned from a trip through the North. He visited the company's mills and stated that they were very busy at all the plants. Those in the South have difficulty in getting logs, though they have not been obliged to shut down for want of material.

J. N. Woodbury, manager of E. B. Lombard in the Railway Exchange building, states that business is keeping up in excellent shape. He has several large contracts on hand.

Boston.

Several of the hardwood lumbermen of Boston are planning to attend the annual convention of the National Hardwood Lumber Association, which will be held at Atlantic City, N. J., May 23 and 24. John M. Woods will be accompanied on this trip by Mrs. Woods.

The New Hampshire Lumbermen's Association held a meeting in Manchester, N. H., on

April. The prominent guest of the association was Lucius Tuttle of the Boston & Maine Railroad. President Tuttle gave a very interesting talk. Among the new members elected were: M. W. Hart, hardwood dealer, Boston; Nathaniel P. Beman, Chelsea, Mass.; C. M. Howlett, Cambridge, Mass.; C. J. Sargent, Wilmington, Mass.; C. J. Kennedy, Worcester, Mass.; and Charles C. Batchelder, Boston, treasurer of the Boston Lumber Company. In addition to the above several New Hampshire lumber dealers were admitted to membership.

Mr. Mead of Mead & Speer, Pittsburg, Pa., spent several days in Boston recently.

The Connecticut River Lumber Company, whose large sawmill at Mt. Tom, Mass., was destroyed by fire recently, will rebuild the structure shortly. Until this is completed the company will get out all its orders at the Holyoke mill.

The Atlantic Lumber Company, dealers in hardwoods and North Carolina pine, have removed from 2 Kilby street to the Mason Building.

The woodworking plant of John B. Moran, Valley Falls, R. I., has been destroyed by fire, entailing a loss of about \$30,000.

A large lumber deal in which Massachusetts interests are prominent has just been consummated in Quebec. The sale of timber lands comprised in all about ninety square miles and the buyers have an option on about fifty-five additional square miles. The purchasers are said to be A. C. Dutton & Co. and John Fenderson & Co., both of Springfield, Mass.

The Steep Falls Lumber Company has been incorporated in Portland with a capital stock of \$10,000. The promoters are William M. Tucker, Roscow S. Emery and Thomas J. Brackett.

New York.

Insignificant labor troubles have broken out in various sections of the metropolitan district during the past fortnight among lumber handlers and teamsters and the employees of several firms have been called out, but in every instance of such proceedings the firm immediately replaced their men and have the situation well in hand, and to date there has been no serious interruption of business. It is not believed that the trouble will grow or exceed the present limits and therefore little is feared in the way of any disturbance to business generally in that particular.

C. E. Lloyd, Jr., of Philadelphia, chairman of the entertainment committee for the reception of the National Hardwood Lumber Association, was a visitor in town last week rounding up some final details. While here he called attention to the fact that the Monticellor hotel of Atlantic City has been issuing an announcement to the effect that it is headquarters for the National convention, which he absolutely denies, and which denial he wishes to make public with the further announcement that the hotel in question has no authority nor has any hotel the authority to make such a claim. Mr. Lloyd was also disappointed over the railroads failing to comply with their original promise for reduced rates on the certificate plan. He hopes, however, that the railroad officials may be shown the error of their ways and that privileges as promised will be accorded.

The proposed advance in freight rates of five cents from Central Freight Association territory to eastern states, effective June 1, has not created a great deal of stir in local lumber circles, as the proposed advance will be of direct benefit to shippers from the eastern wholesale markets, giving them a distinct advantage over western shippers and to that extent is a benefit to the Buffalo, Tonawanda and other eastern wholesale markets as against western competition.

The new tariffs just issued by the Canadian rail lines in conjunction with the Williams Line,

water route, from Albany to the Metropolitan District place lumber tonnage on the weight basis of so much per hundred pounds as against the measurement basis of so much per thousand feet as heretofore. This same action was taken by the New York Central from Adirondack points last year, and now that the Canadian lines have followed suit the entire northern traffic is now on the weight basis. The schedule of rates issued accompanying the new weight basis has again been slightly advanced, but as a general proposition the new weight rates will about equal the old measurement rates. It will be more difficult to adjust differences under the new arrangement and the possibility of error in weights, etc., will be increased rather than diminished by reason of the new arrangement, but shippers are hoping that the general operation of the new schedule will not work to any material disadvantage.

The Parker-Bothner Milling Company has been incorporated in this city with a capital of \$30,000 to manufacture mouldings and woodwork. The incorporators are E. C. and K. W. Parker of Brooklyn and W. Bothner of New York.

Sales Manager F. A. Kirby of the Cherry River Boom and Lumber Company, Scranton, Pa., was a recent visitor in town in the interest of business, which he reported of very satisfactory volume. The West Virginia mills of the company are putting out close to 10,000,000 feet of spruce and hardwoods per month, all of which is being freely absorbed by the large trade enjoyed by the company. Business in the Middle West Mr. Kirby reports exceptionally active. After spending a few days in this vicinity he left for the Middle West to consult with the selling representatives of the company in that territory. The new local sales office at 18 Broadway is doing an excellent business.

LaBau & Baker, well known cypress wholesalers of Jersey City, N. J., who handle the output of the Louisiana Cypress Lumber Company and several other Louisiana mills, totaling 75,000,000 feet annually, have removed to fine new quarters at 909 Lincoln Trust building, Jersey City, where they have much better facilities for handling their increasing business.

Chester F. Korn of the Farrin-Korn Lumber Company, Cincinnati, Ohio, was a recent visitor in town in the interest of business. Mr. Korn spoke optimistically in regard to the western hardwood market and the general business situation.

Owing to constantly increasing work in the activities of the National Wholesale Lumber Dealers' Association, the headquarters at 66 Broadway have just been extended by the addition of another room which will be devoted to general usefulness.

John P. McEwan, well known wholesaler, 140 East 42d street, has incorporated his business under the style of the John P. McEwan Lumber Company with a capital of \$200,000. The incorporators are: John P. McEwan and L. H. Strouse of New York City and C. B. Folsom of Upper Montclair.

At a meeting of the creditors of McBride & Co., manufacturers of parquet flooring at 1932 Park avenue, who failed recently, held on May 1, sixteen claims were filed and Thomas B. Lancaster was elected trustee.

One thousand carpenters went on strike at Paterson, N. J., on May 1, and building operations there are at a standstill. They have been getting \$3.50 a day and now want fifty cents an hour for a working day of eight hours.

The planing mill of Gerham F. Smith, 601-605 West 29th street, was destroyed by fire on April 22, entailing a loss of \$30,000.

There was a meeting of the Board of Directors of the Eastern States Retail Lumber Dealers' Association in the rooms of the New York Lumber Trade Association on May 3, with President Richard S. White of Brooklyn in the chair. Numerous matters of importance were discussed and it was voted to hold a special meeting of

the association at Atlantic City May 23, at 12 o'clock, in the Marlborough-Blenheim Hotel, which will be during the sessions of the National Hardwood Lumber Association.

The foreign mahogany and cedar trade in the New York market continues strong and prices very firm. Receipts of mahogany during the month of April were far below the average, some countries not being represented at all in the month's receipts. This fact, together with a very fair demand, has kept all available stocks absorbed and there are but small holdings in hand. In cedar the receipts of Cuban stock were heavy during April, which together with the receipts from other ports considerably increased stocks in first hands, but the demand of the market is such that arrivals keep sufficiently absorbed to maintain prices on a good level. The range of prices at this writing run from 7 to 12 cents per foot on mahogany, according to quality, with an average of about 10 cents. Cedar values range from 8 to 12 cents, with an average close to 11.

Philadelphia.

The Lumbermen's Exchange held its first meeting under the newly elected officers on May 2, with President W. L. Rice in the chair. It was preceded by a luncheon in Griffith Hall. The attendance was unusually large, which was of course very gratifying to the new president. It was moved and adopted at this meeting that the Lumbermen's Exchange of Philadelphia endorse the wharf owners' bill now before the legislature. The Hindle Lumber Company and Paul W. Fleck Lumber Company were elected members to the exchange. Committees were appointed for the year and a great deal of business of a private nature was disposed of at this meeting.

Sheip & Vandegriff have increased their capacity from 10,000 to 15,000 cigar boxes a day. They have also installed several new Whitney planers and one of Falls Machine Company's automatic jointers. Their mills are working full force and the outlook for future trading is very good. They report prices on cigar boxes as stiff, with trend upward, on account of the scarcity and high price of cigar-box lumber.

The Cooling Carriage Company of Wilmington, Del., obtained a charter under Delaware laws on April 30, capitalized at \$100,000. The incorporators are: Severson B. Cooling, Charles E. Dubell and George T. Brown, Wilmington.

The Philadelphia Hardwood Lumber Company reports business, except for handicap of inadequate railroad service, moving smoothly, that good orders are coming in right along and that they are in the market for good hardwoods.

Jos. P. Dunwoody & Co. are complacent over satisfactory conditions. They have engaged P. M. Nevin, who was formerly with the Cypress Selling Corporation as salesman, to look after the eastern Pennsylvania district. Jos. P. Dunwoody, senior member of this firm, is traveling through southwestern Virginia and eastern Tennessee, looking for stocks. He reports that the mill of the Norva Land and Lumber Company near Wallston, Va., in which they are interested, has started, and by May 15 will be running full force, with lots of orders on hand. S. Y. Warner of the Dunwoody firm states that they are making a specialty of tupelo and poplar.

The Philadelphia Veneer and Lumber Company, Inc., reports busy in all departments, their mills working day and night. Francis Goodhue, Jr., of this concern states that they are cutting 60,000 feet of cedar and 25,000 feet of oak daily, besides the sawed veneer, and over 64,000 feet per day of cigar-box lumber. By the last tides they received a large quantity of poplar and oak logs. The company is operating on two tracts of timber, one in Tennessee and one in Kentucky, where it has ten circular mills running, besides the band mill at Knoxville.

The J. W. Difenderfer Lumber Company is as ever among the busiest. A. E. Magargal of this concern reports many inquiries being made and orders coming in rapidly. They have a fair stock on hand, but, as usual, no cars in sight.

J. H. and R. W. Schofield of Schofield Bros., with their salesman, Jos. Lance, Jr., are looking after their interests in South Carolina.

The Rumbarger Lumber Company is benefitting by the reaction in trading and is looking forward to a good summer business. Frank T. Rumbarger was in Baltimore, Md., recently, where he closed a contract for the output of a South Carolina hardwood mill.

O. H. Rectanus, secretary of the A. M. Turner Lumber Company of Pittsburg, Pa., called on John J. Rumbarger recently, in connection with the Hoo-Hoo annual.

Wm. Bond of DuBois & Bond Bros., DuBois, Pa.; Bond, Md., and Thomas, W. Va., was an interesting visitor to the local trade recently. He called on John J. Rumbarger of the Rumbarger Lumber Company, and also looked up his old schoolmate Robert Whitmer, with whom he attended Lafayette College.

The Kirby & Hawkins Company are much pleased with the future business outlook. They are large handlers of ties and report the railroads preparing for steady work throughout the coming season.

W. M. McCormick reports business moving in easy grooves. The mills are all working steadily, but orders are taken only for what stock they may have ready for delivery.

Horace G. Hazard & Co. have no serious complaints to make, have good share of orders. They are now receiving most of their goods by water, which arrangement suits them better than the delinquent car service.

The Philadelphia Textile Machinery Company is a busy concern. It has just issued a book copiously illustrated, called Veneer Dryers, which will be mailed to any veneer concern or other parties interested in the subject on request. T. W. Howlett, manager for twenty-two years of the St. Louis Basket and Box Company and now representative of the Philadelphia Textile Machinery Company, is traveling through all the veneer making districts in the United States and will call upon any veneer house so desiring to exploit the merits of the dryer, which machine he considers has no superior.

The Union City Chair Company of Union City, Pa., was visited by a disastrous fire on April 28. The loss, including several houses, is estimated at \$300,000.

Ephraim E. Bertolet, a carriage builder in Pottstown, Pa., died recently of cerebral apoplexy. He was sixty-four years of age.

The firm of W. S. Haller & Co., cigar-box manufacturer, was declared a voluntary bankrupt on April 24. Liabilities are given at \$2,823.53 and assets, \$1,500.

The ground and buildings of the old Lybrand and McDowell Store Works at East Girard avenue and Aramingo street were purchased at auction on April 30 by Wilson H. Lear, the extensive lumber dealer. The price paid was \$74,500, which is regarded very low, as the property is assessed at \$100,000. The plant covers an area of 558 feet on Girard avenue, 264 feet on Fletcher street and 306 feet on Aramingo street.

The Twentieth Century Lumber Company was incorporated under Pennsylvania laws April 26, capitalized at \$10,000. The incorporators are W. S. Snyder and G. M. Whitney of Harrisburg, Pa., and David Wiener, Carlisle, Pa.

The planing mill and lumber yard of J. A. Hollinger of Chambersburg, Pa., were destroyed by fire on May 1. The loss is estimated at \$100,000. Insurance, \$40,000.

William T. Hoffman, deputy county treasurer, and L. O. Lambert, both of Somerset, Pa., recently purchased the Gastelger timber tract near Ligonier on the Pittsburg, Westmoreland

& Somerset Railroad. The tract is said to contain 1,000 acres and will cut some 8,000,000 feet of lumber. There is a mill on the tract, which the purchasers will operate to its full capacity.

It is announced that the state of Pennsylvania will this year take over 26,000 acres of land at the headwaters of Fishing Creek, which will be converted into a forest reserve. The land lies in Columbia, Sullivan and Lycoming counties and will be purchased from the Pentecost Lumber Company.

A fire along the Standard Oil Company's pipeline at Plowville, Berks County, Pennsylvania, spread over fifty acres of land, destroying considerable valuable timber belonging to Gideon Delcomp and others.

The Hoo-Hoo Annual is becoming the all-consuming topic of conversation among lumbermen throughout the country. The various committees appointed some months ago have worked faithfully, plans have been formulated and other necessary work brought so near consummation that it will be easy sailing during the summer to carry out all arrangements comfortably and satisfactorily. Chairman Jerome H. Sheip of Philadelphia, aided by the various committees, is neglecting no opportunity to render this annual a star of the first magnitude in the galaxy of Hoo-Hoo. He recently spent a week at Atlantic City arranging for rates at the best hotels. It is a settled matter that the fine steel pier at this famous summer resort will be secured for the Hoo-Hoo headquarters. Five thousand booklets will be issued by the middle of May and distributed in all Hoo-Hoo centers, containing any information desired concerning matters pertaining to the annual, including a program of the daily doings and entertainments arranged for guests.

Baltimore.

The National Lumber Exporters' Association and the various committees of that body are working energetically to bring about the elimination of some of the abuses that have troubled the export trade for a long time. One of the questions agitated is the so-called Liverpool measurement. The special committee named to bring about a change met at the office of E. M. Terry, secretary, on April 23, and adopted a plan of campaign. It was decided to draft a circular letter to members and newspapers and talk to representative exporters and buyers, pointing out the injustice of the Liverpool measurement and explaining that under the system every cargo of lumber is subject to a dockage of from two to ten per cent for alleged faults. It is also urged in the letter that members write to buyers and brokers, informing them that it is impossible to do business in Liverpool under the present system and that the exporters are prepared to sell lumber only on the basis of a measurement of the actual contents, no allowance for defects of any kind to be made. Secretary Terry was directed to draft another letter to the National Hardwood Lumber Association, the Hardwood Manufacturers' Association, the National Wholesale Lumber Dealers' Association and the New Orleans Lumber Exporters' Association urging that they co-operate with the National Lumber Exporters' Association in this matter. It was further decided to send letters to the Timber Trades Federation of Liverpool and the hardwood section of the Timber Trades Federation of London on the subject.

The claims committee of the National Lumber Exporters' Association also had a session ten days ago and disposed of various matters that had accumulated since the previous meeting. The difficulty which this committee encounters is to be found in the numerous loopholes left by careless consignees, and which enable the transportation companies to get out of paying claims for damage or shortage. Often the receiver of a shipment will neglect to file a

claim or give proper notice of a shortage, and this is taken advantage of to reject claims. With the idea of overcoming the difficulty the committee has had sent to members of the association a letter covering this difficulty. In order to correct these drawbacks and secure a basis for future claims, the committee had formulated recommendations and it suggested that shippers notify their consignees of these recommendations and endeavor to have them adopted wherever necessary.

Secretary Terry of the National association has lately received advices from England which justify the expectation that an agreement upon a new form of contract satisfactory to both the exporters and the brokers and buyers on the other side of the Atlantic will shortly be reached. When the question first came up the exporters drafted a form of contract which was rejected by the brokers and buyers as not acceptable to them. The latter then drew up one that met their views but which the exporters did not find it possible to accept. Another draft was submitted, and this has been somewhat amended. With a few additional changes it may meet the wishes of both sides, and will then be adopted.

An accident which cost a dozen lives a few days ago will be a matter of much concern to the lumber export business of this city, inasmuch as it means an indefinite delay in the completion of facilities for the unloading of lumber and logs that would greatly facilitate the trade. This accident was the collapse of the new pier, known as No. 8, being erected at Locust Point by the Baltimore & Ohio railroad. The work had progressed so far that the finishing touches were being put on, when the great weight of sand, concrete and the superstructure of steel—the latter being some 2,000 tons—caused the piles to bulge and let down the whole pier. A large number of men were caught in the wreckage and twelve have since been missing. The pier was designed to relieve the freight congestion at Locust Point and the lumber exporters had the promise of the railroad that they would get room for the prompt unloading on it of the lumber and logs reaching here for shipment abroad. This meant that such consignments would have been put aboard steamers without delay, as the intention was to divert the Liverpool and Glasgow vessels to the pier. The latter was one of the largest in the United States, two stories in height and rested on about 10,000 piles, sixty feet long. What caused the piles to shift has not yet been ascertained.

Work on the Swayne county (N. C.) mill of the R. E. Wood Lumber Company of this city has been resumed, and the plant may be put in operation this summer.

Pittsburg.

The Nicola Lumber Company has been having its full share of hardwood trade all the spring. It is covering the Pennsylvania and Ohio field very thoroughly this year and is making some fine contracts with large manufacturers and for building lumber.

A new company, promoted by J. T. Caveney and J. W. Selvey of Grafton, W. Va., has bought 2,000 acres of timber land in Randolph, Barbour, Preston and Tucker counties, West Virginia. A large sawmill will be erected at once.

H. E. Clark and Keger & Bradley of Abingdon, W. Va., have bought 7,200 acres of timber land in Johnston county, Tennessee, for about \$60,000. They will erect a large band sawmill and market most of the product in Pennsylvania and Ohio.

The Lincoln Lumber Company made a very fortunate hit when it arranged to take over the entire output of the International Hardwood Company of Catlettsburg, Ky. This concern makes a specialty of fine oak flooring, and Linahan Bros. are getting orders for the

stock which keeps them hustling. Hardwood stocks in general are reported by the Linehans to be scarce, and the demand outside of the city is fully up to expectations.

Two hardwood men of prominence who recently paid Pittsburg wholesalers friendly calls were J. P. Shirk of the Garrett Lumber Company of Maryland and L. J. Pischel of the Farmers' Lumber Company of Kentucky. Both men have been taking some good Pittsburg business this spring and say that hardwood stocks in their respective states are down pretty close to the saw.

The Willson Bros. Lumber Company announces a fine call for sound wormy chestnut. Most of this is coming from West Virginia, where the company placed some big orders under contract last year. I. F. Baisley of this company is working hard to raise a good percentage of the cash required at the National Hardwood Lumber Association's annual at Atlantic City, May 23 and 24, and predicts a large attendance from Pittsburg.

R. C. Patterson, hardwood man for the William H. Schuette Company, says that oak, hickory and ash are all in splendid demand. The latter two woods are going to the implement people in Ohio, Indiana and Michigan in large quantities. The Schuette company is getting most of its hardwood from West Virginia and Kentucky and reports a tendency among mill owners there to submit lists of broken stocks of late at a little better prices than formerly. Straight stocks, however, are as firm as ever.

The Kendall Lumber Company has resumed operations in full at its plant at Crellin, Md., where its mill was shut down for four weeks for repairs.

Manager G. W. Cantrell of the Herman H. Hettler Lumber Company has been stirring up the Cleveland trade this week. His work at the Pittsburg office shows up mighty well on the company's books, for it makes an average of 1,500,000 feet a month.

W. P. Craig of the firm of William Whitmer & Sons, Inc., has been taking a long trip through the South.

The Edgewood Improvement Company of Charleston, W. Va., has been chartered with a capital of \$25,000 for the purpose of dealing in lumber and building material. Its incorporators are: John A. Thayer, H. L. Wehrle, A. S. Guthrie, Steele A. Hawkins and Henry Fry, all of Charleston.

General Manager J. N. Woollett of the American Lumber and Manufacturing Company is off again on a two weeks' selling tour, which is likely from his reports to result in some mighty fine hardwood orders being placed.

J. E. McIlvain & Co. are making some very nice advances in the tie business as well as in securing orders for bridge and river timbers. They note a scarcity of stocks in West Virginia, where they get most of their lumber, and see no reason for a belief that prices will be any lower for a year at least.

The C. P. Caughey Lumber Company has recently taken an order for 190,000 feet of oak timber to be used in a big coal shaft at Uniontown, Pa. This is one of several similar orders which this company has secured this spring, and it is busy cutting the oak at its five mills in western Pennsylvania. It also reports a fine demand for railroad ties, 8x8x8, and for bridge timbers.

The big plant of J. Hollinger of Chambersburg, Pa., was burned May 1. The plant employed seventy-five men, and every building was destroyed. The total loss is estimated at about \$100,000 and insurance at \$30,000.

Some splendid oak timber has been cut the past month in the vicinity of Washington, Pa., for ship building concerns. One of the best logs that has come to the notice of Pittsburg lumbermen was shipped last week and

measured 43 feet long. It squared 20 inches at one end and 19 at the other.

The planing mill and lumber yards of E. R. Dowler at Braddock, Pa., burned last week. It is estimated that his loss will be \$80,000. The plant was an old one and employed a large force of men.

The Crescent Lumber Company is now in its new quarters in the Machesney skyscraper and has much larger offices than in its old place in the Whitfield building, East End. Telephone companies have contributed largely to the business of this concern lately in the way of good orders for poles and they have also received some good business from the new traction lines that are being built in western Pennsylvania. The officers note a slight falling off in the call for piling.

H. F. Domhoff of the Cheat River Lumber Company came back from a trip through West Virginia and Kentucky last week. He bought 500,000 feet of chestnut and other hardwood lumber while there and is marketing it rapidly in the Pittsburg field.

The Reitz & Martin Lumber Company of Parkersburg, W. Va., has been organized with a capital of \$24,000. It will have a large plant at Kermit, Mingo county, W. Va. The incorporators are: T. G. Reitz, T. G. Martin, Ralph B. Martin, G. L. Dudley and W. D. Camden of Parkersburg.

The McDowell & Torrence Lumber Company of Xenia, O., has been incorporated with a capital of \$18,000. Those interested are: T. D. Torrence, A. M. Patterson, D. McD. Patterson, W. C. Conan and T. B. Clark.

An interesting example of how well the timber bridges have stood the strain of years is seen in the razing of the old Union bridge at the intersection of the Ohio and Allegheny rivers in Pittsburg, which has been ordered down by the government engineers to make navigation better on the three Pittsburg rivers. The bridge is thirty-five years old, but the timbers are coming out of it with hardly a wormhole visible and very little rot except where the nails and bolts were inserted. Engineers who have examined the structure say that it was good for at least ten years more and maintain that a timber bridge of this sort is much more durable than the new style steel structures, which are liable to rust out rapidly.

The Parkersburg Tie and Timber Company has been formed to take over 3,700 acres of timber land in Clay county, Kentucky. The timber is twelve miles back from the Kentucky river and to bring it down to a point where it can be rafted down to the Ohio river a narrow-gauge railroad has been built and equipped with a twelve-ton engine. Over 20,000 logs are already cut. The members of the company are: John W. Dudley, Jr., Lysander Dudley, G. W. Carney and G. W. Brown of Ritchie county. W. G. Stout, who was for years in the employ of the Standard Oil Company in that territory, has been engaged as general superintendent of the operation.

Buffalo.

Vicegerent Snark Blumenstein will hold a Hoo-Hoo concatenation May 11. The attendance at the last meeting, April 18, gives promise of a very large turnout next time.

There is still much complaint of car shortage in the West and South, although the situation is easier here. Shortage has not been the real difficulty here. It was easier to get the car than it was to get it to destination after it was loaded.

H. S. Jones, manager of the Empire Lumber Company, toured through the South very extensively on his late visit there. He looked up the Arkansas mills and then went to the Gulf states, returning through Georgia and North Carolina.

J. N. Scatcherd has returned from his late visit to his Memphis mills, where he found conditions much improved, though it would be very pleasant if oak logs were more plentiful than they are.

T. Sullivan & Co. are now getting some cars of Washington fir and hope that the long embargo is raised for good, though it is not likely that the movement will be very active right away. The lumber sells well.

Beyer, Knox & Co. again hear that there is going to be grade crossing work on their street this year, but will not worry till they are notified to move. Business is too good to be dropped for side issues.

F. W. Vetter is filling up his yard with good hardwood lumber and will go to North Carolina as soon as he can be spared. His son, George Vetter, is still in North Carolina buying oak and other hardwoods for him.

A. Miller is off on a trip to Pennsylvania and will no doubt return with a further addition to his hardwood stock, which is moving out fast enough to keep the office force busy.

A. J. Elias is still the watchdog of the Buffalo river improvement project and does not mean to give it up till the work is done. He lately helped block a scheme to build stationary bridges on the river.

Angus McLean has so far recovered from his late severe illness that he has gone to the sanitarium at St. Catharines, beyond Niagara Falls, to complete his convalescence.

O. E. Yeager keeps his Buffalo yard very full of lumber and is constantly receiving more from southern points, especially oak, poplar and chestnut from his headquarters in Kentucky.

M. M. Wall, as president of the Manufacturers' Club, took charge of a meeting of that body on May 2, assembled to listen to an address of W. T. Stead, the London journalist and diplomat.

The cherry stock of I. N. Miller & Bro. goes out in bunches at times and is always the very best stock to handle, for it is never thrust aside when a fine material is wanted.

A. W. Kreinheder came back from the mills of the Standard Hardwood Lumber Company in Kentucky and Tennessee very well pleased with the lot of oak, poplar and chestnut that he got started this way.

Detroit.

An important move which was interesting to the car manufacturers and hardwood men of Detroit was told in a dispatch from St. Louis last week to the effect that W. J. McBride, first vice-president of the American Car & Foundry Company, had resigned and accepted the position of general manager and president of the Haskell-Barker Car Company of Michigan City, Ind., at the princely salary of \$50,000 per year. Mr. McBride was originally a Detroit man. He began at the bottom with the old Peninsular Car Company of Detroit and is now at the height of his career, though only 46 years old.

After winning a lawsuit against W. E. D. Stokes in three New York courts, one being in the highest court in the state, and getting judgments that now amount to \$89,000, the Vinton Company of Detroit was called on early this week to fight before Supreme Court Justice Thomas in New York Stokes' efforts to get a new trial of the case. The Vinton Company did the hardwood interior finish a few years ago in Stokes' large Ansonia apartment house in New York, over which the trouble arose.

The Detroit Board of Review, composed of a committee of aldermen and the three city assessors, have made several startling boosts in the valuation of the local lumber companies. The Detroit Lumber Company's assessment was raised from \$123,000 to \$150,000. It was planned at first to fix the assessment of

the McClure Lumber Company at \$160,000, but a representative of that concern appeared before the board and declared that nearly all the property enumerated in the valuation was located in the South, and so the matter was referred to the corporation counsel for investigation. The assessment of the C. W. Restrick Lumber Company was apportioned at \$100,000, although the company kicks on this figure, saying that is about \$30,000 too high.

Arthur N. Perry, a well-known wholesale and retail lumber dealer of Detroit, has filed a petition of bankruptcy in the United States district court. He gave his assets as \$1,814.85 and his liabilities as \$12,259.18.

The Austin Automobile Company of Grand Rapids will remove to Detroit at an early date. They employ about 200 men. Detroit hardwood dealers like to see these companies coming, as that means larger demand for hardwood in the manufacture of auto bodies.

Thomas Merrill of Saginaw, who has just completed his ninety-second year, has been connected with the lumber industry over fifty years. He was formerly associated with ex-Senator Thomas Palmer of Detroit for many years.

Saginaw Valley.

Hardwood lumbermen in the valley are taking every possible opportunity to strengthen their position in the matter of obtaining stock for the future. The Kneeland-Bigelow-Buell interests have a stock of hardwood sufficient to stock their two mills at 25,000,000 feet a year for fifteen years if they do not buy another stick, and they are picking up every tree they can get an option on. They are stocking the Bliss & Van Auken mill with 10,000,000 feet annually for ten years, and the latter firm also has some timber of its own. The Wylie & Buell Company is furnishing a large quantity of hardwood logs for J. T. Wylie & Co. and one or two other firms.

A deal is now being negotiated which will bring the timber from 30,000 acres of land to Bay City to be manufactured. W. D. Young & Co. and people with whom they are associated control 200,000,000 feet of hardwood timber which comes to Bay City; S. G. M. Gates is cutting 7,000,000 feet annually at his mill and owns the timber which it cuts. The Johannesburg Manufacturing Company, Salling, Hanson & Co. and the Michaelson & Hanson Company have very large holdings of hardwood, and the Stephens Lumber Company is cutting mixed timber which embraces considerable hardwood. At Au Sable the H. M. Loud's Sons Company not only owns a large quantity of hardwood timber tributary to the plant, but also a number of thousands of acres in Presque Isle county as yet unprofaned by the axe and saw.

The White Brothers plants at Boyne City have thousands of acres of hardwood timber behind them, as have the Gilchrist and Churchill companies at Alpena. The Richardson Lumber Company, which is erecting a hardwood plant at Bay City, has a twenty-year stock for the new mill, located in Montmorency county, and the Lewiston branch of the Mackinaw division of the Michigan Central is to be extended twelve miles to reach the Richardson timber; it will be cut and hauled by rail to Bay City. There are also numberless smaller tracts of timber available and which will be gradually picked up, though the larger tracts are now in comparatively few hands. Stumpage is appreciating and some holders have put prices out of sight. Lumbermen regard \$4.50 and \$5.50 as about the stumpage prices that will enable cutting, hauling to the mill by rail and manufacturing at a profit at existing prices for the manufactured product, but some stumpage owners are asking as high as \$8.

The Ottawa Hardwood Company which has operated a sawmill plant, cutting about 5,000,000 feet annually the last few years, has been succeeded by Gardner & Richards, who have ac-

quired the property and will operate the mill. It has a stock of over 4,000,000 feet for the season.

Wages paid men in the woods continue high, as all of the large manufacturers who operate plants the year through run about the same number of camps in summer as in winter, and the small mills and the portable mills in operation give employment to a large number of men in the aggregate.

The H. M. Loud's Sons Company shipped a large cargo of hardwood timber last week to Port Arthur, Ont., on contract to furnish timber for harbor purposes for the Canadian government. The company shipped a cargo of maple to Lake Erie ports. This company has some heavy contracts for timber to fill during the year.

The maple flooring business is in excellent condition, both as regards prices and volume of business. The S. L. Eastman Flooring Company has made extensive improvements to its plant and reports a good trade. The Strable plant at Saginaw is already full of orders, and the Bliss & Van Auken and the W. D. Young & Co. plants are running day and night. The new Richardson plant at Bay City will give the valley five large plants, and still another is being projected at Bay City.

J. E. Wright has taken a contract to cut 4,000,000 feet of hardwood lumber at Ocqueoc Lake for the Embury-Martin Lumber Company of Cheboygan.

The Cook, Curtis & Miller hardwood plant at Grand Marais will ship its cut by lake this season.

D. B. Pinkerton has his hardwood plant at Onaway ready to begin operations and has enough logs to stock the plant for the season.

The Metz Manufacturing Company's sawmill at Metz after being thoroughly overhauled and receiving a new boiler and steam feed has resumed operations.

At West Branch the Batchelor Timber Company is installing a finely equipped heading plant to be operated in connection with its sawmill plant. Brick kilns will be erected in connection and the entire plant is equipped with electric lighting.

Scarcity of cars is the only serious obstacle that confronts the hardwood operators, but it is a serious problem. It is almost impossible to get box cars at all. Where ten are wanted the shipper is thankful to get one. It is a source of no little vexation that lumber cannot be shipped after being sold, and when loaded the delay in getting it forward is exceedingly exasperating.

Grand Rapids.

M. F. Butters of Ludington was in the city May 5.

C. A. Phelps, W. A. Phelps and J. H. Bonnell of the Hackley-Phelps-Bonnell Company; Clay H. Hollister, Edward Lowe, Dudley E. Waters, H. S. Jordan and T. F. Garratt of the Michigan Chair Company, and W. A. Gunn of the Gunn Furniture Company are included in the list of stockholders in the National Bank of Commerce, recently organized in Detroit.

A belt line steam road, connecting all the roads entering Grand Rapids, will be constructed this year, which it is expected will be of great advantage to shippers and at the same time will open up excellent factory sites just outside the city. The Grand Rapids-Muskegon Power Company will stretch one of its big feeder wires around this loop, supported on steel towers 100 feet high, to supply the new industries with power.

L. L. Skillman, E. D. Hazard and C. S. Travis, a committee of creditors appointed to straighten out the affairs of A. L. Utter of Grandville, have secured a bill of sale of the lumber yard and other property, which will be disposed of to the advantage of creditors.

John E. Barnes, until recently president of the Spencer-Barnes Furniture Company, Ben-

ton Harbor, has organized a new company there, known as the John E. Barnes Furniture Company, and will manufacture dining-room furniture and specialties. Mr. Barnes has an interest in a large tract of southern timber and has options also on some scattering pieces in the southwestern part of Michigan.

The Northern Michigan Press Association met recently at Traverse City and forestry matters, including the state's policy in dealing with its lands, were discussed. Perry F. Powers of Cadillac, former auditor general, favored a continuance of the present policy rather than turning over the lands to the Forestry Commission. He said that the turning over of lands to the commission would injure the value of adjoining property for years, or until the crop of trees had been grown. The association evinced its interest in forestry, however, by asking E. L. Sprague, a newspaper man of Traverse City, to prepare an article on growing locust trees for ties and posts, with cuts showing the growth of such trees in one, five, ten and sixteen years.

In discussing the above objection to reforestation Charles W. Garfield, president of the State Forestry Commission, said: "It is unworthy of consideration as an argument. In any plan of timber growing on a large scale somebody will be injured for a time. This is true in the development of a street or a drain or a thousand other public utilities. The state must look out for all its people in adopting its land and forest policy. The question of growing timber enough for its woodworking industries is alone of tremendous importance."

Cleveland.

F. M. Kinderman of Columbus, O., representing the Collins Lumber Company, of Elkhurst, W. Va., called on the hardwood trade here last week.

John D. Mershon of Mershon, Schuette, Parker & Co., Saginaw, Mich., was a caller among the dealers here this week.

James Miller of Pittsburg, representing Wm. Whitmer & Sons, Inc., called on the trade this week.

W. D. Steinmetz of Bergholz, O., an extensive hardwood manufacturer, was a visitor in this market recently. He reports business good and the outlook very promising.

W. P. Hilton of the Advance Lumber Company has just returned from a two months' absence at their mill at Easkin, La. He reports they are cutting a very fine lot of oak. This stock will find a ready market in New Orleans territory.

W. A. Cool of W. A. Cool & Son is at their mills in West Virginia looking after securing cars for shipments of stock.

White oak has been moving freely of late. Poplar continues firm and dry stock is exceedingly scarce. Jobbers fight shy of taking orders for this stock unless they know where they can put their hands on it. Large quantities of beech and maple are being shipped into this market, and in some cases this stock is being substituted for other hardwoods which consumers have not been able to buy owing to the scarcity of dry stock. A cargo of hardwood recently arrived from Michigan, being the first stock to come in by boat this season.

Indianapolis.

The Turner, Day & Woolworth Handle Company is preparing to build a large plant at Bluffton. Bids have been asked and work will be started within a short time with a probability that the new factory will be occupied early in the Fall.

G. H. Palmer of Sheridan suffered a loss of considerable lumber stored in a barn. Boys and cigarettes were responsible for the burning of the building.

The Advance Vencer & Lumber Company at

Massachusetts avenue and Adams street, is enjoying the largest business in its history. In the veneer plant unusual business is requiring the force to put in much overtime, while in the yards there is a steady demand for hardwoods for building and manufacturing purposes. The company has a practically new plant in Brighton, one of the city's largest suburbs.

J. D. Tennant and J. E. Grant of Sidney, O., have purchased the manufacturing plant at Laporte owned by William E. Crichton. Fanning mills, lawn furniture, chairs, step ladders and the like have been manufactured in the factory for several years and it is one of the leading industries in Laporte.

It has been announced that the recently organized McIlvaine Lumber Company of Vincennes will take over the lumber yard and planing mills of D. R. McIlvaine in that city. The company has a capital stock of \$40,000 and expects to make considerable improvement in the old plant and extend the business.

The Indiana Realty Company of this city has sold to R. M. Smith & Co., hardwood lumber manufacturers of Parkersburg, W. Va., extensive holdings of hardwood timber lands in Franklin parish, Louisiana. There are about 20,000 acres in the tract and it is understood the price paid was \$350,000, the local company clearing about \$50,000 on the deal. J. H. P. Smith, senior member of the West Virginia firm who came to Indianapolis to consummate the deal, said he believed the tract would net 100,000,000 feet of hardwood lumber and that it would be cleared at the rate of about 1,000 acres a year. As soon as cleared the ground will be used for growing cotton, which will produce, according to an estimate, about \$50 worth of cotton to the acre per year. W. B. Cooley is president of the Indiana Realty Company, which was organized about three months ago for the purpose of investing in southern timber lands.

Purdue University at Lafayette will inaugurate a course in forestry, beginning with the fall semester. Students will have the advantage of hardwood experiments to be conducted at the institution under the auspices of the State Board of Forestry and the course will be designed to meet the needs of farmers, lumbermen and manufacturers who handle lumber in large quantities.

A timely word of warning relative to the rapidly disappearing supply of hardwood lumber in Indiana has been issued by the State Board of Forestry to the farmers of the state. The board advocates the planting of forestry lots on each farm to be given the same attention as other crops. While the supply of timber for manufacturing purposes would ultimately be increased from this plant, farmers are urged to plant trees especially for use on their farms to meet their own demands for fence posts, telephone poles and building purposes as well as to furnish lumber yards in their respective localities with timber. From one-tenth to one-eighth of the whole farm should be given over to the exclusive growing of timber, according to the board. From an investigation made in different parts of the state it is found that farmers, with few exceptions, take little interest in forestry on the theory that when the present supply of timber is exhausted something will be found to take its place. This, the board says, will never be possible.

Milwaukee.

Milwaukee has been a furniture manufacturing city since as early as 1855, when the firm of A. Meinerke & Son was established, which still continues in business, though in another line. The first chair manufactory was started in 1857, among the first concerns in this line being the Milwaukee Chair Company and the Mayhew Manufacturing Company, which still exist. The city's output last year was more than \$3,500,000. In recent years it has been dominated by Shobergson, which has become the

chair and furniture center of Wisconsin. In nearly all instances the leading chair factories own their own sawmills, in which they get out their rough stock.

Julius G. Ingram, the well known millionaire lumberman of Eau Claire, Wis., has offered \$40,000 to the trustees of the Congregational Church of the Pilgrims, Washington, D. C., with which to erect an institutional church, to be a memorial to Mr. Ingram's son, who died about a year ago.

The Long-Bell Lumber Company of Ludington, La., has bought the entire southern interests of Isaac Stephenson, Jr., for \$3,500,000.

As the result of a conference between representatives of the Milwaukee, the North-Western and the Wisconsin Central roads and members of the legislative committee of the Merchants' & Manufacturers' Association, the rate on lumber shipped from the South to Milwaukee has been reduced so as to be in conformity with that shipped from the north to Chicago. The new tariff became effective May 7. This rate puts Milwaukee manufacturers using southern lumber in a position to compete with Chicago manufacturers in the same line.

The Milwaukee road is turning out twenty-eight complete freight cars a day in its shops at West Milwaukee. It expects to add at least 8,000 freight cars to its rolling stock this year. Heavy wooden beams for the body work of these cars is being discarded, steel being substituted, owing to the scarcity of lumber of a high quality demanded in car construction. The company is also building a large number of mail and express cars. It is not putting out any passenger coaches at this time, though it has been building many sleepers.

The Milwaukee market continues steady, though business on the whole is light. Prices remain firm. The outlook is considered highly favorable by local dealers.

Bristol, Va.-Tenn.

The first Hoo-Hoo concatenation of the year was held here May 3. The attendance of lumbermen from all over this section was large and twenty-four kittens were initiated into the mysteries of Hoo-Hoo. Vicegerents Irving Whaley of Tennessee and T. W. Fugate of Virginia conducted the ceremonial session. The guests repaired to Hotel Tip Top, where a sumptuous banquet was served. C. D. Clark of Abingdon acted as toastmaster and toasts were responded to by W. A. Hassinger, J. A. Wilkinson, A. D. Reynolds, Jr., and others.

C. H. Smith, Jr., of Nashville, Tenn., was in the city last week buying hardwood.

John T. Nagle and O. C. Hathway, managers of the W. M. Ritter Lumber Company's eastern Tennessee and western North Carolina operations, were in the city last week. Mr. Nagle heads the Linville River Lumber Company, the new concern that is preparing to begin cutting near Pineola, N. C., on a large scale. The company is building a railroad to its timber lands near Saginaw and will use the big band mill of the W. M. Ritter Lumber Company near that place.

Nathan Bradley and D. D. Anderson of the Bradley Lumber Company of Elizabethton, Tenn., were in the city last week.

P. V. Widener, manager of J. A. Wilkinson's Bluefield, W. Va., office, came to the city last week and will spend several days at Mr. Wilkinson's offices in this city.

Chas. A. Baker, manager of the T. W. Thayer Lumber Company, at Damascus, Va., was in the city on business last week.

The E. M. Hoskins Lumber Company of this city has received articles of incorporation under the laws of Virginia, with a capital stock of \$25,000.

A. M. Scott of the J. Walter Wright Lumber Company of Mountain City, Tenn., was in Bristol last week.

The T. K. Garland Lumber Company of Mount-

ain City is preparing to install mills and begin cutting on a big tract of timber which it recently purchased in Johnson county, Tennessee.

M. N. Offutt of the Tug River Lumber Company has gone on a business trip in Virginia.

Cincinnati.

William A. Bennett, president of the Chamber of Commerce of Cincinnati, has been appointed receiver with bonds of \$25,000 for the Pease Company. This action was taken upon the petition of C. H. Pease, president of the Pease Company, dealers in sash, doors, building material and general millwork, with plant located at Avondale, a suburb of Cincinnati. The company is capitalized at \$50,000 and has assets of over \$30,000, with liabilities of \$200,000. President Pease avers in his petition that he is, in addition to being a heavy stockholder and the president of the company, a creditor in the sum of \$90,000 as security on the company's paper for money borrowed with which to meet current obligations in conducting the business. He is not, he says, secured, and while the concern is perfectly solvent, he asks the court to take the business in charge and conduct it through, not sacrificing to pressure of creditors, as there are others than he and some are pressing for collection. Lengthy and expensive litigation with forced sales, he says, would sacrifice the business, while if free will is preserved and time given in which to wind up or straighten out the affairs of the company, all creditors will be paid in full and there will be a substantial balance for distribution among stockholders.

The Receivers and Shippers' Association recently made public a reply to the statement of Vice-President Murphy of the Cincinnati Southern Railroad, in which he called attention to the necessity for an increase in freight charges in order to keep pace with increased cost of materials and labor used by transportation companies. The statement is a very warm one and took up more than 2,000 words. A conference of shippers will be held in the association rooms to arrange to bring the case of the Southern's rates before the Interstate Commerce Commission.

Chester E. Korn of the Farrin-Korn Lumber Company has gone to New York to meet M. B. Farrin and wife, who are returning from a pleasure trip to the Orient. He will also look after business affairs while in the East.

The Dornstreet Lumber Company of Toledo, O., has been incorporated with a capital stock of \$20,000 by C. P. Brigham, William M. Hamilton, F. M. Dotson, G. McKay and J. M. Weaver.

E. M. Schantz of North Fairmount is adding another one of his patented dimension machines to his mills. The new dry kilns are now in full operation.

Frank F. Fish, secretary of the National Hardwood Lumber Association, was in town recently to look after the affairs of the organization.

The Wiborg-Hanna Company has added additional land to its yards at North Fairmount by filling up the bottoms in the rear of the plant. The yards have been increased several hundred feet. The company has been doing a better business this season than ever before and was pressed for a bigger yard accommodation.

The Cincinnati lumbermen are figuring on sending a large delegation to the National Hardwood Lumber Association's convention, to be held at Atlantic City the middle of May. A special car will probably be chartered and several of the married men are contemplating taking their wives with them and spending several days on the seashore after the convention.

William E. Delaney, general manager of the local offices of the Kentucky Lumber Company, has gone South on a business trip,

visiting the company's three mills. During his trip he will complete a deal that involves several thousand feet of lumber. During his absence R. McCracken assumes charge of affairs in this city.

The large stock of veneers stored by the Maley, Thompson & Moffett Company, which were partly destroyed by the recent fire, were put on the "bargain" counter and sold at low prices. The veneers were burnt on the ends, but not sufficiently to keep furniture manufacturers from using them.

L. H. Gage of the Gage-Possell Lumber Company has returned from a successful business trip through the South. Mr. Gage stated that the car shortage still hampers trading in the South, but aside from that business is brisk.

W. Quick and L. D. Halstead, of Richey, Halstead & Quick, have returned from business trips.

At the annual election of the Cincinnati Lumbermen's Club, held May 6, Thomas J. Moffett of the Maley, Thompson & Moffett Company was again elected president; George Littleford, first vice president; J. W. Darling, second vice president; B. Bramlage, treasurer, and E. J. Thomas, secretary. President Moffett stated that the club has had one of the most successful years of its career, also each individual lumber dealer reports that business has been very brisk. He also said that he looks for a record breaker this year. The C. & O. road was selected as the route to the annual convention in Atlantic City, May 23 and 24. The plans of the Park Commission were unanimously and enthusiastically indorsed, and the club will use its best efforts to further the scheme.

The Parlor Table Manufacturers' Association of the United States, makers of parlor furniture, met at the Sinton hotel and discussed a new tariff sheet. Indications are that an advance will be made in finished goods because of the higher prices of wood and other materials.

Work of cutting down the walnut timber on the old Todhunter farm, recently purchased by D. F. Frazee of Lexington, Ky., will be superintended by L. L. Vandegrift of this city. The lumber is the finest in Fayette county, it is said, and will be sent to Cincinnati to be sawed and sold for furniture use.

The receipts of lumber during the month of April exceeded those of the past few months, amounting to 7,561 cars as compared with 6,875 the same month last year. The shipments for the month also show an increase, amounting to 5,457, against 5,398 last year. Besides showing an increase in business these figures show that railroad accommodations have been materially better than for some time.

The two large sawmills of the Cincinnati Hardwood Lumber Company at Huntsville, Tenn., will be in operation within the next ten days. A complete new line of machinery has been purchased and the company expects to do business on an increased scale. The first cut will be shipped directly to Cincinnati.

William A. Bennett, president of the Cincinnati Chamber of Commerce, hopes to have General Kuroki, the Japanese warrior, speak before the members of the Chamber of Commerce. Business men are anxious to induce him to visit the Queen City.

St. Louis.

The O'Reilly Lumber Company has recently been incorporated with a capital stock of \$50,000. It is the successor of the Mosberger-O'Reilly Lumber Company, and will maintain headquarters and yards at the same location, Main and Chambers streets. It assumes all liabilities of the latter concern and will collect all outstanding indebtedness. A general wholesale hardwood business will be carried on, and a good stock of lumber will be maintained at

southern points as well as in St. Louis. The personnel of the force will be practically the same, with Richard J. O'Reilly at its head.

George B. Osgood, representing the Paepcke-Leicht Lumber Company of Chicago, was a recent visitor to this market.

Frank F. Fish and F. P. Southgate, secretary and chief inspector of the National Hardwood Lumber Association, made a business trip to St. Louis a fortnight ago.

G. H. Barnes has been succeeded by the G. H. Barnes Hardwood Lumber Company, with a capital stock of \$45,000. G. H. Barnes, M. D. Barnes and M. H. Stiles are the incorporators. This new arrangement contemplates no change in business procedure as formerly conducted, but is calculated to facilitate handling the steady and increasing growth of the wholesale hardwood business which Mr. Barnes has been carrying on. The company's yard at Main and Warren streets was formerly occupied by the Koenig Lumber Company, and is well situated for the quick handling of stock. Well-assorted stocks of lumber will be kept on hand.

Two well-known machinery men, N. A. Gladding of Indianapolis and S. P. Egan of Cincinnati, were visitors to their companies' St. Louis branch houses recently.

Jacob Mosberger of the dissolved Mosberger-O'Reilly Lumber Company has entered the hardwood business on his own account, with yards at 653 Morin avenue, under the name of the Mosberger Lumber Company. This extensive property is owned by Mr. Mosberger and is well supplied with transportation facilities. Upon it are situated a stable for sixteen horses, a house for the teamster in charge, ample sheds, and a handsome office building. A large and varied stock of hardwoods will be kept on hand, and a competent force of salesmen and buyers maintained. Mr. Mosberger has been identified with the lumber business for twenty-six years, and is thoroughly familiar with all its details. He is a strong factor in the hardwood trade of this market.

G. H. Barnes has purchased a handsome large brick residence at number 5439 Perlin avenue, which he will occupy in the near future.

A. R. Stevens of Stevens & Lyons, Decatur, Ill., was a recent St. Louis visitor. His house is well known in the local wholesale hardwood trade as a handler of white and red oak, birch and cypress.

The Massengale Lumber Company has been getting in a great deal of stock by river of late and reports its mill in Mississippi running steadily.

The Hafner Manufacturing Company has greatly increased its cypress holdings, and reports car service from the South much better of late.

The J. D. Harnett Lumber Company has moved its headquarters to Pine Bluff, Ark., where it will wholesale a fine line of hardwoods manufactured at a large up-to-date sawmill recently established at Langford. The company is composed of progressive business men and has built up a large trade in its line.

Nashville.

The lumber firm of John B. Ransom & Co. purchased at auction this week at Baxter, Tenn., the lumber left by the late Chalmers Vestal, of the Caney Fork Lumber Company. There were only two bidders, the other being the American Lumber Company. The property disposed of at the sale consisted of some 600,000 feet of oak and beech and it went "dirt cheap." Chalmers Vestal, it will be remembered, was recently found dead at his home at Baxter and his bookkeeper was later arrested charged with the murder.

C. B. Benedict will shortly sever his connection with the Davidson-Benedict Company in order to go to east Tennessee to take charge of a big tract of timber in Pike county owned by the newly organized Sylco Lumber Company. The company has recently bought a large tract,

embracing several thousand acres, in this section and will shortly erect two band saw mills and a planing mill. A logging road ten miles in length will be built to connect with the Knoxville division of the Louisville & Nashville railroad. Both C. B. Benedict and C. H. Benedict have disposed of their stock in the Davidson-Benedict Company. Several other stockholders have become interested in the Sylco company and John W. Love and John B. Ransom have also taken some of the stock.

D. S. Hutchinson, the popular manager of the Nashville Hardwood Flooring Company, has returned from a three months' trip through the West and Northwest. He first visited points in Colorado, then dropped down to Texas and from there on out to the coast, taking in Los Angeles and Frisco. He returned through the northern route by Minneapolis and Chicago. Mr. Hutchinson's trip was phenomenally successful. He got orders most everywhere he went and listed many new customers. He states that Tennessee hardwoods are thoroughly established in the West and quite popular there. He describes the lumber situation at Frisco as most excellent, saying that the lumber and planing mill people there survived the recent great disaster in great shape.

A special from Humboldt, Tenn., announces the destruction of the large heading mill there of the Humboldt Hoop & Heading Company. C. H. Ferrell was the principal stockholder. There was no insurance.

A special from Decatur, Ala., announces that Arantz Bros. have just completed a large band saw mill at Red Hill, in Lawrence county. Several thousand feet of hardwood lumber are being sawed daily.

Among the visitors to the city this week were: E. E. Taenzer, first vice president of the Darnell-Taenzer Lumber Company, and R. J. Wiggs, secretary and treasurer of R. J. Darnell, Inc., both of Memphis.

Several big deals are recorded recently as having been transacted at Waynesboro, Tenn., and in that vicinity. T. S. Hassell of Clifton, Tenn., who recently purchased from the Decatur Land Company of New Decatur, Ala., some 17,000 acres of timber lands in Wayne county, has sold to R. A. Haggard of Waynesboro a one-half interest in these lands. Messrs. Hassell and Haggard have sold 200,000 cross ties to the Holcomb-Hayes Company of Cincinnati for \$90,000 delivered on the Tennessee river. The tract from which these cross ties are being cut is said to be rich in poplar, hickory, chestnut and pine.

Thomas Wells, a well known agent at Tullahoma, Tenn., has closed a deal whereby the Greenfield-Talbot-Finney-Battle Company of Nashville and Tullahoma purchases a tract of 2,000 acres of timber lands in Grundy county near Altamont. The price is said to be a most substantial one. Mr. Wells is said to have some 11,000 additional acres he will shortly place on the market.

J. H. Baskette, former general manager of the Prewitt-Spurr Manufacturing Company of Nashville and Murfreesboro, which concern is the only red cedar factory in the world, has tendered his resignation as a member of the city council of Nashville. He removes from here to Helena, Ark., soon, where he will establish a big woodenware factory.

What is said to be the largest cross tie camp in the world is being established at Guntersville on the Tennessee river in Alabama, just across the Tennessee line. The ties are being collected at this point for the Big Four railroad, which has a contract with Chattanooga parties for 5,000,000 ties. The ties will be floated down the Tennessee river to the Ohio to the point of delivery.

The Chattanooga Stave & Cooperage Company has been granted a charter by Secretary of State John W. Morton. The capital stock is \$10,000 and the incorporators are V. J. Blow, H. F.

Smith, D. G. Hart, S. G. Holland and Leroy McGregor.

A project is on foot in Nashville to secure a new railroad running from Nashville to Huntsville, Ala. The promoters want the citizens of Nashville to subscribe for \$75,000 worth of stock in the road and Nashville lumbermen have subscribed as follows: Love, Boyd & Co., \$2.00; John B. Ransom & Co., \$250; Nashville Hardwood Flooring Company, \$100; Standard Lumber & Box Company, \$100; W. J. Wallace, \$100; J. H. Baird, \$100; A. E. Baird, \$100; E. & N. Manufacturing Company, \$250; A. L. Hayes & Co., \$200.

The American Pencil Company has about completed arrangements to erect a large pencil factory at Murfreesboro, Tenn. Murfreesboro is probably the largest red cedar market in the world. There is considerable growth of this very valuable timber remaining in this section, and in addition practically all the fences in the county are built of red cedar rails. The pencil companies are now buying these rail fences and putting up other kinds of fences for the farmers in order to get the cedar.

J. H. McCall and Gray Sanders of Huntingdon, Tenn., are erecting a saw mill at West Port, near Huntingdon.

Work has begun on the new saw and stove factory that is being built by the C. C. Mengel & Bro. Company of Louisville, at Hickman, Ky.

The W. J. Cude Land & Lumber Company has moved its offices into the new Stahlman skyscraper.

A. E. Baird has just returned from a business trip to Texas and Mexico.

V. J. Blow, president of the Hiram Blow Stave Company, is back from a business trip through Mississippi and Louisiana.

Nashville has nearly a score of woodworking plants and they are all running overtime in order to try and keep pace with the heavy demand for building material. In spite of the large number of suburban lots into which tracts around the city are being subdivided, numerous houses are springing up on them and it is these that are keeping the plants busy. Some of the larger plants are turning out contracts for handsome structures in many parts of the country. The box factories here are also doing a record business and many of them have been forced to go into distant territory to get all the gum and other varieties they use in their business.

Memphis.

Lumbermen in this city and throughout this section are much interested in the outcome of the case of the E. Sondheimer Company against the Illinois Central and Yazoo & Mississippi Valley Railroad companies, hearing on which was begun in the federal court recently before Hon. Judson C. Clements, a member of the Interstate Commerce Commission. The plaintiff alleges discrimination in favor of Memphis and against Cairo, Ill., in the matter of rates on lumber, the allegation being made that Cairo does not enjoy the reconignment privileges which have been given to Memphis. Mr. Clements had to leave Memphis for other hearings before the conclusion of this case and will resume the hearing in a short time. J. J. Bruner, traffic manager for the E. Sondheimer Company, and members of that firm have appeared and given testimony, while a number of railroad men have been examined for the defense. Lumber interests of Memphis will take a hand when the hearing is resumed, the Lumbermen's Club being represented by its regular counsel. In addition to this, however, there is a movement among local wholesale handlers of hardwood lumber, who would be affected more than other interests by an adverse decision, to employ associate counsel, though no definite statement is obtainable at this time. Reconignment privileges have played an important part in the development of the Memphis market, especially in the building up of this center for distributing and vending

point, and the Lumbermen's Club will do everything it can to prevent an unfavorable decision in this case. There is no opposition on the part of Memphis lumbermen to the granting of reconignment privileges to Cairo by the defendant roads, but there is a very strong protest against taking away from Memphis the privileges now enjoyed. Moreover, the plaintiff company does not care how the equalization of rates is effected, whether through the abrogation of the privileges given Memphis or through the granting of similar ones at Cairo. There is a suggestion that the reconignment privilege is not exactly legal and that the commission may so hold, but local lumber interests are encouraged over the fact that the commission has ruled that while it is anxious to remove this practice wherever possible it will not do so unless the letter of the law demands it in cases where large business interests would be affected by such a ruling. Cotton and grain interests would be as seriously affected as the lumbermen if the commission should declare the reconignment practice illegal.

The Rust Land & Lumber Company, a corporation affiliated with the Three States Lumber Company and the W. E. Smith Lumber Company, is building a mill at Mer Rouge, La., to cut cypress timber at that point. The plant is a circular one and will have only a moderate capacity. It will be ready for operation within the next thirty days.

The Three States Lumber Company is making good progress on its planing mill at Burdett, Ark., and with favorable weather conditions will have this in readiness for operation within the next fifty to sixty days. The big band mill of the same company at Burdett, Ark., is being operated both day and night in order that considerable accumulated timber may be cut up before it has sustained any damage.

The Bellgrade Lumber Company, the corporation recently launched by Thompson & McClure and Crenshaw & Cathey, reports through A. N. Thompson, vice president, that ninety-five per cent of the machinery has been shipped to Belzoni, Miss., where it recently acquired a large site, and that actual construction of the plant is under way. Mr. Thompson estimates that the mill will be ready for operation within about sixty days.

The conference held here April 22 between the river and rail committee of the Lumbermen's Club and high officials of the railroads operating in Memphis territory did not accomplish anything definite, but the feeling among both lumbermen and the railroad interests after adjournment was that much good would result from the interchange of views. Various subjects were discussed from the standpoint of both the railroad men and the committee representing the lumber interests of this city.

John W. McClure, secretary of the Lumbermen's Club, who, with President George D. Burgess, participated in the conference, gave out a statement afterward in which he declared it to be his conviction that the railroad men did not know any more about the causes of congestion than the lumbermen themselves. He further said the object of the conference was to prevent a recurrence of conditions recently experienced and that one of the remedies suggested by the railroad men was "less hostility on the part of the people and their representatives in the various legislatures."

The car situation now shows marked improvement. For a time after the congestion first began to disappear it was almost impossible to secure box cars for lumber shipments. In fact lumbermen had to use flat cars and everything else they could get placed on their sidings. Now they are obtaining a better supply of box cars than for some time, thus relieving to some extent the rather serious complaints from buyers regarding the use of flat cars and the damage to lumber thereon while in transit. The cotton movement is running much lighter and this of

itself is in some measure responsible for the better car situation.

Heavy rains are reported for the entire Memphis hardwood lumber producing area, and this has interfered with both logging and milling operations, thus restricting the output of hardwood lumber below the recent average. Conditions surrounding production had begun to get rather favorable, but it is intimated that it may take some days, even with fair weather, to get production back up to the average reached prior to the previous fortnight.

There will be a very large delegation of lumbermen from the Memphis club at the annual of the National Hardwood Lumber Association at Atlantic City, May 23-24. At the last meeting a committee was appointed to look after transportation arrangements, of which James E. Stark is chairman. The Memphis delegation will wear the same button which was worn during the Memphis convention last year, bearing the emblem of the association and the word Memphis in addition thereto.

The publicity committee of the club, of which George C. Ehemann is chairman, is now making arrangements to secure a permanent gold lapel button to be worn exclusively by members of the Lumbermen's Club at home and abroad. The idea is to advertise the city and give every member of the organization some insignia of membership. The button is described by Mr. Ehemann as an axe sunk into a stump. The initials "L. C." will be written across the axe and the word "Memphis" will appear below. The membership of the club is now at the highest point in the history of the organization, four new members having been received at the last meeting: W. C. Barneth, Heth, Ark.; Philip A. Ryan, C. B. Willey and Frank B. O'Leary, all of Memphis.

The announcement of the Southern railway that it will abandon the proposed extension of the Delta Southern, which was intended to connect Memphis and Jackson, Miss., is regretted by lumber interests of this section because it was felt that this road would be an important factor in the development of timber resources in the section between Memphis and Jackson. The Mobile & Ohio has declared its intention of abandoning the construction of the branch lines for the purpose of developing the virgin forests tributary to the road. Officials of the Pine Bluff North & South railroad, which plans to build a line from Memphis to Shreveport, La., announce that the contract has already been awarded for the building of a 46-mile section from Pine Bluff to Lonoke, Ark., where connection will be made into Memphis over the Rock Island. On the completion of this, which will require about six months, work will begin on the line from Pine Bluff south to Shreveport. The Memphis division will be the last constructed. The road is backed altogether by Pine Bluff capitalists and it is being built for the purpose of competing with the St. Louis Southwestern (Cotton Belt) and the St. Louis, Iron Mountain & Southern, which now handle all the traffic from Pine Bluff and the surrounding territory.

Hugh McLean of the Hugh McLean Lumber Company, which operates a large band mill in this city, has been here during the past few days looking after interests of the firm. His headquarters are at Buffalo.

Horace F. Taylor, another Buffalo lumberman, member of the firm of Taylor & Crate, has been circulating among local lumber interests during the past few days.

The Robertson-Fooshe Lumber Company will make application within the next few days for a charter with a capital stock of \$25,000. The company will engage in the manufacture and wholesale handling of hardwood lumber and will have offices and yards at North Second street and the Illinois Central railroad. The officers of the company will be: F. B. Robertson, president; S. B. Anderson, vice president;

W. B. Morgan, treasurer, and George W. Fooshe, secretary. Mr. Robertson is well known to the hardwood lumber trade, having been for some years a member of the Goodlander Robertson Lumber Company. Mr. Anderson is president of the Anderson-Tully Company and W. B. Morgan is secretary-treasurer of the same corporation. Mr. Fooshe has been for some years representative of the leading lumber papers of the United States. The company will begin business June 1.

New Orleans.

Two hundred boxmakers employed in the plants of the Central Manufacturing & Lumber Company and S. T. Alcus & Co. went out May 1 because their demands for a nine-hour day and recognition of the union had been refused. Sixty-five of these men were employed in the plant of the first named company, while the remaining 135 worked for Alcus & Co. Trouble had been brewing in these plants for some time, and the walk-out was not altogether unexpected. There are fourteen of these box factories in the city, but so far as is known no others have as yet been affected by the strike. The New Orleans Box Factory, on which demands had been served, conceded what the men asked, with the result that there was no strike in its factory. About 500 boxmakers are employed in the fourteen factories here. Two hundred of these are now on a strike, and it is expected that others will go out. The proprietors of the factories declare that they will stand pat and hold out against the demand for recognition of the union to the very last.

A full statement of the liabilities and assets of the W. A. Powell Lumber Company, Ltd., has been filed in the United States Circuit Court here in accordance with an order issued by Judge Parlange. The liabilities are given as \$494,645.02 and the assets are \$385,649.42, showing a deficiency of \$108,995.60. The statement of deficiency is supplemented by the following table: Apparent deficiency, \$108,995.60; W. A. Powell, \$61,420.24; doubtful accounts, \$34,954.78; stock not turned over to receivers, \$1,000; estimated total deficiency, \$206,370.02.

Heavy rains throughout Louisiana recently have interfered seriously with the operations of lumbermen and comparatively little has been done by hardwood men in the interior. The rains have been general and the precipitation in the last two weeks has been exceedingly heavy. Logging operations in a great many instances have been suspended. The weather is fair again, however, and it is anticipated that the lumbermen in the interior will shortly be able to get back to cutting stock.

The Evert Lumber Company, which operates a big mill in Calcasieu Parish, has just been incorporated. Its capital stock has been fixed at \$75,000 and the following are its officers: James H. Simpson of Detroit, Mich., president; W. E. Hooper, Chicago, vice-president; Ira T. Sayre, Flushing, Mich., secretary and treasurer.

Advices here state that I. R. and J. W. Adams have purchased the interests of J. M. Nugent in the Smith & Adams Lumber Company of Trent, in Catahoula Parish. The same persons have purchased Mr. Nugent's interests in a big planing mill at Georgetown, in Grant Parish.

K. Champlain, a well known Mississippi operator, has bought a big site on Fort Bayou. In the rear of Ocean Springs, and will erect thereon a big box factory. He expects to establish a big plant and very soon put it in operation.

Charlotte, N. C.

The J. Randall Williams Company of Philadelphia has about completed its splendid plant at Salisbury, and within a few days it will be running at full force. It will turn out lumber for shipment to foreign as well as domestic ports, and when contemplated additions are made will be one of the most complete plants in the entire South. A large force has been

employed and when operations are well under way both equipment and help will be largely increased. Mr. Williams is expected from Philadelphia to take charge of the work temporarily.

An effort will be made to obtain an injunction against J. Middleby, Jr., to restrain the sale of 23,000 acres of fine hardwood timber lands near Rutherfordton, which is valued at several million dollars. Mr. Middleby sold the property about six months ago to Governor Swanson of Virginia and his brother, W. G. Swanson, who, with D. A. Ritchie, D. E. Cogbill, C. J. Argyle and W. L. Clements, have organized the Broad River Lumber Company. He now alleges failure to pay interest and other breaches of contract in consequence of which he has advertised the lands for sale on May 18. The Broad River Company, acting through Governor Swanson, has for this reason agreed to ask for an injunction. The lands in question extend through four counties and are the most valuable lumber and mineral lands in North Carolina. They were purchased for \$150,000, \$10,000 being paid in cash and a mortgage being given for the remainder. When the first note for \$15,000 fell due in February it was paid, but no interest was included. The company answered Mr. Middleby when he made complaint at first that they would pay no interest until a re-estimate of the lumber on the lands was made, alleging a shortage in the first estimate of 100,000,000 feet, asking that this allowance be made in favor of them. This led to the foreclosure proceedings.

Mammoth operations are in progress between Waynesville and Clyde, N. C., where the Waynesville Transportation Company is constructing a twelve-mile flume which will serve seven sawmills. S. Montgomery Smith, who is at the head of the enterprise, means to make North Waynesville an important manufacturing center of the state. His company is building a large planing mill, through which some 60,000 feet of lumber will pass daily. The flume will serve a section producing 100,000,000 feet of lumber and 200,000 cords of cord and acid wood. Mr. Smith owns a tract at the head of the flume which contains 25,000,000 feet of hemlock, spruce and balsam and 12,000,000 feet of hardwood. The big sawmill which will be operated is the first "gang" sawmill ever built in this section of the state. Great things are held in view by the company, and with the capital behind it and the efficient men who are pushing it, the Waynesville section will doubtless become one of the most important hardwood centers in the lumbering district of North Carolina.

The plant of the J. W. Watts Lumber Company at Stony Point, N. C., was damaged by fire a few days ago. A large amount of fine lumber was destroyed in addition to machinery and equipment. The loss is estimated at \$2,000.

J. W. Crowell of Lexington, N. C., has established a new hardwood business in Salisbury. The capital stock of his company at the beginning of business is named at \$30,000 with privilege of increase.

The plant of the Kings Mountain Lumber Company, manufacturers of sash, doors and blinds and woodwork of every description, is nearing completion. The officers of the company are: W. A. Ridenhour, president; T. C. Mauney, secretary, and H. E. Petterson, general manager. A carload of new machinery will be installed in the new factory.

The plant of Asbury & Finger of this city recently destroyed by fire will be completed at an early date. Already work has commenced, and within a few weeks the plant will be in operation. The loss the firm sustained amounted to about \$22,000, large quantities of fine hardwood being burned as well as the entire machinery equipment.

C. W. Jones, formerly of this city, has decided to operate a hardwood plant in New Mexico. He recently made purchases of timber in that state and expects to begin operating a plant within a few weeks. He reports fine qualities

of hardwood, and exceedingly high prices in the West.

The High Point Planing Mills Company has been chartered with a capital of \$25,000. M. B. Smith and others are the incorporators.

President Hotchkiss of the Dare Lumber Company of Binghamton, N. Y., has announced that he will soon begin the erection of mills at Elizabeth City, N. C. The company owns 167,000 acres of fine timber lands lying between Croatan sound and the Alligator river in Dare county. This property has been in litigation for a number of years, which has held back the building of the mills which have long been contemplated. These encumbrances have been cleared away and plans are about matured for the erection of mills for the development of the property. The daily output of the mills will be 150,000 feet. About 300 hands will be employed. R. Gilpin Smith is now in the North buying machinery for the new mills. Active work is expected to begin within a few days.

Kramer Bros. & Co.'s establishment at Elizabeth City, the oldest plant in that section of the state, is being extensively improved. These additions are being made with the hope of being able to handle the large orders which are being booked daily from all over the country. This large concern shipped the first load of dressed lumber from the eastern part of the state to Philadelphia. This was the beginning of a reputation which has constantly broadened since the establishment of the business and which was never more evident than just at present.

A certificate has been issued by the secretary of state for the dissolution of the Waccamaw Land and Lumber Company of Wilmington. This is one of the largest lumber companies in the state, being capitalized at \$1,000,000 and backed by prominent Michigan hardwood men. The company owns about 200,000 acres of timber land in Columbus and Brunswick counties. The granting of the privilege of dissolution does not mean that the company is going out of business, however. The Waccamaw Lumber Company, backed by practically the same capital, will own and operate the establishment hereafter. Extensive improvements are looked for.

The Tyrrell Manufacturing Company will soon begin operating its new circular sawmill on the Scuppernon river near Columbia, N. C. The plant will manufacture all kinds of lumber, the daily output being about 30,000 feet, which will be increased as logging and shipping facilities are improved. B. F. Duncan is the principal spirit in the movement.

The McEwen Lumber Company of Azalea, N. C., is installing an up-to-date planing mill, a much-needed addition to its large plant. The company expects to begin operating within sixty days, manufacturing hardwoods. W. B. McEwen is president; P. R. Moale, vice-president; Herman Meader, treasurer, and A. H. Cobb, secretary.

The Whiteville Lumber Company has filed an amendment to its charter increasing its capital stock to \$250,000. The plant is situated at Goldsboro, N. C.

The Hope River Lumber Company has been chartered at Durham, N. C., with a capital of \$50,000.

The Cochrane Show Case Company of Charlotte recently filled an order for Secretary Pruner of the State Agricultural Department for cases to be used at the Jamestown Exposition to contain North Carolina exhibits. This is one of the leading hardwood factories of this part of the state.

The Dixon Lumber and Veneer Company of Rose Hill, N. C., has been chartered with a capital of \$100,000; William J. Hall and others, stockholders.

The Linville Lumber Company of Pineola, N. C., which has been operated for a number of years by John T. Nagle and others has recently consolidated with a number of hardwood concerns operating in the vicinity of Bristol, Tenn.,

and a movement has been started to do a general wholesale and manufacturing business.

Altapass, N. C., will be the scene of operations of the Tipp City Lumber Company of Bristol, which has recently established itself on the South & Western railroad near Spruce Pine, N. C.

The Noell-Anderson Company of Danville, Va., manufacturer of office furniture, tables and desks, has begun the construction of a new factory which will be completed in a couple of months. The addition was necessary on account of increased business, and represents an expenditure of about \$25,000. The concern is preparing to manufacture between two and three million feet of hoghead staves per year for consumers in and around Danville.

Louisville.

P. B. Lanham, formerly of Lebanon, Ky., and others have organized the Lanham Lumber Company, to manufacture parquet flooring. The company is equipping a plant at 12th and Magnolia streets. Down-town offices have been established in the Columbia building. Mr. Lanham has already had some experience in this work at Lebanon, where he developed quite a business in parquet flooring, shipping to the eastern trade. The new venture simply means going into the same business on a larger scale.

A. E. Norman reports that his company is putting in two or three new mills down in its Kentucky timber territory which will increase manufacturing facilities considerably. Speaking of the hardwood situation generally, he says that it has improved materially in point of supply. The company now gets stock more freely over country roads and is also getting a better supply of railway cars, so that the outlook for a busy summer is rosy.

The A. P. Turner Lumber Company is making better progress in the woods now than for some weeks, but not enough to be entirely satisfactory. It hopes to continue improving the work in the woods and expects pretty busy times all summer.

Albert R. Kampf says there is larger demand for hardwoods than can be cared for, and while he keeps booking orders from time to time to cover his accumulations, he has to turn away considerably more orders than he is able to accept because he hasn't the stock with which to fill them. He thinks the situation in oak is pretty strong and it is only a matter of time until oak prices go up. In fact, he is a firm believer in all hardwood prices being firmly fixed and inclining upwards.

Minneapolis.

The local consumption of hardwood promises to be fully up to last year. Building operations are under way with assurance that they will not be interrupted. The carpenters compromised their demand on the contractors for an increase in wages, the strike was called off and all the building trades are quiet and satisfied. The building permits for April reached a total estimated cost of \$1,147,960, compared with \$893,990 for April last year. St. Paul's were valued at \$623,119. The sash and door factories have a big line of special work calling for oak, birch, maple and basswood, and while not buying heavily now they will be in the market right along. The furniture factories have been having rather a light business.

Notices have been sent to the trade of the new table of estimated weights adopted by the Northwestern Hardwood Lumbermen's Association, which makes a number of increases on account of the tendency to ship so much hardwood dry or half dry. The new table of standard weights per thousand feet, which means some increase in price, reads thus:

Pounds.	
1,000	
1,000	

Soft maple	3,500
Rock elm	4,000
Soft elm	3,000
Brown ash	3,250
White oak	4,000
Red oak	3,800
Butternut	2,500
Basswood	2,400
Basswood ceiling, $\frac{3}{4}$ in.	1,500
Basswood siding and ceiling, $\frac{3}{4}$ in.	800
Oak flooring, 13-16	2,100
Maple flooring, 13-16	2,100
Birch flooring, 13-16	2,100

In this connection it is of interest to Minnesota producers of hardwood that lumber rates within the state have been reduced by the legislature about 10 per cent and that a law has been passed giving the state railroad commission jurisdiction over the question of railroad track scales. An inspector will be detailed to test the scales and also to check up on the present careless methods of weighing.

John E. Glover, the New Richmond, Wis., lumberman, was in the twin cities last week looking up the hemlock and hardwood situation. He has sawed about 7,000,000 feet of hardwood for the summer and fall trade, now in pile, most of it birch. He expects to cut about 20,000,000 feet of hemlock during the season.

E. Payson Smith of the Payson Smith Lumber Company has been away on a short trip to Milwaukee and Chicago. He reports their business good and enough now on the books to give them a good volume of shipments for three months. George S. Agnew, who has been in the South looking after shipments of oak for them, will be home this week.

The Transfer Warehouse Lumber Company, a new concern which expects to assemble lumber and look after mixed car business, with shipping facilities at Minnesota Transfer, has been organized with \$50,000 capital stock by C. W. Dewey, A. J. Sine and C. T. Dewey, all of Minneapolis.

W. O. Barndt of the W. O. Barndt Lumber Company is back from a business trip in Wisconsin territory looking after the condition of stock.

Ashland, Ky.

F. G. Eberhart of Mishawaka, Ind., a member of the Page Lumber Company, has returned from a business trip through West Virginia in his company's interests.

E. C. Means and C. M. Crawford of the Yellow Poplar Lumber Company are among the incorporators of the Russell Fork Railroad Company. The road will be a standard gauge and will run through Dickinson and Buchanan counties, Virginia, to the Kentucky border, and will promote the development of the rich timber and mineral lands in that section. This begins the railroad development in the brakes of Big Sandy, in which the people of this section are interested, and foreshadows the development of great riches in that portion of the rich Big Sandy country.

O. E. L. Beckett and wife are in California, where they will spend several weeks in travel after taking in the Shriners' meeting at Los Angeles.

W. H. Dawkins has returned from a trip east, where he looked after business interests and visited his daughter, Miss Hazel, who is attending Fairmont College, Washington, D. C.

John Hartman, head sawyer for the Dimen Lumber Company at North Catlettsburg, was frightfully mangled by one of the rapidly revolving saws a few days ago, and was thought to be fatally wounded, but the attending physicians say there is a slight chance for his life. He fell on top of the saw, which severed every rib in the left side from the backbone and cut the end off of one lung. So great was the wound that the liver protruded, while his lungs could be seen moving. Hartman recently came

from Cincinnati, where he worked for C. Crane & Co. He has a wife and four children.

Ironton, Ohio, has lost one of its best-informed and most prominent lumbermen in the death of James W. Pierce, president and manager of the Pierce Lumber Company, who died at his home of pneumonia after a week's illness. He is survived by his wife and a young son. Mrs. Pierce was made executrix of her husband's estate and will carry on his business without any change.

Giles Wright has purchased of C. C. Clark a fine tract of poplar on Rockcastle, in Martin County, Kentucky. There are 3,000 trees of the finest quality and extra large. Mr. Wright has just made a business trip through Michigan. He reports business brisk, with all the orders he can comfortably handle. Development of the vast and unexcelled timber along the lines of the Deepwater Railroad in Raleigh and Wyoming counties, West Virginia, is being pushed with unusual vigor at a number of points along the route. Capitalists seeing the possibilities of this region are attracted to it almost daily.

Wausau, Wis.

The Cisco Lake Lumber Company of Wausau has been organized with a capital stock of \$200,000. The incorporators are Walter Alexander, Cyrus C. Yawkey and Benjamin Heinemann. The firm has lately purchased lands in Gogebie County, Michigan, on which there is 100,000,000 feet of hardwood and hemlock, which will be shipped by rail to Wausau and manufactured.

The Upham Manufacturing Company of Marshfield recently paid Vincent Milkowski, an employee, \$3,200 for the loss of both feet while in the company's employ. It was a voluntary act.

The lumber barge Arcadia, which recently left Manistee, Mich., for Two Rivers, Wis., loaded with a cargo of hardwood, was lost with her crew.

The Wheeler-Timlin Lumber Company of Wausau, a hardwood concern, has increased its capital stock from \$15,000 to \$25,000.

W. D. Connor, head of the R. Connor Company of Marshfield, and lieutenant governor, has been acting governor during Governor Davidson's recent absence from the state.

The Roddis Lumber & Veneer Company of Marshfield, which is rebuilding its plant destroyed by fire last winter, will have a roller drier with a capacity for drying 120,000 feet of thin veneer every ten hours.

The English Manufacturing Company of Merrill is adding machinery to its plant which will greatly increase its capacity. It is engaged largely in the manufacture of paint pails and has one order which will take five years to fill.

C. P. Crosby, a Rhinelander hardwood man, and family are visiting in the South and in Cuba.

A carload of birch lumber containing 29,223 feet was recently shipped out of Bundy to the Lesh Matthews Lumber Company of Chicago. This is one of the largest amounts of that grade of lumber ever put on a car in northern Wisconsin.

The hub factory recently built by business men of Athens has been put in operation. The concern has 100,000 feet of timber on hand, sufficient to turn out 14,500 sets of hubs.

The Payne Lumber Company of Oshkosh is enlarging its sawmill plant at a cost of \$100,000, which will make it one of the largest in the world.

What is claimed to be the largest tree in Wisconsin is on the farm of Matthew Mallon near Reedburg. It is an elm and it requires a string thirty feet long to reach around the trunk. It is about eighty feet high and the body holds its size remarkably well for about forty feet, when several large branches are thrown out, making a symmetrical and beautiful specimen.

The G. W. Jones Lumber Company of Apple

ton recently made a sale of 500,000 feet of rock elm plank at its plant in Crandon which will be cut into material for the Bell Telephone Company.

Charles Fish of Elcho and Charles R. Johnson of Grand Rapids, Mich., will build a mill and coopeage plant in Elcho.

As a sample of the difficulty lumber firms have in keeping laborers may be cited the following: The W. H. Rogers Lumber Company of Nashville, Wis., recently found upon looking over its books that during one month there was an enrollment of over 600 names, and yet never at one time did they employ over 100 men. The company owns 7,000 acres of hardwood lands in Langlade County.

Here is an instance showing how hardwood lands are advancing in Wisconsin: A. W. Breitenstein of Stockton three years ago purchased a tract for which he paid \$1,700. A few days ago he sold it to Charles Geboreck of the same town for \$3,000.

Isaac Stephenson, Jr., will return to Marinette to live. He recently disposed of his timber holdings in the South to the Long-Bell Company for \$3,600,000.

The Kaukauna Lumber & Manufacturing Company of Kaukauna has purchased and sawed into lumber some black walnut trees which grew from seed planted over fifty years ago. They had attained a growth of from eight to ten inches in diameter and were cut down to make room for building purposes.

The Paine Lumber Company of Oshkosh, hav-

ing placed the highest bid for 17,000,000 feet of logs on the Keshena Indian reservation near Shawano, will be awarded the contract. Its bid was \$326,000.

Toledo.

Following the announcement of an investigation of local railroad conditions by Special Agent Mackenzie of the Interstate Commerce Commission they seemed for a time to be somewhat improved. This, however, did not last long according to most dealers, and while western shipments are some better there is room for much improvement. It is understood semi-officially that when the grand jury convenes in June the government will enter into the investigation from the grand jury standpoint.

There has not been very much change in the situation caused by the indictment of the lumber dealers last month for violation of the Valentine anti-trust law. All of them have given bond for appearance and it is expected that their case will come up the latter part of the month. The defendants have indicated no line of defense, but it is hinted strongly that they will open up a few surprises before the end is reached.

The hardwood lumber plant of C. A. Hunt & Co. at Baneroff, near Pt. Huron, was destroyed by fire last week. The loss was total, as there was no insurance. The owners announce they will rebuild the plant.

Thomas A. Buckley of Eostoria, a well known lumber buyer, died suddenly at Upper Sandusky last week.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

While many local wholesalers claim that they are as busy as ever, others admit that trade is slackening a little. It is certain that there is no particular buoyancy in the market, and, while prices remain firm, sales are being urged in a good many instances. The furniture manufacturing trade, which furnishes a considerable element of the local demand, is not particularly active; in fact it is not up to expectations, while stocks in the yards of factories are comparatively light; buyers are hesitating about placing many orders for advance shipments. The entire woodworking industry still remains active, and there is a good demand from this class of trade for oak, birch and some of the other woods. Local flooring people are busy and are still strong buyers of maple and oak when they are offered at reasonable terms. On the whole, the situation may be regarded as healthy, and many of the dealers are glad to see an evidence of slackening demand so that they can catch up with their business.

Boston.

The market for hardwoods is very firm but trading is less active than it was. Nearly all dealers did a good business during March and April, but this month so far has produced small orders. A leading dealer gives as a reason for this that sellers notified the retailers that prices were advancing and advised them to place orders previous to the mark-up with the result that the majority of buyers have unusually large stocks or are protected by orders placed. Some buyers believe present high prices cannot continue and that holding out of the market will result in the market becoming easier.

Consumers of hardwoods are busy. Furniture manufacturers are doing a good business.

Export inquiry is not large, and until there is a material decline small orders only will be received from abroad. Plain oak is firmly held and quartered oak is strong. White and brown ash are in comparatively small offer-

ing with prices tending toward a higher rather than a lower level. Whitewood has developed a great deal of strength during the past two months. No shipper is willing to make concessions and where prompt delivery is wanted values are very firm. Cypress is well held, but demand is not of large volume just now. Black walnut is in good demand; prices are strong.

New York.

The hardwood trade in New York city proper has eased off slightly of late in certain lines, but the volume of buying in the outlying sections seems strong. Trade as a whole is not abnormally large, but supplies are small, and taking all branches of the trade into consideration there is a fair consumption, particularly among manufacturers of furniture, pianos, trim, mouldings, etc., with oak, ash and poplar in the most active call. There is an exceedingly brisk trade in low grade rough stuff and rough car and ship lumber and specialties of that nature, but as a matter of fact there has not been as good a demand for this class of material for many years as there is at the present time, and the mills and wholesale houses in a position to furnish this class of material are reaping a profitable trade. Hardwoods in the better grades are by no means plentiful, although in certain directions there seems to be a slight increase in supplies. In some sections the supply of oaks is a little more plentiful, but as a whole the situation seems to grow pretty generally worse, and large handlers of stock are urging buyers to place orders for their summer wants at once in order to get shipments when wanted, as it is generally believed that delayed purchases will prevent buyers from securing their supplies as the season progresses.

The price situation continues strong, but while hardwood values as a whole are today on a higher level than was ever known before the margin of profit is by no means commensurate with what it appears to the average manufacturer. It is true that the manufacturer who holds timber purchased years ago is reaping good

profits, but the operators who have gotten into the game in recent years and have purchased their timber holdings at recent prices and have installed up-to-date plants must of necessity realize these high prices in order to receive any profitable returns. Of course, this increased operation will eventually increase supplies, but any material easing off in values will result in a suspension of newer operations in many sections.

As a whole, the general outlook for the balance of the spring and summer trade is very fair and there is every indication that values will be maintained for some months to come, and especially so if the supplies do not materially increase.

Philadelphia.

The good effect of the spring-like weather, which has put in a tardy appearance, is very perceptible in the lumber business and a reaction is felt all along the line. It is unfortunate, however, that a strike is on in building circles, which naturally will call a halt to free buying among those who handle building material. The trouble is a complicated one and concerns neither the question of wages nor hours, but has grown out of a dispute as to whose work it is to set the cut stone in the body of a building. For years the granite cutter has been doing this, but now the stone-mason, who does the lighter work, insists that the heavier stone should be set by him, and as the stone-masons' association is allied with that of the bricklayers, the latter naturally back the first named in the stand it has taken. It is understood that the bricklayers, however, are not unanimously in favor of this move, and the master bricklayers tried to force a settling of the dispute upon the bricklayers by notifying them that all building would stop short on the evening of May 2 unless the three organizations came to satisfactory terms. This warning has been ignored and the strike is now on. It is believed, however, that pressure will be brought to bear upon the stone masons and that they will yield.

The various woodworking industries are busy, with no perceptible sign of abatement. Hardwood dealers are anticipating a good season and many houses claim they have any number of good orders coming in, but are unable to get the goods on account of the railroad service and the unfavorable weather conditions at the mill districts. Among the hardwoods, chestnut, ash and basswood keep the top notchers, but continue scarce. Oak is apparently regaining old status, but opinions do not all coincide, it seems, on poplar. Some say it is not so stiff as heretofore, while others contend it is showing up strong. Quartered white oak is looking up, and gum holds steady. Maple flooring keeps in good call. The cedar and veneer market is active, but the high grades are scarce, with prices up. On account of this scarcity and high price of cedar and veneer, some dealers have made a trial of African and Brazilian mahogany as a substitute, but it did not work, so some of the cigar-box makers are using veneered instead. Yard stocks of hardwood are normal, but seasoned material is scarce, both here and at the mills.

Baltimore.

The hardwood trade of this section is holding up remarkably well. Stocks continue to be in good demand and the mills are unable to supply lumber fast enough. Values are firmly maintained, and dealers admit that they are getting the highest prices ever paid for stocks; an excellent feeling prevails in the trade and no uneasiness is felt over the outlook. Manufacturers as well as dealers reason that as the railroads cannot now handle all the freight that is offered, because of the scarcity of rolling stock, they must continue to make large additions to the equipment, whether they want to or not. It is the general belief that the demand

for stocks must continue brisk because of the extraordinary requirements of the large consumers which cannot be deferred but must be met without delay. And this opinion appears to be justified by the existing state of affairs, which has all the manifestations of a big boom.

Oak commands most attractive values and the inquiries are always ahead of the output of the mills, which latter have contracts enough to keep them going for months to come. Shipments are made at record-breaking figures and the tendency of stumpage values is steadily upward. The demand for foreign points is said to be not quite so urgent as it was some time ago, but the situation there is eminently satisfactory. What is equally important, the terms are such as to leave the exporters a good profit, because the consignees have ceased to insist upon vexatious requirements which tend to cut down the gains. Ash is not far behind oak, being eagerly sought, bringing very acceptable prices and holding its own in every particular. Chestnut, walnut, beech and all the other hardwoods dealt in are finding ready takers and there is so far no indication of a decline in the movement. The favorable weather serves to increase the output of the mills, but an inspection of the yards here shows that stocks have been materially reduced during the past months, and that large quantities of lumber will be needed to bring the selection up to what it was before the heavy withdrawals. Business is being done abroad on a more satisfactory basis and exporters are benefited accordingly.

Pittsburg.

Pittsburg hardwood men for months have held the center of the stage. It is not so with dealers in other woods by a long way. Business is moving along at a very fair pace in all lines, but it goes by leaps and jumps in the hardwood trade, and there is not a dealer in the city who is not ahead of the game so far as orders are concerned. His greatest trouble is to get lumber enough to fill his orders and cars to ship out the stock. Of late the latter complaint has been a very serious one, especially on the short line branches in West Virginia, where the scarcity of cars is perhaps more pronounced than one month ago.

Everything in hardwood is selling well. Stocks at the country mills are picked over till they are down to the minimum. Dry lumber is at a premium almost anywhere in the Pittsburg district.

Under this strain of demand prices are remarkably firm in all lines. Oak is leading the race. Pittsburg has never had a better market for oak lumber of almost every variety than this spring. From the finest grades of finishing stock to the heavy timbers and piling wanted for river and railroad improvements there is a steady inquiry for everything in oak and the quotations named by local wholesalers are not objected to, as a rule. Chestnut is strongest in market this month. There is an excellent inquiry for sound wormy, and mill culls are being worked off at good prices. Piano and casket manufacturers are taking more chestnut this spring than ever before and this makes a very good demand for the better grades. Several firms report a splendid call for ash and hickory, which are wanted chiefly by the factories of Ohio and Michigan. The trade throughout the East is good and some big orders have been placed there lately.

Buffalo.

Business in hardwood is unanimously reported active, with prospects for a busy season. There is in general enough stock of the various hardwoods to meet the demand, though it is no longer possible for the consumer to choose just the sort that he used to prefer.

There seems to be oak enough to meet most demands and the balance between quartered and plain is better than it used to be. Prices are strong, and some dealers say that they ought to be higher.

One thing that is not very reassuring to the eastern dealer is the fact that so much hardwood lumber sells right from the mills into other markets. It is now out of the question to bring such woods as gum and cottonwood here, as there is a better trade in them further south and west.

There is a big demand for poplar, with only a light supply and that pretty badly distributed. While some of the dealers are managing to get a fair supply of it, others are reporting so little of it that they have to turn most of their orders down.

The opening of the late trade will soon add materially to the birch, black ash, elm, maple and basswood supply, all of which will find a ready sale. The demand for elm is improving, as it is wanted so badly in place of ash, and maple is going into the same trade. Basswood grows in demand as poplar becomes harder to find.

Saginaw Valley.

Hardwood plants are in operation throughout this territory and a number of them have been running all winter, yet there is no accumulation of dry stock. The market is in much better form than it was a year ago, both as to volume and price. A quantity of No. 1 common basswood at \$45 a thousand was shipped out to Pennsylvania last week, and there is an inquiry for dry stock on every hand. Beech and birch are doing very well. A lot of beech, birch and basswood culls are being worked up into boxes. Prices for all kinds of hardwood are now firm and everything that appeals to the eye of the dealer is being taken. Maple flooring has advanced on the factory grades and the market all through is strong.

Indianapolis.

Within the last ten days the car situation has shown considerable improvement throughout Indiana. Cars of the fast freight lines have appeared in larger numbers during that time than at any other period within the last five or six months. This does not mean that there is an ample supply of cars for every line of traffic, but the relief is noticeable. An advance in grain rates has checked the demand for cars from that source and it is believed that the shortage will be greatly relieved until grain begins to move in the fall. Lumber has been coming into Indianapolis in large quantities the last ten days, and hardwood men are getting a fairly satisfactory supply to meet the unusually heavy demand. There has been no increase in hardwood prices, nor is any contemplated, it is understood, in the immediate future. The demand for all lines of hardwood is brisk, with a fairly good supply.

Bristol, Va.-Tenn.

The past fortnight has seen no appreciable change in market conditions in this section. Despite the fact that stock is moving rapidly and there is a steady demand for all grades and kinds, it is beginning to accumulate on the yards which have been pretty generally depleted for the past few weeks.

The car supply is not what it should be and many lumbermen in remote sections report that they are handicapped by their inability to get their wants in this line supplied.

Local exporters report the foreign markets very satisfactory. There has been a large amount of stock from this section exported this year and shippers are unanimously satisfied with conditions abroad at the present time.

Cincinnati.

The demand for all grades of hardwood lumber in this market is excellent. The car

shortage that held back trade for some time is now practically cleared up and cars can be secured with short notice. The only thing that now bothers lumber dealers is the shortage of stock on poplar grades. That item of wood has never been in greater activity than now and dealers are contemplating augmenting the price. Poplar firsts and seconds are eagerly sought and dealers are securing fancy prices; however, a general rise in the price has not been posted. Oak, white and plain, are two more that are receiving their portion of requests, and next to poplar are the best seller in this market. Hemlock and cypress are still selling well, but not like oak and poplar. Hickory, spruce, birch and mahogany are keeping up with the pace set by them some weeks ago and prices obtained are generally on a steady basis. Dealers now look for heavy orders all through the year 1907.

St. Louis.

The demand for hardwoods is still excellent but the majority of dealers report the market less active than it was a month ago. Buyers evidently think that the improved car service and the past few weeks of good weather in southern milling and logging territory will bring up a large amount of stock, which operators have not been able to move during the winter months. However, the cut for the season was light, owing to the heavy rains and the scarcity of cars.

Poplar, cottonwood and ash are still in great demand with the jobbing and consuming trade at the prevailing high prices for all sorts of grades in these woods. Oak is not so active of late as it was a short time ago, although the demand for quartered white is still excellent. Gum is coming into the market rapidly, and with the increased supply there seems to be no diminution in the call, business in this line being better than ever before.

Nashville.

Nashville lumbermen have at last reached the stage where they are making promises about the time they will deliver shipments, so marked has been the recent improvement in the car shortage situation. Until right recently the question of getting a car for a shipment figured very materially in the price paid. Many northern and eastern dealers who came South here offered big increases in quotations if they could only get the promise of a car at once in which to forward their stuff. Poplar continues to lead all the other hardwoods in this market. Dealers who have any are still able to get most anything they have the nerve to ask for all kinds of stock. Quartered oak showed a slight advance this past week, although the market has been pretty steady in this variety owing to the liberal supply on hand. There is plenty of plain oak but it is selling well. A good deal of ash has been reaching this market recently, although a slight advance is noticed. Gum shows an advance, owing to the heavy inroads the box men have been making. First class oak staves are now bringing the highest price ever known here. The demand for staves this season exceeds that of any previous year. In some quarters staves are worth more than lumber and many of the saw mills are putting in stave cutting facilities.

Memphis.

The demand for hardwood lumber is perhaps not quite so active as previously. There is no evidence of weakness in the market and there is still a very satisfactory volume of business doing, but it is evident that buyers are not quite so strenuous as they were. They have secured large quantities of lumber during the past several months and, with improved car service, this is now being delivered to them. Thus they are in

a waiting attitude pending further developments before they become active buyers again.

There is scarcely as much strength in the higher grades of gum as there has been recently. The offerings of this have shown considerable increase and some holders are offering to sell at lower prices than recently current, which has created the impression among buyers that prices may go lower on this class of lumber. The lower grades are firmly held because there is such an excellent demand for these for use in box and crating factories. Plain oak, quartered oak, ash, poplar and cypress are just as firm as heretofore. There is no surplus of any of these woods and holders are rather independent. The recent increase in the amount of hardwood lumber placed on sticks may have had some influence in making buyers hold back somewhat, but the decrease now in evidence, resulting from the unfavorable weather conditions told of in the general letter from Memphis, may have the effect of renewing the demand somewhat in instances where it is beginning to lag. General conditions continue quite wholesome and the trade is confident of the immediate future of the market.

Charlotte, N. C.

Hardwood market conditions locally are satisfactory. The good prices that have prevailed for six months continue with little evidence of early reduction. All grades of lumber are demanding stiff prices. The past few weeks have brought much improvement in the car situation and the prospects are that before many more weeks lumbermen will not be troubled at all in this direction. High-grade hardwood is somewhat scarce on the local market, and prices have advanced. Poplar and chestnut are in demand over the state. Weather conditions were favorable to work during the month of April, many important timber deals have been made, new companies are chartered almost daily and altogether the outlook here is exceedingly gratifying to the hardwood manufacturer.

Louisville.

There are hustling times in the Louisville hardwood market. The improvement in the car situation continues, and as a result the receipts in the yards here and the shipments from country points have been much more liberal. Operations in the woods are also more active. There does not seem to be any trouble about the demand, except that here and there a prospective buyer will wrangle over prices, but these things are always with us and do not alter the fact that prosperity continues to smile on the hardwood trade in this community and every class of hardwood products finds a ready market.

There is in addition to the regular factory trade an increasing call for structural material as the spring building season advances, and this call in the aggregate absorbs a large quantity of hardwood and incidentally assists the mill men materially in cleaning up their cut. Poplar bevel siding continues scarce and in demand, as is the case with all poplar lumber. Aside from poplar, which is distinctly in the lead, the woods seem to be pretty well bunched as far as demand is concerned, and naturally with the continued improved conditions of transportation there is a decided increase in the amount of business being done.

POPLAR

Rough and Dressed
SOUTHERN HARDWOODS

M. A. HAYWARD

1021 Saving and Trust Bldg., Columbus, O.

Minneapolis.

The country trade is the main feature now with Twin City wholesalers. They could do a bigger volume of business if they had the stock, but the offerings of dry lumber are decidedly restricted. Some oak is being shipped green and, with the exception of one or two small lots of red oak, there is no dry northern oak stock to be had. Low grade lumber is all very scarce and high in price, and basswood is especially sought after. Box manufacturers are buying the new cut and will soon have it cleaned up at prices \$5 or \$6 a thousand higher than last year. The mixed car trade is good and calls for wagon stock, which is very scarce, with liberal amounts of flooring.

Factories seem pretty well stocked up for the present and are not buying much, but are looking ahead and contracting to quite an extent for the new cut, at prices which show confidence in the market. The talk of retrenchment in business has not affected the factories as much as it has some wholesalers, who are disposed to clean up and not take on much more stock until summer comes and they know more about the outlook. Prices are stiff now on everything, and birch, about the only northern hardwood in fair supply, is running low and getting stronger on the market, though the new cut can be had on contract very reasonably. Southern stock is not very freely offered and is held high. Dry ash is out of the market, and new offerings are pretty well contracted by large consumers.

Rhineland, Wis.

Backward spring weather has delayed the placing of a good many orders, and complaints are being made that trade is rather dull. Traveling men report finding factories pretty well filled up. There are certain items, however, that customers are short of, as was the case last year. Cars are quite plentiful, but for eastern shipments nothing but gondolas or flats are provided, and in the case of hardwood flooring, or firsts and seconds of any kind, dealers dislike to load open cars. One advantage in loading open cars is that one can get on a good big load. C. P. Crosby of this city last week shipped a car from Whitcomb, Wis., to Sheboygan loaded with 30,532 feet of 2-inch birch plank. This is the biggest carload of lumber on record yet, considering the fact that dry birch weighs 4,000 pounds, so that the car must have weighed over 120,000 pounds. Buyers of basswood are resigned to the prevailing prices and are placing orders for the new cut without a kick. Those who cannot afford to use basswood will have to substitute some other wood, for there is no likelihood that it will ever become plentiful or cheap again.

Birch is selling well and covering a wide range of country. Probably the birch trade never before approached in volume what it is today. Many manufacturers of furniture and wood goods are using it in place of some wood that has grown too scarce or too high for them, but the bulk of it goes into house finishing, where it is largely supplanting oak. A good deal of birch leaves here for New York state points, and Ohio and Indiana are buying it to a large extent also.

Soft elm is in better demand than at any time for several years and is commanding good prices, but still they are not as much as the wood is worth.

Toledo.

Good demand, firm prices and no surplus stock seem to fairly tell the condition of the hardwood market in Toledo. The strongest feature of the market is poplar. This wood is very scarce and very high. Every foot is snapped up eagerly as fast as it is received and box men and manufacturers are complaining constantly of being

unable to get stock. The maple market, particularly in the flooring line, has been fairly quiet up to a week ago, but since that time it has taken a brace and now is moving along in pretty good shape. There is a strong demand for plain oak with prices inclining upward. Quartered oak is also fairly active and may take a jump at any time. Ash is holding well with demand fair; straight-grained is not to be found in any quantity. Hickory is being readily sold.

Ashland, Ky.

The car shortage is easier in this section and not so much difficulty is met in making prompt shipments. There was never a better demand for high grade poplar, and in fact all kinds and grades of lumber find ready sale as soon as they leave the saws; in consequence of which there is very little accumulation in the yards. All mills are busy and lumbermen have no complaint from any quarter.

Liverpool.

Two mahogany sales were held recently and higher prices were the rule. The advance, though small, was quite distinct and there is no hesitation in saying that much higher prices can be looked forward to. Mahogany on this side is, without the smallest shadow of doubt, coming into fashion again. All the cabinet makers state that it will be used more than ever during the next year or so. This must mean that the increased demand will bring increased prices. It certainly seems a sound deduction to buy freely at the comparatively low price prevailing today.

Poplar and ash are still firm and stocks are very low. Oak remains in similar position. Hickory is better and is really wanted. Something like a famine in this wood would take place if one or two of the big buyers started buying, as they no doubt shortly will have to do. Satin walnut and walnut boards are not so good as they should be, considering the high price of poplar. Ash logs are not so strong, the import having been very heavy. These should be kept back a bit. The price asked, too, does not meet with buyers' ideas, which are only low.

London.

Business certainly seems to be improving and buyers are making more inquiries for stocks, which in many instances seem to be coming forward quite freely.

Thick oak planks for car construction and house building purposes are still scarce. Most of the arrivals are being sold on the open market and are realizing top prices. It is not always safe to send thick planks here for the open market, but at the present moment buyers are afraid that by the time they receive goods ordered prices may not be quite so high.

Plain boards, 1", 1½" and 1½", seem to be arriving quite freely, but the market is in position to deal with these stocks for some time to come.

Quartered boards and planks are coming into better demand and there is no great stock here.

Walnut is very difficult of sale, the demands being for other woods for furniture making. There is a fair stock of all except prime grade thin boards, which are in request. Logs fit for veneers would sell well. The demand for satin walnut is mostly for No. 1 common, which is in good supply; 1s and 2s have got too high in price for the class of small makers who manufacture this wood into furniture, and therefore the demand is restricted to one or two large buyers who take constant supplies which do not come on the market. Whitewood shows a continued scarcity and stocks are practically exhausted and arrivals realize good prices.

Ash planks have a good sale, but logs are neglected.

AT COST

IS AN UNCOMMON TERM AS APPLIED TO INSURANCE

But this is the actual price of Indemnity against Fire Loss furnished by the

Manufacturing Lumbermen's Underwriters

THE STRONGEST INSURANCE ORGANIZATION
TO-DAY IN AMERICA

The saving is not on a small portion of your insurance but on the entire line.

There are other advantages equally interesting.

Only well built plants with adequate protection and at least five years timber supply are considered eligible.

BUSINESS OPPORTUNITIES

WANTED—MANAGER.

The advertiser, a large corporation, contemplates starting a first-class Box and Veneer plant in the South, and desires to associate with a first-class, practical man to take full local charge. Man must have had successful experience in similar work, be of unquestioned character, and be able to invest from ten to twenty-five thousand dollars in the business. The business will require a capital of one hundred to one hundred and fifty thousand dollars. The advertiser has ample capital to finance it, but desires investment indicated on part of manager for business reasons, which will be apparent to the right man. Give in confidence full information in replying. Address "E. W. C.," care HARDWOOD RECORD.

A SAWMILL OPERATOR

With at least 25 to 50 M capital can obtain timber from an Eastern Tennessee hardwood tract 6,000 acres and stumpage based per thousand feet, pay when dry and shipped. Write for further particulars. A good chance for good timber and will warrant investigation. Address "D.," care HARDWOOD RECORD.

MAPLE FLOORING MILL

For sale. Located in Michigan and now in active operation. This plant is modern in every respect and making money. Will sell or take stock in new company. Owners have large interests elsewhere demanding personal attention. Address "MAPLE FLOORING,"
care HARDWOOD RECORD.

MISCELLANEOUS

FACTS FROM PRACTICAL MEN.

The HARDWOOD RECORD is always in the market for articles on any and every feature of the hardwood industry. It wants practical statements of fact from practical men who know how certain things can be done in the best way. Literary quality not essential. Liberal pay for acceptable articles. Address
Editor HARDWOOD RECORD.

RED BOOK

Published Semi-Annually
in January and July

It contains a carefully prepared list of the
buyers of lumber in car lots, both among
the dealers and manufacturers.

The book indicates their financial stand-
ing and manner of meeting obligations.
Covers the UNITED STATES and MANI-
TOBA.

The trade recognizes this book as the au-
thority on the lines it covers.

A well organized Collection Department
is also operated and the same is open to you.

THE NEW 1907 CATALOG

is ready, ask for one. It describes the most complete line of filer room machinery manufactured, including our New No. 99 Automatic Sharpener, as shown by cut, also our New No. 109 Stretcher with automatic Re-toother.

Covel Manufacturing Co.
Chicago, U. S. A.

THE MARKET IS DEMANDING, more and more LUMBER OF STANDARD LENGTHS, WITH SQUARE ENDS

As well as straight and parallel edges. The straight and parallel edges you can obtain with a "Tower" Edger, while

THE "TOWER" ONE-MAN 2-SAW TRIMMER

will give you the standard lengths and square ends with a minimum of **time, labor and waste**. In all other trimmers the manner of shifting the saws is such that every time the position of the saws is changed the operator has to go clear to the end of the machine. In the "Tower" One-man 2-saw Trimmer he never has to go beyond the end of the board. Especially with **short boards**, this means a great saving in **time and labor**. It also greatly reduces the amount of waste, as it is **much** easier to see how to trim lumber to the best advantage from the end of the board than from the end of the machine.

In all of these trimmers there are **two feeds**, which may be instantly **started, stopped or changed**, without stopping the saws. Both are controlled by the **same lever**, which is located in the most convenient possible position.

SMITHVILLE**

The Profit Builder

**SMITH of
SMITHVILLE**

NO. 105-A, EXTRA HEAVY 12-INCH MOULDER

IT HAS been our purpose during the last half century to develop a line of wood working machines containing the best workmanship and material that American skill and wisdom can afford. This fact we are proud to say is well established in the minds of our many patrons. We have, however, now exceeded ourselves by the development of a remarkable Moulder, the excellence of which is due to our obtaining written suggestions from more than a thousand operators throughout America. This machine stands alone as being the composite idea of the thinking operators of this country. One year's test of its work has convinced us that it is impossible for you to compete successfully against the Smith Moulder with any other machine. Can't we send you prices and literature?

A McGIFFERT LOG LOADER

will be in full operation at the
JAMESTOWN EXPOSITION

This is your chance to combine business with pleasure. Go and enjoy yourself and at the same time see what a really wonderful machine the McGIFFERT is. Watch it switch and spot its own cars, skid its own logs, and especially load those logs faster, easier and cheaper than you've ever seen it done before. We'll have a good man in charge to *prove* what you've only read before.

Seeing is believing, you know,
so go if you possibly can.

CLYDE IRON WORKS
Duluth, Minnesota

ATKINS Silver Steel SAWS

cost more than other Saws, because they are BETTER. The First cost of a Saw does not count for much. What you want is your Money's Worth. Isn't it better to pay a fair price and get the best rather than a low price and get poor goods? Try an ATKINS SAW. They're better.

E. C. ATKINS & CO., INC.

The Silver Steel Saw People.
Home Office and Factory, Indianapolis.

	New York City,	Portland,	San Francisco,	Seattle,	Toronto.

Lidgerwood Combination Hardwood Logger

(Patented)

Especially Designed to Log the Hardwood Flats Bordering on the Mississippi River. A Machine that Can be Used Twelve Months in the year.

RIGGED AS A CABLEWAY SKIDDER.

To be used in sloughs, swampy places and during the wet season, especially where the timber runs high to the acre per thousand feet, or where the timber is thick and small with lots of underbrush.

RIGGED AS A SNAKER.

Should be used when flats are dry enough for a horse to return tongs into the woods, especially where the timber is large and scattering.

RIGGED AS A SLACK ROPE MACHINE.

To be used only when impossible to operate either the snaking or cableway system, or when the railroad is so located that a slough or low swampy place must be crossed, thus preventing the return of line by horse.

Lidgerwood Manufacturing Co.

96 Liberty Street,
New York

Atlanta, Ga.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock $17\frac{1}{2}$ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

Write for Full Description.

Automatic
Band Saw
Sharpener

All Machines Fully Guaranteed

This machine excels all others for single cutting Band Saws from 8 to 14 inches. Its construction is mechanically correct, simple and durable, and does not possess any of the intricate complicated parts that confuse the operator. The head is adjustable so that straight wheels can be used with the same results as concave.

This represents just one type of machine. We make in addition a complete line of modern tools for the care of saws.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

General Market Conditions.

There were no particularly new features in the hardwood situation during the last fortnight. While prices are being well maintained, there is a slackening of demand in nearly all the trade centers. It is thought that speculative building is over for some time, and the business of the furniture manufacturers is not as active as it has been. These two causes are primarily responsible for a slight let-up in the insistent demand for many varieties of woods.

Oak and poplar, especially wide stock, are still in active call, with the good end of cottonwood a close second. The demand for nearly all kinds of hardwoods used in boxes and crates is still heavy, as is the call for ash, hickory and all varieties of wagon material. Maple, beech and birch are in fair demand.

Current market conditions are entirely satisfactory owing to the fact that there is a manifest shortage in practically every hardwood producing section of the country. The southern and southwestern districts, owing to bad weather conditions, are fully sixty days behind a year ago, and the average stocks north show very light assortments at milling points. The season's cut among northern producers is already entirely sold.

This apparent settling up and levelling of prices is going to be a good thing for the trade. It will not only give it time to catch up with business but for thorough adjustment of prices on a basis of relative values. On the whole, the situation is decidedly favorable and the season will undeniably be a very satisfactory one.

Flooring factories report a good volume of trade with their plants all busy. There seems to be an increasing demand for veneers and panels, and the many plants producing this line have their facilities fully occupied. There is a heavy call for mahogany and there seems to be an increasing home demand for walnut and cherry, owing to the immense development in the use of these woods in electrical appliances.

The call for dimension stock of nearly every variety is far in excess of the capacity of manufacturers to supply. At least ten times as much of this material as is now produced could be sold.

The Lesson and Its Warning.

Luckily, perhaps, the business man, in common with all humanity is prone to forget his past troubles, but surely the wise lumberman will profit by the car shortage experiences he has encountered at regular intervals during the last few years, especially during the fall and winter of 1906. There is every evidence that there will be a manifest shortage in hardwood lumber of all varieties during the remainder of 1907, and there is equally good evidence that the extremely severe car famine of last season will be eclipsed during the coming fall. Railroad companies cannot begin to keep up their freight equipment. Old cars which are about worn out, and those already being abandoned, are in excess of the number they are able to buy and build at the present time.

There will surely be less cars to carry lumber and kindred products next fall than there were last. The sensible buyer of lumber should not fail to anticipate his wants and attempt to secure his lumber supplies for the coming season at a very early date. It requires no element of prophecy to see that the men who expect to fill lumber requirements from a distance after September 1 are going to get their cars at rare intervals for some months following that date. Right now, and perhaps for a month or two to come, cars can be secured in limited numbers. If lumber can be found today, now is the time to buy it and get it shipped.

Annual National Hardwood Lumber Association.

As the HARDWOOD RECORD goes to press the annual meeting of the National Hardwood Lumber Association at Atlantic City is about to close. A telegraphic abstract of the proceedings will be found in the news columns of this issue, but rather than delay the publication it has been deemed wise to defer the detailed report of this meeting until the issue of June 10, at which time a complete account will be published, including the portraits of many distinguished members of the organization.

Business Honor and Commercial Failures.

A review of the commercial failures that occurred in the United States and Canada last year shows that ten per cent of them were directly traceable to fraudulent intent on the part of the persons, firms or corporations involved. Directly due to fraud there were 938 failures, involving losses of more than \$21,000,000. Such are Bradstreet's figures for 1906, drawn from the great total of 10,624 failures and an aggregate loss of \$137,000,000. The ten other general causes for failure, any one of which may have had the elements of dishonesty involved, bring home to the reader a realization of how widespread is the crime of crookedness in present time business methods.

In spite of these facts it should be remembered that the last fifteen years have witnessed great improvement in the systems of the business world and in the conduct of commercial pursuits of all kinds. Bookkeeping long ago became an exact science; the economics of administration are no longer left to guesswork or regarded as a matter of chance; fixed charges, ratio of depreciation, etc., may now be anticipated with almost absolute certainty. The modern business man, who is entitled to that name, has ceased to guess at cost. He knows it. The one chance element above all

others—the one the business man is perforce still obliged to estimate—is crookedness. These records of failures for one year are something to set students of men and affairs to thinking. The possible assets represented in last year's failures, which involved \$137,000,000, were \$68,000,000. In the light of these figures it is not to be wondered at that "honesty is the best policy" has come to be regarded as a platitude rather than a worthy axiom.

Noting the eleven ascribed causes for failures in America and considering only those which have brought loss to innocent investors and creditors, students of business methods may make their own deductions as to the possible degree of criminality involved. The compilation is as follows:

UNITED STATES.

CAUSES OF FAILURES.	No. of failures.	Assets.	Liabilities.
Incompetence	2,091	\$9,743,680	\$19,657,908
Inexperience	457	1,520,516	2,760,234
Lack of capital	3,370	19,577,813	39,342,384
Unwise credits	244	1,381,690	2,652,590
Failures of others	190	7,068,226	11,196,193
Extravagance	95	707,322	1,094,927
Neglect	206	955,947	1,855,484
Competition	101	253,662	537,470
Specific conditions	1,623	11,674,844	22,925,002
Speculation	70	1,166,633	4,576,734
Fraud	938	9,389,192	20,574,566

CANADA.

Incompetence	203	878,185	1,528,086
Inexperience	41	250,233	527,620
Lack of capital	626	2,266,775	5,089,214
Unwise credits	13	90,100	158,227
Failures of others	14	101,200	346,385
Extravagance	9	52,175	29,285
Neglect	41	52,064	111,901
Competition	9	12,213	27,426
Specific conditions	168	392,766	934,261
Speculation	7	26,600	77,254
Fraud	108	182,760	620,334

Granting that in almost any of these specific causes for failures this element of crookedness may have entered, it will be seen that the fraud and speculation have been especially costly, while failures attributable to competition and inexperience are particularly light; and the inference is therefore plain that "irregular" methods are much more dangerous to creditors than is even incompetence.

An analysis of the attributed causes which are most suggestive of dishonest methods in business failures makes a striking showing in averages for the United States in particular. In this double analysis the assets are subtracted from the liabilities, thus arriving at the net average loss:

CAUSES OF FAILURES.	No. of failures.	Net losses from all failures.	Average net loss from each cause.
Incompetence	2,091	\$9,914,228	\$4,741
Inexperience	457	1,240,718	2,715
Lack of capital	3,370	19,764,571	5,865
Unwise credits	244	1,270,900	5,209
Failures of others	190	4,127,967	21,668
Extravagance	95	387,605	4,080
Neglect	206	899,533	4,367
Competition	101	283,808	2,810
Specific conditions	1,623	11,250,158	6,932
Speculation	70	3,410,101	47,716
Fraud	938	11,185,192	11,925

In proportionate net loss it will be seen that speculation, failures of others, and fraud are the three greatest agencies. In "failures of others" professional men, farmers, stock brokers, real estate dealers, bucket shops, old bankruptcies in process of court settlement, etc., have not been considered by Bradstreet's in any way. In like manner mere failures to succeed, which have not involved loss to others, have no place in these statistics. Here, then, is the clue to the enormous average of \$47,716 for the seventy concerns which went down through speculation, and of \$21,668 for each of the 190 failures through failures of others. In each of these cases the stock broker, the race track, the real estate dealer and the bucket shop pointed the way to that form of crookedness which leaves distinctly "fraudulent" failures in inconsiderable quantity.

Beyond question these figures point to one form of crookedness or another, on the part of those directly or indirectly concerned, as the

prime cause of disastrous failures. It is these conditions which point significantly to the fact that merely lack of capital furnished nearly one-third of the failures of the year. The disposition of so many men in business to resort to crooked schemes naturally makes hardships for any concern which, however honestly struggling, often finds itself pushed for capital. It is plain that inexperience and even sharp competition as threatening factors in business are in the minority, both as to numbers and aggregate possibility of loss. Only a little more than five per cent of the year's failures are due to these causes. Against the average loss from these two causes of \$2,762 we have the average from all failures standing at \$6,510. A further analysis will show that of all firms failing ninety-one and a half per cent had an alleged capital of \$5,000 and under; six per cent had a capital of between \$5,000 and \$20,000, and only one and seven-tenths per cent employed capital of between \$20,000 and \$50,000.

It is perhaps something of which to be proud that of the 1,401,085 individuals, firms and corporations in recognized commercial business in the United States only 9,385 "proved their inability or indisposition to pay their debts" in 1906, in the language of Bradstreet's. At the same time it cannot be disputed that among the hundreds of thousands of surviving business enterprises there are possibly uncounted thousands which are "making good" through keener manipulations of crooked methods.

In view of the foregoing analysis of commercial failures can one be at all positive that "honesty is the best (and accepted) policy" in the modern business world?

Happily it may be stated that this record does not apply specifically to the lumber industry. The small record of business failures during 1906 makes an enviable showing for this great commercial pursuit. However, this analysis of general results in all lines of business is well worth study by every lumberman that it may prove a guide-stone and a warning against the causes that have produced so many failures in other lines.

The Question of Continued Prosperity.

Financial experts are discussing the question, "Is prosperity waning?" and they are unable to agree. Jacob H. Schiff predicts an era of great suffering among the poor. August Belmont told the capitalists and workingmen at Mr. Carnegie's industrial peace conference that we are about to have a halt in industry, which, he alleged, may not be altogether undesirable. James J. Hill, often accused of being a pessimist, denies that he has predicted a collapse of industry, but thinks there will be a slackening. The general view that trade has been going ahead too fast prevails, and that it will have to slow down to give capital a chance to catch up; Chairman Gary of the United States Steel Corporation and many foreign observers have the same view.

Based on the theory of periodical financial crises the time has not yet arrived for a great industrial depression. Such disasters overtook this country in 1819, in 1837, in 1857, in 1873 and in 1893. The average interval between them was twenty years. Hitherto the shortest has been sixteen years—that between 1857 and 1873, and the effects of the Civil War furnished ample explanation of the exception. On the basis of financial history a long, severe crisis cannot naturally be expected until some time between 1909 and 1913. A mild reaction from prevailing prosperity midway between two great panics has usually prevailed. One occurred in 1884, and a corresponding break in the present period of prosperity came in 1903. Therefore, according to precedent, "good times" ought to last for some years longer.

Prosperity in the United States is largely dependent upon the yield of the crops. The Baring panic of 1890 would have brought the calamitous times of 1893 two years earlier if the disaster had not been stayed by the magnificent harvests of 1891. Of vast importance, therefore, in estimating the commercial prospects of the near future are the crop prospects. At the present time this outlook is decidedly encouraging. The winter wheat acreage is greater than ever and fine crops are anticipated.

Pert, Pertinent and Impertinent.

Reminiscences of Atlantic City.

I dreamed that I dwelt in the Isle of Cracked Ice
In the midst of a lake of champagne;
Where bloomed the mint julep in meadows green
Amid showers of lithia rain.
I reclined on a divan of lager beer foam
With a pillow of froth at my head.
While the spray from a fountain of sparkling gin fizz
Descended like dew on my bed.
From faraway mountains of crystalline ice,
A zephyr, refreshing and cool,

Came wafting the incense of sweet muscatel
That sparkled in many a pool;
My senses were soothed by the soft, purling song
Of a brooklet of pousse cafe,
That rippled along over pebbles of snow,
To a river of absinthe frappe.
Then, lulled by the music of tinkling glass,
From the schooners that danced on the deep,
I dreamily sipped a high ball or two
And languidly floated to sleep.

And then I awoke in a bed full of rocks,
With a bolster as hard as a brick;
A wrench in my neck, a rack in my head
And a stomach detestably sick,
With sand in my eyes and grit in my throat
Where the taste of last evening still clung,
And felt a bath towel stuffed into my mouth
Which I afterwards found was my tongue;
And I groped for the thread of the evening before
In a mystified maze of a brain
Until a great light burst upon me at last—
"I'm off of the wagon again!"

Why?

Few liquors improve with age—they don't get a chance.

Conversely.

Don't judge a woman's brain by the size of her hat or her pompadour!

Sad, but True.

Most men appreciate the nonsense of a pretty woman far more than they do the good sense of a homely one.

Stay Up.

"Early to bed and early to rise—and you'll meet no prominent people," says Frank Daniels

Impossible.

It is safe to say that the French artist who claims to have painted President Roosevelt "in a restful pose" has never been at the White House.

The Loafer.

If a man is a loafer he has little to live for.

Every Time.

Find fault with your employees and it will make them faultier.

To Women.

Though we scorn and flout 'em,
We can live with but not without 'em!

JUST A SUGGESTION.

In view of the ever-recurring inundation of the timber area of the lower Mississippi Valley and the consequent interruption of logging enterprises, the Hardwood Record submits this drawing as illustrative of a possible way to carry on woods work the year through.

Capacity.

Some pint bottles can hold more than a peck o' trouble!

Making the Best of It.

Many women who appear to be contented are merely resigned.

Waiting.

Now that the wonderful Spanish heir has really arrived, we may soon expect a cablegram that he has said "Goo!"

Cunning.

A man often wins out by asking many questions and answering none.

Suspicious.

Lots of men are suspicious of others because they know themselves so well.

The Pace.

The faster a man travels the harder it is for him to pay as he goes.

Surely the Worst.

The worst failure of all is not to try.

Logical.

Some of us expect to find rest in heaven because we feel sleepy in church.

Elusive.

The slipperiest thing in the world is the man who never says no.

Later Advices.

But Winter wouldn't stay put out—
The stubborn, tough old chap.
He ousted Summer, and resumed
His seat in Spring's soft lap.

Springless Poetry.

If you should send a poem
To the editors on Spring.
Send evidence to show 'em
The existence of the thing.

Helps Some.

Little spots of powder.
Little dabs of paint.
Make a thing look pretty
When it really ain't.

AMERICAN FOREST TREES.

FIFTY-THIRD PAPER.

Chinquapin Oak.

Quercus acuminata—Sarg.

This tree has a range of growth from northern New York, along Lake Champlain and the Hudson river westward through southern Ontario, and southward into parts of Nebraska and Kansas; on its eastern boundary it extends as far south as the District of Columbia and along the upper Potomac; the growth west of the Allegheny mountains reaches into central Alabama and Mississippi, through Arkansas and the northern portion of Louisiana to the eastern part of Indian Territory and parts of Texas even to the canyons of the Guadalupe mountains, in the extreme western part of that state.

It is known as the chinquapin oak in Massachusetts, Rhode Island, Pennsylvania, Delaware, North Carolina, South Carolina, Alabama, Arkansas, Mississippi, Texas, Missouri, Indiana, Nebraska and Kansas; it is called chestnut oak in Connecticut, Delaware, Alabama, North Carolina, Mississippi, Louisiana, Texas, Ohio, Illinois, Michigan, Kansas and Nebraska; pin oak in Kansas and Arkansas; yellow oak in Illinois, Kansas, Nebraska and Michigan; scrub oak in New York; dwarf chestnut oak in Massachusetts, North Carolina and Tennessee; shrub oak in Nebraska; white oak in Tennessee; rock oak in Arkansas; and yellow chestnut oak in several of these localities.

This variety should not be confused with *Quercus prinus*, or the true chestnut oak, although it is commonly known in so many sections of the country by the latter name; the names yellow oak, pin oak and scrub oak are likewise applied to many varieties, so that the only way to accurately designate members of this great family is to employ their botanical name. However, this species should always be known as the chinquapin oak, which is a distinctive term, and not applied to any other variety; it is so designated in Indiana, where the tree reaches its maximum development.

The bark of this tree is light gray and is broken into thin flakes, silvery-white, sometimes slightly tinted with brown; rarely becomes half an inch thick. The branchlets are marked with pale lenticels.

The leaves of the chinquapin oak are from five to seven inches long, simple and alternate; they have a taper-pointed apex and blunt, wedgeshaped or pointed base; are sharply serrate. When unfolding they show a bright bronze-green above, tinged with pur-

ple and are covered underneath with light silvery down; at maturity they become thick and firm, showing greenish-yellow on the upper surface and silvery-white below, the pubescence remaining. The midrib is conspicuous and the veins extending outward to the points of the teeth are well-defined. In autumn the leaves turn orange and scarlet and are very showy. The leaves are narrow,

TYPICAL FOREST GROWTH CHINQUAPIN OAK, INDIANA

ply two inches wide, and more nearly resemble those of the chestnut than do any other oak leaves. In their broadest forms they are also similar to those of the true chestnut oak, although the difference in the quality and color of the bark, and of the leaves *en masse*, would prevent either tree from being mistaken for the other. They are crowded at the ends of the branches and hang

in such a manner as to show their under surfaces with every touch of breeze. This characteristic gives the chinquapin oak a peculiar effect of constantly shifting color which is one of its most attractive features and which puts the observer in mind of the trembling aspen, although the shading and coloring of the oak is much more striking.

The staminate-flowers grow in catkins from three to four inches long, having a light yellow calyx; the pistillate are sessile, or grow in short spikes, covered with thick white tomentum, and have bright red stigmas. In speaking of these flowers, Lounsbury says: "Those that have paid little or no attention to the trees, excepting perhaps to regard them as affording a gracious and wholesome shade, are invariably surprised when their interest in them is quickened, to see how exquisite are many of the blossoms with which they are hung in the spring. Then it is a revelation that the long yellow clusters, looking like bits of string, which dangle from this great oak are in reality its staminate flowers. In this way many of them grow snugly together. The pistillate blossoms are congregated in more compact clusters and, as in many monoecious trees, they are located near the tips of the lower boughs. From the topmost branches the staminate ones sway. That their respective positions are such is another illustration of Nature's theory that nothing is insignificant. When the breezes bend the tree-tops the pollen is shaken out, and its natural fall is then downward upon the pistillate ones which eagerly arrest its flight."

The fruit of this tree is a small, sessile acorn; its cup is broad, round and thin, with close scales; the nut is light brown, and is about one-third hidden by the cup; it is sweet and sometimes edible.

The wood of chinquapin oak is heavy, exceedingly hard, strong and close-grained; it is very durable, and is largely used in cooperage, for wheels, railway ties, fencing, etc. The sapwood is thin and light-colored; the heartwood much darker.

In general appearance this tree is tall and straight, with narrow head, reaching a height of from forty to 160 feet. It is rare and comparatively local through the Atlantic states, being usually found on limestone soil. In the Mississippi basin, along stony ridges and dry hills, and the rocky banks of rivers, it is very abundant, as it is also in the rich bottom-lands. It reaches its finest development along the lower Wabash river and its tributaries, in the south-

MAURICE M. WALL
BUFFALO, N. Y.

LEAF AND FRUIT OF CHINQUAPIN OAK.

ern parts of Illinois and Indiana. The chinquapin oak is a magnificent tree, its hardy uprightness and beautiful, ever-shifting foliage making it an ornament to any landscape.

The large halftone accompanying this sketch was made from a picture loaned by William H. Freeman, secretary of the Indiana State Board of Forestry.

Builders of Lumber History.

NUMBER XLV.

Maurice Martin Wall.

(See portrait supplement.)

The Buffalo Hardwood Lumber Company of Buffalo, N. Y., occupies a position among the wholesale hardwood contingent of the United States which is second to none—not in point of enormity of its plant, size of output, etc., but as to its exalted reputation for correct business methods and general high character in commercial transactions. In the building up of this enviable record, Maurice M. Wall, secretary and treasurer of the company, has been most instrumental.

Mr. Wall was born at Avon, N. Y., in 1864, and is of Irish descent. He received his early education in the common schools, and with only this equipment, supplemented by his own intelligence and what knowledge he acquired through reading and observation, he entered the business world at the early age of eighteen, becoming a bookkeeper for a lumber concern in his native town. In addition to his work in the office, the young man was required to spend about half his time in the lumber yard, giving attention to receipts and outgoing shipments of lumber. This gave him excellent training in the line which he elected to follow as his life work. Mr. Wall remained with the firm for about three years, or until the business was sold out, when the owner removed to Painted Post, taking his employee with him. Two years later, in 1887, he was taken into the new firm as a partner, and it was then called Stanton, Crandall & Co.

When native timber began to grow scarce in that locality, which had previously been of considerable importance as a lumber manufacturing center, attention was directed toward Buffalo, which was fast becoming a great market. The Buffalo Hardwood Lumber Company was a small concern which had suffered financial reverses, and which was at that time

in charge of two eastern banks who were anxious to unload its affairs upon a competent manager. Mr. Wall was offered the position and took hold of the business with a vim and ability which soon brought it to the front rank of the city's industries. In a year he and his brother, James B., purchased the business and operated it as a firm until March, 1898, when it was incorporated and organized with James B. Wall as president, Thomas H. Wall vice president, and M. M. Wall secretary and treasurer, which are the offices still occupied by the three brothers.

The old institution made a specialty of cherry before Mr. Wall took hold of it, and he continued along the same line, although adding some other varieties of hardwoods to the stocks carried. However, his policy has always been to confine efforts to a few lines, believing that such concentration is better business and brings better results. Today the company's specialty is oak in all its varieties, and it has a sawmill located in Woodruff county, Arkansas, which is in the center of a fine oak district; it also has a yard in Memphis, where it carries a large stock of all kinds of southern hardwoods. The principal yard is at Buffalo, through which many million feet of lumber coming from the South are handled; also stock from Michigan, Wisconsin,

Pennsylvania, Canada and other points from which hardwoods are obtained.

The company has just established a new and separate department in the shape of a large plant in that city for manufacturing glued-up veneer stock. The factory is equipped with the most modern machinery and appliances known for getting out this class of work, and places the company in position to furnish goods of superior quality with promptness. The principal output is veneered tops, fronts and panels of all woods. The company is particularly well equipped for furnishing quartered oak, mahogany, figured birch and other fancy woods, cut to length, jointed and taped to required widths, ready for the glue room. The quality of glued-up veneered stock that this house is now making puts it in the market as one of the large buyers of rotary cut, sawn and sliced veneers, wormy chestnut and other hardwood lumber.

In addition to his chief interest—the Buffalo Hardwood Lumber Company—Mr. Wall is prominently identified with several other business enterprises, among them the Buffalo Desk & Table Company, of which he is secretary and treasurer; the Cutting Furniture Company, which he serves in like capacity; the Eureka Hardwood Lumber Company, of which he is president; he is also a director of the Buffalo Maple Flooring Company and secretary and treasurer of the Plus & Minus Desk Company.

Mr. Wall is prominent in the social as well as the business life of the city and is president of the Manufacturers' Club of Buffalo, which has a membership of over five hundred men—all leading spirits in pushing their city forward to its rightful place in the industrial world. He has been very prominent in the affairs of the National Hardwood Lumber Association and was the first inspector general of that organization. For two years he spent a large portion of his time in organizing the Inspection Bureau and it was largely through his influence that salaried inspectors were placed in charge of inspection and reinspection affairs of the association.

Personally Mr. Wall is the embodiment of good nature; he makes friends easily and holds them for all time; his sincerity and uprightness and other sterling qualities give him universal popularity. He is married and has three daughters. It is with no ordinary degree of pleasure that the *HARDWOOD RECORD* takes this opportunity to pay its respects to a man so distinguished both at home and abroad.

Hickory Wheels for Motor Trucks.

Since the introduction of heavy motor vehicles for the transportation of freight, there has been considerable activity in the manufacture of wheels for these carriers. The hickory wheel for motor wagons is not built like the ordinary wheel. It has to be designed for the special service to which it is put. The wheel must be small in diameter, and quite powerfully constructed, as is

known. Different woods are used for different parts of the modern motor wheel by some manufacturers, while others employ a single wood for all parts. In the English-made wheel ash is used for the felloes, elm for the hub and oak for the rim. The French wheels, on the other hand, are made entirely of locust, and a good wheel results. Manufacturers in this country use quite a

wide variety of timbers, but find that hickory serves as well or better than any other. Hence, while we find model motor vehicle wheels exhibited as samples in all of the shops which are composed of various woods, when it comes down to utility strictly hickory predominates. This article refers briefly to the manufacture of the hickory wheel for heavy transportation vehicles which are now propelled by steam, gasoline, gas or electrical power.

The selection of the wood is made from that part of the tree below the branches, so as to avoid knots and make sure of even grain. This valuable portion of the tree is then barked and the hickory butts are made. These butts are usually about thirty inches long, this size being convenient for working. They are cut down to a size about the shape shown in Fig. 1; then comes the riving process, which calls for the insertion and driving of wood or iron splitting wedges. This work is done before the stock passes to the manufacturers of the wheels in some cases, while in others the stock is obtained in the butts, which are halved, quartered and split to the sizes required for wheel spokes. Or if hubs are to be made, the pieces are reduced only to the size required for that part of the work. For felloes, still another size is needed.

After the splitting operation is finished, the sticks have to be thoroughly aired before anything is done with them. They are piled in the open air for seasoning. After a complete exposure in this way, the pieces are piled in a heating chamber, where hot, dry air is admitted. A summer-heat exposure of thirty or more days in a chamber like that shown in Fig. 2 thoroughly dries the stock. The dryer illustrated is built with brick sides and back. The top, bottom and door are of sheet metal, coated with concrete. One of the splits is shown in Fig. 3.

The turning process, to get the spokes to the form shown in Fig. 4, follows. The lathe is called into service for this work.

Machine model turning is employed in some shops, while in others the modeling is accomplished by hand. The rough sawed and split hickory stick is quickly rounded off into proper shape in the hands of the experienced turner. Then comes the operation of buffing, which is done by various methods. The sheet metal pattern of boxed belt buffer is now used to considerable extent. This consists of a belt running in a casing, as in Fig. 6. The operator simply holds the stick to be treated on the moving surface of the speeding belt. The revolving belt, with the usual distribution of adamas powder, will fill the pores of the wood quite thoroughly. This powdered, flint-like stuff gives the wood a smooth finish.

Further seasoning is required, however, and once more the sticks go to the drying chamber, after which the fine work is put in on the spokes. The mortiser shapes the

keystone base and throats out the neck. He trues up the ends and puts on the shoulder, as in Fig. 5. He must shape the bulky spoke so that it will look trim in the wheel, and at the same time possess the necessary strength. It will not do to shave down too closely to make the spokes look well at the expense of strength, since they are not for the light wheels of speedy automobiles, but for the slower, heavier, freight-loaded machines. Revolving discs are used to make the ends true, and insure a uniform fit.

The manufacture of hubs and felloes forms almost another story, so important are the details of their construction. The work of setting up the wheel begins at the hub, because it is necessary that the adjustments

be absolutely exact in every part, although the dies may have stamped out everything in an apparently uniform manner. There are machine-made wheels for heavy automobiles in which the setting-up work is done on the plan of putting it through with speed

and cheapness. But the best firms do the adjusting through trained men who fit each identical part in place with care and judgment. Slight turning off is done here and there, while in other places a little building up is done in order to get a perfect combination of fit and balance. Nothing is left to chance. Each part of each wheel is handled and carefully adjusted by an expert. The spokes are perfectly fitted into the hub of the motor wheel. Numbered spokes are used and pressure is applied to force each into the place created for it. A hub thus fitted is shown in Fig. 7. A band of iron is then applied to hold the spokes in place while the setting bolts are put through and fastened.

Another delicate piece of work is the fitting of the felloes to the tongues of the spokes. It must be done with great care and accuracy and in a manner to avoid any future looseness. The parts are forced together to avoid play. After the felloes are on, the whole wheel has to be trued. A skilled workman is given charge of this, and when he gets the rim right, the metal tire is placed, as in Fig. 8, being first expanded by heat, and in this condition slipped over the rim. When cooling, the rim of course contracts, and a proper fit results. In Fig. 9 is shown an end view of the finished wheel, and in Fig. 10 a side view.

The usual varnishing and striping puts the wheel in order for the market. The interiors of the hubs are usually fitted in other shops, where the metal sleeves are adjusted, the ball-bearing devices introduced, or the hub keyed or set-screwed direct to the shaft, which is arranged to revolve in journals of its own below the body of the vehicle.

Modern Hardwood and Cement Combinations.

All workers in hardwoods have noticed the increased demand for unique styles of decoration for the interior of houses. The so-called *art nouveau* decoration is becoming very popular, and the illustrations will give an idea of the character of some of this class of work. The list of hardwoods selected includes nearly all in the category. The decoration devices include panels, grilles, arches, cornices, and all kinds of household furnishings; and the scope of the work is exceedingly wide.

On a recent visit to a well-known manufacturer the writer saw samples of hardwood decorative material which had been purposely charred for the sake of giving the desired burned effect; also some pieces coated with emery and others decorated with serial rows of tacks. Oddity and originality are constantly sought. Some of the panels are outlined with floral decorations; there are roses and lilies and painted figures of Indians and of animals; there are imitations of checker boards and patterns that seem suitable for the dime museum only. Yet these oddities

are constantly called for and sell at good prices, so that manufacturers will continue to make them while the demand lasts.

Many varieties of interior and exterior decorations and fixtures are made along the lines stated to be used in connection with concrete, for there is a cement age at hand, as is well known. Cement block buildings are going up all over the world in considerable numbers. Ingenious men combine woodwork for inside and outside ornamentation with cement blocks. The design shown in Fig. 1 is a demonstration of this idea. The wood bracket lines the interior surface of the concrete wall and ceiling at intervals; on top of the cement layer is wood again.

Furthermore, there are combinations including metal, as in Fig. 2. Cement is placed in the tier shown, while the hardwood is next to it, below. Then the iron brace is placed in position. The object is to show the crude concrete and the finished wood and iron within the room. Just as the advent of finished hardwood beams became an important factor in interior building some years ago,

the combination of rough cement and smooth finished surfaces of hardwood form a feature at present. Some of the patterns are exceedingly rich, the fine finish of the wood serving to make the design very pleasing to the eye. At the same time the presence of metal, concrete or brick work increases the strength.

One is surprised at the numerous patterns in hardwood, cement, stone and metal which may be found in modern building designs. In Fig. 3 is shown another type in which hardwood is employed. The black represents

room coloring matter. The cement in the crevices between the stones, combined with panels of finished hardwood, made an unusually handsome window for the interior of a library or music room.

Manufacturers and designers of this line of work say they are receiving liberal orders to create novelties in the finishing of artwork for studios, arbors, dens, etc. In the latter much hardwood grille work is used; and the prevailing style calls for a half door, so that the swinging blind is now very popular.

The trees are never allowed to reach a very great age, however, for they are felled as soon as large enough for good fuel. In the autumn the superintendents go through the sections selected for the winter's operations and mark the available trees. Cutting begins in December. The woodsmen build rough huts, which they occupy during the season. As the trees are cut down they are sawed into logs perhaps five feet long and piled on carts, which take them to the nearest stream, where they are built up into great cross-wise piles to await the arrival of buyers, who usually come in October, after the wood has lain in the heat and sunshine all summer.

A firewood fair is held at Chateau Chinon the first Monday in each November, each buyer sending his axmen to brand his special mark on every log which he has purchased, that he may identify them when they arrive at destination after their long journey down stream. The water courses are usually swollen by the fall rains, although if not, water is turned into them from ponds and reservoirs which are maintained for this purpose. One of these ponds, at Settons, can, if necessary, release about 700,000,000 cubic feet of water into the river Cure. When such an operation takes place, the banks are lined with men who see that the logs start off with a clean sweep. The logs on the Cure are stopped at Clamency by a dam, and then it is that men, women and children commence work on them, handing them from the water, identifying them by the owners' marks previously placed upon them, and sorting them out for the rivermen to form into huge rafts, which are then sent forward again, to Paris. Many of these rafts contain 7,000 to 8,000 cubic feet of lumber. Under good conditions, they reach Paris, more than 150 miles away, in about twelve days.

Pine from the shores of the Bay of Biscay also reaches that city by water, since railroad transportation is much too expensive for the purpose. This lumber, however, is loaded upon small vessels, which slowly make their way along the coast to the mouth of the Seine, and thence up that stream to Paris.

The bakers and restaurant keepers consume enormous amounts of wood since they will not, as a rule, employ coal. It is estimated that they use 10,500,000 cubic feet of pine alone. The public officers of the government consume immense quantities also; the Department of Justice uses approximately 2,000 cubic feet every winter; the Department of Instruction 6,000, of the Interior 5,200, of War 10,000, of Finance 10,000. The government's supply is piled in great yards along the shores of the river Seine. Sawing is done there for both public and private consumers of the wood, the government doing its own in the courtyards of the public offices each summer, to insure a ready winter supply.

a zig-zag form of hardwood which is set into the masonry at the time of building, just as plain cement bricks are used. The hardwood bricks, so to speak, are stained to the tint required. In the selection of the material for making this line of work, thoroughly dried stock is used, so as to avoid its warping, shrinking or expanding. A design in the form shown in Fig. 4 is what the workman called a "blind window." Instead of glass in the frame there are panels of hardwood. The effect is unique. The frame supporting the wood panels is of ash and around this were cemented cobblestones. They were impregnated with green and other colors, just enough to make an attractive contrast with the cement which had been treated with ma-

Considerable work like that shown in Fig. 5 is also used. The spaces between the short posts are filled with concrete. In Fig. 6, rubble stones are used in the panels. They can be found on the beaches in various colors and are carefully assorted before being placed. When the cement dries and hardens the stones become fast.

Cement work is usually done by concrete workers, although some of the hardwood artisans do it themselves. The wooden portion of the combination shown in Fig. 7 is represented by the pieces forming the squares. At the upper left-hand corner of each square a wood block is fitted in. The other portions of the squares are packed with small stones imbedded in cement. The entire frame is fitted into a brick wall.

terially during the last twenty-five years, as statistics show; the average annual burning for the first four years of the present century for heating purposes alone was nearly 9,000,000 cubic feet, which required the stumpage on nearly 125,000 acres of woodland. The trees cut range in age from 24 to 25 years, and extensive forests in several parts of France are reserved to meet this drain. Some of the provinces are famous for their picturesque beauty, of which the great forests of beech, oak, chestnut and elm form the most attractive feature.

Firewood Consumption in France.

France, particularly the city of Paris, consumes immense quantities of timber every year for fuel. Regardless of modern heating methods, the Parisians still cling to the use of wood for cooking and heating. Coal is very scarce and high in price, and not of the best quality; moreover the French people have an eye to the beautiful, and are loth to give up the glowing log in the fireplace, which appeals to them as much more cheerful and attractive than the radiator or register.

However, consumption has decreased ma-

Annual National Hardwood Lumber Association.

The tenth annual convention of the National Hardwood Lumber Association opened under the most favorable auspices on Thursday, May 23, at Atlantic City, N. J. The weather was bright and clear, though crisp for the season; nearly 300 delegates were present, representing nearly all the hardwood manufacturing and consuming sections of the United States; and the steel pier proved an ideal place for holding such a gathering.

On Thursday at 11 a. m. a reception for members and guests was held in the convention hall at the Pier, and at noon the first session was opened with an address of welcome by Mayor Stoy of Atlantic City. Following it the officers presented reports for the past year, which were comprehensive and showed the association to be flourishing in every department. The secretary reported that the membership is now nearly 600, and that the finances are in good shape.

W. H. RUSSE, RE-ELECTED PRESIDENT.

During the day reports of standing committees were heard, and several exceedingly interesting addresses were given. Earl Palmer spoke on "Association Obligations"; B. C. Currie, Jr., on "A School of Inspection"; Robt. W. Higbie on "The Wholesaler: Why He is Necessary," and John A. Fox on "Rivers and Harbors."

The Inspection Rules Committee in their report recommended the suspension of the now famous "Buffalo agreement" and a modified set of inspection rules. Action on this report was deferred until Friday's session. Considerable friendly "electioneering" went on among members, the most favored candidates for the office of president being Maurice M. Wall of Buffalo and W. H. Russe of Memphis, now holding that office.

In the evening a smoker and entertainment for members was held at the Rudolph Grotto, while the many ladies who accompanied delegates were agreeably entertained on the Steel Pier. The work of the Committee on Arrangements was admirably systematized and the minutest details for the welfare and amusement of guests carried out.

SECOND DAY'S SESSION.

The convention reconvened on Friday morning, and nearly the entire session was occupied by interesting and earnest discussion of inspection matters. By resolution the "Buffalo agreement"

providing that no change in inspection rules be made until December, 1908, was suspended. The Inspection Rules Committee presented numerous amendments to the rules as they now stand, and recommended their adoption, to take effect Dec. 1 next. At the afternoon meeting the report of the committee was adopted after three hours' discussion, and the presentation of many arguments for and against it. Its adoption was secured by a ratio of ninety-three to forty-five votes.

By resolution provision was made for taking up the subject of the establishment of an inspection school, as suggested in a valuable paper presented by B. C. Currie, Jr., the preceding day.

John M. Woods presented a resolution condemning the daily press for its false allegations that the National Hardwood Lumber and other associations were fostering a lumber trust; he stated concisely the prime objects of his association, and that its aim was the establishment of

O. O. AGLER, RE-ELECTED FIRST VICE PRESIDENT.

uniform hardwood inspection; that it formulated no price agreements and did not attempt to curtail the lumber supply.

A resolution was adopted endorsing the survey of the proposed Appalachian forest reserves and urging congressional appropriations for their establishment; also for support in the timber census work.

A vote of thanks was tendered the Inspection Rules Committee for the strenuous work accomplished, and for the painstaking services it has rendered the association. Another expression of appreciation was extended to the Entertainment Committee, which so generously and capably provided for the entertainment of delegates and visitors.

M. M. Wall spoke in behalf of the Yale school for practical lumbering, setting forth its line of work and accomplishments, and asked for contributions. John J. Rumbarger urged members to attend the coming big Hoo-Hoo convention, and promised them a royal good time.

Some minor business was transacted, after which the election of officers was held, resulting in the following choice:

President, W. H. Russe, Memphis, Tenn.

First Vice President, O. O. Agler, Chicago.

Second Vice President, C. E. Lloyd, Jr., Philadelphia.

Third Vice President, Sam E. Barr, New York.
Treasurer, Claude Maley, Evansville, Ind.
New Directors, Theo. Fathauer, Chicago; Geo. W. Stoneman, De Valls Bluff, Ark.; F. A. Diggins, Cadillac, Mich.; G. J. Landeck, Milwaukee, Wis.; J. H. P. Smith, Parkersburg, W. Va.

The next annual meeting will be held at Milwaukee, Wis.

Tree Planting in Illinois.

During a recent field season an extensive study of Illinois forest plantations was carried on by the forest service. This work covered nearly two-thirds of the state, or in all approximately 56,000 square miles. The region considered was principally north of a line drawn through the central part of the state. South of this the prairie gives way to natural forest land, and though much of it is cleared, there has been little tree planting. The results of the study are equally applicable to the southern part of the state, however, as well as to parts of Indiana, Missouri and Iowa.

All variations of soil occur in Illinois from deep black prairie loam to pure sand and these changes are frequent and often abrupt. On the whole both climate and soil conditions are favorable to tree growth, as is well illustrated by the fact that there are over a hundred native tree species in the state and a number of foreign species which have been introduced are thriving. European larch is adapted to the well-drained prairie soils and in such situations grows well. It will produce posts and poles in a short time if closely spaced; it is intolerant of many other species, however, and will not endure mixing with trees which grow as fast or faster than it does. A plantation set with larch, catalpa and white ash showed at the end of twenty-two years, but fourteen per cent of surviving larch, although seventy-one per cent of the ash trees survived and fifty-two of catalpa. Silver maple has been more extensively planted in Illinois than any other species, although its rapid growth is about the only point in its favor. It is a quick-growing shelter-belt tree and good for fuel. Ash usually does well on upland prairie soil, though moister situations are preferable. It is also principally used as a shelter-belt tree, close planted, the necessary thinnings furnishing good poles for farm use. The Osage orange grows well everywhere except in the extreme northern part, and will succeed where neither catalpa nor larch thrive. Burr oak will readily adapt itself to the prairie soils throughout the state, but its rate of growth is slow, and there is no particular inducement to plant it on agricultural land unless for wind-breaks or ornament.

Black locust was planted extensively in the early days, and for a time it thrived; the borer appeared, however, and most of the plantations were cut. The durability of posts made of this wood is well understood in Illinois, where they sell for a high price. It is not uncommon to find posts sound after twenty years' use, while they have been known to last for forty. Black locust should be planted on sandy soil, such as occurs along the Mississippi and Illinois rivers. Its growth is rapid, and if the situation be right and proper treatment given, post size will be reached before the damage from borers is serious. The tree is as hardy as Osage orange, and will not winter-kill; when forest planting on poor land is contemplated this species should be considered. Cottonwood thrives throughout the state, and makes a good shelter-belt. It is planted largely in towns because of its rapid growth, but its habits are not such as should recommend it for a street tree. Sugar maple is one of the finest shade and ornamental species; it grows slowly but reaches great size, presents a fine appearance, and lives to an old age. It is probably the most popular tree in Illinois where these points have to be considered. The white elm is also desirable as protection and for ornament; it flourishes, as do also hemlock, arbor vitae and bald cypress, slippery elm, sycamore and white birch.

News Miscellany.

Meeting Executive Board Hardwood Manufacturers' Association.

A meeting of the executive board of the Hardwood Manufacturers' Association of the United States was held at the Grand Hotel, Cincinnati, Saturday, May 11. Present at the meeting were: J. B. Ransom, president; W. M. Ritter, R. M. Carrier, C. M. Crawford, Clinton Crane, R. H. Vansant, Frank F. Fee and Secretary Lewis Doster.

Page proofs of the new book covering grading rules, with the changes authorized at the last annual meeting, were submitted. The secretary supplied information covering the changes in the matter of lengths and uniformity of wording. On motion it was decided that the revised proofs should be submitted to the committee before final approval.

The secretary made a report covering the location and work of the inspectors since the last meeting, which report was carefully gone over and approved. It was decided that a permanent inspector should be located in Philadelphia to take care of the work in the eastern section of the country. This decision was reached after the secretary had explained that all sections of the country were covered by traveling inspectors, but those who did the work in the East had their headquarters in the central West. The location of an inspector at Philadelphia was decided upon to enable the association to give prompt service to members located in Atlantic coast cities.

The secretary suggested the publication of a new report on market conditions and changes in values on wide poplar, poplar saps, wide cottonwood and ash. A reduction was recommended on No. 3 common white oak and on No. 2 common red oak. The secretary was instructed to issue a new list within the next few weeks, if conditions warranted.

The report of the secretary showed that the hardwood buyers' guide authorized at the last annual meeting would be received from the printers in from two to three weeks. He submitted specimen pages showing final corrections, which were approved.

A telegram was received from A. F. Specht, secretary of the Lumber Manufacturers' Joint Committee of Seattle, Wash., asking the association to join the lumber associations of the Pacific Northwest in filing a complaint before the Interstate Commerce Commission to determine the reasonableness of the proposed advance in the lumber tariff from Chicago to points in the trunk line territory, effective June 1 next, and in a Federal Court injunction to stay the proposed changes until the reasonableness of the tariff was legally determined; and to bear the proportionate expense with the other associations.

Owing to the fact that the territory involved was not covered by the association, the executive board did not deem it wise to join in the movement, although expressing entire sympathy with it.

A letter from T. Jas. Fernly, secretary of the Affiliated Presidents & Secretaries' Association, was read, asking that the president and secretary of the Hardwood Manufacturers' Association join that organization to assist in furthering the advancement of a one-cent postage propaganda throughout the United States. This letter was referred to the president and secretary for action.

A further portion of the secretary's report showed that the membership of the association during the first four months of its fiscal year showed an increase of twenty-nine manufacturing members, and that he had received many applications for membership under the consumers' list, as authorized at the last annual meeting, and that he was making arrangements to

take care of that division of the organization.

On invitation of President Ransom, the members of the board adjourned for lunch as his guests, at which time representatives of the city of Nashville were introduced and urged that the secretary's office be moved to that city.

The secretary reported that reservations had been made for some of the delegates and others had arranged for their own accommodations at the Norfolk meeting of the National Lumber Manufacturers' Association. He advised that S. B. Anderson had been substituted for W. A. Gilchrist as Memphis delegate.

Resolutions were adopted authorizing the assistance in the work of unifying methods of measurement both in this country and in foreign markets in harmony with the work of the New Orleans Lumber Exporters' Association and the National Lumber Exporters' Association.

The secretary was authorized to notify the National Association of Box Manufacturers that the association was entirely in sympathy with it in the movement to work with the Census Bureau of the government for the purpose of obtaining statistics as to the annual timber supply.

After careful consideration it was decided to move the association's headquarters to Nashville at such time as the secretary could arrange to do so.

The Exploiter of Memphis.

There are newspaper correspondents and newspaper correspondents. There are some men who write for the press that have "a nose for news," and there are others who fail to recognize news value in very important happenings. There are some correspondents who depend on rewriting the usually somewhat unreliable information of the daily press for technical trade journals, and others who go and dig out the facts accurately

GEORGE W. FOOSHE, MEMPHIS, TENN.

and state them succinctly for the papers they represent. There are some correspondents who impress the public with the get-up-and-get qualities of the city they represent, while other writers leave the impression that their town is more dead than alive.

Probably as thoroughly alive a correspondent as there is in the country is George W. Fooshe of Memphis, whose portrait adorns this page. Mr. Fooshe represents not only the RECORD, but many other trade newspapers throughout the country. If one is in Boston he finds Memphis exploited; if in New York, there are columns

about Memphis in the leading commercial newspaper; the trade press is pregnant with information supplied by George W. Fooshe. Perhaps his chief value as a newspaper correspondent lies not only in his accuracy of statement but in his ability to know what to keep out of a newspaper. He never forwards scandal or hard-luck stories; his news is always clean, forceful and convincing.

Mr. Fooshe represents the leading lumber papers, as well as the cotton trade press of the country at Memphis. He has recently become allied with the new Robertson-Fooshe Lumber Company of that city, and while he will take no active part in this enterprise at present, he will come in closer touch with the hardwood trade and be able to cover the news of the lumber interests of Memphis with still greater accuracy.

The city of Memphis owes Mr. Fooshe more than a debt of gratitude for the splendid work he has accomplished for years in exploiting the business interests of that energetic and great commercial center, and if the business public of Memphis did its entire duty by him it would acknowledge his services in a substantial way.

A Novel Sawmill.

A novelty in the sawmill line may be seen at Oshkosh, Wis., on the property of Buckstaff-Edwards Company; it is an electric sawmill, the second of the kind to be put in operation in that city. The other is used by the Oshkosh Logging Tool Company, and both mills have been proven successful. The former company is a manufacturer of caskets, chairs, etc., and during the two weeks or more that the mill has been operated, it has "eaten up" a good-sized pile of hardwood logs, and has fulfilled expectations in its rapid disposal of timber, and in its ease of operation. Many outside millmen have visited the plant, as it is unique to see a mill running in which not a particle of steam power is employed, and where the familiar sounds of the ordinary sawmill are missing.

The birch, maple and elm used by the Buckstaff-Edwards Company are brought from the northern part of the state by rail, unloaded from the switch track in the mill yard and piled up to a height of perhaps twenty feet by the aid of electric power applied through a windlass. A car holding three or four logs is pulled up the slip, which is graded at about forty-five degrees, to a platform. The power for the car comes from an electric winch. From the platform the logs are rolled off to another platform next the carriage, on which, one at a time they are carried back and forth past the big band saw, which takes off a plank or long slab at every trip. The rolls and the conveyor, as well as the slasher and other mechanical appliances about the mill are run by a 75-horsepower electric motor. Eight men are required to operate the plant. Its capacity is 15,000 feet of lumber daily. The power is generated in the boiler engine room of the factory, where a steam engine runs the necessary dynamo. At the mill no attention is required by the motor except to start and stop it. Two men handle the logs on the slip, two ride the carriage, one acts as head sawyer, one takes the boards away from the saw, one runs the slasher and one takes the boards from the conveyor. The outfit cost about \$7,000, and is expected to effect considerable economy to the users.

New Memphis Hardwood House.

There has just been organized at Memphis, Tenn., the Neal-Dolph Lumber Company, with a paid-up capital of \$75,000. The principals of this new house are: W. H. Neal, formerly of Greenville, Miss., now residing at Memphis, president and treasurer; J. T. Strickland, Greenville, Miss., vice president and manager; Greenville, Tenn., and Wm. A. Dolph of Memphis,

general manager and secretary. The company's offices are located in the Randolph building. The corporation takes over the sawmill plant formerly owned by the Planters Lumber Company at Greenville, Miss., and at an early date

Collins Company Purchase.

The Collins Company, wholesaler of lumber at Pennsboro, W. Va., has just purchased from the Decker Lumber Company a large tract of Virginia timber near Sturgis, between Morgantown and Kingwood. The tract comprises from 2,500 to 3,000 acres of virgin timber and is one of the finest in the state. The transaction includes several miles of railroad, two sawmills, a hotel, store, and other property. Although the exact amount of money involved has not been announced, report places it at at least \$100,000. The company has taken possession of operations, with E. M. Bonner as general manager and Frank Smith as superintendent. The sales department will be conducted through the general offices of the Collins Company at Pennsboro, W. Va. Creed Collins, C. W. Sprinkle and E. M. Bonner are the principals of this well-known hardwood house.

Peruvian Hardwoods.

A recent report of the development of various industries in Peru states that that country contains a large amount of valuable hardwoods. Many years ago the government, looking toward the development of its rich lands along the Amazon river, maintained several steamers which plied between Para and Iquitos, and which brought down lumber to a planing mill which was established in the latter city. The plan was not successful, however, until 1894, when business generally became better, and it was placed on a paying basis. It is at present managed remarkably well, considering its size and the kind of machinery in use. The operator has a ten-year contract with the government at \$13 per month rental, and in return is given charge of the mill; he assumes all liabilities and receives all profits. This contract will expire in 1908. The machinery is very ancient, and consists of two vertical saws, one band saw, two circular saws and an eighty horsepower engine. The mill when pushed to the utmost can turn out 1,800 feet of lumber a day, but the usual output is about 900 feet. It is run less than half the time, because of poor labor and the difficulty in obtaining it, as well as the primitive methods used in logging. The desirable timber within easy access of Iquitos has been cut and the remaining timbers must be floated down the river. Laborers will work at lumbering only during the dry season, and then cut a very meager supply of trees growing near the water's edge; when the river rises the logs are allowed to float down the stream.

The best grades of Peruvian lumber are very heavy and will not float, so immense rafts are made from the poorer kinds, and used for carrying the better stock down to the mill. No fine work is turned out, owing to the fact that there are only limited facilities and that the demand for rough and dimension stock is in excess of supply, so that the entire output is sold at prices which would average about \$180 per thousand feet, United States money. The greater part of the timber is a kind of cedar, which is not at all durable, and which splits badly; it is not even desirable for the shooks and rough boxes into which it is made as casing for the rubber output of that section.

It is a peculiar fact that the United States, with its rapidly decreasing supply of timber, furnishes to the countries of the Amazon valley many thousand feet of lumber annually, although the latter is remarkably rich in virgin forests. It is the opinion of Consul Eberhardt of Iquitos that there is now no industry in Peru where better profits could be made than on a modern hardwood saw mill in charge of a practical lumberman, provided the problem of securing labor could be solved satisfactorily. The river for 400 miles above Iquitos is navigable the year round for vessels drawing fourteen feet of water, so that it would seem possible to bring some of the handsome Peruvian hardwoods into the United States from the Amazon countries.

Annual National Lumber Manufacturers' Association.

On Tuesday, May 28, at 11 a. m., the fifth annual convention of the National Lumber Manufacturers' Association will be called to order in the Auditorium on the Jamestown Exposition Grounds at Norfolk, Va. Following is the programme which will be presented:

FIRST DAY'S SESSION.

Roll call of delegates from affiliated associations.

Enrollment of visiting manufacturers.

Address of welcome by Harry St. George Tucker, president of Exposition.

President's address, William Irvine.

Secretary's report, George K. Smith.

Treasurer's report, J. A. Freeman.

Appointment of committee on credentials.

Paper, "The Growing Need of Accurate Knowledge as to the Standing Timber in the United States Available for the Manufacture of Lumber," J. B. White, Kansas City, Mo.

Paper, "The Lumber Cut of the United States in 1906," R. S. Kellogg, Forest Service, Washington, D. C.

Paper, "Yale Forest School," Henry S. Graves, director, New Haven, Conn.

Paper, "Adjustment of Lumber Fire Losses," James M. Hamill, Columbus, O.

Appointment of committees.

Cargo conference at 8 p. m.

SECOND DAY'S SESSION.

Report of Committee on Credentials.

Reports of standing committees—Transportation, C. I. Millard, chairman.

Report of Committee on Credit Indemnity, Drew Musser, chairman.

Report of Committee on Endowment of Chair of Applied Forestry and Practical Lumbering in Yale Forest School, F. E. Weyerhaeuser, chairman.

Report of new committees appointed.

New business.

Election of officers.

Appointment of standing committees.

Adjournment of convention.

Meeting of the Board of Governors.

New East-Bound Freight Rates.

The proportion of the new schedule of lumber freight rates from Chicago east, on tonnage originating in the Pacific Northwest and West, has been definitely determined upon by freight officials. The HARDWOOD RECORD is indebted to R. L. Clark, general western freight agent of the L. S. & M. S. railway, for the following table showing the present and the new rates:

Chicago to—	Present rate.	New rate.
Toledo	9 cents	9 cents
Detroit	9 cents	9 cents
Cleveland	10 cents	10 cents
Pittsburg	12½ cents	15 cents
Buffalo	12½ cents	15 cents
Cincinnati	10 cents	10 cents
Philadelphia	18 cents	23 cents
Baltimore	17 cents	22 cents
New York	20 cents	25 cents
Boston	22 cents	27 cents

A Doubtful Remedy.

In an oak log which was sawed up at Webb's Sawmill at Greenfield, Ind., a walnut peg, a foot long and one inch in diameter, was found, where it had been driven into the heart of the log about seventy-five years ago. At the end of the peg was wound a long coil of dark brown, silky hair, and after investigation a peculiar legend was unfolded which, in these days of easy divorces, is quite interesting.

It seems that one of the customs of pioneer times, when a man and his wife could not get along happily together, was to cut a lock of hair from the head of each and wind around a walnut pin, which was then driven into a hole bored in some thrifty oak tree. Tradition does not state whether the remedy was always effective or not.

WILLIAM A. DOLPH, NEAL-DOLPH LUMBER COMPANY, MEMPHIS, TENN.

will commence the manufacture of hardwood lumber at that point. This mill is a modern single band hardwood mill, and an ample supply of logs for it is assured. The company will also be large buyers of hardwood lumber in the open market. Mr. Neal of this company was formerly president of the Planters Lumber Company. J. T. Strickland has been local manager and sawmill operator for the Chicago-Mississippi Land & Lumber Company the past year, and formerly was associated with the Planters Lumber Company. W. A. Dolph for

J. L. STRICKLAND, NEAL-DOLPH LUMBER COMPANY, GREENVILLE, MISS.

the past seventeen years has been associated with J. M. Darnell & Son Company in a confidential capacity, and has had a very wide experience in hardwood affairs. All the members of the house are particularly popular in both the producing and consuming ends of the market, and the success of the new enterprise is assured in advance.

New Self-Feed Rip Saw.

The well-known machinery manufacturing house of Chagrin Falls, Ohio—the Ober Manufacturing Company—has put out a new type of self-feed rip saw for ripping boards and plank and preparing squares for lathes and other work that is usually done on saws of this class. The machine is very rigid and is entirely of iron and steel, except the table, which is made of strips of quartersawn hardwood which are glued and doweled together. The table is hinged at one end. The saw is covered in such a manner as to fully protect the operator against injury from splinters or pieces which may fly from the saw. This saw guard is raised and lowered when ripping plank of different thicknesses by means of a hand wheel and crank. The guide is hinged to a hand lever within easy reach of the operator. A scale provides for varying widths of stock which it is desired to cut. The machine rips up to 12 inches in width. The entire machine is an admirable specimen of the product of the Ober Manufacturing Company and while it is illustrated herewith, a complete description and price can be obtained from the manufacturers.

Frank Henry Goodyear.

On May 13, at the family home in Buffalo, N. Y., occurred the death of Frank H. Goodyear, caused by an attack of Bright's disease. Not only was Mr. Goodyear a man of fine character and one of the first citizens of Buffalo, but he was one of the most prominent factors in lumber and railroad circles in the country.

Mr. Goodyear was born at Groton, N. Y., March 17, 1849. He took up his residence at Buffalo in 1871, and although he began operations on a small scale, they have multiplied and grown to mammoth proportions. He early commenced to purchase hemlock and hardwood timber land in northwestern Pennsylvania, and organized one corporation after another, until he controlled directly or indirectly nearly all the available timber in that section. In 1887, with his brother, Charles W., Mr. Goodyear organized the firm of F. H. & C. W. Goodyear, which in 1902 was made the Goodyear Lumber Company. Their holdings in Pennsylvania produce an annual output of more than 200,000,000 feet of hemlock and a large quantity of hardwoods.

Aside from directing lumber interests Mr. Goodyear was the promoter of the Buffalo & Susquehanna railroad and was interested in several minor ones; was president of the Buffalo & Susquehanna Coal & Coke Company, vice president of the Buffalo & Susquehanna and modern plant is being constructed at

Iron Company, and a director in the United States Leather Company. In 1902 Mr. Goodyear and his associates commenced accumulating longleaf yellow pine in Louisiana and Mississippi, and their holdings in those states now aggregate 600,000 acres. An extensive

NEW SELF-FEED RIP SAW MANUFACTURED
BY OBER MFG. CO., CHAGRIN FALLS, O.

Bogalusa, La., which will cost \$2,500,000. The enterprise is called the Great Southern Lumber Company; Mr. Goodyear was its president.

The funeral was held on Wednesday, May 15, at the family home in Buffalo. The offices of the many Goodyear interests were closed during the day; the trains on his railroads ceased running, and work was suspended at the lumber camps, saw mills and iron plant during the hour of the funeral. Interment was at Forest Lawn.

Stephenson Captures Toga.

Lumbermen are much pleased over the selection of Isaac Stephenson, Marinette, Wis., to succeed John C. Spooner in the United States senate, thus ending the deadlock which began nearly five weeks ago. Mr. Stephenson's victory is due to some extent to another prominent Wisconsin lumberman, Lieutenant Governor R. Connor, of Marshfield, who turned to Mr. Stephenson the votes of two assemblymen who had been counted upon to support an opposing candidate. When this change of front took place the opposition moved to make his nomination unanimous.

Mr. Stephenson is an intimate friend of Senator La Follette, who has been his warm supporter during the campaign, which has been made on a platform which is exceedingly progressive, not to say radical. It has declared for thorough revision of tariff schedules, reducing duties where possible without reducing the wages of labor; giving Interstate Commerce Commission power to regulate rates and service and to ascertain the true value of railway property, the cost of operation and the amount paid therefor;

legislation compelling the adoption of the best known safety appliances and strict regulation as to operation of trains; strengthening the Sherman anti-trust law and imposing necessary penalties for control of corporations; constitutional amendment for election of United States senators by popular vote; federal tax on incomes and inheritances; an effective child-labor law; legislation prohibiting sale of public lands containing coal, oil, or gas, would lease them; opposition to ship subsidy and all forms of government bounty.

Mr. Stephenson is reputed to be the wealthiest man in Wisconsin, and has made his fortune through prudent investments in timber lands. He is interested in several large lumber operations in Wisconsin and in the I. Stephenson Company of Wells, Mich., an immense proposition. He is seventy-eight years old; from 1866 to 1868 he was a member of the Wisconsin legislature and from 1883 to 1889 a member of Congress.

Increase in Memphis Lumber Companies.

It has become almost an axiom in Memphis that it is a cold week that does not see the organization of one or more new hardwood lumber concerns. There are well toward one hundred hardwood houses of various caliber in that city at the present time.

The HARDWOOD RECORD does not want to betray any unwise advance information, but from a memorandum card picked up by a representative in the foyer of the Gayoso Hotel a few days ago, it is probable that official announcement will soon be made of still another new corporation. The card reads:

THREE OWL LUMBER COMPANY,

Dealers in
Quartered Coconut in the Round
and

Airy Persiflage.

Specialties: Coconut Fur and Milk.
C. M. Kellogg, Pres.; Geo. C. Ehemann, V.-Pres.;
H. L. Stern, Secy. & Treas.

The present ostensible occupation of the officers of the Three Owl Lumber Company must needs be explained for the enlightenment of those unfortunate enough not to be acquainted with them. Mr. Kellogg is the active man in the hardwood house of Barksdale & Kellogg; Mr. Ehemann is the junior partner of Bennett & Witte, while Mr. Stern makes a bluff as southern buyer for the Brunswick-Balke-Collender Company of Chicago. The out-of-work headquarters of the bunch is the Gayoso.

New Hardwood Rules for London.

It is proposed by the hardwood section of the Timber Trades Federation of the United Kingdom to substitute a set of new rules governing hardwoods for those made effective in July, 1902. The proposal contemplates the measurement of lumber by the American board rule in accordance with the present rules of the National Hardwood Lumber Association; all lumber should be tallied face measure, and all fractions of $\frac{3}{4}$ of a foot or more counted to the next higher figure; all fractions less than $\frac{3}{4}$ of a foot to be counted back to the next lower figure. Standard lengths are specified as 6, 8, 10, 12, 14 and 16 feet, except as otherwise specified, and all lengths such as 9, 11 and 13 feet are to be measured back to the next even length, except in walnut, which shall be measured odd and even feet; no allowance to be made for defects; the width of tapering boards to be made at the narrow end.

In view of the prevailing tendency toward the modification of hardwood rules and measurement, the HARDWOOD RECORD has its suspicions that the Timber Trades Federation of the United Kingdom will have difficulty in buying American hardwoods on the basis of the proposed measure.

Changes in Grading Rules.

At a meeting of the Southern Cypress Manufacturers' Association, held in New Orleans May 16 changes were made in the grading rules as given below. The revised rules are now being printed and copies will be sent to all members as soon as possible.

In the fifth paragraph, under the head of "General Instructions," the word "shall" is changed to "should" in the clause "but the reverse side should, in no case, etc."

Under the head of "Standard Defects" season checks are now described as follows: "Ordinary season checks, meaning such as occur in lumber properly covered, shall not be considered a defect in any grade."

Add to standard lengths of mouldings "not exceeding five per cent of eight feet."

Under the head of "Standard Thicknesses" "all lumber shipped in the rough shall be of sufficient thickness to S2S to standard thickness as follows:"

After the worked thicknesses of ceiling add the thicknesses of panel stock, as follows:

Inch.	Inch.
3-8 panel stock S2S shall be 7-32	
1-2 panel stock S2S shall be 5-16	
5-8 panel stock S2S shall be 7-16	
3-4 panel stock S2S shall be 9-16	

The thickness of flat pickets is changed to 3-4 inch.

In the grade of first and second clear bright sap is not a defect in pieces 13 inches and wider.

In the grade of selects 4-inch stock is made a standard thickness.

In the grade of shop both No. 1 and No. 2 4-inch stock is made a standard thickness and the words "cuts and rips" are changed in all instances to "cuttings and rippings."

In the grade of selected common tank the words "wane edge" are eliminated.

In the grade of No. 2 common the wording is changed to read "This grade may be either random or specified widths 3-inch and wider, 1-inch and thicker, etc."

The grade of "C" finish now reads as follows: "All widths in this grade shall admit small sound knots, stained sap, pin worms and other defects, except shake; but none that will prevent the use of same in its full width and length as a paint grade."

"D" (or selected common) finish is changed so that 12-inch stock will be furnished and the closing words "for common finishing purposes" are changed to read "as a common paint grade."

In "C" siding the waste of 12-inch length is changed to ten per cent of the length.

The grade of "A" flooring and ceiling is changed to read as follows: "May have bright sap on one edge one-fourth of its width, otherwise must be clear."

In the grade of "C" flooring and ceiling the words "ten per cent of the length" are inserted in lieu of "twelve inches in length" both as regards waste and end split.

Miscellaneous Notes.

It has recently been reported through various channels that the Seaman, Kent Company, Ltd., a large manufacturer of kiln-dried hardwood flooring and sheeting, with factory at Meaford, Ontario, and offices at 160 Bay street, Toronto, would build a sash, door and blind factory. The company announces that it has no such intention, but that it will erect a large flooring plant at the head of the Lakes in the near future.

The first large raft of logs to be brought down the Arkansas river by the United Walnut Company passed Fort Smith recently and were watched by crowds as they passed the wharf. Three of them were several hundred feet long and were the largest hardwood rafts that have floated down the Arkansas river for

many years. Each contained many hundred logs which were being brought downstream from the large timber possessions of the company in the Canadian valley and other up-river points.

Charles R. Little, for sixteen years superintendent of the Merrill & Ring sawmill at West Duluth, Minn., committed suicide May 14, at the home of his parents, with whom he resided, by firing a bullet through his brain. Failing health is said to be the cause of his act. Mr. Little was 48 years old and had been in the lumber business at Saginaw and Duluth since a boy.

An authority writing from Santo Domingo in regard to cedar suitable for the manufacture of pencils says that there are considerable quantities of the timber there, but no successful exploration has been made except by a Virginia lumber company which owns several tracts of land yielding cedar, and has done a good deal in getting out the cedar and other woods.

The Fort Lumber Company of Little Rock, Ark., has filed a certificate with the secretary of state showing a change in name; it is now known as the Brinkley Hardwood Manufacturing Company.

An interesting dispatch from Tresbein, O., states that an old tramp wandered through that village recently planting nut trees, so that the youth of the land in years to come will not be deprived of shellbarks and walnuts. Not many years ago there was hardly a farm in the East that did not have at least one walnut tree, and all the streams had hundreds of shellbark hickories along their banks. The demand for black walnut and hickory for manufacturing have made these varieties so scarce that it will not be long before the joy of gathering the nuts will be lost to the children, so that during the last three years the old tramp has been engaged in his work of planting. He seeks out-of-the-way spots, so that the trees will have a chance to grow unmolested and untrampled. The rocky sides of hills and the edges of creeks are preferred, and he hopes that when he has become but a memory, children of other generations will thank him for his foresight and kindness.

Efforts are being made to form a combine of German toy manufacturers, including those in other woodworking lines also, to regulate selling conditions, prices and other matters pertaining to that line of trade.

The Kaukauna (Wis.) Lumber Company has purchased some black walnut logs of William Tuttle which were grown on his father's farm near that town from seed planted by his mother over fifty years ago. They had reached a diameter of from eight to ten inches and were converted into valuable lumber; such wood is now high in price and easily stands second to rosewood and mahogany.

The Bird & Wells Lumber Company of Wausaukee, Wis., has purchased another tract of standing timber in Forest county, having closed a deal with C. A. Hutchins of Beloit for a section of land heavily timbered with hemlock and hardwoods.

A dispatch from Stockholm, Sweden, says that Harnosand was the scene of a riot on the 13th inst. as a result of the strike of several hundred laborers in the Sando sawmills. Twenty nonunionists and a sheriff were seriously hurt. The owner of the mills, Dr. Kemphe, who is one of the most prominent men in this line of business in Sweden, had imported laborers, and this was the cause of the clash. Order was finally restored by the Westernorland regiment.

The Diamond Match Company has purchased a large tract of timber land in California from the Sierra Lumber Company, for \$1,000,000, which will be paid in four quarterly installments during 1908.

Two sawmills are being installed in Randolph county, West Virginia, by the Roaring Creek Lumber Company, a new concern whose principals are all of Clearfield, Pa.

The Tyrell Manufacturing Company of Columbus, S. C., will soon complete and put into operation its new circular sawmill on the Scuppernon river. All varieties of lumber will be manufactured and the daily capacity will be from 20,000 to 30,000 feet.

About 20,000 acres of timber land in Thomas county, Georgia, have been purchased by the J. L. Phillips Company of Thomasville, the consideration being about \$127,000. A mill and tram road will be built, and the capacity of the mill when in active operation will be 50,000 feet. The company recently increased its capital stock from \$500,000 to \$1,000,000.

According to official returns the capital stock of lumber companies organized in Mississippi from Oct. 1, 1905, to April 15, 1907, aggregated \$3,800,000. The total increase in capital stock of railroads, banks, land companies, etc., is given as \$39,638,500.

Reports from Scranton, Miss., say that the loading of steamships direct from the sawmills of Moss Point is causing a rapid increase in the maritime commerce of that port. Cargoes of 3,400,000 feet of square timber, 2,000,000 feet of hewn lumber and 1,500,000 superficial feet of timber have been loaded within the last few days by the L. N. Dantzer Lumber Company, consigned to European markets.

Barges are being loaded at Morgan City, La., sawmills to carry cross-ties to Galveston. The scarcity of railroad cars has forced mills to secure water transportation.

Fire at Lincoln, N. H., last week very nearly wiped that town out of existence. It is practically owned by J. E. Henry & Sons, known as New Hampshire's lumber kings, who have suffered great losses; 120 men, women and children were left homeless.

J. Beecher has started a sawmill at Lake-wood, Wash. The output will be about 100,000 feet of cedar per day. There is said to be sufficient timber in that vicinity to keep a mill running for years, the settlers selling the cedar as they clear the land.

There is a great shortage of stovewood and hardwood for building in Oakland and San Francisco. The hard winter has made the mountain roads practically impassable and the railroads have been so loaded with freight that they have neglected or refused to haul cordwood when the cars could be loaded with any other material. San Francisco and vicinity have drained the state of hundreds of able-bodied woodchoppers who find they can get more money doing lighter work in the metropolis than they can in the woods.

Charles M. White, a veteran lumberman of Old Town, Me., died May 14. He operated along the Penobscot for many years.

John E. Wilcombe, a lumber merchant of Hammond, La., filed a petition in bankruptcy in the United States District Court May 14. He gives his liabilities as \$1,298.57 with no assets.

Charles V. Higgins of Paris, Ky., has sold his interest in the lumber yards and manufacturing plants of the Paris Manufacturing Company to William P. Ardery and Ossian Edwards and will locate in Florida.

The large sawmill of Rose & Fisher at Bethel, O., was destroyed by fire on the 15th inst. The loss was only partially covered by insurance.

The Case-Fowler Lumber Company, which operates a hardwood mill at North Birmingham, Ala., and has valuable timber lands on the Tombigbee river, has disposed of its holdings to the Hugh McLean Lumber Company of Buffalo, a large hardwood manufacturer.

The Cleveland Cliffs Iron Company is carry-

ing on considerable experiments in northern Michigan, with a view to bringing about the reforestation of the pine barrens of that section by raising the trees from seed. An attempt is also being made to grow southern cottonwood on northern Michigan lands. It is believed this timber would be ideal for pulpwood, of which commodity the Cleveland Cliffs Iron Company is a heavy consumer. A considerable quantity of cottonwood cuttings will be planted on lowlands in the vicinity of Coalwood. All these experiments are in charge of expert foresters. The company's holdings comprise nearly 1,500,000 acres, and much of the land is covered with hardwood, which the company uses in the manufacture of charcoal to supply its various furnace plants.

The Elmira Interior Hardwood Company, a new concern at Elmira, N. Y., has been incorporated with a capital stock of \$100,000.

A new company with a capital of \$10,000 has been incorporated at Ripley, Tippah county, Virginia, by J. W. Paulk, William Ruff and I. M. Paulk. It is to be known as the Mississippi Sawmill Company.

The Crosby-Bonds Lumber Company of Bookhaven, Lincoln county, Virginia, has been incorporated with a capital stock of \$30,000. W. P. Bonds Jr., L. O. Crosby and others are the incorporators.

R. C. Oliver, A. C. Jones and others have incorporated the Hurricane Creek Lumber Company at Columbia, Marion county, Virginia, with a capital of \$50,000.

The Cisco Lumber Company, recently organized in Wausau, Wis., by Wausau capitalists, has closed a deal for the purchase of a large tract of timber land in Gogebic county, Mich.,

in the vicinity of Cisco Lake, whereon is over 100,000,000 feet of standing timber. While it is not definitely stated, the probabilities are that this timber will be hauled to Wausau and sawed there.

The Richwood Lumber Company of Hattiesburg, Perry county, Virginia, has been incorporated with a capital stock of \$25,000 by A. E. Causey, O. B. Perry and others.

A new stock concern, under the name of the Harris Lumber Company, has recently been organized at Junction City, Ark., with a capital stock of \$6,000, divided into sixty shares of \$100 each. The general business of the company is the manufacturing, buying and selling of lumber and the buying and selling of land and timber.

The Ohio Handle and Manufacturing Company of Jonesboro, Ark., has been organized with a capital stock of \$25,000 for the purpose of manufacturing handles, etc. The company will erect a frame building 60x100 feet. All necessary machinery has been purchased and the plant will be installed and ready for operation by June 1. N. Hetherington has been elected president and E. S. Hetherington secretary.

The Beaumont Iron Works Company of Beaumont, Tex., has begun building a large logging car factory, which will be developed into a general car factory. It is planned to install a carwheel foundry later.

The Hilton Lumber Company of New Haven, Conn., has filed a certificate of incorporation in the office of the secretary of state. The capital stock is \$20,000 and the incorporators are C. H. Hilton, J. W. Palmatier, William Aufort and E. C. Sloan.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

Invitations have been received in this city for the marriage of Stephanie Suzanne Bendorf and Rudolph Sondheimer, which will occur at the Hotel Gayoso in Memphis on the evening of Tuesday, June 11.

Registered at Chicago hotels May 16 were John Cathcart of New York, A. F. Anderson of Cadillac and C. B. Dudley of Grand Rapids, Mich.

Harry P. Coe of the Coe Manufacturing Company, well-known manufacturers of veneer machinery at Painesville, O., was in town May 16.

James Cowen of Schultz Brothers & Cowen, left town on May 15 for a trip through the hardwood producing sections of the Southeast. Before returning home he will attend the annual meeting of the National Hardwood Lumber Association at Atlantic City.

L. L. Harris of Harris & Cole Brothers, Inc., Cedar Falls, Ia., was a Chicago visitor May 15.

Secretary Doster has had another lemon handed him; the Hardwood Manufacturers' Association has decided to remove its headquarters to Nashville. These constant changes of the official headquarters of this organization are getting to be a very serious matter for the young bachelor secretary. Just about the time he gets properly introduced into society and has a girl lined up to the courting stage, he is steered off to some far distant spot on the map. The fair and marriageable femininity at Nashville is hereby notified that Doster is not only an eligible but a very susceptible bachelor, and if they want him it's wise to get busy early.

The forces of J. D. Lacey & Co., leading timber dealers, are reassembling at the Chicago office, 1200 Old Colony building. Mr. Lacey and a corps of clerks have already arrived, but Victor Thrane is now in the East

and Wood Beale is at the New Orleans office. Both will be in town soon.

The Morton Dry Kiln Company of this city has just issued a handsome little catalogue profusely illustrated, setting forth the many advantages of its product and an explanation of its method of seasoning lumber, which is universally conceded to be among the very best.

Gilbert Y. Tickle of Tickle, Bell & Co., 5 St. Albans Rd., Liverpool, has been making an extended trip through the chief lumber markets of the United States, and dropped into the RECORD office May 14. Mr. Tickle is a prominent factor in the mahogany trade of the United Kingdom, and also a large buyer of American hardwoods. He will sail for home the middle of June.

G. von Platen, the well known lumber manufacturer of Boyne City, was a recent caller at the RECORD office. Mr. von Platen was en route home after an eight months' trip to the Pacific Coast.

Wagstaff-Lumber-Oshkosh is back from an extended southern trip which included the inspection of timber properties with a view to purchasing, and a little vacation sojourn at French Lick.

The RECORD acknowledges receipt of a very elaborate and attractive "ad" from the Interior Hardwood Company of Indianapolis, which consists of a wall hanger displaying to excellent advantage types of the floors which they make a specialty.

W. F. Biederman, superintendent of the National Lumber Manufacturers' Credit Corporation, with executive office in the Victoria building, St. Louis, is out with his seventh credit rating book, dated April, 1907. It contains the usual classified list with capital and pay ratings, of all manufacturers, wholesale and retail dealers in lumber, and factories

which buy lumber in carload lots. It is announced that the utmost care has been taken to make the new list as complete and accurate as possible. The information on which the capital and rating are based has been obtained from sources deemed reliable, and conservatism consistent with the facts in each case, has been exercised. Corrections, business changes, new firms, failures, etc., are taken care of by weekly correction sheets, and a trade report is issued each week which is a source of further important information to members. The book is published semi-annually and is of great value to lumbermen in their commercial transactions.

John N. Penrod of the Penrod Walnut Corporation, Kansas City, Mo., was a recent Chicago visitor.

The American Wood Working Machinery Company has removed its general offices to Rochester, N. Y., where all remittances and correspondence regarding collections and accounts should be directed in future. For prices or information regarding machinery, the nearest salesrooms should be addressed; they are at Cedar and West streets, New York; Hennen building, New Orleans; Fisher building, Chicago, and 591 Lyell avenue, Rochester.

The HARDWOOD RECORD acknowledges receipt from the Lidgerwood Manufacturing Company, New York, of a set of six fine photographs illustrating Lidgerwood logging systems, contained in a handsome frame 21x28 inches in size.

J. J. Linehan of the Linehan Lumber Company, Pittsburg, was in town on May 11.

The Michigan Maple Company of Grand Rapids has removed its offices from the Michigan Trust building to 414 Houseman block, that city.

R. J. Clark, president of the Peninsula Bark and Lumber Company of Sault Ste. Marie, Mich., was a welcome caller at this office on May 11.

The Fullerton-Powell Hardwood Lumber Company of South Bend, Ind., announces that Wm. P. Schmuhl, for the last twelve years buyer and inspector for the Ford & Johnson Company of Michigan City, Ind., has resigned his position with the latter concern and accepted one with the former, to take effect July 1.

The American Central Lumber Company, formerly of Anderson, Ind., has moved its office from that city to Central City, W. Va. The company manufactures and wholesales oak and hickory wagon stock in the rough and has about twenty mills in various parts of the country in operation. It is under the management of G. A. Lambert.

The Rotary File and Machine Company, Inc., 589 Kent avenue, Brooklyn, N. Y., is out with a neat little booklet about its band saw machines, sharpeners, setters, blades, guides and brazers, which gives in concise form considerable information about its tools, and a number of useful pointers for hardwood manufacturers.

E. C. Atkins & Co., Inc., of Indianapolis, whose Chicago branch at 38 S. Canal street was recently destroyed by fire, are noted for their ability to get to the front and surmount all sorts of obstacles with the utmost dispatch. Another instance of this is shown in the following communication, dated May 11: "We write to announce the fact that we have opened new headquarters in Chicago at 75-77 Market street, and while we are not doing business at the same old stand, still we are doing business right along, and lots of it."

J. W. Embree, vice president of the Rittenhouse & Embree Company, has returned home from a week's trip to the company's mill at Warren, Ark.

William Wilms of the Paepcke-Leicht Lum-

ber Company is making an extended southern trip; he will visit Cairo, Memphis and other mill points at which his concern has interests.

Fred W. Black of the Fred W. Black Lumber Company has gone to Memphis on business for his house; from there he will visit other Tennessee and Mississippi points.

Boston.

The Heywood Bros. & Wakefield Company of Gardiner, Mass., is contemplating the erection of an addition to its plant at Gardiner. The addition will be 440x75 feet and will be four stories and basement. Another building will be erected for the office.

Collier & Keyworth, manufacturers of go-carts, Gardiner, Mass., will build another story on their plant.

C. F. Schurster, who for over twenty years has been connected with the Connecticut Valley Lumber Company, has resigned and will give his entire time to the affairs of the Green Mountain Lumber Company.

The Hilton Lumber Company has been incorporated in New Haven, Conn., with a capital of \$20,000. The incorporators are C. H. Hilton, J. W. Palmatier, William Aufort, E. C. Sloan. Mr. Hilton has recently returned from Bellevue, Fla., where the mills of the company will be located. He secured an option on a large tract of land there containing oak, baywood and other hardwoods.

The coffin manufacturing plant of Miller & Burnham, Hartford, Conn., was recently destroyed by fire, causing a loss of about \$10,000.

Lawrence & Wiggin are making quite a specialty of mahogany veneers. Fred W. Kirch, formerly of New York, who has been in the veneer business for several years, has been engaged as salesman in this department. He is showing some fine samples of mahogany veneers.

William E. Litchfield, who has been visiting his mill in Indiana, has returned.

Among the southern visitors to this market recently have been: M. F. Amorous of Atlanta, Ga., and J. J. McDonald, Savannah, Ga.

A leading dealer in hardwoods states that a few years ago it was customary for him when opening his morning mail to first look for orders, then checks and finally shipments. Conditions have changed. Now he looks for shipments, checks and orders.

Mr. Bacon of the Davenport-Peters Company, says whitewood is still held at high prices. Manufacturers are able to market their product as fast as they have it in shipping condition. Dealers here are buying only what they need and are not anticipating wants.

The New England lumbermen will hold their seventh annual outing at Narragansett Bay, June 8. The train leaves South Station, Boston, at 10:45 a. m. for Providence, where connections will be made with the steamer Warwick. Dinner will be served at Fields Point, after which the party will proceed to Prudence Park. Howard C. Morse of Blacker & Shepard, is one of the leaders in this outing. It is hoped that the lumbermen will turn out in large numbers.

Fred S. Morse of the F. S. Morse Lumber Company, Springfield, has recently returned from a trip South.

Elmer L. Gibbs, president of the O. M. Bearse & Son Company, Chelsea, Mass., has returned from a western trip, with a very satisfactory volume of orders. It is reported that he took one order for 1,000,000 feet of mahogany.

K. W. Hobart of Hobart & Co., Boston, returned from a southern trip recently.

J. M. W. Hall, president of the Machias Lumber Company, returned last week from a trip to Maine.

New York.

Labor troubles are infesting certain sections of the metropolitan lumber district, which, while they have not as yet assumed momentous proportions, are, nevertheless, causing considerable speculation as to what the future will bring forth. In every case where trouble has arisen the places of the strikers have been immediately filled by strike breakers and nonunion help, and there has been absolutely no interference with the conduct of business on the part of the dealers affected. The New York Lumber Trade Association has the situation well in hand and is preparing to cope with trouble of any proportions should occasion require, and the fact of its absolute preparation in this respect bids fair to prevent general spreading of the trouble. As a matter of fact, the trouble is not due to any dissatisfaction on the part of the men, but is caused by the activity of walking delegates.

As the time approaches for the lumbermen's golf tournament, which will be held at the Baltimore Country Club, Baltimore, Md., June 12 and 13, everything is reported to be progressing finely and a large number of entries have already been received. The tournament will be held under the auspices of the Lumbermen's Golf Association, of which Wm. D. Gill of Baltimore is president, and Henry Cape, 1 Madison avenue, New York, secretary. Arrangements for the comfort and entertainment of the contestants at Baltimore are in charge of Mr. Gill. Any lumberman or anyone engaged in any of the allied lines of the lumber business is not only eligible but cordially invited to enter the contest.

The official report of the National Wholesale Lumber Dealers' Association's last annual convention has just been issued in its usual attractive style, containing handsome illustrations of the officials for the current year, a full list of committees, etc., together with the annual proceedings.

The Lumber Underwriters of 66 Broadway recently enlarged and renovated their quarters at that address and now have a very handsome suite of offices. They have just issued a very handsome calendar, containing a beautiful reproduction of a famous forest fire scene. Accompanying the calendar is a booklet giving some interesting and valuable pointers as to their system of insurance, the character of their policy, financial resources, etc., which they will be very glad to mail to any one interested on application.

The executive committee of the National Wholesale Lumber Dealers' Association will hold its first regular meeting of the year at the headquarters, 66 Broadway, on May 22, at which time reports will be received covering the work thus far this year and plans will be discussed for future operations.

Mrs. Lewis Dill, wife of Lewis Dill, the distinguished Baltimore lumberman, sailed from this port on May 7 for a summer stay in Europe, and will be joined by Mr. Dill a little later.

The regular annual meeting of the stockholders of the Cross, Austin & Ireland Lumber Company, big Brooklyn house, was held at the company's offices on May 8, at which time officers and directors were elected. The officers are: President, Jas. Sherlock Davis; vice president, J. S. Carvalho; secretary, Bruce W. Belmore; treasurer, Charles L. Adams, Jr., and assistant secretary and treasurer, Wm. Dubocq. The Board of Directors of last year was re-elected. The retirement of N. Irving Lyon because of ill health was announced. Bruce W. Belmore, the new secretary, has been associated with the company for a number of years. The gigantic improvements which have been under way at the

company's premises during the past year or more are nearing completion, at which time the premises will represent one of the biggest and most up-to-date operations of its kind in the country.

The wholesale lumber business of John McClave of 1 Madison avenue has been incorporated under the name of the McClave Lumber Company, with a capital of \$150,000. The incorporators are S. W. McClave and John McClave of New York.

The local branch office of the Lumbermen's Credit Association of Chicago, publishers of the Red Book, has been removed from 18 Broadway to 116 Nassau street, where Manager Charles D. Chase is enjoying larger quarters for the conduct of their business.

John R. Glover of W. R. Adams & Co., Van Brunt and Bowne streets, Brooklyn, is on a business trip to Buffalo and Tonawanda markets.

G. Wetherhorn, local representative of Wetherhorn & Fischer, manufacturers of cypress sash, doors, blinds, mouldings, etc., of Charleston, S. C., has removed from 150 Nassau street to 146 Broadway, where he has increased facilities. The plant of the company at Charleston has undergone some improvements and additions which will increase the daily output forty per cent.

Philadelphia.

Chas. F. Felin & Co. report their mills and factory working to full capacity, orders coming in right along.

Eli B. Hallowell & Co. have been busy for the last few months, and have no fault to find with conditions. Their hardwood department is doing nicely. They have a man in West Virginia looking up these woods. Their business is extending so rapidly that a good man for Pittsburg and one for New York territory is to be considered. Eli B. Hallowell of this firm and wife, are sojourning in Wernersville, Pa.

Soble Bros. report trade in excellent condition. Frank D. Folsom of this concern has been called home on account of the serious illness of his son. John J. Soble is at the mills in Honaker, Va., looking after their interests there. H. P. Minard, superintendent of the Okeeta Planing Mills Company, in which the Soble Bros. are largely interested, spent a few days at the home office in Philadelphia recently.

J. R. Williams, 909 Land Title Building, recently returned from a Canadian trip. He is very busy and reports his hardwood department in good shape. He has just made connection with the largest mill work concern in the northwest.

The Righter-Parry Lumber Company is reaping good results from its hardwood department. Frederick C. Righter recently returned from a selling trip through the Pittsburg territory with a good bunch of orders. Charles K. Parry is making a tour of North and South Carolina and Georgia, visiting the mills and making some desirable connections.

The Codling Lumber Company, wholesaler of lumber at Twenty-second and Bellevue streets, Tioga, is moving its offices into the Land Title building.

M. F. Amorous, president of the Union-Pinopolis Lumber Company, Atlanta, Ga., recently visited the local trade.

The Pennsylvania Lumbermen's Mutual Fire Insurance Company reports business at the present time the best in the history of the company. In the past their banner year showed a total of about \$1,000,000 insurance; for 1907, so far, the company has written up insurance amounting to over \$800,000; this prosperity is undoubtedly due to the conscientious and careful policy of its manager.

James Ruth of Sinking Spring, Pa., a well

known lumber dealer, and first station agent of this place, died on May 3, in his seventy-sixth year.

C. E. Lloyd, Jr., of the Boice Lumber Company, Inc., reports business active and is more than pleased with results to date. Mr. Lloyd has been making an extensive tour among mills, their own and others, and reports conditions eminently satisfactory—no weakening at any point in values. This company has purchased considerable hardwood of late, and with the output from their mills, will be prepared to meet most any demand for months to come.

A forest fire that has been burning in President and Pine Grove townships since May 12, was recently checked, after the timber loss had reached the sum of \$75,000.

The Holloway Lumber Company reports business moving along nicely and the car service a little improved, so that it is able to get out some of the back orders.

Miller & Miller, a prosperous firm, have extended their business considerably during the past year. They have mills at Branchville and Bowman, S. C., and are arranging for the building of a railroad to connect with their mills. They also expect shortly to open a branch office in this vicinity. They report their hardwood department doing well. Frank B. Miller has recently returned from an extended tour in South Carolina and Georgia, where he has been looking up longleaf pine, in which wood they also deal extensively.

J. N. Holloway & Co. are receiving a goodly share of orders. They feel that a new impetus has been given to trading, in consequence of the more seasonable weather.

H. H. Maus & Co., Inc., report the best year's business they have ever had. Their mill is working without interruption, orders coming in right along, notwithstanding they have not been able as yet to close out all the back orders. The company has engaged F. W. Strahorn to look after the pole end of the business. Mr. Strahorn, who is well known, having been in this business on his own account for some years, is thoroughly familiar with the line.

The J. W. Difenderfer Lumber Company will shortly remove to 1314 North American Building.

J. Randall Williams & Co. are preparing for prospective good summer trading. J. Randall Williams, Jr., of this firm, is on a buying trip in South Carolina. When last heard from, he was fast developing into an expert in the piscatorial line. It comes from good authority that his record for one afternoon's catch was twenty-three trout.

Baltimore.

A meeting of Baltimore members of the National Hardwood Lumber Association was called prior to the annual meeting of that organization to discuss the advisability of urging the amendment of the National grading rules and whether the Buffalo resolution of 1905 should not be rescinded with a view to securing as close an approach to unanimity throughout the United States as possible. All the Baltimore members were present with two exceptions, and the action taken was unanimous. After an extended discussion of the subject under consideration, the following resolution was adopted:

"Resolved, 1st. That it is the sense of the Baltimore members of the National Hardwood Lumber Association that the association in convention at Atlantic City, N. J., May 23 and 24, 1907, should take such action as is necessary to rescind the Buffalo resolution of 1905, whereby it was agreed to make no change in the grade rules of the National Hardwood Lumber Association for a period of three years; and that this association should make such alteration and changes in

its grade rules as will as nearly as possible promote and bring about a common and universal system of inspection of hardwood lumber throughout the entire country.

"2nd. That the chairman shall appoint a committee of three members whose duty it shall be to present to the convention of the National Hardwood Lumber Association through the proper channel this resolution and the further action of the Baltimore members here assembled."

The following resolution was adopted on motion of M. S. Baer:

"Resolved, That the committee of Baltimore members are empowered and instructed to meet with the committee on inspection of the National Hardwood Lumber Association, and discuss with them fully the proposed changes to be offered in the association inspection rules, with a view to determining their action in behalf of the Baltimore members and to lay before the committee the desirability of the following changes:

"1st. That there should be a proper division in the grade of shipping Culls Hardwood, conforming nearly to the present system of division into No. 2 Commons and No. 3 Commons of the Hardwood Manufacturers' Association of the United States.

"2nd. That for the inspection of poplar lumber there should be established an additional grade of "stained" saps, making a place for this class of stock under a head to itself.

"3rd. That the rules governing the measurement of hardwood lumber should be so changed as to cause measurement to be made as follows:

"In widths, fractions on the one-half foot are to be given alternately to the buyer and seller; the fractions below the one-half foot to be dropped, and all fractions above the one-half foot to be counted to the next higher figures on the board rule.

"In lengths, standard to be four to sixteen feet, counting the 'odd' as well as the 'even' feet."

This matter, for which the meeting had been especially called, having been disposed of, the cost of inspecting hardwood lumber at Baltimore was taken up. The Baltimore Lumber Exchange having adopted the national rules, M. S. Baer offered the following resolution, which was adopted:

"Resolved, That the committee of three members appointed by the chairman of this meeting shall be further empowered and requested to take up with the Inspection Bureau of the National Hardwood Lumber Association at some suitable time in the near future the subject of co-operation between the National Hardwood Lumber Association and the Lumber Exchange of Baltimore, with a view to having the association grant proper license to the chief inspector of the Lumber Exchange of Baltimore, permitting him to issue the National Hardwood Lumber Association inspection certificate on lumber inspected under his supervision, and allowing the Lumber Exchange charges to apply."

This, it was contended, would relieve the association of the fixed expense of the salaried inspectors in this city.

Richard W. Price presided over the deliberations. The committee named to bring the matter before the Atlantic City convention was: R. E. Wood, Richard P. Baer and Richard W. Price.

Articles of incorporation were filed recently by the John C. Scherer, Jr., Manufacturing Company, which is organized to manufacture and deal in office furniture, bar fixtures and other similar products, and has an authorized capital stock of \$60,000. The incorporators named are John C. Scherer, Jr., Harry R. Ruse, Thomas T. Tongue, Frank H.

Longfellow and Daniel MacLea. Mr. Scherer is widely known in the sash, door and blind trade. Mr. MacLea is a member of the Eisenhauer & MacLea Company, dealers in hardwoods on West Falls avenue, and enjoys an excellent reputation. The company will doubtless conduct operations on a large scale.

Hardwood men here are considerably exercised over the action of the Baltimore & Ohio Railroad in serving notice of an increase in the freight rates of one cent per 100 pounds. The increase became effective on May 1. At the same time the minimum weight of cars was increased from 30,000 to 34,000 pounds. In other words, where a lumber shipper had formerly to pay for 30,000 pounds when he loaded a car, he will now have to pay on 4,000 pounds more, so that the increase in rates is really much more than the one cent advance indicates. Arrangements are under way to make some sort of representation on the subject to the railroad company, the advance being considered out of proportion to that on other commodities.

Among the visiting lumbermen here last week was C. E. Lloyd, vice-president of the Boyce Lumber Company of Philadelphia. Mr. Lloyd had been on a southern trip, and was enroute for home. He said that the hardwood business continued in excellent shape, with prices strong and the demand active with the possible exception of common oak, which, he thought, had eased off somewhat, though the general situation was not affected thereby. He looked for a prosperous business during the balance of the year.

A concatenation of local Hoo-Hoo has been called by Vicegerent Snark Maurice W. Wiley for the first week in June, when it is expected that a number of applicants for admission will be on hand.

B. C. Currie of the R. M. Smith Lumber Company of Parkersburg, W. Va., was in town last week and expressed himself as highly gratified over the way trade keeps up.

The Norva Land and Lumber Company of which Robert MacLean, a well-known exporter of hardwoods with offices in the Stewart building, this city, is general manager and president, is erecting a planing mill in Norfolk County, Va., along the Dismal Swamp Canal, with Walliston, Va., as the postoffice station. The company has some 23,000 acres of land there, containing large quantities of hardwoods, cypress and much gum. The latter is being worked up into staves, a stove mill and sawmill having been on the place when it was purchased. A resaw is also being put up, and the facilities of the company will be greatly enlarged when the improvements are complete. The planing mill will be in running order about the middle of June.

The Danzer Lumber Company of Hagerstown, Md., is making extensive improvements at its yards on South Potomac street, which cover an area of five acres and are being connected with the Baltimore & Ohio Railroad by means of a switch 550 feet long. This will permit cars to be shunted direct to the yards without extra handling. A smoke stack 50 feet high is being built, and dry kilns are under construction, together with exhausts to convey shavings and sawdust to the boilers. Every facility for handling lumber, heavy timber and logs is to be provided. The improvements will be completed some time in July.

Mary L. Evans, president; Eugene Murray, vice-president, and William B. Murray, secretary-treasurer, all of Washington, D. C., have incorporated the Convertible Furniture Manufacturing Company of Alexandria, Va., with a capital stock of \$50,000, and will erect a factory there.

R. P. Baer of R. P. Baer & Co. recently returned from a trip South, in the course of which he visited a large number of mills.

The Herbertson Lumber Company has been incorporated at Richmond, Va., with William Herbertson, Sr., as president; M. L. Herbertson as vice-president, R. H. Herbertson as secretary, and R. K. Herbertson as treasurer. The three first-mentioned are of Pittsburg, and R. K. Herbertson is of Burkeville, Va. The capital stock of the company is fixed at \$100,000.

Pittsburg.

The Willson Brothers Lumber Company reports an excellent demand for hardwoods of all kinds and says that the call for oak and sound wormy chestnut is one of the most promising features of the Pittsburg market for two years. This firm has fortified itself with large stocks and is supplying the trade throughout the East in a way that few other concerns are able to do.

The A. M. Turner Lumber Company is now quartered in one of the finest suites of offices in the city, in the Union Bank building. They have nearly double the space which they had in their old quarters in the Ferguson building, but the room has been badly needed for a long time. In poplar, cottonwood and basswood the Turner Company is doing a big business.

A number of investors from Clearfield, Pa., have bought 1,000 acres of hardwood timber land on the Coal & Coke railroad in Randolph county, West Virginia, for about \$20,000. It is estimated that the tract will cut 5,000,000 feet, most of which will be marketed through the agency of W. W. Dempsey of Johnstown, Pa.; several portable mills will be installed at once.

The L. L. Satler Lumber Company is getting out a fine lot of hardwood at its big plant at Blackstone, Va. A large part of this is oak and the firm finds a good market for this lumber both on the eastern coast and in the Pittsburg district. Mr. Satler was one of the Chamber of Commerce excursionists who toured West Virginia on a business trip last week.

The big plant of J. A. Hollinger at Chambersburg, Pa., was burned a few days ago, with a total loss of \$100,000. About \$40,000 of this was covered by insurance. The fire started in the engine room of the sawmill and burned practically the entire plant of the company.

The Cotton Belt Timber and Manufacturing Company has been incorporated in Ohio by a number of capitalists of Norwalk. Its capital is \$100,000, and the members of the company are Fred H. Fox, F. C. Miller, B. N. Childs, John Laylin and H. A. Gallup.

J. E. Melvain & Co. are having a very good call for railroad ties. They report most of the West Virginia mills fairly busy and they are putting on new men at the mills where they have lumber under contract.

The big planing mill of Dimond & Borland at Oil City, Pa., was damaged by fire to the extent of \$50,000 on May 8. The firm carried about \$7,000 insurance.

West Virginia Hoo-Hoo held a very successful meeting at Weston, May 2. Nearly thirty were initiated and over two hundred members of the order were present at the services. Among the prominent speakers were H. K. Stover of Elkins, I. N. Butler of Pickens, James H. Chapman of Sutton, John L. Altizer of Baltimore and E. S. Boggess of Clarksburg.

The Babcock Lumber and Boom Company has been incorporated at Davis, Tucker county, West Virginia, with a capital of \$500,000. The stock is all held by the Babcock Lumber interests, which have their headquarters in Pittsburg.

The Valley Bend Lumber Company, of Shaffer's Run, Randolph county, W. Va., lost its big mill last week by fire. Wilson Brothers of Toronto were the chief owners and will likely rebuild the plant.

The Pennsylvania Railroad Company has set out more than 500,000 trees as a preliminary to its immense project of starting enough oak forests to supply it with tie timber in the future. At its new nursery at Hollidaysburg, Pa., 135 pounds of seed will be planted this year. The work is being conducted by E. A. Sterling, formerly of the United States Bureau of Forestry.

The Lycoming Lumber Company is a new concern chartered by Wm. Collum, S. V. Brown and F. C. Zercher. It will operate near Greensburg, Pa.

Pittsburg wholesalers are greatly concerned at the increase of 20 to 30 per cent in freight rates which will go into effect June 1 on all the roads of the Central Freight and Trunk Association. Hitherto the rate on lumber from Chicago to New York has been 20 cents per hundred pounds. The increase will cause a sharp advance in the price of some hardwoods that are being shipped in large quantities to the Middle West and it is expected that oak will suffer worse in this respect.

Three new lumber companies were chartered last week in western Pennsylvania. The Newell Brothers Lumber Company of Pittsburg is backed by J. A., W. A. and H. T. Newell, H. A. Miller, A. C. Leslie of Pittsburg and W. E. McMillan of Wilkinsburg, Pa. The capital is \$100,000, of which over \$40,000 has been paid in. The Fort Pitt Lumber Company of Pittsburg has a capital of \$12,500 and is promoted by H. L. Austin, George McGinnis, R. J. Hadley and T. S. Dickey of Pittsburg and C. M. Konkle of New Kensington, Pa. The other company mentioned is the Stewarten Lumber Company of Conneville, Pa., capital \$6,000. The incorporators are August Stickle, Jr., and Otto Stickle of Mill Run, Pa., and John A. Guyler of Conneville.

Lloyd, Chalfant & Peyton have bought the planing mill of Rowand & Company at Shinnston, near Morgantown, W. Va., for about \$15,000. The price includes several acres of real estate.

The Crescent Lumber Company is now located in its new quarters in the Machesney Building, and is doing an excellent business in white oak, cypress and hardwoods. Much of its trade is in lots of from 20 to 50 cars, and a good portion of its lumber goes north to the lake towns.

W. E. Terhune of the W. E. Terhune Lumber Company has been looking up the West Virginia situation the past week. He finds the hardwood business in general much better than the yellow pine trade.

The J. W. Pierce Lumber Company of Ironton, O., has been shut down by the order of the Pierce estate. It is expected that arrangements will soon be made with the Advance Lumber Company of Cleveland by which the plant can be operated again.

The Sommer & Henry Lumber and Manufacturing Company has taken over the plant of Charles Ike at Canton, Ohio, and will manufacture hardwood lumber on a large scale. It has also secured several tracts of timber which will be good feeders for the big planing mill. The new officers of the company are: President, David S. Sommer; vice president and treasurer, U. R. Henry; secretary, Edward L. Smith; directors, J. M. Cozan and Anna Sommer.

The Pittsburg Pit Post Company is doing a fine business in the Pittsburg field in all kinds of mine timber. Its posts are selling for half a cent higher than a year ago and it also has a good demand for mine car stock.

The Maloy, Thompson & Moffatt Lumber

Company of Cincinnati has bought from D. F. Frazee about 500 acres of walnut timber near Lexington, Ky., for \$15,000. The firm will cut off the timber at once and market most of it in Cincinnati.

The Warren Handle Company is one of the busiest concerns in eastern Ohio. Last week it shipped another order of 200 dozen pick handles to the Panama Canal, this being one of several consignments which it has lately sold to the United States government. The company also has the entire handle business of the Carnegie Steel Company and the Republic Iron and Steel Company.

The Twentieth Century Lumber Company, capital \$10,000, has been incorporated by David Weiner, W. S. Snyder and G. M. Whitney of Harrisburg and Carlisle, Pa.

Timber lands in the neighborhood of Oil City, Pa., got a bad scorching last week by forest fire. Nearly the entire townships of President and Pine Grove were swept over, badly damaging an area of about ten square miles.

The Western Lumber Company of Weston, W. Va., has increased its capital to \$75,000, its president, John T. Dixon of Memphis, Tenn., having taken a large part of this last issue.

The Baltimore & Ohio Railroad Company is negotiating with the Kendall Lumber Company for the purchase of the latter's line from Confluence, Pa., to Mountain Park, a distance of about twenty miles. This is a narrow gauge road, but if the B. & O. gets it, it will be made into a broad gauge for excursion purposes. The Kendalls built it several years ago to furnish an outlet for their timber operations in that district.

The Wellman Lumber Company has been incorporated at Glen Jean, Fayette County, Pa., with a capital of \$5,000. The members of the company are O. F. McCoy, L. D. Marshall, H. E. Wilson, J. R. Gunning and C. W. Osenton.

Robert Felty of Conneville, Pa., has bought from the Collins Lumber Company of Pennsboro, W. Va., a tract of hardwood lumber which it is estimated will cut 20,000,000 feet, besides some 4,000,000 pit posts. The deal includes all the machinery, tram road, logging engines, cars and other equipment of the Deckers Valley Lumber Company of Morgantown, W. Va., in which Mr. Felty is a large stockholder.

The Webster-Keasey Lumber Company is a new wholesale concern at 803 Bessemer building. It will have its own mills, and will handle poles, ties and piling on a large scale. Webster Keasey, president of the company, has been in the lumber business in the Pittsburg district for seventeen years. George A. Cypher, Jr., of Butler, Pa., is secretary and treasurer of the concern, and J. O. Harrison, who has been associated with Mr. Keasey for a long time, will be general manager.

The Red Lick Lumber Company of Marlinton, W. Va., has been formed with a capital of \$10,000. The incorporators are M. C. Watkins of Gassaway, W. Va., A. D. Williams and N. C. McNeil of Marlinton and John Peters of Ronceverte.

The Furnace Run Saw Mill & Lumber Company of Pittsburg has started a branch office at Cincinnati, with William Hunter, manager. The company is practically cut out at Johnston City, Tenn., and will handle hardwood direct from its Cincinnati office.

The Pittsburg Hardwood Floor Company reports much the best business in its history. Its city trade is picking up rapidly and of late it has been doing a fine business in the big industrial towns of western Pennsylvania and eastern Ohio.

The Kendall Lumber Company sold 200 cars of lumber and ties in two days last

week. Throughout the hardwood list it notes a very firm feeling as to prices and Secretary J. H. Henderson says that both oak and chestnut are going up slowly. The company's mill at Crellin, Md., is now cutting 100,000 feet a day.

General Manager J. N. Woollett of the American Lumber and Manufacturing Company recently took an order for 1,000,000 feet of oak to be exported from Mississippi and Arkansas for car lumber. He also bought 5,000,000 feet of cottonwood to be cut in Texas and Indian Territory, a large part of which will be brought up the Mississippi for distribution in the central West.

Buffalo.

The Hoo-Hoo Concatenation held by Vice-governor F. J. Blumenstein May 11 was the principal event of the month. The attendance was large and a class of ten kittens was admitted to membership as follows: Edwin S. Lott of Chestnut & Slaght; William F. Stuhlmiller of the Stuhlmiller Mantel Works; Cris M. Moyer of the American Seating Company; Jacob F. Hirschmiller of Palen & Burns; Arthur T. Wilcox, with G. Elias & Bro.; Frank M. Betts of the Eastern Lumber Company, Tonawanda; Sylvester B. Bond of the Hugh McLean Lumber Company; James H. Walsh, with F. W. Vetter; Frank W. McGregor of the Standard Hardwood Lumber Company and James L. Stewart, inspector for the National Hardwood Lumber Association.

A. Miller keeps two or three good hustling buyers in the oak and other hardwood districts south, looking after stock and so is easily able to carry a full stock in yard, in spite of active sales.

The Buffalo yard of Scatcherd & Son still depends on hardwoods, mainly from Pennsylvania, as the cut of the Memphis mills is all needed to meet the general eastern and foreign demand.

Beyer, Knox & Co. find that their new mill headquarters at Pascola, Mo., is to be a fortunate venture, as they are selling too much oak and other southwestern hardwoods not to have a special supply somewhere.

T. Sullivan & Co. are now for the first time lately able to put some Washington fir into stock here. A lot of 2½-inch, a size always hard to get, is going into pile just now.

G. Elias & Bro. are getting in lumber liberally by lake and as they handle all sorts of lumber it is quite in their line to get a cargo from Lake Ontario, as they did a few days ago.

Members of the Standard Hardwood Lumber Company have organized the Bison City Table Company, with \$50,000 paid up capital. R. F. Kreinheder is president, A. W. Kreinheder, vice president; O. W. Kreinheder, treasurer and manager, and Charles Benfold, secretary. The factory is already in full operation.

F. W. Vetter is still adding to his yard stock since going into business on his own account. He now carries a full assortment of general hardwood sorts and is enjoying all his former trade.

The Buffalo Hardwood Lumber Company has two barges coming down from the upper lakes with hardwood stock, all of which will be needed to keep up the yard stock, as everything is moving fast.

Manager James of the Empire Lumber Company is back from a long trip through the South and Southwest, stirring up his mill and shipping forces. He is able to report plenty of cars, which is exceptionally favorable.

Oak, ash and poplar are being added to the yard stock of O. E. Yeager from his Kentucky headquarters. Cars in that direction

are not as plenty as they ought to be, but are made to answer.

I. N. Stewart & Bro. are moving an increased amount of cherry and are always able to show an increased stock of oak in yard, which comes from cherry territory and sells along with it nicely.

The Hugh McLean Lumber Company still finds the Memphis district a rain center, but is able to get stock enough from its various mills to meet all demands.

Detroit.

Joseph H. Berry, the genius behind the greatest varnish manufactory in the world, died in Detroit, May 22. He had been ill only seven weeks. He was 68 years of age.

Mr. Berry was chairman of Berry Brothers, Ltd., of Detroit, large varnish manufacturers. He was also president of the Dwight Lumber Company, large handlers of hardwood; president of the Detroit Heating and Lighting Company and the Berry Car Wheel Foundry Company at Buffalo, N. Y. He was interested in the press steel, barrel, lumber and picture frame trades, in iron furnaces in the northern peninsula, in the sugar business, in real estate, was a promoter of the new \$2,500,000 belt line in Detroit, which is now in progress of construction.

William C. Brownlee of the Brownlee & Kelly Lumber Company, hardwood wholesalers of Detroit, is spending a week at the company's mill in northern Georgia. The company has just received a large cargo of basswood.

There is now a very serious strike at the Detroit plant of the American Car and Foundry Company among the forces in the steel department. Police are necessary to keep order.

A new warehouse is being erected for the Detroit Lumber Company.

The \$2,500,000 new Cleveland "D. & C." boat which was to have gone into commission this month was burned at her dock at the foot of Orleans street last week. A large amount of beautiful interior hardwood finish was destroyed at a big loss to the Detroit Shipbuilding Company.

There is a big strike among the shipbuilders of the American Shipbuilding Company at the Great Lakes branch at Ecorse. Outside workmen are being imported.

The spring shipments by boat to Detroit are very light owing to the fact that the spring stock is not entirely dry, and fall stock has been pretty well cleaned up. Basswood is reported very scarce. Every wholesaler is busy, there being no let up in building here.

Saginaw Valley.

The Superior Iron and Chemical Company has been organized at Detroit with a capitalization of \$7,500,000. Joseph H. Berry of Berry Bros., Detroit, is said to hold \$6,000,000 of the stock. This company has charcoal and iron plants at Ashland, Manistique, Newberry, Chocoma, Elk Rapids, and Boyne City. All of these plants manufacture charcoal from hardwood and charcoal iron from the charcoal. They also manufacture chemicals from the wood by-products. Efforts are being made to secure a large plant of that character at Bay City. There is one chemical plant in operation which manufactures wood alcohol and other by-products, the plant being operated by the Dupont Powder Company of Philadelphia. The alcohol from the wood is converted into use in the manufacture of gunpowder. There is no location in the world so advantageous for the location of a plant of this character as Bay City. Eight sawmills, nearly all of which are operated the year through, are engaged in the manufacture of hardwood lumber and there is thus a constant

accumulation of hardwood refuse available. Moreover, tributary to Bay City are immense forests of the best hardwood timber in the world, and it has rail and water transportation for the raw material and the manufactured product.

S. L. Eastman has purchased the interest of Ross & Wentworth of Bay City in 10,000,000 feet of standing timber in Ogemaw County. A spur track will be extended into it by the Detroit & Mackinac railroad and the timber will be taken off. A portable band mill will be put up on the ground to manufacture the timber. A large portion of the timber is beech, maple and birch. The lumber will be handled by Mr. Eastman in his business, the maple going into flooring. Beech lumber of good quality is being put into flooring here and it gives satisfaction as it finishes nicely. This timber has advanced to \$18 for No. 1 common, and there is a good call for it.

The Saginaw Manufacturing Company, which puts out washboards, wood split pulleys and other hardwood novelties, is enlarging its plant materially to permit of the expansion of its business. The concern is doing a prosperous business. The Palmerton Woodenware Company and the Bousfield Wooden Works Company are two of the largest establishments of their kind in the United States. They use a number of million feet of basswood and also large quantities of other hardwoods every month. Over at Ithaca, Mich., is a plant operated by Armour & Co., which produces butter tubs and other novelties. All of these institutions are doing a fine business and are operated with full crews.

A. McKay is erecting a portable mill on the French Siding, near West Branch, with which he will cut up 1,000,000 feet of logs.

The Batchelor Timber Company at West Branch has erected a heading mill and other improvements. The mill is cutting about 60,000 feet of hardwood lumber daily.

The new Strable Flooring plant at Saginaw is having a fine run of business considering the short time it has been in operation. The company is booking orders ahead and the officials feel well satisfied with conditions.

At Whitestone Point, near Au Gres on Saginaw Bay, Samuel Umphrey is operating a small sawmill which is cutting 12,000 feet a day. Up in that section a number of small mills are in operation.

Good progress is being made on the new mill of Keyes & Warboys at Tower, and it will soon be ready for business.

The Pinkerton sawmill, near Onaway, is ready for business and has an ample stock of logs.

The Kneeland-Bigelow Company's mill is running day and night and cutting some fine stock. The maple goes to S. L. Eastman. Mr. Bigelow says that practically their entire cut for the season has been sold.

Bay City parties are negotiating for a large body of hardwood timber north of the city to come here to be manufactured.

Grand Rapids.

Among the new Michigan corporations are the following: Cisco Lake Lumber Company, Wausau, Wis., and Ontonagon, \$200,000; Southland Lumber Company, Grand Rapids, \$20,000.

The Baines-Mosier Cabinet Company of Allegan has increased its capital stock from \$4,000 to \$13,000.

Louis D. Rich has resigned his position as cashier of the R. G. Peters Salt and Lumber Company, Manistee, taking effect June 1, and will give his entire attention to his lumber interests in the South.

Officers of the newly formed Portage Lake Lumber Company of Hancock are: President,

James J. Byers; vice-president, James W. Cleaves; secretary and treasurer, William J. McKenna. A mill has been built at West Hancock and will be operated this summer.

The Grand Trunk railroad has expended three-quarters of a million dollars on the erection of a new depot and freight house and is extending its tracks into the downtown district of Grand Rapids. Business men are arranging for a celebration in connection with the opening of the new station June 15.

The Wilson Manufacturing Company of Port Huron, manufacturer of saws, is the only concern of that city to make an exhibit at the Jamestown Ter-centennial. The Wilson company started operations at South Park five years ago with five men. The force has been increased to 125 men and the output added to tenfold.

All Michigan railroads have made a change in classification of railroad ties which materially increases the shipping rates to points within the state. Every road needs the ties originating along its own line and is averse to moving the same. Some roads refuse to move ties to outside points, which is indicative of the scarcity of timber.

The Grand River boat line is carrying large cargoes of freight, including furniture and manufactured products, and the directors of the new transportation line, who include some of the leading business men and manufacturers of the city, state that proper support of the venture will assure the ultimate operation of an independent boat line to Chicago, whereby traffic arrangements with lake lines to and from the East may be made and the eastern freight rates reduced. The rates to western points are from 5 to 10 per cent below the tariffs over the electric or steam lines.

More than 2,000 trees and shrubs were set out this spring on the school grounds at Ironwood, by direction of the board of education.

The Superior Manufacturing Company of Muskegon has closed a contract with the board of education of New York city for \$14,700 worth of opera chairs and school seats.

The Muskegon factory of the Brunswick-Balke-Collender Company has recently begun the manufacture of cues, and 100 men are employed in this department. When the billiard table department is in operation, which will be in about four months, 250 men will be added to the force.

Cleveland.

J. H. Benedict of Detroit, representing the Duncan Bay Manufacturing Company, stopped off here a few days on his way to Cincinnati, where he will buy machinery for their sawmill at Cheboygan.

The Sawmill Company of Chase City, Va., was incorporated recently with \$20,000 capital stock. W. P. Porter of East Jordan, Mich., president; Harry Sherman of Collingwood, O., vice president; C. H. Foote of this city, treasurer, and A. M. Foote of this city, secretary. The four officers, together with Burt Pero, comprise the Board of Directors. The company will manufacture hardwoods and North Carolina pine. The main office will be at Cleveland.

The car situation in Kentucky and West Virginia is easing up somewhat. Manufacturers and dealers report shipments going forward more satisfactorily than for some time.

R. H. Vansant of Ashland, Ky., was a caller among the hardwood trade here last week.

W. L. McManus, who is a large manufacturer of hardwoods at Petoskey, Mich., called on the trade here May 18.

W. A. Cool of W. A. Cool & Son returned recently from the Chamber of Commerce trip

into Indiana. He reports a fine trip and trade conditions good. Mr. Cool left May 19 for the firm's West Virginia mill.

Trade conditions continue good. The better grades of poplar and oak are moving rapidly. Dealers having dry stock to offer report ready sale. Most manufacturers in this territory state they are well filled up with orders.

Indianapolis.

The will of Charles Zabel, formerly connected with the Cabinet Makers' Union, one of the large manufacturing concerns of the city, has been offered for probate in a local court. His widow is left a life interest in all personal and real estate, amounting to about \$20,000.

An increase in capital stock from \$36,000 to \$60,000 has been announced by the South Bend Healy Box Company of South Bend. A. M. Russell is president and Frank B. Clayton, secretary.

Changes necessary to make the plant a standard fire risk are being made by the Greer-Wilkinson Lumber Company of this city at its hardwood mill in Mangham, La. Among the improvements is a 20,000-gallon water tank which supplies 6-inch water mains laid completely around the plant. New machinery is being installed and the company believes it will have one of the finest hardwood mills in the country when improvements are completed. The company is also installing a retail yard in connection with its wholesale plant in Cairo, Ill.

A company has been organized at New Albany to manufacture veneer. It will have a capital stock of \$100,000. The plant will be located on a part of the De Pauw glass factory tract, and will be complete in every respect. Those interested in the company are N. T. De Pauw, W. A. McLean, C. W. Inman, E. V. Knight, Conrad Fleischer, Thomas McCulloch and Basil Doerhoefer. This will make the third veneer plant in New Albany.

An increase in capital stock has been made by the Hohe Planing Mill of Muncie, according to its secretary, Irvin L. Morrison. The increase is from \$15,000 to \$20,000, the additional stock to be used in extending the company's business.

One of the newest lumber concerns in southern Indiana is the George D. Seitz Lumber Company at Haubstadt, which is just entering the field where hardwoods are most plentiful. Articles of incorporation were filed last month, showing a capitalization of \$15,000 and stating that directors had been elected as follows: George D. Seitz, Grover M. Cleveland, John F. Ringer, Amy G. Tenbarger and Sophia F. Riffert.

Balke & Krauss of this city have purchased some old buildings and ground on West Market street. The buildings are being razed to make way for additional switching facilities, the city council having granted permission for the laying of the tracks.

An important change in Indiana manufacturing circles was noted last week when the Barcus Manufacturing Company of Wabash purchased the abandoned plant of the American School Furniture Company in that city for less than \$25,000. The Barcus Company will move from its present quarters and with a large addition built to the school furniture plant, will manufacture wagon stock, automobile bodies and operate a foundry.

Miss Marie Jungclaus, daughter of W. P. Jungclaus, a well-known local lumberman, was married one night last week to Samuel L. Pattison of Memphis, Tenn. The couple, after a wedding trip, will make their home in Memphis.

Frank E. Patrick, Henry Kasperlain and Cora Patrick have organized the Seymour Chair Company at Seymour, and will manufacture all grades and designs of chairs. They have \$15,000 capital stock and have incorporated.

Auburn is fast becoming one of the best hardwood markets in the state, due to the constantly increasing business of manufacturing carriages, buggies, wagons and automobiles. The city now ranks third in Indiana in the vehicle industry and is only rivaled by South Bend and Indianapolis. In South Bend one-third of the vehicles made in Indiana are turned out.

The Capitol Lumber Company is enjoying such an extensive business that it has been obliged to open a fourth yard in this city. The new yard is located on English avenue in a fast-growing part of the city, where there is a great demand for all grades of lumber.

The M. R. Gardner Company of Wabash has been incorporated and will soon begin manufacturing furniture and other cabinet work in that city. Its capital stock is \$25,000, invested by Della B. Rolland and Morland Gardner, who are also named as the directors of the new concern. Wabash is becoming one of the greatest furniture manufacturing centers in Indiana.

Steps for the permanent organization of an association representing the various shippers' organizations in Indiana will be taken at a meeting to be held in the Board of Trade building in this city on the evening of May 27. With all shipping interests of Indiana combined, it is believed that considerable influence can be exercised in bettering shipping conditions and pushing desirable legislation. At the same time every effort will be made to keep existing laws on the subject intact. A meeting was held some time ago, when the organization was put on a temporary basis with John W. McCardle as temporary president and J. V. Zartman as temporary secretary. A committee is drafting by-laws and constitution which will be offered at the coming meeting.

Extensive planting is being conducted at the reservation of the State Forestry Board near Henryville, and includes the following: white oak and hickory on eight acres of clay upland; red oak, burr oak and large shellbark hickory on seven acres of bottom land, 600 feet elevation; American chestnut, on five acres of upland clay at 700 feet elevation; black walnut and American chestnut on three acres of upland porous clay at 700 feet elevation; American chestnut on three acres of upland clay at 570 feet elevation and mixed oaks and hickory on five acres of upland clay at 620 feet elevation.

Asheville, N. C.

There has been little change in the hardwood situation in western North Carolina during the past thirty days. Prices still remain firm with a demand equal to if not greater than the supply. The hardwood men are able to fill orders with some promptness, as the railroads are giving better service than for months past. With a dry season in the mountains a good supply of hardwood will be cut and made ready for shipment.

A number of important deals in timber lands are pending in this section, but as yet none of importance have been consummated. Should some of the deals now pending go through several large tracts of splendid timber will be opened up.

The ten-mile flume from the mountains in Jackson county to Dillsboro is rapidly nearing completion. Less than three miles of it remain to be constructed. The flume will be put in operation by midsummer, when large

boundaries of timber land will be opened and transportation of lumber and logs to railroad points made possible.

Bristol, Va.-Tenn.

The Smoky Mountain Land and Lumber Company of Monroe county, Tennessee, last week sold to the Babcock Lumber Company of the same county a tract of approximately 43,000 acres of timber land, lying in the eastern part of Monroe county. The consideration is said to have exceeded \$300,000. The land is said to be well wooded and easily accessible. It is understood that the purchasers will develop the property as soon as possible.

Irving Whaley, vicegerent of the Concatenated Order of Hoo-Hop for east Tennessee and well known in local lumber circles, has resigned his position with the Tug River Lumber Company in this city, and gone to Giles county, Virginia, where he has purchased an interest in the East River Lumber Company and will have charge of the company's mills at Tamrosh.

F. G. Griffin, European representative of J. A. Wilkinson of this city, was a visitor in Bristol last week as the guest of Mr. Wilkinson. Mr. Griffin has been with Mr. Wilkinson, with headquarters at London, for the past three years. He has gone to Mobile, Ala., and other southern points to look after lumber interests.

H. M. Hoskins of the H. M. Hoskins Lumber Company, has become interested with C. M. Ryburn, also of this city, in the Little Creek Lumber Company, in Pulaski county, Virginia. This company, of which Mr. Hoskins is vice president, has leased eight miles of railroad in Pulaski county, leading to a 20,000-acre tract of timber land which it owns and is preparing for extensive development. The company will install a big band mill at once.

The H. M. Hoskins Lumber Company is engaged in putting in circular mills on its timber property eight miles north of Bristol.

Among the visitors on the local market last week were James Faulkner, Faulkner Lumber Company, Damascus, Va.; R. G. Rogers, Tennessee Lumber and Manufacturing Company, Sutherland, Tenn.; T. H. Carrier, Adventure Lumber Company, Butler, Tenn.; Paul W. Fleck, Paul W. Fleck Lumber Company, Philadelphia; J. H. Smith, J. J. and A. H. Jones, Philadelphia, and C. T. Aust, New York.

The Tug River Lumber Company of this city is erecting a big band mill at Horton's Summit, Scott county, Virginia, and has purchased an additional 3,000-acre tract of land in that county.

O. C. Armitage and others of Greeneville, Tenn., are preparing to erect a big furniture manufacturing plant at that place.

J. W. Stiles of the Kingsport Lumber Company was here from Johnson City last week. Mr. Stiles' company is operating a band mill and a circular mill at Caretta, McDowell county, West Virginia, and is receiving about a million and a half feet of lumber per month from this operation.

J. H. Bryan of the Bryan Lumber Company has returned from a business trip to North and South Carolina. He visited his company's mills in these states while away.

L. C. Capps, formerly with the J. Walter Wright Lumber Company of Mountain City, Tenn., has come to Bristol to enter the business with a local concern.

George E. Davis & Co. of this city has purchased a tract of timber land in Virginia and is getting ready for extensive operation.

The plant of the Empire Chair Company at Elizabethton, Tenn., was destroyed by fire May 20, entailing a loss of \$75,000 and throwing 125 men out of employment. The plant

was insured for \$25,000. It is understood that it will be rebuilt, though General Manager E. M. Carrier is absent from Elizabethton. It was erected two years ago.

Cincinnati.

The Wiborg & Hanna Company of North Fairmount has donated to the Improvement Association of that suburb a considerable amount of lumber to be used in protecting the trees just planted. There were 550 of them and a large quantity of lumber will be needed to make the necessary protection. The Improvement Association is working untiringly to push the viaduct at Hopple street. When this is completed it will be a great convenience for the suburb and will also serve well the big lumber industry located there.

"It seems that prosperity was never so universal as at the present time," said Thomas J. Moffett, the re-elected president of the Cincinnati Lumbermen's Club. "The demand for lumber throughout the United States is unusually heavy, and England, France, Germany, Australia, South America and other countries are also enjoying an extraordinary business, which may be taken to indicate that general trade conditions are splendid. And the prospect is for a continuance of the prosperous situation. The demand has been so heavy that stocks are very low and, although a vast amount of lumber is being produced, it is taken up so rapidly that there is no opportunity to accumulate stocks. Prices have an upward tendency. Conditions in the East are fine, and the South and West likewise are busy, absorbing rapidly the lumber that is produced. Cincinnati is the biggest hardwood lumber center in the world and naturally gets her share of the large business that is now being transacted."

James Albert Green recently spoke before the Carriage Makers' Club on Panama, and was complimented by the various local papers for his efforts, both in a literary way and in his illustrations. The annual outing of the club will be held June 15, and will consist of a steamboat ride to New Richmond, luncheon to be served on board.

The Bell Belting and Supply Company of Cincinnati, was incorporated lately with a capital stock of \$25,000 by Oliver G. Bailey, James G. Fenwick, Michael Roehrer, Thomas J. Bell and Abner Thorp, Jr.

John McGrath of the Eberhard Carriage and Buggy Supply Company, who has been located in this territory for many years, has been transferred to Cleveland, where he and his family will make their future home.

At the meeting of the Furniture Exchange, held last week, Colonel Henry Uchman presided, owing to the indisposition of President William J. Sextro, who is mourning the loss of his father, the late Joseph G. Sextro, pioneer furniture manufacturer and promoter of the first furniture exposition ever held in America. Eulogies on the life of the late member, Joseph G. Sextro, were pronounced by many of his associates. The committee on outing reported that Highland Grove had been secured for Saturday, June 8. The regular baseball game between manufacturers and supply men will be held in the morning, and in the afternoon the dealers and manufacturers will meet. Bowling prizes will also be offered.

The Jacoby Lumber Company of Dayton, O., is the name of a new company incorporated with a capital stock of \$50,000. The incorporators are Peter Kuntz, Peter Kuntz, Jr., John A. Payne, Dennis Dwyer, Hugh E. Wall and John Kuntz.

E. F. Dulweber of John Dulweber & Co. is much improved after having undergone a surgical operation. Mr. Dulweber has suffered from stomach trouble for some time and it is

hoped he will now be entirely free from this annoyance.

George Littleford of the Littleford Lumber Company is rapidly recuperating from an attack of typhoid fever. He is still confined to his home, but expects to be out again within a few days.

William E. Delaney, general manager of the Kentucky Lumber Company, has returned from a successful business trip in the South. He stayed in Cincinnati only a few days and then left for Burnside, Ky., where the company runs a large sawmill. He expects to return to the Queen City in a week.

George Ehemann of Bennett & Witte will be married next month to Miss Lillie E. Morris of Memphis, Tenn. Mr. Ehemann has charge of the Memphis office of the company, and is very popular in the trade.

St. Louis.

The Moore Company has moved its offices to suite 1717 in the new Lumbermen's Building.

The regular monthly meeting of the Board of Directors of the St. Louis Lumber Exchange was held on May 10. Only routine business was transacted.

Among recent visitors to this market were the Hon. Gifford Pinchot, United States Forester, and R. S. Kellogg, also of the Forest Service.

Clarence Boyle of the Heath-Witbeck Company, Chicago, is making a trip to the company's mills in Arkansas, and stopped off in this city for a short time.

J. C. Magness, of J. L. Phillips & Co., Thomasville, Ga., was a recent St. Louis visitor. Mr. Magness' concern is a great factor in the car and railroad equipment business, and handles the cut of a number of saw mills in all parts of the country, representing an output of about 10,000,000 feet per month.

A number of prominent lumber and machinery men have been in St. Louis within the past two weeks; among them R. M. Merrill and H. G. Buckner, in charge of Mississippi and Alabama interests of the International Hardwood Lumber Company of this city; Samuel Disston of Henry Disston's Sons, Philadelphia; J. W. Thompson of the J. W. Thompson Lumber Company, Memphis; A. R. Vinnedge of the A. R. Vinnedge Lumber Company, Chicago.

Building operations for April compare unfavorably with those of the same month last year, possibly owing to the fact that the latter was the banner month in number of permits issued in the history of this city. The totals for the two were \$4,159,715 and \$2,560,447.

The Thomas & Proetz Lumber Company has secured the services of G. M. Bailey, who resigned his position as inspector with the St. Louis Lumber Exchange.

The Chas. F. Luehrmann Hardwood Lumber Company is making more or less of a specialty of red gum, which they are pushing to the front as much as possible; their yards are well stocked, and they report that they are in a position to take care of a good trade.

Nashville.

The Board of Trade and the lumber interests of Nashville are much pleased with the success of the special committee which went to Cincinnati and secured for this city the headquarters of the Hardwood Manufacturers' Association of the United States. It was pointed out that Nashville is the natural and actual center of hardwood activity. While other hardwood sections has been cut out, the territory tributary to Nashville is just being developed, especially North Alabama, North Georgia, etc.

Lewis Foster, the genial secretary of the association, will come to Nashville the early

part of June and will take offices in the new Stahlman skyscraper, Nashville's largest and handsomest building.

Several of the most prominent lumber firms in this city have manifested a keen interest in the trial of two men in the criminal court of Davidson county on the charge of committing acts of vandalism on Cumberland river, consisting of the theft of rope with which rafts were tied and the cutting loose of rafts, causing lumbermen much damage and loss. For years Nashville lumbermen have been held up by a gang of river pirates who charged them with catching lumber that had "broken loose," for bankage, etc., and they have found it cheaper to pay than to refuse. Catching the offenders, however, has been the difficult part. Recently they got the "dead wood" on one defendant, J. D. Miller, and several of the local companies combined in a prosecution, chief among them being John B. Ransom & Co., Lieberman, Loveman & O'Brien, Davidson-Benedict Company, Prewitt, Spurr Manufacturing Company and the Southern Lumber and Box Company. Miller received a sentence of three years in the penitentiary and three sentences of three months each on the county road. Miller and his accomplice were charged with having cut loose five rafts containing some 1,800 valuable logs.

Walter E. Knox, general manager of the Nashville Terminal Company, announces that he has secured for Nashville another big lumber concern, one that will handle 1,000 cars of lumber annually. The plant is now negotiating for a site on the lines of the terminal company and the matter will be closed up in a few days. A specialty will be made of handling hardwood. The company will have plenty of capital back of it.

The properties of the Powell Lumber and Mining Company at Crossville, Tenn., have been sold to H. M. Alexander of the Coleman Lumber and Mining Company with headquarters at Williamsport, Pa. The purchase price was \$77,000. The purchasing company now owns about 12,000 acres of timber land in Cumberland county and estimates the timber on it at about 60,000,000 feet. Quite a boom is reported in the lumber business at Crossville.

The Journey & McCombs Slat Factory, destroyed by fire recently, is again in operation. The new factory is much larger than its predecessor.

The Davidson-Benedict Company has decided to move its plant at Cedar Hill, Tenn., on the Washington estate, to a point near Monterey, where the company also has large undeveloped holdings.

J. H. Baskette, former general manager of the Prewitt-Spurr Manufacturing Company, is winding up his Nashville interests preparatory to his departure to take charge of a big wood-enware factory at Helena, Ark.

Lieberman, Loveman & O'Brien have recently added a cross-tie department to their business and are cutting a good supply of them at their Nashville mill. Love, Boyd & Co. continue to do a big business in this line. This firm is probably the pioneer in that business in Nashville. They have recently sold to the Louisville & Nashville Railroad Company several hundred thousand ties at this point.

Much activity is reported in the counties bordering on the Tennessee river in this state. In Wayne, Hardin, Perry and Decatur a number of important land and timber sales are reported and St. Louis and Chicago tie concerns have made heavy purchases in that section.

The Jones & Woodfolk Lumber Company is a new concern organized at Lexington, Tenn., by Chicago, Louisville and Lexington capital. Will J. Jones of Chicago was made president, J. A. Woodfolk of Louisville, vice

president, and Thomas E. Graper of Lexington general manager.

A big timber deal is reported from Sparta, Tenn., on the McMinnville branch of the N. C. & St. L. The consideration for the timber properties in the Second and Tenth districts of White county is said to be \$45,000. The property was bought from J. W. McClure, agent for the Eastland heirs, by J. T. Anderson, O. H. Anderson, John M. Welch, J. A. Wilson and J. R. Tubbs.

W. B. Bynum and Guy Alexander of Gleason, Tenn., have purchased a large tract of oak timber in northern Alabama and will erect two or three stave mills there in the near future.

Memphis.

Recent heavy rains throughout this territory have further interfered with logging and milling operations. There is a pronounced scarcity of timber and this is proving a serious handicap. The past five days have been clear, but the ground is so wet that very little progress is being made in the woods and it may be some days before much can be accomplished in getting out timber. Most of the smaller mills are out of business altogether, while some of the larger have been forced to suspend operations for the time being.

The Darnell-Love Lumber Company has filed application for an amendment to its charter to increase the capital stock from \$25,000 to \$250,000. R. J. Darnell, A. M. Love, R. J. Wiggs and other officials signed the application. The company was established five years ago at Leland, Miss. It has been operating a big band mill at that place and is now installing another one there. This, together with large purchases of timber lands and the building of a standard gauge railroad, is the reason for the increase in capitalization. The Darnell-Love Lumber Company is affiliated with R. J. Darnell, Inc., Mr. Darnell being president of both corporations.

R. J. Darnell, Inc., is now completing its new double band sawmill and veneer plant in South Memphis. The new machinery will soon be ready for operation. The management expects to have everything running by July 1.

The Crittenden Railway Company, which began some months ago the building of a standard gauge railroad from Earl to Heth, Ark., has completed the main line as well as the branch to Parkin, Ark., where the Lansing Wheelbarrow Company has extensive milling interests, and everything is now in readiness for the operation of trains. The road furnishes a connecting link between the Chicago, Rock Island & Pacific at Heth and the St. Louis, Iron Mountain & Southern at Earl, thus giving lumber interests at the terminals and at intermediate points the use of both roads without having to depend altogether on a single line. F. E. Stonebraker, general manager for the Lansing Wheelbarrow Company in the South, is president and general manager of this road.

A number of gentlemen prominently interested in the Lamb-Fish Lumber Company were in Memphis a few days ago, including Col. LaFayette Lamb, president of that corporation, who makes his headquarters at Clinton, Iowa, and J. M. Studebaker of the Studebaker Wagon Company, South Bend, Ind. Col. Lamb came down on his houseboat and with him were a number of friends. It is understood that while Mr. Studebaker was here he looked over the field very carefully and picked up a good lot of wagon stock.

There was a called meeting of the Lumbermen's Club at the Hotel Gayoso, May 11, at which the report of the River and Rail Committee, covering the conference recently held here between that committee and high officials of the railroads entering this city, was

formally presented. The report was read by A. L. Foster, one of the members of the committee and himself an old railroad man. It stated that the committee had considered means of preventing a recurrence of the unfavorable conditions which have recently prevailed rather than present relief, the feeling of the members being that relief would come through a reduction in the volume of traffic. It further stated that, in the opinion of the committee, the railroads were doing all they could, not only for immediate relief, but for the prevention of a recurrence of the trouble. The report contained a lengthy quotation from a prominent railroad official, to the effect that the railroads were in the transportation business; that their revenue was derived from handling this business and that, since this was the case, they were doing all they could to solve the problems confronting shippers; that the railroads had submitted the various features of the traffic problem to the most experienced committee of railroad men obtainable; that the recommendations of this committee would be submitted to the American Railway Association, which would not adopt them unless they were practical, and that the main question right now is "What can shippers do to help the railroads?"

The report states that statistics were cited, showing that a large percentage of equipment is being held at important junction points because the delivering lines are unable to effect immediate delivery, receivers being unable to find storage room or being slow in unloading cars after delivery has been effected; that thousands of cars are being held at the various seaports, awaiting the convenience of ocean carriers; that many of the railroads of the smaller class have found it cheaper to borrow cars than to build them, with the result that the stronger lines connecting with the weaker systems have, against their most earnest protest, been deprived of a large portion of their equipment. In this connection the committee expresses the belief that the raising of the per diem rate from 25 to 50 cents per car will have the effect of making it cheaper for the weaker lines to build their cars than to borrow them and points out that they have already placed orders for enough equipment to materially relieve the situation.

At this meeting two important papers on phases of the transportation problem were heard. One was prepared by C. D. Hendrickson and read by Secretary John W. McClure. In this the writer made a plea for justice on the part of the public, the legislatures and shippers toward those railroads which are striving honestly to improve the disastrous conditions of the past and to prevent their recurrence in the future. The other was from Elliott Lang, formerly secretary of the National Lumber Exporters' Association and now connected with R. J. Darnell, Inc. The main feature of his paper was the necessity for relying on the national laws for the correction of transportation evils, his contention being that the states, which are trying to correct evils by legislation, have no power to enforce their enactments where interstate commerce is concerned.

Much interest has been lent to the 14-foot channel from the lakes to the gulf by the presence in this city a few days ago of the Inland Waterways Commission, of which Congressman Burton is chairman. This official delivered an address in which he expressed the belief that the plan was feasible, but in which he further declared that, before it was realized, it would be necessary to create additional public interest therein.

It is announced in the press dispatches from Washington that President Roosevelt has accepted an invitation to come down with the commission on its trip to Memphis

next fall. He is in sympathy with the movement, and it is believed he will incorporate important recommendations in regard thereto in a future message to Congress.

Lumbermen here generally concede that, if there is to be complete relief from the traffic conditions which recur every year during the period of heaviest freight movement, it will come through the improvement of the waterways and the landing of the heavier and more bulky traffic thereon. For this reason they are taking deep interest in the movement.

C. C. Lataner of Montpelier, O., has become interested in the General Lumber Company, which has offices in the Randolph building, this city. It is understood that he has become equally interested with Messrs. Bailey and Bookmiller, the other two stockholders therein.

The Ostermann Manufacturing Company is about ready to begin the operation of the branch plant in this city which is to manufacture car stock to be used in the plant of the company at West Pullman, Ill. E. H. Ward is to be manager of the local interests of the company.

H. Katz, of the American Land, Stave and Timber Company, with offices in the Tennessee Trust building, has sailed for Europe, where he will spend some time looking after the interests of his firm. Fred B. Zupke, one of the vice presidents of the Darnell-Taenzer Lumber Company, is also another of the local lumber contingent who recently left for Europe.

The consolidation of the offices and office forces of the two concerns which recently combined in the Darnell-Taenzer Lumber Company has not yet been completed and it will require some time before it will be effected. Enlargement of the offices of the old I. M. Darnell & Son Company was necessary and this work is not yet finished. The company, however, hopes to have everything in readiness soon for operation from a single office.

J. W. Thompson, president of the J. W. Thompson Lumber Company, left here some days ago for St. Louis, Chicago and New York. From the latter point he will go to Atlantic City to attend the annual meeting of the National Hardwood Lumber Association. The company is in receipt of advices from the manager of its Berclair (Miss.) mill to the effect that the recent rains will enable the floating out of 500,000 feet of cypress. As a consequence the company is now making preparations for resuming operations there.

The Kimball-Lacy Lumber Company of Arkansas City is authority for the statement that it is getting out a large quantity of cottonwood timber on this rise in the Arkansas river, its float being estimated at about 1,000,000 feet.

George H. Foote, local manager for the Fullerton-Powell Hardwood Lumber Company, with headquarters in the Tennessee Trust building, has recently returned from St. Louis and other points north.

W. H. Greble of the Three States Lumber Company is another local lumberman who has recently made an extended trip to northern and western markets.

The Robertson-Fooshe Lumber Company has filed application for a charter with a capital stock of \$50,000. It will be ready for business June 1. Yards and offices will be at North Second street and the Illinois Central road. F. B. Robertson is president; S. B. Anderson, vice president; George W. Fooshe, secretary, and C. J. Tully, treasurer. Privilege of manufacturing and of handling hardwood lumber at wholesale is conferred by the charter.

The Marked Tree Lumber Company, with

a capital stock of \$750,000, the Chicago Mill and Lumber Company, with capital stock of \$25,000, and the Paepcke-Leicht Lumber Company, with capital stock of \$25,000, have complied with the new corporation laws of Arkansas by filing their articles of incorporation. A. C. Lange is named as state agent for all three companies and the principal places of business as designated are Marked Tree and Blytheville. Two of these companies have local offices in Memphis.

New Orleans.

The New Orleans Lumber Exporters' Association has joined hands with the Public Belt Railroad Commission in an effort to have the Board of Port Commissioners of New Orleans construct at some place along the river front of this city, a big wharf which will be used exclusively for handling of export lumber. This matter was broached by J. H. Hinton, president of the Exporters' Association at a recent meeting of the Belt Commission and has attracted considerable attention here. At present the lumber exporting industry gets comparatively little consideration along the New Orleans wharves with the result that this port does not export anywhere near the amount of lumber it should handle. The agitation over this question, however, will in all probability result in a change that will divert to and through New Orleans sixty per cent of the southern lumber manufactured for foreign shipment. The matter will at once be taken up with the dock board and an effort will be made to have that board build a \$200,000 wharf to be devoted entirely to lumber shipments. It is understood that the members of the board are in favor of building such a structure and will do so just as soon as they can get the necessary funds.

W. A. Powell, former head of the W. A. Powell Lumber Company, a big exporting firm which is now in the hands of a receiver, was in one of the inferior criminal courts here last week on the charge of embezzling cargoes of lumber and staves valued at something over \$12,000. The first charge was preferred by the German-American National Bank and the second by the Hibernia Bank and Trust Company, both of which institutions alleged that they had advanced money on shipments and had never received the bills of lading. In the case of the German-American National it was alleged that a shipment of French claret staves had been embezzled, while the Hibernia Bank charged that Powell had embezzled a cargo of lumber valued at something over \$10,000. The accused was committed to the Criminal District Court under bond of \$10,000. He will be tried there on the two charges of embezzlement. In its recent report to the United States Circuit Court, the Commercial-Germania Savings Bank and Trust Company, receiver for Powell's Company, estimated that the firm's liabilities would exceed the assets by \$200,000 or more.

The Wright-Blodgett Company, Ltd. of Saginaw, Mich., has just transferred to the Gulf Lumber Company of Louisiana an 80,000 acre tract of land in Vernon, Rapides and Calcasieu parishes, this state, the consideration being \$4,197,454, of which amount something over \$1,000,000 was paid in cash.

The Lecompte Lumber Company has been succeeded by the Oberlin Lumber Company, which has an authorized capitalization of \$50,000. The officers are: G. W. Gaimie, president; N. C. Waggoner, vice-president and general manager; K. M. Gaimie, secretary and treasurer.

Advices from Mississippi state that the lumber exporters of Gulfport have been having all kinds of trouble with their shipments of late as a result of the heavy rains which have

caused washouts all along the lines of the railroads leading into the Mississippi lumber exporting center. The Gulf & Ship Island, one of the principal lumber hauling roads, was tied up practically all of last week by the several washouts. From last Tuesday to last Sunday it was unable to move a train and it was not known when the service would be straightened out. The Mobile, Jackson & Kansas City also suffered from washouts, but the freshets along its line were not quite as serious as those which tied-up the G. & S. I.

Though the interior demand on hardwoods continues good, the foreign market is not as steady as it has been and exports from this section have fallen off. The end of the crop season is enabling lumbermen to handle their interior business in better shape, however, and they are keeping that trade in good condition. Not a great deal of difficulty is being experienced in getting cars at present and a large amount of the output of the Louisiana hardwood mills is going into the interior and is being handled very well.

Minneapolis.

The Minnesota metropolis will contend for the honor of entertaining the National Hardwood Lumber Association in 1908. The proposition was put forward May 20 at the monthly meeting of the Northwestern Hardwood Lumbermen's Association, and was received with unanimous favor. A. E. Peterson of St. Paul was the propounder of the idea, and that is enough to show that the Twin Cities are better friends than they used to be. D. F. Clark and A. H. Barnard, who are the only Twin City men to attend the Atlantic City gathering, will present the invitation.

The meeting of May 20 was of special interest in the discussion of grades. D. F. Clark, who is a member of the Grading Rules Committee of the National Association, explained the changes in rules which the committee decided to submit to the Atlantic City gathering, and they were freely discussed. Frank H. Long, one of the official inspectors of the National Hardwood Lumber Association, was present and took part in the discussion. Mr. Long is looking over the ground here, and if there is work enough to keep him busy, expects to locate permanently in Minneapolis.

Complaints against the overcharges of the Minnesota Transfer officials were taken up by the state railroad and warehouse commission at a public hearing May 21. It frequently happens that lumbermen send word as to the disposition of a car, that the transfer company employees disregard the order and set the car out on the team track, and then hold the shipper for switching charges for their own mistake. Complaints of this kind have been so numerous that the state commission set a time to take them up and notified the complainants. Several hardwood men appeared in the hearing.

C. F. Osborne of Osborne & Clark, the Minneapolis wholesalers, has been on a trip in Illinois looking over their retail yards at Erie and other points.

Loren H. Pope of St. Louis, representing the Charles F. Luehrmann Hardwood Lumber Company, was here a few days ago calling on line yard buyers and factory managers with an attractive line of hardwoods to offer.

W. H. Sill of the Minneapolis Lumber Company says they are having no trouble to dispose of the new cut on long contracts to be filled during the fall and winter. They have a good supply of logs and will have a fine line at the mill of the Ruby Lumber Company, Ruby, Wis.

F. M. Bartelme of the F. M. Bartelme Lum-

ber Company says he has all the business on hand that he can take care of during the next month, and has found a ready market for everything on his stock sheets.

Toledo.

In order to prevent a long drawn out fight and to protect members of National Associations from being harassed by any evidence that might be given, the Toledo lumber dealers, recently indicted for violation of the Valentine anti-trust law, entered their pleas of guilty and are now awaiting sentence.

No intimation is given of what the sentence may be and it lies with the judge to fine them any amount between \$50 and \$1,000 or sentence them from six months to one year in the workhouse, or both. This action on the part of the lumbermen caused no little surprise as it was commonly supposed that a long and bitter fight would ensue. Attorney Barton Smith represented the lumbermen. In addressing the court he said that he feared that the indicted men as members of the Credit Bureau might be found technically guilty of violating the Valentine law. He said that neither he nor they felt that they were morally guilty or guilty in the spirit of the law itself, but that there was likelihood that they could be found guilty on a technicality. For this reason he said he did not care to plunge his clients into a long and hard fight and that he would therefore enter pleas of guilty and ask the mercy of the court in passing sentence.

As a result of all this disturbance business has "gone to the bad." There is nothing doing compared with what should be doing at this time of the year, and with the weather against builders prospects are for a very poor season. Record cold weather has been the rule during May, and this has had its effect on prospective builders. But the big drawback is the idea of narrow-sighted persons that since these lumbermen have been indicted the price of lumber is to be cut in two and that because of the indictment of the brick men and the plumbers other supplies will soon be given away for the asking. Many who are planning to build simply as an investment have deferred in hope of lower prices.

Another fact that is bothering lumbermen at this time is the announcement of the railroads that there is to be an increase in freight rates. This is particularly important in this section because the official announcement has already been made from Michigan points. The new ruling is the change in classification. This means a raise from five per cent to ten per cent in the rates. The railroads announce through their agents here that the raise is to enable them to increase their revenue, which they will have to do in order to meet their increase in wages and the increased cost of materials with which to keep up their roads. Lumbermen are going to fight the action of the roads. They will probably enter a protest with the Interstate Commerce Commission alleging that the new rate is unfair and unreasonable and not warranted. Just what the exact move will be cannot be stated as nothing can be done until the rate becomes effective and the roads try to operate under it.

The sawmill and planing mill owned by Jacob A. Petty at Sycamore, O., was wrecked by the explosion of the boiler a few days ago, and Charles Ludwig, an employee, was fatally hurt.

Sampson Bice, vice president of the West Side Lumber Company of Dayton, Ohio, died last week, aged 70 years, as the result of an operation.

The Baney Washing Machine factory is moving into the Burger Foundry building at Delphos, Ohio.

The Dorr Street Lumber Company of To-

ledo, Ohio, has been incorporated for \$20,000 by C. G. Brigham, W. M. Hamilton and others. Mr. Brigham is president and general manager. Mr. Hamilton is secretary-treasurer.

The Bowers & Conke Lumber Company of Massillon, Ohio, have dissolved partnership.

At the annual meeting of the West Wood Turning Company at Fremont, O., last week, a six per cent dividend was declared. E. B. Smith, president; A. E. Culbert, vice president; C. C. Bowlus, secretary-treasurer and general manager, were all re-elected. It was practically decided to erect an addition to the plant, costing in the neighborhood of \$4,000.

The majority of the creditors having at last consented to accept 30 cents on the dollar, the bankruptcy case of Bruner & Sons, owners of the stove factory at Tiffin, is in a fair way to be settled. W. K. Noble of Fort Wayne has deposited in a Tiffin bank the sum of \$21,200 to secure the proportional payments, and as soon as the settlement is confirmed by the district court at Cleveland the old firm will begin operations on a new basis.

Wauseon is to have a new handle factory and sawmill. The plant will be built and operated by J. M. Cleveland and others of Indianapolis. It will be located near the junction of the Wabash railroad and the Detroit, Toledo and Iron road.

Charlotte, N. C.

Fire, which originated in one of the dry kilns of the Goldsboro Lumber Company at Dover a few days ago destroyed three of the company's kilns and 110,000 feet of lumber, entailing a heavy loss.

The Clarkton Planing Mill Company of Clarkton has been incorporated with a capital stock of \$25,000. O. L. Clark is the principal stockholder.

The New Hope Lumber Company, recently incorporated, will erect a two-story building, costing \$12,000. It will have an average daily capacity of 25,000 feet of pine, oak, gum and hickory.

The Moss Planing Mill at Washington, N. C., has been chartered with a capitalization of \$125,000. B. G. Moss, H. N. Blount and W. T. Condon are the incorporators.

The Avant Woodworking Company of Charlotte is beginning business, with W. A. Avant, manager, and C. A. Eastman, designer. Chairs and tables will be manufactured.

A mass meeting of the North Carolina Case Workers' Association, composed of furniture manufacturers, was held a few days ago at Greensboro, N. C. The matters discussed and acted upon are said to have been relative to the demoralized condition of the furniture market, although the sessions were executive, for which reason no more details of the convention are available. It is known, however, that for some months the manufacturers of the state were concerned about the condition of the market.

The Hardwood Novelty Company of Durham, to manufacture hardwood novelties, bank furniture and fixtures of all kinds, has been organized with an authorized capital stock of \$100,000. Eight prominent citizens of Durham are behind the movement.

The Swansboro Lumber Company of Swansboro has been chartered and will begin business within a few days with a capital stock of \$250,000. T. H. Pritchard is the principal holder of stock.

The Newton-Purdle Lumber Company of Elizabethton has been organized with a capital of \$40,000 by F. A. Addington and others.

The Red Lyon Lumber Company of Bur-gaw is chartered with a capital of \$100,000, most of which is held by W. F. Baughman of Pennsylvania.

The Carolina Flumes Company is a new industry just starting business at Franklin.

It has a capital of \$40,000 and will operate flumes for timber.

The Sprucement Lumber Company of Waynesville has been authorized by the secretary of state to operate with a stock of \$30,000.

The Globe Mantel and Cabinet Company has established at High Point, N. C., and is beginning a thriving business. The company occupies the plant of the High Point Hardwood Company, which has moved to the Standard Furniture Company's old factory. This last named company has erected a new plant which it now occupies.

Wausau, Wis.

The Bird & Wells Lumber Company of Wausaukee has purchased of C. A. Hutchins a large tract of timber land contiguous to other timber the company is cutting in Forest county. The timber, which is largely birch and maple, will be hauled by rail to the company's mill in Wausaukee.

The north section of the Escanaba Manufacturing Company's plant at Escanaba was destroyed by fire recently, entailing a loss of \$75,000, covered by insurance. The fire was caused by an overheated dry kiln. The company will rebuild on a larger scale.

The Stange-Ellis Lumber Company, incorporated last fall, has commenced the work of erecting its plant in Grand Rapids. The main factory building will be 96x100 feet in dimensions, and the power house 56x66 feet, the latter to enclose a 400 horse power engine. A sawmill will also be erected. The company will manufacture sash, doors, interior hardwood finish, fixtures, etc.

In Milwaukee recently the Newbold Land and Lumber Company was organized and incorporated with a capital stock of \$9,000. The officers are L. Peshong, president; J. L. La Boule, vice president; Henry Wubker, secretary; Carl Krueger, treasurer. The general office of the company will be located in Rhinelander, and a sawmill will be operated on Wm. Doyle lake in Oneida county. The present holdings of the company are about 1,000 acres of good hardwood lands, with options on about as much more.

An addition to the veneer mill and installation of more power are improvements being made by the Morgan Company of Oshkosh. The cost will be about \$15,000. The addition to the veneer mill will add 20,000 square feet of floor space. It will be of brick and steel construction, three stories high.

Two sawmills, operated entirely by electricity, have been built in Oshkosh, one by the Oshkosh Logging Tool Company and the other by the Buckstaff-Edwards Company. The latter mill was built recently and has been an object of much curiosity among lumbermen. It has a capacity of cutting 15,000 feet daily. The company manufactures chairs, furniture, caskets, etc. Only eight men are required to operate the mill.

Two measures have been brought into the assembly chamber of the Wisconsin legislature which will engage the attention of lumbermen generally. One was a set of resolutions, unanimously passed, memorializing congress to remove the tariff on lumber. The other is a resolution adopted providing for an investigation of the operations of alleged lumber and cement trusts in Wisconsin. The former resolution comes from a lumber state, and one which is overwhelmingly republican. It therefore, in a measure, places Wisconsin republicans in the position of demanding the removal of the tariff on one of their chief products. Both of these measures have received prominence because of the high prices charged in the state for building materials. There is a very strong feeling among farmers that building materials are costing too much

and that the time has come when there should be a cheapening of those articles. It was this feeling which led to the adoption in the assembly of the resolutions mentioned. It is believed that this feeling also will secure the adoption in the senate of the lumber and cement investigation resolution.

Ashland, Ky.

Most of the timber that recently came out of Guyandotte and Big Sandy rivers is rafted and the river bank on both sides from Iron-ton, O., to Huntington is crowded with logs, most of which are of superior quality. Nearly all the mills in this section have enough logs to keep them sawing until the first of next year; usually these mills have to shut down at least three months in the year, but, owing to the unprecedented runs of timber, will saw steadily.

Jeff Tacket and James Sowards of Pikeville are associated in the construction of the railway and other big undertakings for the Yellow Poplar Lumber Company, at Jane, near the breaks of the Big Sandy.

The Acton Piano Company has had a representative looking over ground with a view to locating the company's works in this section. Catlettsburg will probably be selected as the site for the factory.

W. T. Hubbard of Toledo, O., was a recent visitor in the Ashland markets. He bought a big bill of lumber from the Giles-Wright Company.

W. A. Cool of Cleveland and W. W. Reilly of Buffalo, N. Y., were here recently.

There is prospect of two large sawmills being erected at Kenova, W. Va.

The R. G. Page Lumber Company has recently bought a tract of timber land containing several thousand acres, in the Big Sandy valley, near Paintsville. The tract will yield 20,000,000 feet of extra fine poplar, oak and walnut lumber. A narrow gauge road and a big band mill will be built at once.

John W. Kitchen has gone to Asheville, N. C., on business for Vansant, Kitcher & Co. R. H. Vansant and son Harold have been spending a few days in Elliott county, visiting relatives.

W. H. Dawkins of the W. H. Dawkins Lumber Company is in Parkersburg and W. E. Berger of the same firm is in Logan, W. Va.

The spoke works of the Breece Manufacturing Company at Garrison, Ky., were totally destroyed by fire at a loss of \$5,000. Ground is being cleared to rebuild at once.

Mr. Evan Walker, a prominent lumberman of Pikeville, and Miss Josephine Francis of the same city were recently married in Pikeville, and left for a visit to the groom's home in Philadelphia.

Fire of unknown origin destroyed the plant of the Pike Lumber Company near Pikeville, Ky., on May 20. The loss will be several thousand dollars.

On account of the rapid increase in business, the Fearon Lumber Company of Iron-ton has been obliged to put on a night crew at its mill.

The main offices of the W. R. Vansant Lumber Company will be removed from this city to Rush, Carter county, Kentucky, near to where the company is opening up a large tract of virgin forest. Mr. Vansant will remove his family to the scene of his new operations, as will also James Hayes.

Morehead, Ky.

The Clearfield Lumber Company has received a new Climax engine to be used in hauling logs. It now has two engines and one log loader on its new railroad.

S. M. Bradley has commenced work on

another large boundary of timber, principally oak, and is experiencing great difficulty in getting men and teams.

There is really no improvement in the car situation here. It is still difficult to get cars.

W. J. Rice of Jackson, Miss., is here to attend the hearing of the case of the Winton Lumber and Manufacturing Company, bankrupts, at Mt. Sterling, Ky., on May 23. Sev-

eral attorneys here and at Ashland are interested in this case.

We notice a very singular thing in freight rates at Ashland. The C. & O. charge 2 cents more per hundred on all freight out of Ashland than other roads charge to same point. This goes to show the C. & O. does not want business, and it is needless to say they are not getting the business from Ashland.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

In the Chicago district trade in hardwoods is only fair. There is no particular snap in the market and in some instances lumber is being urged upon buyers. Of course, a good call remains for oak, ash and all varieties of wagon stock, wide poplar and cottonwood. There is a fair demand for maple and basswood. Undeniably, the furniture people are disappointed in the volume of current sales, and this constitutes a large element of the local buying trade. A lessening demand is being felt by the jobbers. Owing to the shortage of stock at sources of supply, prices are being well maintained and the volume of trade as it is, is above normal.

Boston.

The market for hardwoods is firm. Wholesalers continue to complain of a great delay in shipments from mill points, although the trouble from this source is not as bad as it was. The demand is moderately active. One of the leading wholesalers says he prefers to get notice of shipments having been made at present rather than new orders, although the latter are welcome. Some of the interior finish mills have been handicapped by a labor strike and as a result have not been large buyers. Furniture manufacturers are busy and are in the market for fair sized lots from week to week. A good demand for veneer of all kinds is reported. It is stated that since the marked advance in lumber took place more veneer has been used than previously. The yards in this vicinity are carrying fair sized stocks of hardwoods, and owing to the extremely high prices they are buying in moderate way only.

Plain oak is in moderate call. It is reported that some sales have been made at lower figures than this, but where this has been so, it is found that the lumber does not come from the best sections of the country. Quartered oak is very firm with a fair call. One inch stock is held at \$85 to \$87. Considerably more interest is reported in black walnut than for several months. Offerings of this are not large and prices are very firmly held. Many believe that walnut is coming back into favor as wood for furniture. The call for maple flooring is moderate only. White-wood continues very firm with offerings of desirable dry stock small. Many of the southern mills have very little dry lumber on hand. It is reported that they have two customers for every lot ready for shipment. Cypress is in quiet call with prices well maintained.

New York.

The current volume of trade in hardwoods in the metropolitan district continues good in pretty much all branches. Notwithstanding the high prices which have prevailed for some months, the yard dealers, with a full appreciation of the situation at mill points in the matter of supplies, have laid in good stocks, and a majority of the yards are today in possession of some very choice assortments of

stock and are all looking to a good volume of summer and fall business. For this reason the demand in the wholesale market from the yard dealers has eased off considerably of late except perhaps in choice or fancy car loads, for which there seems to be a specially good call. Also for glue-up table and furniture stock. This latter character of business is constantly increasing and is a very profitable line of business for those wholesale houses handling it where they have proper facilities for supplying the wants in this line. Notwithstanding this easing off in the demand among the yards, the furniture, cabinet makers and in fact the general manufacturing trade, both in the city and surrounding territory, are very active and are supplying a good volume of buying orders to the wholesale trade.

Stocks of good lumber continue to be scarce, although there are some slight increases in offerings in certain lines due undoubtedly to the fact that the season is approaching when the new cut begins to be available for market. There is, however, no easing off in the matter of prices, which continue very stiff and high all along the line. It has really been remarkable the prices which have obtained this year for good hardwood lumber and which have seemed to have no effect on the volume of demand, and it has indeed been a rich harvest for those houses who had foresight enough to lay in a good stock before the rise.

Plain oak, ash, birch, chestnut and poplar seem to be mostly in call in the lumber line, with oak ship timber and heavy coarse hardwoods for construction work likewise moving freely in those channels. Beech is also in large call for boarding and planking and temporary construction work, and the trade therein is developing greatly as each season arrives. The whole hardwood situation in this section of the country is certainly on a very sound basis and the general opinion of the trade is that there will be a good and firm market for the balance of the year.

Philadelphia.

Although general activity is noticeable in hardwood circles, some members of the trade still report a slight dullness. This is attributed mainly to the belief that there is likely to be a drop in values, consequently some diffidence is felt in buying certain woods. The better posted dealers and consumers, however, realize that the bad weather recently experienced in southern producing sections will prevent accumulation of stock, which condition must keep values up, hence they do not hesitate to transact business on the prevailing schedule of prices. Fair supplies of logs have come in at mill districts, and a good deal of lumber is being turned out, but it is sold way ahead.

Although reports show that the western furniture manufacturers are slacking up, there has been no indication so far of a let-up in the activity of the factories in eastern Pennsylvania. The sash and door men continue prosperous, and are rushing things. Indoor

finishing works keep up a hum, and rail and trolley building promise steady consumption of material during the summer months. Building will be extensive, now that the strike among the bricklayers, stonemasons and granite cutters has been called off. The veneer and cigar box men work day and night, and the box factories keep fairly busy. The railroad service is reported but slightly better; whatever improvement there is has been spasmodic, and not to be relied upon for any length of time.

Among the hardwoods, ash, poplar, chestnut and basswood lead, but are scarce. Oak is more plentiful and values hold steady. Gum keeps firm. Quartered white oak holds its own, cherry is moving fairly well and maple, both lumber and flooring, receives a good call. Dry stocks of all hardwoods are scarce, and there is no prospect of improvement in this direction for some time to come. Veneer and cigar box lumber values are high and very scarce.

Baltimore.

Such changes as have taken place in the hardwood situation here are of no moment. With the exception of the common grades of oak, which, according to the statements of some dealers and manufacturers, have eased off slightly, the whole range of prices is firm, and the demand promises to remain sufficiently active all the summer to keep the price list strong. Stocks are in brisk demand. Apparently the requirements of the trade are as large as ever. If some of the big corporations have deferred, for a time, improvements that would have called for the use of great quantities of lumber such improvements cannot be long postponed for the reason that the facilities to be supplied are urgently needed. This holds good especially of the railroads, which show a disposition to hold back improvements, but their equipment is undeniably far behind the demands of traffic and some provision must be made before long.

The export business is sufficiently brisk to call for liberal shipments, and the movement is large enough to hold out the prospect of a complete acceptance of the conditions which American shippers insist upon especially with regard to inspection and measurement. Stocks abroad are low enough to encourage purchases and no unfavorable factors have developed. Oak, ash and walnut are in good request on the other side and the forwardings are large accordingly, while poplar also retains its activity, though the returns are said by some shippers to be lower on this wood relatively than are realized in the domestic market. The destruction of the new B. & O. pier here will be felt as a serious inconvenience by the exporters, especially as months must elapse before the work of rebuilding is well under way. The availability of the improvement which was badly needed, has been deferred by the collapse for perhaps a year. Stocks in the hands of local dealers are relatively low at the present time and all the hardwoods are in good shape.

Pittsburg.

There has been little change in the hardwood situation in Pittsburg since May 1. Hardwood wholesalers say that it is hard to get dry stock fast enough to meet demands.

The building situation in greater Pittsburg is the most unhappy feature of the market at present. In spite of the fact that there are no strikes of consequence on hand, building lags and the local yards are accordingly buying very little lumber. This affects the hardwood men less than wholesalers of hemlock and the pines, but they are beginning to feel it a little. Their trade is held up very well thus far by the inquiries from manufacturers

in the eastern and central states and also by the increased demand of late from the railroads and big industrial concerns. These latter are beginning to place orders that were held up indefinitely early in the spring when the railroad investigations were at their height. It is quite possible now that this business will come forward right along and help very materially to relieve the usual summer dullness.

Oak is by far the best seller. The rapidity with which good oak lumber is being snatched up is shown by the fact that most of the hardwood wholesalers are sending out their buyers to pick up choice tracts of oak timber whenever they can find them. Many such purchases have been made lately and at a uniform advance over prices that were paid six or eight months ago. A few firms are buying very extensively in the Southwest and have worked up a splendid market in cottonwood and southern oak for export trade. A large amount of this lumber is also being shipped up the Mississippi for delivery in the big manufacturing centers of the middle west.

Chestnut is another wood that has a very strong hold on local buyers at present. Prices range little higher than a month ago and the stocks are being picked over so carefully that even mill culls are in good demand. The minor hardwoods are selling well all through Ohio, Indiana and Michigan, as well as in the seaboard cities of the Atlantic Coast where Pittsburg firms have a very strong footing in the wholesale market.

Buffalo.

If there is any change in the hardwood lumber situation here it is in the line of better business, but as that was good enough all along there is not much need of close calculation along that line. There is not quite as much complaint of stock shortage as there was, though poplar is not coming in any faster than it is going out and there seems to be no hope of a full assortment again of either chestnut or ash. Dealers are getting fugitive lots of all these woods, but nobody is able to furnish a wood that will meet all demands.

It looks now as though the three scarce woods would before long take the position in the trade that sycamore has already taken. It is so hard to get that the consumer does not ask for it to any extent and when a dealer gets a lot of it he finds that it sells very slowly. Poplar, chestnut and ash are quite easily grown, however, and when this country wakes up to the necessity of cultivating timber they will return to general use.

There is plenty of plain-sawed oak at present, some of the yards receiving liberal amounts of it and all finding that an assortment is quite possible. Some dealers report that birch is a trifle dull of late, though it is pretty generally doing well. It has been a great help to the oak situation.

Maple is coming forward as a much-needed wood, especially as it can be so easily used in place of ash. With maple, Washington fir and yellow pine to substitute for ash the gap is pretty well filled as a rule.

Dealers find that there is more call for basswood and elm and are looking for it with some success, but they are not pushing gum or cottonwood in this market. If they have any at their southwestern mills they find a better market for them there than to ship them here.

Saginaw Valley.

The car shortage is believed to be practically a thing of the past. Shippers do not complain and freight agents say they are getting cars right along now. This will

greatly facilitate the movement of lumber products. The market is in good form. There isn't much dry lumber available in the market and prices are firm. Lumber that can be converted into box material is in active demands. Dry stock moves off rapidly and some firms are disposing of green lumber as it comes from the saw. Trade, in fact, all round is healthy, with indications that it will hold out strong during the year.

Indianapolis.

There has been considerable betterment in the car situation during the last fortnight. With lighter grain movement and the long-shoremen's strike in New York, which is delaying export trade, more cars are available for lumber traffic. Railroads operating in the state are also receiving an unusual amount of new equipment and the effect is noticeable. Without doubt the car situation is better than it has been in a long time and shippers have little complaint to make.

Building is increasing. In April building fell off more than \$120,000 as compared with April, 1906.

The demand for all grades of hardwood is brisk with a specially heavy demand for all kinds of oak. Building activity is exceptionally heavy and the supply of hardwoods will probably be less plentiful from now on. All factories that use hardwoods are crowded with orders, the output only depending upon shipping and warehouse facilities.

Bristol, Va.-Tenn.

"The lumber business in this section is in fine shape," said M. N. Offutt, of the Tug River Lumber Company and Boice, Burns & Offutt, to the Hardwood Record representative. "The mills are nearly all running regularly. The car supply is ample and the demand for stock in excess of the supply. Prices are good, and while some do not appear to be appreciative of present conditions, I am eminently satisfied."

The yards are pretty well filled, despite the fact that lumber has been moving rapidly during the past fortnight. The car supply is much better and the lumbermen all report that they are having no trouble in this respect at present.

Cincinnati.

The demand for all grades of hardwood lumber in this market has, if anything, showed improvement over that of the previous two weeks. This fact is emphasized by the increase in the price of both poplar and gum. The advance in poplar has been contemplated for some time, but gum was not expected to take a jump. Both woods have advanced from \$1 to \$2 per thousand feet, but despite this fact the demand has not let up any. Both items find ready sale at the increased prices, and consumers are willing to pay the price asked if they can secure immediate shipment. The car situation has eased up, and dealers are doing a larger business. The demand for oak, both white and quartered, is at its best and while the values have not advanced, dealers are securing top prices quoted for it. Building material of all kinds is in active request. Large improvements are being made in the suburbs, and the construction of cottages along the river banks for summer residences. Cypress and mahogany are being rapidly absorbed and prices are generally firm. The market has had a firm tone for some time and from present indications will continue on that basis throughout the year.

St. Louis.

Buyers of hardwoods continue to put off purchases except for stock that they need for

immediate use, evidently still hugging the delusion that the price schedule will shortly be lowered. This will not take place, and furthermore, it is not only possible but probable that consumers who wait very much longer before getting in their supplies will be seriously hampered by the usual fall car shortage when it comes time for delivery. All concerns are making strong efforts to replenish their yard stocks during this temporary lull in demand, but although the car supply has improved, the few weeks of pleasant weather experienced a month or more ago were not the forerunners of a good logging season, as they appeared to be, and were followed by extremely heavy rains, which still continue, making the woods and all low land almost impassable. In fact, many mills in Missouri and Arkansas, as well as in parts of Louisiana and Mississippi, have suspended operations. Even those large plants which are well equipped with logging roads have suffered from continued interruptions to work caused by floods and washouts. The general situation does not show any radical change over that of a fortnight ago.

Nashville.

A general advance in prices was noted in the local lumber market last week. Poplar and ash were advanced, following a slight lowering in prices on dry stocks the week previous. Poplar continues to be a top-notch in price and this wood along with ash is getting dearer all the time. Many of the local lumbermen, however, are making good money on poplar, as a large amount of it cut in this vicinity is owned or controlled by Nashville concerns. A slightly increased demand is noted for plain and quartered oak. An upward tendency is noted in walnut, beech and chestnut. These woods have experienced advances from time to time during the past winter and early spring. The river has had a good tide on for some time and many logs have reached the market. The mills are all working full blast and on every hand there are indications of prosperity. The supply of railroad ties and poles is reported short owing to the fact that the farmers are busy getting their crops planted and have not had time to cut poles and ties. Top prices are being paid here for these items.

Memphis.

The hardwood situation here continues quite healthy. The demand readily absorbs all the dry stock available for immediate shipment and there is therefore no pressure to sell. In some instances it is reported that prices are being shaded on the high grade gum, but there is nothing to indicate any special weakness in that item. Low grade gum is in excellent request and full prices are being paid therefor. Ash, cottonwood, poplar, cypress and all grades and descriptions of oak are in excellent request and prices are about as high as they have been at any time this season. Buyers are perhaps not quite as persistent as they were a short time ago, owing to the arrival of delayed shipments, but there is no difficulty in disposing of well-sawed, well-handled lumber at satisfactory values. The export situation is

hardly as healthy. Several exporters state that they are in receipt of advices indicating the presence of considerable consigned stock on the other side, which is interfering somewhat with firm offers. The recent interference with production, growing out of the unfavorable logging and milling conditions, will, it is believed, result in a well maintained market for some time because assuring the continuance of the recent strained relations between supply and demand. The car situation is quite satisfactory.

Minneapolis.

Conditions are rather quiet all along the line at present. The dealers are devoting most of their energies to taking care of old orders, and cleaning up their business before starting in with the new year's cut. This line of activity will probably prevail until perhaps the end of June. Manufacturers in some lines claim they are doing a lighter business than last year, and conditions just at this time in the Northwest seem to warrant their statements. They are picking up dry hardwood when it is offered, however, and not haggling about the price, though they are slow to contract ahead for new stock at present prices. The sash and door factories are keeping well stocked on birch, oak and maple, as the building movement is heavy and calls for large quantities of hardwood finish.

The railroad demand has fallen off, and purchasing agents are sending out stories about retrenchment. They look a good deal like attempts to bear the market, however. The retail yards are not active in the market for any kind of lumber just now, and the outside demand for hardwoods is rather slow. There is plenty, however, considering the low state of dry hardwood lumber, and the orders that dribble in are enough to pick the yards clean by July 1. Birch is running low and other northern woods are practically out of the market unless shipped green. Southern stock is coming more freely now, and about all the oak being received in the northwest is coming from southern mills. They are reporting a better car situation, but their stocks as a rule are very limited and likely to be closed out earlier than usual.

Toledo.

The demand is generally fair and as a consequence there is no marked difference in prices in the local hardwood market. There seems to be more effort to force buying than for some time, due largely to the failure of the building boom that was anticipated earlier in the season.

The car situation is only fair. For the last two or three weeks things have been going along smoothly but this does not seem to be lasting. If a change comes and the demand grows unexpectedly as it should there is liable to be a big cry for material and prices may respond.

Poplar is about the only wood that has shown any material change during the week. The better grades are stiffer than ever but the lower grades are being offered to local consumers at off prices. The prices are still high enough, but they are some weaker than they have been for several weeks. Delivery, however, is not guaranteed.

Liverpool.

Chaloner's wood circular for May announces that arrivals from North American ports during April have been considerably less than the corresponding month last year. There have been no arrivals of oak logs the past month, but deliveries have been fair; prices remain unchanged, stocks are very light. The consumption of elm has been nominal and

the stock is still sufficient. Ash has been coming in in quantities which have kept the stock large enough. Walnut logs of prime quality and good size are in request, and for desirable shipments full prices would be obtained; boards and planks of this wood are in steady call at fair prices, according to quality and specification. There is a moderate demand for seasoned satin walnut boards of good quality, but logs are not wanted. Whitewood logs of good dimensions are bringing good prices, as are also boards and planks. Of birch logs there has been a fair import, and consumption has been good the past month; the stock is heavy and prices are still steady and unchanged; planks have been moderately imported and deliveries fair. Prime quality hickory logs sell at good prices. The market in African mahogany is in a very strong position, the demand being exceedingly active, and full values rule for medium to large logs in sound or fairly sound condition. Stocks are light and shipments will be well received. This is practically true of Cuban, Mexican and Central American mahogany also. Stocks in all varieties of this wood are much depleted.

London.

There is a fair amount of business doing, but it may be fairly said that it is of a forced nature. During the past fortnight close upon 400 carloads of lumber have arrived per the steamers from New Orleans and Newport News. These vessels have mostly oak lumber of various grades. Another steamer is shortly due from New Orleans and carries about 350 cars of lumber.

Now, whilst it must be admitted that quite one-third of these cars have arrived under firm contracts the balance of say 500 cars have to be sold, and on a market that is exceedingly dull owing to the slack state of the cabinet and building trades here. Buyers are taking this opportunity whilst these stocks are being forced upon the markets to point out that there is an end at last to the high prices that have been ruling for some time. Be that as it may, why this quantity of lumber has been slumped upon the market so suddenly is a puzzle. Either prices are falling in the states and shippers are only too glad to ship goods against drafts, chancing the prices that these goods will realize when sold, after the heavy dock charges have accrued upon them; or this is the direct result of the recent visit to the states of a representative of one of the firms of brokers here who sell on commission and urge shippers to send them lumber on consignment, a practice which has been so often strongly written against in this paper, and can only mean a great loss to parties concerned, as the London market cannot absorb this quantity for some months.

Plain oak, there is a good demand for "dry" parcels of which the market is in need, but most of the parcels recently arrived do not fulfill this requirement. Quartered oak is in slightly better demand for boards and planks, and the demand for moulding strips of this wood is much greater than the supply.

In satin walnut there is still a good demand for No. 1 common, but prime grades are neglected. In walnut, the arrivals have been light, but sufficient for the demand, and supplies certainly seem to be regulated according to the market requirements.

All grades of whitewood are in good request at fair prices, and unless heavy consignments are made, prices bid fair to be maintained all the summer.

Several large parcels of poor ash logs have arrived recently which are difficult to sell.

Some very fine parcels of hickory logs have recently been seen on the quay, which have changed hands at good prices.

Wanted and For Sale -SECTION-

Advertisements will be inserted in this section at the following rates:

For one insertion 20 cents a line
For two insertions 35 cents a line
For three insertions 50 cents a line
For four insertions 60 cents a line

Eight words of ordinary length make one line. Heading counts as two lines.

No display except the headings can be admitted.

Remittances to accompany the order. No extra charges for copies of paper containing the advertisement.

EMPLOYES WANTED.

FOREMAN WANTED

In machine room on piano cases and have charge of about 50 men. Good proposition to married men willing to locate in small town near Chicago. Address

"X. Y. Z.," care HARDWOOD RECORD.

MANAGER WANTED

In chair factory at Gardner, Mass. Man to run 12 dry kilns, who has had experience in the handling of hardwood dimension lumber for drying. State wages and experience. Address

"E 25," care HARDWOOD RECORD.

WANTED—HARDWOOD INSPECTOR.

Wanted—A young man not over 25 years, experienced at measuring and grading Hardwood lumber, especially Poplar and Oak. A good position to a good, reliable man.

C. J. FRANK, Logansport, Ind.

LUMBER WANTED

WANTED.

300,000 ft. 4/4" to 8/4" Quartered Oak, all grades.
100,000 ft. 4/4" to 8/4" Walnut, all grades.
Also Oak and Walnut logs.
THE FREIBERG LBR. CO., Cincinnati, O.

SMALL DIMENSION HICKORY

In sizes of from 1 1/2"x1 1/2" 36" to 2"x2 1/2" —39", tough, good wood, white or red. Send for specifications.

L. T. LA BAR, Hackettstown, N. J.

WANTED—SHORT HICKORY SQUARES

In carload lots: All White Grade: 1 1/2"x 1 1/2"x26" and 14" to 42". In Red and White: 1 1/2"x1 1/2"x26" and 30" to 42"; also 1 1/4"x1 1/4"x 66". Address

VAN DEVENTER MFG. CO., LTD.,
302 Cora Bldg., New Orleans, La.

WANTED—CAR STOCK.

Inspected and cash at mill.

J. GUTHRIDGE,
934 Monadnock Bldg., Chicago, Ill.

WANTED.

5 cars each 4/4, 5/4, 6/4 and 8/4" Sound Wormy Chestnut. Quote f. o. b. Cincinnati.
DUHLMEIER BROTHERS, Cincinnati, O.

WANTED.

Walnut logs 11" and up in diameter, Oak logs 24" and up and Hickory logs 14" and up — all good quality. Address

H. V. HARTZELL, Greenville, Ohio.

YELLOW PINE POLE STOCK

Wanted—From reliable mills who understand how to manufacture No. 1 Pole stock, clear and straight grain quality, free from all defects excepting sap.

AMER. LBR. & MFG. CO., Pittsburg, Pa.

WANTED.

QUARTERED RED OR WHITE OAK.
1x4x11, 16 1/2, 19 & 20, 1x3 1/2x11, 16 1/2 & 19, 1x3x14, 1x2 1/4x14—for delivery at Mound City, Ill.

QUARTERED OAK CHAIR BACKS.
2 1/2 to 6" wide, 15 and 17" long, for delivery at Port Washington, Wis.

THE WISCONSIN CHAIR CO.,
Port Washington, Wis.

WANTED.

4/4" Chestnut, all grades.

4/4" Log Run Buckeye.

4/4" Stained Sap Poplar.

Address Lumber Department,

NATIONAL CASKET CO.,
Hoboken, N. J.

BASSWOOD WANTED.

A few carloads 4/4 and 8/4 Northern White Basswood dressed two sides. Quote price delivered on New York rate of freight.

H. J. ROSEVELT,

66 Broad St., New York, N. Y.

WANTED—DRY CYPRESS.

2x5" and wider, 8 or 16', 1sts and 2nds, selects or sound common.

AMER. LBR. & MFG. CO., Pittsburg, Pa.

WANTED—HARDWOOD LOGS.

200,000 ft. 28" and up White Oak logs.

200,000 ft. 12" and up Walnut logs.

50,000 ft. 12" and up Cherry logs.

C. L. WILLEY, 1235 S. Robey St., Chicago.

DRY SOFT YELLOW POPLAR.

All grades and thicknesses, rough or dressed, wanted. Prompt cash. Willing to contract.

AMER. LBR. & MFG. CO., Pittsburg, Pa.

OAK.

We are in the market for plain sawed oak, all grades and thicknesses.

P. G. DODGE & CO., 2116 Lumber St., Chicago.

OAK WANTED.

3 and 4 inch White Oak; also Mixed Oak; also 12x12 Timbers and Piling of all kinds.

CONTINENTAL LUMBER CO.,
1213 Monadnock Bldg., Chicago, Ill.

YELLOW PINE CAR MATERIAL.

Long Leaf Car Sills, Switch Timbers and Decking wanted, rough or dressed. Also Long or Short Leaf Car Siding, 1x4 6"-9 or 18", also 16' kiln dried and worked to pattern. Quote cash price f. o. b. mill.

AMER. LBR. & MFG. CO., Pittsburg, Pa.

LUMBER FOR SALE.

SOFT CORK WHITE PINE.

High grade Michigan stock for sale, all thicknesses up to 4", bone dry, suitable for making patterns and fine cabinet work.

AMER. LBR. & MFG. CO., Pittsburg, Pa.

TIMBER LANDS FOR SALE

FOR SALE.

Timber lands in fee simple, 2,500 acres, S E Missouri on St. Francis river. Good railroad transportation. Finest grade Oak, Gum, Tupelo, Cypress and Hickory. Money maker to work or hold; 1,000 acres more may be secured.

R. FOREMAN, St. Francis, Ark.

FOR SALE.

A new saw mill in operation cutting 30 to 35 M ft. of hardwood lumber per day—with an abundance of choice Oak and Poplar logs and timber on hand, and with a supply of hardwood timber to draw from that will last for years and can be bought at right prices. Address

"Box K," care HARDWOOD RECORD.

MACHINERY WANTED

AT ONCE.

If you are in need of machinery—new or second hand—a few lines in this column will place your wants before those who have such goods for sale. For particulars address

HARDWOOD RECORD, Chicago, Ill.

RAILWAY EQUIPMENT

RAILS AND LOCOMOTIVES.

All inquiries for industrial railway equipment listed before RECORD readers will find ready response.

BUSINESS OPPORTUNITIES

WANTED.

To contract with some experienced sawmill man, with complete band-mill outfit, to saw from ten to fifteen million feet Poplar and Oak timber.

R. G. PAGE LUMBER COMPANY,
Ashland, Ky.

A SAWMILL OPERATOR

With at least 25 to 50 M capital can obtain timber from an Eastern Tennessee hardwood tract 6,000 acres and stumpage based per thousand feet, pay when dry and shipped. Write for further particulars. A good chance for good timber and will warrant investigation. Address

"D.," care HARDWOOD RECORD.

MAPLE FLOORING MILL

For sale. Located in Michigan and now in active operation. This plant is modern in every respect and making money. Will sell or take stock in new company. Owners have large interests elsewhere demanding personal attention. Address

"MAPLE FLOORING,"
care HARDWOOD RECORD.

WANTED—MANAGER.

The advertiser, a large corporation, contemplates starting a first-class Box and Veneer plant in the South, and desires to associate with a first-class, practical man to take full local charge. Man must have had successful experience in similar work, be of unquestioned character, and be able to invest from ten to twenty-five thousand dollars in the business. The business will require a capital of one hundred to one hundred and fifty thousand dollars. The advertiser has ample capital to finance it, but desires investment indicated on part of manager for business reasons, which will be apparent to the right man. Give in confidence full information in replying. Address

"E. W. C.," care HARDWOOD RECORD.

MISCELLANEOUS

FACTS FROM PRACTICAL MEN.

The HARDWOOD RECORD is always in the market for articles on any and every feature of the hardwood industry. It wants practical statements of fact from practical men who know how certain things can be done in the best way. Literary quality not essential. Liberal pay for acceptable articles. Address

Editor HARDWOOD RECORD.

By Using the

RED BOOK

Published Semi-Annually
in January and July

It contains a carefully prepared list of the
buyers of lumber in car lots, both among
the dealers and manufacturers.

The book indicates their financial stand-
ing and manner of meeting obligations.
Covers the UNITED STATES and MANI-
TOBA.

The trade recognizes this book as the au-
thority on the lines it covers.

A well organized Collection Department
is also operated and the same is open to you.

AUTOMATIC LAST TURNING LATHE.

NO. 4 POWER-FEED BAND RIP SAW.

—Send for 500 Page Catalogue—

THE MARKET IS DEMANDING, more and more LUMBER OF STANDARD LENGTHS, WITH SQUARE ENDS

As well as straight and parallel edges. The straight and parallel edges you can obtain with a "TOWER" Edger, while

THE "TOWER"

ONE-MAN 2-SAW TRIMMER

will give you the standard lengths and square ends with a minimum of time, labor and waste. In all other trimmers the manner of shifting the saws is such that every time the position of the saws is changed the operator has to go clear to the end of the machine. In the "TOWER" One-man 2-saw Trimmer he never has to go beyond the end of the board. Especially with short boards, this means a great saving in time and labor. It also greatly reduces the amount of waste, as it is much easier to see how to trim lumber to the best advantage from the end of the board than from the end of the machine.

In all of these trimmers there are two feeds, which may be instantly started, stopped or changed, without stopping the saws.

Both are controlled by the same lever, which is located in the most convenient possible position.

The Gordon Hollow Blast Grate Co.
GREENVILLE, MICHIGAN

The Largest Manufacturers of Grates, Edgers and Trimmers in the World.

This Truck—The Gillette Truck—with its Roller Bearing Axle—Unbreakable Malleable Iron Caster-Fork, Improved Stake Pockets and general Superiority of Construction is the Easiest Running Truck made. Strongest where other trucks are weakest. Best Truck to buy. Cheapest Truck to use. Invest money in these trucks. Do not waste it on others.

SPECIALISTS IN
PLANERS, MOULDERS AND FLOORERS

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock $17\frac{1}{2}$ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

THIS CUT SHOWS

The No. 11 Ober Lathe

For turning Axe, Adze, Pick, Sledge, Hammer and Hatchet Handles, Spokes, Whiffletrees, Gun Stocks, Shoe Lasts, etc., etc. It is very simple, strong and durable, requires but very little power and is very easily and quickly changed from one kind of work to another.

We also manufacture other Lathes for making Spokes, Handles and Variety Work, Sanders, Shapers, Boring and Chucking Machines, etc., etc.

Complete catalogue and price list free.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

HOLMES' "CLIPPER" CUT-OFF SAW

This machine is designed to trim the ends of maple flooring and for cutting off stock in box and furniture factories. It is the most rapid and accurate machine for the purpose now on the market and is extremely simple and durable. The saw carriage is brought forward by a foot lever and returned by an equalized extension spring on the foot lever. The saw is completely covered, thus making it perfectly safe to operate. The slotted frame carrying the braced slide rods can be bolted either to posts or to the wall, and it is vertically adjustable.

The automatic belt binder is placed directly above the saw arbor on adjustable post hangers and the belt passing over both pulleys is kept uniformly tight at all times. If desired, a regular countershaft with T. & L. pulleys can be furnished instead of the automatic binder.

The machine for trimming maple flooring will cut up to 5 in. wide, and the machine for box and furniture factories will cut up to 12 in. wide.

LET US TELL YOU MORE ABOUT IT.

**E. & B. Holmes
Machinery Company**

BUFFALO, NEW YORK

General Electric Company

Flexible Power

INDUCTION MOTOR

In all sawmill work the power required varies with the kind of timber handled and according to its condition when passing through the mill. In a day's work heavy logs follow on the heels of smaller ones, partially seasoned timber is mixed with green and the work is constantly changing.

These conditions can be met only with a motor of ample over-load capacity and the simplest possible construction—qualities which are featured in the General Electric Induction Motors for sawmill work. Upon demand these motors will supply 200 per cent to 300 per cent of their normal output.

One Man Said:—

"The 100 h. p. (GE) Induction Motor driving our 9-foot sawmill shows absolutely no drop in speed no matter what load the sawyer puts on it, and can hum thro' a 30 in. birch at as good a clip as it can thro' a poplar log."

He has more to say in booklet 4470-H.

VENEER MEETING.

Semi-annual meeting of the National Veneer and Panel Manufacturers' Association, Auditorium Annex, Chicago, Thursday and Friday, June 20 and 21. First session 10 o'clock a. m.

General Market Conditions.

The hardwood trade the country over is not particularly active, as will be noted by market reports from all the chief consuming centers, in this issue of the HARDWOOD RECORD. Happily stocks of dry lumber are sold up closely in every producing section, and therefore it happens that with the diminishing insistence for hardwood lumber, there is no shading of values save in rare exceptions. These seem to be in firsts and seconds and sap gum, which within the last few days have been offered at considerably less than past quotations, and West Virginia oak is being quoted at from \$1 to \$2 off in the eastern markets.

In the great area of hardwood production in the Southwest, prevailing weather conditions are still very bad. There has been an endless flood of rain and the mills have not yet been able to run more than half the time on account of inability to secure logs. There is a little accumulation of stock in some rare cases, but generally speaking every foot of reasonably dry lumber is being shipped out as fast as cars can be secured. In the North basswood and black ash are practically out of the market and the stocks of maple and birch are pretty low. Poplar today stands at the very head of the list in demand, and with short stocks and heavy call, prices are tending upwards rather than otherwise. Cottonwood and oak are reasonably close seconds in demand.

In the news columns will be found an analysis of building operations for May which is a surprise, as they show a slight gain in the aggregate over that month a year ago. Some cities seem to be booming in this respect, while others show a tremendous falling off. It is thought that local conditions govern these marked changes.

The furniture trade the country over is not up to expectations; neither is the interior trim business, hardwood door making, agricultural implement and wagon trade. All these usually large buyers are holding off on purchases, having the very prevalent idea that they will be able to buy hardwoods at lower prices later in the season.

Veneer and panel makers still seem to have all the business they can carry, but prices remain unsatisfactory and comparatively few plants are making any considerable amount of money. The hardwood flooring people with their accumulation of orders and a fair current demand are having all they can do. Apparently a vast quantity of hardwood flooring is going into old buildings to replace worn-out yellow pine and other softwood floors. The demand for the rest of the season looks very promising. The call for mahogany, cherry and walnut seems to be growing, as the furniture and electric trades are increasing their use of these woods.

On the whole, the hardwood situation shows marked strength by reason of the paucity of present and prospective stocks, and it can scarcely be predicted that there will be any diminution of consequence in prices during 1907.

A School of Inspection.

Perhaps the most notable paper presented at the Atlantic City meeting of the National Hardwood Lumber Association was the one suggesting a school of inspection for training young men, especially amateurs, into a correct knowledge of the way in which hardwood lumber should be graded to accord with standard rules.

In the past, associations and individuals have selected inspectors who have been educated in a hit-or-miss sort of way and their interpretation of rules has varied in accordance with the environment under which they worked. It has been a rare thing for two inspectors to get anywhere near each other when it came to matters of reinspection, and the result has been equally unsatisfactory to both seller and buyer. Old-time inspectors who have been educated to do the work in a certain way are very loath to amend their ideas of grades, even when a printed page of specific rules is before them. It is the boast of more than one that he has not changed his grading methods for a quarter of a century, but does the same under National or Manufacturers' rules that he did before either were promulgated. This has been the serious difficulty encountered by association managers of grading systems.

The plan of taking young men, preferably common school graduates, who are desirous of fitting themselves for employment that will pay a very handsome salary is admirable. It is proposed to establish several of these schools throughout the United States, so as to cover experience with all varieties of timber, and by transferring classes from one point to another, let each individual gain a comprehensive knowledge of all hardwoods and thus enable him to inspect lumber of every kind, no matter where he finds it. It has been suggested that the Biltmore estate in North Carolina would be one admirable location for one school, on account of the great variety of woods encountered there. It is suggested that a second school might be established at Cadillac, Mich., as this point offers fine residence facilities and hardwoods are manufactured there under the best possible conditions; moreover, it is a point at which all

varieties of northern woods are encountered. A third school should be maintained in Memphis, for like reasons.

It may be said that the essential, professed value of inspection is to establish the worth of lumber. Up to this time an inspection certificate simply recites the sizes and grades. While this is absolutely essential, it fails in a marked degree to set forth all the facts in the case that go to make up the value of lumber. These students should be taught beyond actual measurement and the nomination of a grade, to be able to analyze the physics of the wood which they inspect. On the certificate of inspection should be stated the quality of the wood itself; in the case of oak, whether it is soft and workable, or tough and stringy. Students should be taught to take into consideration the sawing of the lumber as well as the seasoning. These two features tend to determine value, in a marked degree. In fact, if young men are to be scientifically trained in the inspection of lumber, they should be started at the tree and have a course through the woods, sawmill and lumber yard, previous to undertaking actual grading *per se*. It is to be hoped that the committee having this matter in charge will carry out this scheme of education in inspection to its logical conclusion, and that there may be permanent schools maintained under competent tutelage, until the necessary thousands of lumber inspectors become fully competent to carry on this work scientifically and intelligently.

Atlantic City Meeting.

The recent meeting of the National Hardwood Lumber Association held at Atlantic City, the full proceedings of which appear in this issue of the *HARDWOOD RECORD*, was marked by very important legislation. The so-called Buffalo agreement, a resolution providing that no change be made in inspection rules until December, 1908, was suspended, and many modifications were made in the grading rules, to take effect December next. These rules were the result of the most exhaustive and careful deliberation on the part of the Inspection Rules Committee in conference with delegates from the hardwood associations of Michigan, Wisconsin and Indiana, and while the standard of quality is lowered in many instances, it was deemed wise to thus amend the rules to conform with current trade practices covering the inspection of hardwood lumber. The grade of firsts and seconds remains practically unchanged, save that the minimum widths admitted are narrower. New grades of selects and finish lumber are incorporated between firsts and seconds and No. 1 common. These changes were not made without long and patient consideration by the delegates and serious debate on the subject. The majority in favor of the amendments was more than two to one. The new rules correspond closely to those of the Hardwood Manufacturers' Association in that resultant grade products from the application of either set will be practically the same.

In spite of past fiascos in reaching a joint agreement with the Manufacturers' Association on the subject of grades, it is now certainly up to this association to again make overtures toward having the wording of the various rules for hardwood grades of both associations synonymous and for the eventual establishment of a joint bureau of inspection which shall be competent, impartial, intelligent and unhampered by any political influence from either body.

This is the insistent and crying demand of the hardwood trade at large in all its divisions—manufacturers, jobbers and consumers alike. The slight breaches today can easily be bridged over. Let conciliation and compromise go on until the desideratum is obtained.

Annual Statistics of Forest Products.

The great value of accurate statistics as a factor in assisting to regulate production to the best advantage and to estimate prospective values should be more carefully considered by progressive lumber manufacturers. Information of this character, when accurate and complete, reflects the true situation unerringly. It is therefore highly essential that these statistics be made public at the earliest possible moment, otherwise much of their value is lost. The United States government has for years made itself responsible for crop statistics, and last year with the coöperation of the National Lum-

ber Manufacturers' Association undertook the work of collating statistics covering forest products. The average lumber manufacturer supported the movement heartily, but still the work did not possess the value it should have done, owing to the indifference of the few who failed to supply individual reports, thus rendering the figures incomplete. The Forest Service has now entered into coöperation with the Bureau of the Census, which has a large force of trained statisticians, and if it can secure the coöperation to which it is entitled, the lumber-manufacturing public will be doing itself a great service in assisting to this end. The bureau announces that state totals will be published as soon as any individual state report is complete. It is to be hoped that every hardwood manufacturer will take the little time necessary to supply the information asked for.

The Veneer Meeting.

Agreeable to the announcement at the head of the editorial columns of this issue of the *RECORD*, the National Veneer & Panel Manufacturers' Association will hold its semi-annual meeting at the Auditorium Annex in Chicago on June 20 and 21. The first session will be called at 10 a. m. The meeting promises to be very interesting, as a carefully prepared report by the grading committee on the proposed amendment of rules on all kinds of woods will be presented. A series of papers will be read by experienced operators on topics of particular interest to the trade.

It is designed to make this a good old-fashioned "experience meeting," in which every problem pertaining to the trade will be thoroughly threshed out. In view of the present rather unsatisfactory condition of the veneer industry it is anticipated that the meeting will call out a larger number of veneer manufacturers than has ever before been present.

Government's Forest Reserve Policy.

A meeting to be known as the Public Lands Convention has been called at Denver June 18, 19 and 20. This meeting is the result of crystallized effort that is being made to discourage the forest reserve policy of President Roosevelt and the United States government. This policy is keeping many lumber, mining and coal companies from appropriating as much of the timber and mineral lands of the public domain as they would like. There has been a steady attempt for months past to array cattlemen and lumbermen against the forest reserve plan, on the plea that it cuts them out of timber and grazing rights and locks up the public land from "legitimate" use.

The fallacy of this reasoning is specious and apparent. This country has wasted billions of dollars in its senseless depredation of the forest, and the time has arrived for scientific conservation. There is nothing in the law governing forest reserves that prevents any land suitable for agricultural purposes from being taken over by legitimate settlers, and it is hoped that hereafter lumbermen, mining men and cattlemen alike will be obliged to pay for the lands, timber and minerals which they utilize for their own profit.

The government's theory of forest reserves is a simple one. It proposes to do merely what the German and other European nations have done for generations. The forestry plan provides for cutting a reasonable quantity of mature or hyper-mature timber, under such systems as will preserve the young and immature trees. The system will promote and assist in the redevelopment of forest area and provide against the future needs of the nation. Lumbering methods, especially in the mountainous districts, have been extravagant to the verge of criminality; but a small portion of the timber has been converted into lumber and the remainder has been wantonly burned. Lumbermen, by their careless methods, have not only burned the unfelled timber, but also the humus or top stratum of decomposed vegetation, which is not only indispensable to the regrowth of a forest, but also has resulted in the washing away of every mountain side thus depredated, so that no vegetation of any sort can be reproduced. By a wise system of lumbering on conservative lines, it is possible to have both lumber and forests, and in a nutshell this is what the forestry policy is meant to accomplish.

Pert, Pertinent and Impertinent.

Take Your Choice.

You may climb to the top of the tree,
But your perch will not help you a bit.
If you fall you will very soon see
There is no way of dodging a hit.
For the world lies in wait with a brick
Or a stone twisted up in a sock.
If it isn't a knock it's a kick;
If it isn't a kick it's a knock.

If you're down you'll be feeling a boot
To your person with vigor applied;
If you're up you'll hear the loud hoot
And the jab will get into your hide.
You may think you are skillful and quick,
But you'd far better brace for the shock.
If it isn't a knock it's a kick;
If it isn't a kick it's a knock.

It's a kick for the fellows who lose;
It's a knock for the others who win.
You may do just whatever you choose,
But you'll need a good thickness of skin.
I can tell you which one I will pick;
I'll succeed and then let the world mock.
If it isn't a knock it's a kick;
If it isn't a kick it's a knock.

Sure Enough.

The teacher had grown eloquent picturing the glories of Heaven, and finally asked, "What kind of boys go to Heaven?" A lively little four-year-old flourished his fist. "You may answer," said the teacher. "Dead ones!" shouted the little fellow at the top of his lungs.

A Child's Definition.

"A lie is an abomination in the sight of the Lord, but an ever-present help in time of trouble!"

A Difference.

A man will stand for a wife's going through his fortune—but not his pockets.

Usually.

A howling swell—the side-show "barker."

Wait in Vain.

Men who spend all their lives in looking for a real opening are pretty sure not to find it till they strike a hole in the ground.

Falls Down.

A fellow never fully realizes the limitations of his vocabulary until he tries to describe a woman's dress.

REQUIESCAT IN PACEM.

The solitary grave beside the sad sea waves.

Easy.

Many a failure in business is making money writing advice to young men.

As Many Do.

To get back one's youth one has only to repeat one's follies.

Too Many Yet.

After all there are but few people in the world that we can help with safety.

Big Winnings, Too.

A crackerjack at skin games—the beauty doctor!

Mostly Otherwise.

Early to bed and early to rise makes a man healthy, wealthy—or otherwise.

Variable.

In some men ambition is a veritable "brain storm"; in others it is an intermittent fever.

One Way.

A man who can induce the world to take him at his own valuation is sure to be successful.

Two of a Kind.

Don't be too hard on the nagging woman; she's not a bit more disagreeable than the bragging man!

I Wonder.

I wonder if the robin that has found himself a mate
Sits down as soon as she is his to gravely meditate?
I wonder if the lady bird upon some other limb
Has charms that set him yearning, since she cannot be for him?

I wonder if the lioness is never satisfied
With any den her tawny lord is able to provide?
I wonder if she secretly, as soon as she is mated,
Begins to think she might have done much better had she waited?

I wonder if 'tis only man that, being loved, is prone
To think some other lovelier than she who is his own?
I wonder if the woman lives who, knowing she's adored
By him whose name she has to bear, is ne'er a little bored?

AMERICAN FOREST TREES.

FIFTY-FOURTH PAPER.

White Cedar.

Chamaecyparis sphacroidea—Spach.
Chamaecyparis thyoides—Britt.

The white cedar frequents cold swamps often inundated during several months of the year, its range of growth commencing with southern Maine on the north and extending southward along the coast to northern Florida; westward to the Pearl River valley in Mississippi; it is comparatively rare east of Boston and west of Mobile Bay.

The botanical term applied to this species—*thyoides*—is from two Greek words, meaning “resemblance” and “arbor vitae,” to which the tree is sometimes likened. It is called white cedar in Massachusetts, Rhode Island, New York, New Jersey, Pennsylvania, Delaware, North Carolina, South Carolina, Florida, Alabama and Mississippi; in Delaware it is known as swamp cedar and post cedar, while in Alabama, North Carolina and Virginia it is popularly called juniper.

The leaves of white cedar are closely appressed or spreading at the apex; on the back they are glandular or punctate; in color dull greenish-blue, becoming brown during the winter in northern climes; they die down during the second season, and are afterward persistent for many years. While the leaves of this tree resemble those of arbor vitae, their general effect is more brownish, the latter being much greener, and the leaf spray is less broad and flat than that of arbor vitae, as well as less heavy and coarse.

The staminate flowers are composed of five or six pairs of stamens, which are dark brown below the middle and nearly black toward the apex; they are very abundant. The pistillate flowers are subglobose, and have ovate spreading light-colored scales and black ovules; they are greenish and much fewer in number than the staminate flowers. The tree blooms in April.

The fruit is a tiny, woody, spherical cone, often not more than a quarter of an inch in diameter; its few scales open at a wide angle with the axis of the cone. The fruit grows sessile on a short, leafy branch, and is light green, covered with a glaucous bloom when matured, then becoming bluish-purple and exceedingly glaucous, eventually turning dark brown. One or two seeds grow under each fertile scale of the cone, about an eighth of an inch in length, and winged.

The wood of white cedar is soft, light,

weak, brittle, close-grained, and slightly fragrant. It is very durable in contact with the soil, and is easily worked. The heartwood is a pinkish or darker brown; the sapwood thin and much lighter colored; the annual layers are very distinct. The wood of white cedar is used in boat and canoe building, for shingles, fencing, cooperage, woodenware and railroad ties; it is also fre-

in open fan-shaped sprays; their reddish, thin bark separates into small feathery scales. White cedar is an important ornamental evergreen tree, and is cultivated widely; however, it will not grow far from coast land.

The illustration accompanying this article was made in one of the clumps of juniper, popularly known as “greens” in the North Carolina timber holdings of the John L.

Roper Lumber Company of Norfolk, Va. This company is the largest holder in the world of this valuable stumpage.

The swamp water in which juniper grows is locally regarded as very healthful, and many barrels of it are shipped to outlying sections, where it is drunk for its alleged medicinal qualities.

Varieties of Cedar.

The original true cedar, the species to which the name properly belongs, is the cedar of Lebanon, which seems to have been imported into England more than two hundred and fifty years ago. Its introduction into that country has been attributed to John Evelyn, from the fact that he wrote of raising it “from the seeds and berries.” This very fact, however, would tend to show that such an idea is erroneous, and that the growth was doubtless one of the junipers, and not the true Lebanon wood. The many foreign “cedars” include the Cape, the Japan, and Queensland, and numerous varieties of cypress and juniper.

England still contains many fine specimens of this famous tree, one of which is in the garden of the old palace at Enfield. It was planted at the time of the Great Plague, in 1665, and measures eighteen feet in girth. The most noted cedars were the four planted in 1683, in the famous physic-garden at Chelsea, belonging to the Society of Apothecaries. They were eventually cut or broken down, the last disappearing in 1904. The society had a beautiful chair made from one of the large branches. The wood of Lebanon cedar is wonderful in its time-re-

sisting qualities. Egyptian boats made of it, which were recently found buried near the banks of the Nile and which, according to excellent authorities, must be between four and five thousand years old, were in a good state of preservation. The desert sand had covered them completely, which of course served as a protection to them and considerably prolonged their existence.

TYPICAL FOREST GROWTH WHITE CEDAR, NORTH CAROLINA.

quently employed for interior trim in dwellings. The weight of a cubic foot of seasoned wood is about twenty-three pounds.

The white cedar grows from seventy to eighty feet high, with a tall trunk usually about two to three feet in diameter. Its slender, horizontal branches form a narrow, spire like head and give it a generally graceful appearance, with its branchlets disposed

ELIHU A. BECKLEY

NEW HAVEN, CONN.

Builders of Lumber History.

NUMBER XLVI.

Elihu A. Beckley.

(See portrait supplement.)

Elihu A. Beckley, whose portrait the *HARDWOOD RECORD* is proud to present as supplement to this issue, was born at Orange, Conn., May 20, 1845, of parents descended from some of the earliest English settlers of that state. He attended various public and private schools in New Haven, and finished his education with a complete business college course.

Mr. Beckley made his entry into the lumber business at the early age of twenty, when he was taken into the employ of his older brother, the late William A. Beckley, who had started a retail lumber yard in New Haven about 1860. After a year or two the younger man was admitted to partnership, and this arrangement continued until 1889;

also his excellent judgment in selecting the younger men associated with him in the management of his vast business enterprises.

The Crosby & Beckley Company still maintains its head office at New Haven, and has a western office and distributing yard at Columbus, O., with a New York branch at No. 1 Madison avenue. Its officers are E. A. Beckley, president; W. E. Douglass, vice president; R. L. Walkley, treasurer, and O. E. Beckley, secretary. The company also operates several sawmills in West Virginia, cutting poplar, oak, chestnut and other hardwoods; it is a large owner of timber properties in that state, and conducts a hardwood yard at Evansville, Ind., doing a general wholesale business. Affiliated with the same interests the Douglass & Walkley Company owns stumpage and operates a band mill at Drew, Miss., with W. E. Douglass as president; also the Holly Lumber Company, of which R. L. Walkley is president, owns

large timber boundaries and a band saw mill at Pickens, W. Va., both companies operating their own logging railroads with complete up to date equipment.

Mr. Beckley is interested and active in association affairs, and is at present a member of the Board of Arbitration of the National Wholesale Lumber Dealers' Association and a loyal supporter of the National Hardwood Lumber Association. He has never been particularly active in politics, but has always been a staunch Republican. He is a member of the Chamber of Commerce of New Haven, of the Independent Order of Odd Fellows, the Congregational Church, and is also identified with several clubs of the quieter sort.

In 1866 Mr. Beckley was married to Elizabeth J. Bartlett of Dorset, Vt.; they have three sons and one daughter. Mr. Beckley is a man of quiet tastes and domestic habits, finding his greatest enjoyment and recreation in his home, which is a beautiful structure on one of New Haven's fine avenues, and in the society of his little family and a circle of close friends.

FOLIAGE AND FRUIT OF WHITE CEDAR.

by constant and conscientious attention to his duties, and by dint of energy and ambition, he helped develop the business from a very small beginning to one of the largest in its line in Connecticut.

Feeling eventually that there was a broader field in the wholesale line and having in the meantime formed an intimate friendship with the late F. E. Crosby of Rome, O., a pioneer in the hardwood lumber business, Mr. Beckley decided to accept an offer from Mr. Crosby to become his partner and handle the selling end of his trade in the East. Such an arrangement was effected and The Crosby & Beckley Company was incorporated, with its principal office at New Haven under the management of Mr. Beckley. Since the death of Mr. Crosby, which occurred in 1893, Mr. Beckley has been the head of this great company, and the business has grown and flourished to such an extent that it stands today among the most prominent hardwood concerns of the United States. This prosperity indicates not only the ability of its prime mover as an executive and his remarkable grasp on commercial affairs, but

Hardwood carpets differ from hardwood floors in that the floor has rafters, flooring boards, joints and finishes to be considered. The hardwood floor is permanent, while the carpet is not a fixture; it is not a part of the building, but is separate from it and can be moved from place to place, unless the joints are of such nature that the sections are too large for practicable transportation. The hardwood floor is used in all countries, whereas the hardwood carpet is not very conspicuous except in certain lands. This sort of carpet may be seen in daily service very often in tropical countries, where conditions are such that fabrics are not sanitary. Hardwood mats and carpets prevail to considerable extent in Cuba, the Philippines and China. Probably the most crude type of covering is obtained by the use of blocks or cubes cut out for purposes of laying, like bricks. Often these blocks are stained. Then they are inlaid and dove-tailed and frequently set with ornaments or engraved, until one wonders what one is walking upon.

The accompanying cuts show some of the processes of manufacturing hardwood floor coverings. The first work involved consists in preparing the stock. Some of the carpets are made by intersecting small pieces of wood, shaped to fit neatly and uniformly. Others are constructed by forming parallel sections of different kinds of pieces. Cubes and oblongs are worked in, and angles described; ovals and circles are not overlooked, nor is engraving and work in which pieces of colored glass and sea shell are employed for purposes of ornamentation, or to set off some showy figure. Birds, horses, fish and even the human figure are often

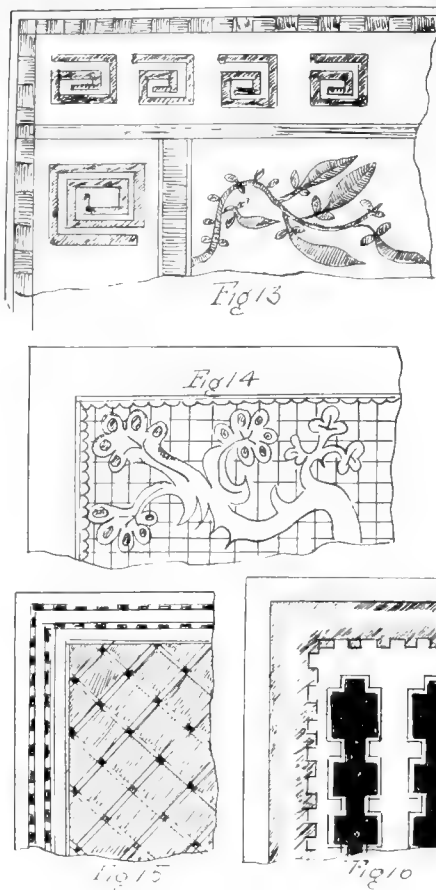

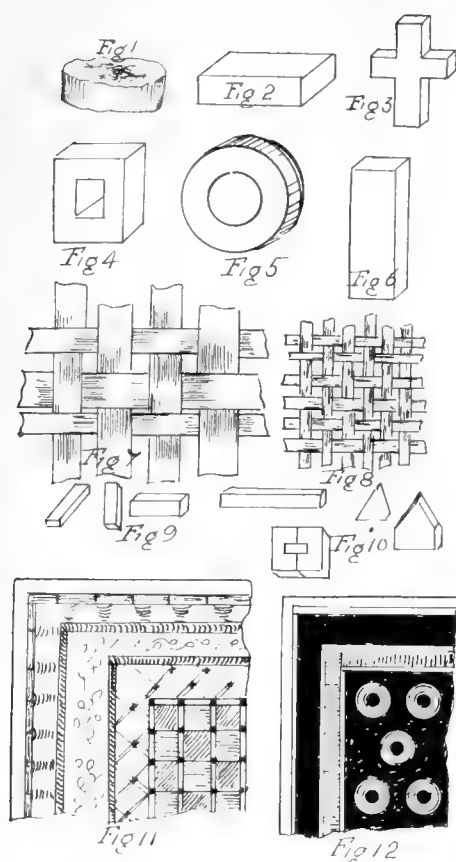

Hardwood Carpets.

outlined by the use of differently finished or colored pieces of wood.

Figure 1 shows one of the bolts in readiness for trimming down to the prescribed size of block or pad for carpets. The block is turned if for round work, and sawed if for flat work. This gives the block the form shown in Fig. 2; the cross as in Fig. 3; the hollowed block as in Fig. 4; the open disk as in Fig. 5, or the long block as in Fig. 6. Any manner of style may be chosen and the original blocks reduced accordingly. Often there is a great amount of handwork necessary to get them into shape for adjusting in a certain design. Usually very small pieces are made and fitted, one at a time, into the design, where they are cemented or glued.

There are carpets which are constructed with split hardwood stock on the order shown in Fig. 9. The operation involves the stripping of a number of pieces of wood. These pieces are made about one-quarter of an inch in thickness and about one inch in width. The weaving process is simple. The pieces are properly arranged and the "filling" strips are alternately laid into the "warp" strips, so that the combination results as pictured in the diagram. Sometimes very much smaller pieces are employed and the design works out as in Fig. 8. In Fig. 9 are shown various shapes of the small pieces of carpet stock, used in making up combination designs. Fig. 10 shows another cluster. One may find all kinds of figures and shapes.

The work of inlaying, matching and fitting falls to nimble fingered persons, who often create the design as they work. Others work according to a given pattern. The

finished woods are of various species, therefore make an agreeable contrast when the pieces of one kind are matched in with pieces of another. Whitewood is often combined with the darkest of stock; black walnut and whitewood go together in some patterns; in others the object is to have very little contrast. Often the shading is so slight that it barely defines the intersections. In Fig. 11 is exhibited one of the popular floor covers manufactured with these varying pieces of hardwood, interlaid as described.

The base for one of these built-up carpets must of course be substantial, as the pieces depend upon it for support.

A flexible base is often wanted, in which case heavy canvas or oil cloth is used. Again sheet metal is employed to advantage. Often the flooring is constructed direct on the

original base, in which case the covering can not be removed without tearing it into pieces. Cement and glue are used for holding the parts together. The matching and putting up of a design like that in Fig. 11 is very laborious and tedious. There are many small pieces of wood and each piece must be picked up separately and adjusted before the adjoining one can be placed in position. All this requires, time and patience. Weeks are often devoted to the manufacture of one carpet of sufficient size to cover the floor of an ordinary apartment.

Some of the hardwood carpets are made with the body of the surface of a certain color, as in Fig. 12, in which case the pieces may be of good size, and the operation of setting is thus much simplified. A number of other designs are shown in illustrations 13 to 16.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Criticizes Hardwood Inspection.

GRAND RAPIDS, MICH., June 3. Editor HARDWOOD RECORD: A point occurs to us that we would like to lay before you, and which we believe should find space in the pages of the RECORD, presented in the manner of which we know you are so very capable. It is this: From past experience, and especially during the last

couple of years, if we were asked to cite the one "bone of contention" in the lumber trade it is that attention enough is not paid to the rules governing the scaling of lumber. We refer now to the National Hardwood Lumber Association's rules of inspection. We firmly believe that a great deal of time and trouble and useless correspondence might be saved if this rule were more closely adhered to in the sale of lumber. For instance, the writer a short time ago placed an order for a certain grade of lumber. Upon receipt of the car he found five distinct grades in the one car and all purporting to be in accordance with the order placed. This, you see, naturally necessitates delay and additional correspondence that is not always of the pleasantest

nature. We think a word from the HARDWOOD RECORD along these lines would have a very salutary effect in promoting a closer observance of the National rules in each instance of inspection. Trusting these remarks may appeal to you, and with best wishes for the HARDWOOD RECORD, we beg to remain, Yours very truly,

BISSELL CARPET SWEEPER COMPANY.

J. H. Shanahan, Supt.

The criticisms noted by the superintendent of the Bissell Carpet Sweeper Company have been repeatedly discussed in the HARDWOOD RECORD and it is this very desideratum that the hardwood associations are now so energetically trying to work out. It is sincerely to be hoped that before the year is over corps of inspectors who are competent, accurate and impartial will have the handling of lumber, and that complaints of careless inspection will finally be at an end.—EDITOR.

Who Wants Oak Spokes?

The Blackstone Handshaved Handle Company of Blackstone, Va., manufacturer of handmade and turned hickory handles of all kinds, has added a spoke department to its business and would like the name and address of some concern that is in the market for oak spokes.

Good Advice.

YOSEMITE, KY., May 30. Editor HARDWOOD RECORD: For good sound information in a nutshell you have the only lumber journal in America today. While I have only been a subscriber for two or three years, I have been a constant reader for more than ten years. Would like to see both associations get together and formulate one set of inspection rules.

A. E. M.

More Good Advice.

NEW YORK, May 31. Editor HARDWOOD RECORD: The man, men or newspaper that will succeed in securing uniform inspection of hardwood lumber throughout the United States will have conferred the greatest good to the industry. This most desirable end can be accomplished by compromise between the two hardwood lumber associations, and I verily believe that Clinton Crane and W. A. Bennett, both of Cincinnati, hold the key to the situation. They are both as stubborn as mules and are not disposed to concede a point to each other, but they should have the good of the trade at heart and get together. They are good friends and should belong to the same association. It makes very little difference how the grade of lumber is defined in the rules for grading, because prices will be made according to those grades anyhow, but it would prevent an enormous amount of friction and consequent loss if only one court for arbitration of inspection differences existed. Let the HARDWOOD RECORD advocate conciliation and compromise between the two associations so that uniform inspection may come in the lifetime of the present lot of lumber dealers, manufacturers and users.

— & Co.

A Friendly Criticism.

RHINELANDER, WIS., May 29. Editor HARDWOOD RECORD: I have no criticisms to make of your paper, but as to suggestions of matters of interest, like to see correspondents inject news of real value into what they write—not news of how Tom, Dick or Harry, or Fred's wife has been in Chicago or Cairo, but real news, sales of lumber, prices for which it is selling, etc. While like every other man, I occasionally like to see my name in the paper, yet, as with other men, I don't care very much for personal items about some other fellow, but prefer to get the

market prices at which that other fellow is selling, conditions of markets as to trade, etc. I think that is a good point to emphasize, and not a lot of personal items cut out of some local paper. I also think wood chemical plants are going to cut quite a figure in our business, and that the matter is worth elaborating.

— & Co.

I wish to thank you for your frank letter of criticism. My views are entirely in harmony with your own on this subject, but I think you will concede that the *HARDWOOD RECORD* contains less of the matter which you deprecate than any lumber trade paper you ever saw. Again, I believe our news covers a wider range and is more complete in its character than that furnished by any other periodical of similar nature. In other words, I believe we are running a paper that pretty nearly suits your ideas of what a lumber newspaper should be. My reason for not publishing more matter on the subject of wood chemicals is the fact that I have seen wood alcohol go to 19 cents a gallon, which meant ruin for everyone engaged in the business. Today these people are making just a fair profit owing to the iniquitous legislation passed by Congress last winter, in the denatured alcohol bill. I therefore did not think it wise to encourage new plants on account of the present and prospective paucity of demand for these products. I think attempting to educate people up to the finer manipulation of their product and the manufacture of dimension stock promises surer returns than the manufacture of pyroligneous acid and its products.—EDITOR.

Discoloration From Stickers.

PITTSBURG, May 16. Editor *HARDWOOD RECORD*: We are expressing to you a piece of hard maple for your examination and wish to call your attention to the conversation we had recently relative to the discoloration you will find in the sample we are sending. Our customer has rejected a quantity out of a car, claiming that this discoloration in the wood is the first stage of decay. Our judgment is quite to the contrary; we claim that it is merely the calico color which is a peculiarity of maple, and which in no way affects the strength or durability of the wood. We would like very much to have your opinion on this subject for guidance in future, and also for adjustment of this complaint.

— LUMBER COMPANY.

Referring to the specimen of hard maple which you send—this piece of wood is undeniably discolored by the stickers, and if such discoloration was general in the shipment, in justice the stock should have been graded down. In all probability this lumber was stuck on old stickers which had commenced to materially decay. There is just as much danger of discoloring lumber by the use of stickers in this condition as in the use of green ones. In fact any stickers outside of red gum and sycamore, after they have been used two or three times, are more likely to stain lumber than green ones. Manufacturers generally seem to think that if a sticker is old it can be used with safety in green lumber, but such is not the case. As a general principle of inspection, stain which will not dress off is a defect. In the case of

the specimen you sent the stain has penetrated clear beyond that point.—EDITOR.

Keeping Busy.

MARQUETTE, MICH., May 31. —Editor *HARDWOOD RECORD*: In our territory here, along the south shore of Lake Superior, the hardwood industry up to the present time has been almost exclusively in the hands of Providence and related solely to the year by year laying on of those thin rings of wood under the bark of our hardwood trees; but the business of converting these trees into material for news in the *RECORD* has begun, and the men so far engaged in the business have found upon opening up these trees that the work of Providence as above mentioned has been exceedingly well done, and are greatly pleased thereat. Both quality and quantity are found satisfactory and more new saw-mill enterprises are being initiated each year; this district will ere long fill an important place in the hardwood markets for all varieties of timber native here.

J. M. LONGYEAR.

Hickory Dimension Stock Market.

CINCINNATI, O., May 29. —Editor *HARDWOOD RECORD*: Can you consistently put us on the track of someone wanting small pieces of fine-grade thoroughly seasoned hickory, say from 6 inches long up to 1 foot long, and from 1 inch to about 1½ inches in diameter? A good deal of the timber is all white. There are a thousand things in this world that could be made from it and are made, if we knew where to get into communication with the parties.

— & Co.

There are doubtless many consumers who would like to get hold of this stock, and the address of the correspondent may be had on application to this office.—EDITOR.

Wants Market for Gum.

RELOT, WIS., May 18. Editor *HARDWOOD RECORD*: Our company has begun work on its new mill in Missouri, and will manufacture lath and shingles and saw southern hardwoods. We will have a good deal of short ends, say 24 inches long, from gum, and would be obliged if you will tell us of a market for them. We could saw them to any required length or thickness. Please enter our subscription to the *HARDWOOD RECORD*.

LUMBER COMPANY.

Anyone in the market for gum dimension, as above offered, would do well to write for this correspondent's address.—EDITOR.

Wants Oak for Sleigh Runners.

PITTSBURG, PA., May 17. —Editor *HARDWOOD RECORD*: We are in the market for some straight-grained white oak to be used for sleigh runners. This stock is to be 2½x5½ inches, 7 feet. Will you be good enough to advise us the names of any parties you may know who are likely to furnish this stock?

— & Co.

The writer has been furnished a few addresses, but others who would like to communicate with him may do so through this office.—EDITOR.

Persimmon Waste.

NEW ORLEANS, LA., May 30. —Editor *HARDWOOD RECORD*: We should be obliged if you could, through the medium of your valued journal, assist us to find a market for our persimmon waste. We manufacture shuttle blocks out of this timber and have a considerable quantity of waste that is not large enough to make our smallest size shuttle block, but out of which we could cut pieces suitable for small tool and knife handles, etc. Persimmon wood is very desirable for the above purposes as it wears smooth and acquires in use a natural polish, and we think it could be employed to advantage for these han-

dles, or for any trade requiring similar qualities in wood, such as toy making, small turnery, etc.

COMIANA.

The above will doubtless prove a valuable suggestion to someone, and the name of the correspondent will be furnished on application to this office.—EDITOR.

Unfair Claims.

GRAND RAPIDS, MICH., May 29. —Editor *HARDWOOD RECORD*: I consider the *HARDWOOD RECORD* a good paper, but without calling any names I wish all lumbermen would reject the business of men and firms who kick on grades and shortage, so as to get a deduction, and then make a profit without being found out, and could buy only from firms shipping them their inspection. One firm bought on Manufacturers' inspection, called for a reinspection, sent a good man from Chicago. Then he said he was going to turn them down. This on two cars of poplar. I wasn't in the deal but know who was. Such men ought to be shown up and in my opinion an article on such work, well gotten up, would open their eyes.

The *HARDWOOD RECORD*, in common with other reputable newspapers, is always willing to show up irregular practices wherever found in the lumber business, but you must recall that there is such a thing as very uncomfortable libel suits which are expensive in the defense whether judgment is given against you or not, and this part of the newspaper game we have to fight shy of at all times. The *HARDWOOD RECORD* stands ready at any and all times to show up irregular practices when lumbermen like the writer present evidence of such transactions that constitutes *proof*. We cannot undertake to print mere hearsay evidence. Give us facts substantiated, and we are not only willing but anxious to print them.—EDITOR.

Drying Hickory Dimension.

NEW ORLEANS, LA., June 3. —Editor *HARDWOOD RECORD*: Perhaps some of your readers who are experienced in the handling of hickory can inform us in what way we can avoid the excessive warping of this wood when sawing up into small dimension. We are working on some orders for 1x1x4 inches to be used for golf shafts. We have the timber and the means for manufacturing same properly but have very great difficulty with the seasoning. We find that a very large proportion of the pieces warp and therefore become useless for turning into the shafts. Our present method is to cut the suitable part of the log into 1 inch boards of slightly over the required length and then rip same on a single rip saw bench into 1 inch wide pieces. We do this when the boards are green. Then the 1 inch squares are piled up crosswise to season. They usually begin to warp in a day or two and get worse as time goes on, making the percentage of wasted pieces so large as to make the business unprofitable. We find that the best timber warps most; that is, the young, heavy, small trees, white practically all through. The makers of shafts want just this sort of timber to make a good "steely" shaft, and if we could keep them straight, they would be just the thing. Trusting that some of your readers may be able to give us the benefit of their experience. Very truly yours

— & Co.

Will not some of our readers who have manufactured these hickory squares send us the benefit of their experience, and give some advice on the subject of seasoning, that we may communicate it to the above correspondent?—EDITOR.

Accidents to Boilers.

Both serious and minor accidents to boilers are happening every day. Many of them could be avoided. A certain steam plant was installed as illustrated in the first drawing, with three boilers, one of which eventually exploded. The boilers had been fired up and the water gauges indicated that the proper amount of water was in each. Unfortunately some one who tested the boilers the day before had carelessly left the stop-

cocks closed. This of course was a most dangerous thing to do. The workmen should have looked over the apparatus before they left the plant, and certainly the fireman should have examined the cocks before he fired up. But he had fired many times before without testing the gauges, and took it for granted that all was well, as usual. The water was retained in the gauges, and no water was in the middle boiler, which heated up good and hot. The steam valves of the main line, over the boilers, although closed, leaked badly. The result was that steam entered the middle boiler, and the pressure therefore registered correctly and once more the fireman was deceived.

This illustrates how easily conditions may fool a man who is not unusually alert. Some of the best firemen and engineers get caught this way occasionally. They are often rushed in the early morning to get up steam so that the works can start full blast by seven o'clock. In the darkness and hurry it takes a very conscientious man to examine into all the little details. In the above case the results were very disastrous. Suddenly the steam shot out of the door and ash-pit of the middle furnace. An examination afterwards revealed the burst plate just over the firebox of the middle boiler, marked A, Fig. 1. Some one had blown out the boiler, closing the valves on the water gauges, also the blow off, and had not refilled the boiler, in his haste or carelessness. The fireman was also to blame for not trying the gauges. The accident caused several days' delay in operations and the broken plate was substituted with a new one as shown in Fig. 2.

One does not have to tramp about the country much to find evidence of many reckless proceedings on the part of steam engi-

neers and firemen. Manufacturers of up-to-date fire grates for boilers would be surprised if they were to count up the make-shift grates which are in use in really important positions. Old car rails are sometimes utilized for grate bars. The plan is shown in Fig. 3. The rails are cut to proper length and placed side by side on the firebrick walls, the engineer priding himself on having a pretty good thing.

Iron rails stolen from a road are cheaper than modern grate bars any time. But the engineer forgets the losses. He overlooks the fact that the draft is hindered, that the rails in their warped condition are letting good fuel sift through only partly burned. Such rigs are money-losers to a firm and a detriment to the work.

In one case a mill lost considerable money for a long period, due to the condition of the

damper in the chimney. For months it had been giving trouble. It was operated on a steel shaft bearing which was fitted in iron journals set into the wall-work of the stack. The shaft was fitted with the proper crank

lever, and a chain extended from this down to a point near the level of the ground, where it could be operated. But the fireman was not able to get the proper draft. Weeks and weeks went by; the stack smoked and the fuel in the furnaces failed to burn thoroughly; great difficulty was experienced in getting up and maintaining steam. Finally it was decided to go to the trouble of examining the damper. Long ladders were obtained and adjusted against the chimney. An opening was made through the bricks, and the damper, which was originally adjusted evenly, as in Fig. 4, was found to be dropped down, as in Fig. 5, due to the breaking of the bearing at B. This bearing had gradually worn down, and, lacking lubrication of any kind, soon filed itself through and off. Hence the damper was supported solely by the remaining end C. This damper was removed and a new one put in, after which the draft was perfect.

At another place an explosion was caused by corroded plates, some of which were as badly corroded as represented at D, Fig. 6. In another instance the corrosion worked itself deeply into the hole near the head of a plate bolt, also cutting into the bolt, as at E, resulting in weakening the plate and allowing it to break.

Instances of this kind are numerous. Many such troubles occur in country plants, however. City plants are better kept and more up-to-date. More experienced engineers are employed in them as a rule; a new man usually strikes out for the country. Nevertheless, one may find some first-class establishments in the rural districts. Many a little hillside mill is operated by as neatly

equipped engine and boiler rooms as one would care to see; while, on the other hand, this department of some great metropolitan works will occasionally be thoroughly littered up and extremely unhandy.

Complete Official Report of the Tenth Annual Convention

National Hardwood Lumber Association

Held at Atlantic City, May 23 and 24, 1907.

OFFICERS 1907-8

PRESIDENT, W. H. RUSSE.....Memphis, Tenn.
 FIRST VICE-PRESIDENT, O. O. AGLER.....Chicago.
 SECOND VICE-PRESIDENT, C. E. LLOYD, JR.....Philadelphia.
 THIRD VICE-PRESIDENT, SAM E. BARR.....New York.
 TREASURER, CLAUDE MALEY.....Evansville, Ind.
 SECRETARY, FRANK F. FISH.....Chicago.

NEW DIRECTORS

THEODORE FATHAUER.....Chicago.
 GEO. W. STONEMAN.....De Valls Bluff, Ark.
 F. A. DIGGINS.....Cadillac, Mich.
 G. J. LANDECK.....Milwaukee, Wis.
 J. H. P. SMITH.....Parkersburg, W. Va.

The tenth annual convention of the National Hardwood Lumber Association, held at Atlantic City, N. J., May 23 and 24, was marked not only by a large but by a representative attendance of members of the organization from every part of the United States. The weather was clear and while the air was tinged with chill, conditions were such as to contribute to the comfort and pleasure of the assembled hosts. The occasion was further marked by the presence of many ladies, the wives and relatives of delegates. The meeting itself was held in the great ball room of the magnificent Steel Pier, which proved an ideal place for a convention.

Every detail of the arrangements for the entertainment of guests was systematically and delightfully handled by the eastern hosts, of which committee C. E. Lloyd, Jr., of Philadelphia, was chairman; E. A. Beckley of New Haven, treasurer; and B. C. Currie, Jr., of Philadelphia, secretary. Other than these, this committee consisted of John J. Rumbarger and J. P. Dunwoody of Philadelphia; John L. Aleock and R. E. Wood of Baltimore; I. F. Balsley of Pittsburg; H. M. Dickson of Norfolk; Sam E. Barr, H. S. Dewey and E. S. Foster of New York; N. H. Walcott of Providence; and Gardner I. Jones and John M. Woods of Boston. In the details of the work they were most ably assisted by Ed. M. Bechtel of Philadelphia. The entertainment features included a smoker and vaudeville performance of unusual excellence at the Grotto of the big Rudolph Hotel on Thursday, during which a delightful lunch was served. This feature of the program was under the personal charge of Messrs. Lloyd and Currie, and the vaudeville entertainment itself was handled by Wm. D. Hall of the Theatrical Exchange and Booking Agency of

Philadelphia. The lady visitors were delightfully taken care of both in a cake-walk affair at the Steel Pier on Thursday evening and with a trolley ride in special cars to all points of interest in Atlantic City and vicinity on Friday.

The proceedings of the convention have

before December, 1908, was rescinded; a new set of rules made after the most diligent study and conference between the Inspection Rules Committee of the association and delegates representing the hardwood associations of Michigan, Wisconsin and Indiana, was approved, which rules go into effect on Dec.

1 next. In a general way these new rules conform to current custom in the sale and grading of hardwood lumber, and provide for an inspection that somewhat lowers old standards of grades. The rules still adhere to inspection from the poorer side of the piece in the higher grades; they provide that tapering lumber shall be measured one-third of the length of the piece from the narrow end; and minimum widths mentioned in any grade must be of the full width named; in random width lumber, fractions over one-half foot are counted up to the next higher figure; fractions less than one-half foot to the next lower figure; and fractions exactly on the half foot are divided equally between buyer and seller. In the grade of No. 1 Common the rules provide that heart must not show more than half the length of the piece in the aggregate; and in No. 2 Common not more than three-fourths the length of the piece. In standard lengths now run in even and odd foot lengths from 4 to 16 feet but not over fifteen per cent of odd lengths are admitted. Eight-foot lengths are the shortest admitted to firsts and seconds, and not more than

W. H. RUSSE, MEMPHIS, RE-ELECTED PRESIDENT.

gone down to history as somewhat radical in character, but the prevalence of common sense in the deliberations has rarely if ever been equaled at any gathering of the sort.

Primarily, a resolution adopted at the eighth annual meeting of the association held at Buffalo in 1905, providing that the grading rules then authorized should not be changed

twenty per cent under 12 feet are admitted, and not to exceed ten per cent of 8 and 9 feet. Stain that will surface off in dressing is not considered a defect. A moderate amount of warp is admitted without being considered a defect. A new grading of clear face cutting is authorized, which provides for clear face or a sound back. The old

moved the association's offices to Chicago. The change was beneficial, enabling our secretary to come in close contact with our membership, and was also of great benefit to our members who do business in Chicago.

After being elected and assuming charge of the duties imposed by you, the executive committee decided that their main object during the year would be the improvement of the inspection department; that we would not give our attention to securing new members but would try and give the members we had better and greater facilities—providing more inspectors, and doing all we could to see that the application of the rules was more uniform. Following out this plan we relieved the surveyor general of part of his duties, and put the entire office and correspondence in charge of our secretary, leaving the surveyor general with nothing to do but to see and instruct his deputies as to the proper application of the rules and to make re-inspection when necessary.

Our reasons for desiring this change were: First. We found that our inspectors in the different markets were not making a uniform application of the rules and felt that when we could get the inspection of a shipment within the 4 per cent clause, whether made by the deputy in Memphis, New York, Chicago, or any other market, our work, as far as the application was concerned, would be practically solved, for the buyer would then know just what he would receive when the goods were measured by a National Association deputy and certificate issued.

Second. That we were not giving prompt service to re-inspections.

The records will show that the change was not only a good but a necessary one.

As already stated, we have made no special effort to increase our membership. The change in handling our inspection department, and in giving prompt service naturally brought in new members, and I am pleased to inform you that we have enrolled 169 new members during the year.

As you all know, the organization of our association was brought about by the fact that every market had its own inspection rules, and the object was to get the different markets together and adopt one rule and make it possible for the different markets to know what they were buying and selling. As I understand it, this association still has this, for its main object and if it stands for anything it stands for, and is committed to bring about, one inspection rule and uniform application of same.

At the Buffalo meeting a resolution was adopted not to change our rules for three years, the rules taking effect Dec. 1, 1905, so that the time the rules would remain in effect would be until Dec. 1, 1908. At that time we all felt that this was a wise move. We did not anticipate the changes that would develop, which

tion was given when the rules were made, on account of its limited use and cheapness. Our rules of today do not conform altogether with custom and the entire output of the log is not provided for. There has been for the past year a persistent and vigorous agitation for what are considered necessary changes in the rules from the producing centers of Indiana, Michigan, Wisconsin and the South. Your Executive Committee, feeling that an earnest effort would and should be made to suspend the Buffalo agreement at this meeting, instructed the secretary to send out a letter to the membership to this effect, and asked them to send their views to Chairman Fathauer of the rules committee of any changes they thought necessary. This was done for the reason that heretofore the inspection committee has attempted to do this work, just prior to, and at, the annual meeting, and was unable to give attention to and to hear all who wished to be heard on the subject. The inspection committee has not only taken into consideration all views from members who have given the matter enough thought to express themselves but have also heard committees from other associations and has its report ready to hand in at this meeting. I can assure you that the changes offered have had more consideration and thought than any ever presented. I recommend that the Buffalo agreement be suspended and that the changes in the rules be adopted. Before leaving the subject I would also recommend that the measurement be made on the half inch, viz., 6, 6½, 7, 7½-inch, etc., and do away with the give and take proposition that is the

it largely belongs, to our efficient secretary, Frank F. Fish.

W. H. Russe, President.

The address was received with applause.

Secretary Fish then read his report, as follows:

Secretary's Report.

Mr. President and gentlemen: In submitting this, my second annual report, I am gratified

JOHN N. SCATCHERD, BUFFALO, DIRECTOR.

at being able to do so in a spirit of confidence not possessed by me upon the former occasion. The associate year closing with this meeting has been profitable to the association and prolific in experience to the secretary. Each day has developed new situations demanding the exercise of judgment and discretion in order that the interests of the association might be fully protected. In this school of experience I have gathered a fund of information relative to associate methods of operation and development not possessed by me on taking charge of the office. I trust that this training has not been secured at an unduly high cost to this association, and beg to assure this membership that it will be used to the extent of my ability for the further betterment and development of the association.

In the preparation of my report I have been placed at some disadvantage by the knowledge that it would follow the address of our able president, which will leave little or nothing of general interest for the secretary to communicate to this membership aside from details connected with his official duties. I trust, however, that even those details may contain something worthy of consideration on the part of the members present.

Shortly after the annual meeting held in Memphis last May, and in pursuance of the decision reached by the Board of Managers at that meeting the executive offices of the association were removed from Indianapolis, Ind. It is my belief that the change in location has been distinctly advantageous to the interests of the association, as it has enabled a much larger percentage of the membership to come in direct contact with the actual workings of the association than would have been possible had the office been maintained in its former location. The best assurance that the change has not in any degree worked adversely to the interests of the association, rests in the fact that it has occasioned no unfavorable comment while, on the other hand, in its present location the office has been of much convenience to members who have had occasion to visit Chicago. It has been my belief that the office belongs to the members of this association and I have therefore endeavored to extend to members a hospitable reception.

A new departure in the work of the past year was the holding of a semiannual meeting of the membership, which occurred in Cincinnati on October 25 and 26, and brought out a creditable attendance. As a full report of this meeting was published in the various trade journals, it is not desirable to enter into any details pertaining thereto. It may, however, be proper to place some emphasis upon the adverse action taken at that meeting with regard to the admission to membership in this association of arms or individuals not actually engaged in the lumber trade. This action demonstrated beyond any question that it is practically the

W. A. BENNETT, CINCINNATI, DIRECTOR.

cause of so many cars falling one or two hundred feet short, and that we also allow a percentage of odd feet in length. In shipping lumber there is often six inches or one foot at the end of the board that is valueless, and I can see no reason why two feet should be cut off simply because the custom was established when we had more timber land in the country than we knew what to do with. Lumber is too valuable to continue this waste.

The inability of the railroads, for the past eight months, to handle with promptness business offered them has interfered with the shipments to such an extent that all of you have sustained more or less serious loss. Railroad officials frankly admit that the traffic of the country has increased beyond their facilities to such an extent that they are unable to promise any definite relief. This has brought into prominence the subject of improving our existing waterways. I consider it one of the vital questions of this day—we not only need transportation, but we want transportation at a minimum and not a maximum cost. Our waterways should be made navigable and kept so, and when they are there will be no such thing as car shortage for, by relieving the railroads of the vast amount of bulk product, they will be able to keep up with the general development of our country. We have invited John A. Fox, special director of the National River and Harbor Congress, to speak on this subject tomorrow, and I can assure you his address will be entertaining and instructive.

I take this opportunity to thank the Board of Managers and their committees for their hearty and loyal support. The year has been a very successful one for the association, and before closing I wish to place the credit where

FRANK F. FISH, CHICAGO, REAPPOINTED SECRETARY

have been more marked than has ever been known in the history of the lumber interests. Timber lands and stumpage have increased in such a marked degree that manufacturers have been obliged to saw and manufacture logs that formerly were left to decay in the woods. The scarcity and high price of some one wood would cause manufacturers to try a cheaper article which they would substitute and find that it would give satisfaction, thus bringing into general demand lumber to which very little atten-

unanimous desire of the membership that the association ever shall be an association of lumbermen, for lumbermen and by lumbermen.

As the year progressed and an enormously increased demand was noted from all sections of the country for the inspection of this association to be applied by its inspectors, it became apparent to those who had the work in charge that a change was necessary in the methods in vogue for handling the inspectors in the field in order to increase the efficiency of the de-

EDWARD BUCKLEY, MANISTEE, MICH.
DIRECTOR.

partment in which they were employed and that the members of the association might receive reasonably prompt service.

Owing to the fact that the chief inspector was necessarily absent from the office of the association much of the time in the prosecution of his duties pertaining to re-inspection and supervising the work of inspectors, delays of a serious nature were likely to occur in the transmission of directions from that office to the inspectors at work in the various sections of the country. To obviate these delays and to place the work on a footing of greatest efficiency, the Board of Managers, at a meeting held on June 14 and 15, unanimously decided to place the secretary in charge of the work of inspection so far as the assignment of employment to the different inspectors was concerned. Without a desire to appropriate any personal credit, it is only proper for me to state that this new arrangement has produced results of the most satisfactory nature. A check is now kept on all salaried inspectors employed by the association whereby it is possible to determine from the records in the secretary's office just where and for whom each inspector is at work at all times, and what work he has assigned to him several days in advance. As a result of this system inspectors are no longer idle while members are waiting for service. Chaotic conditions have been replaced by system and efficiency in service is made to keep step with the development of the association.

Much of my time during the past year has thus been devoted to bettering the conditions under which the actual work of inspection is conducted. I believe, however, that efforts put forth in this direction have been of a profitable nature to the association, as the increase in the demands for national inspection shown by the report of the chairman of the Inspection Bureau Committee will amply demonstrate.

It has also been part of the work of the secretary to investigate and settle a number of claims arising from re-inspection. I have made it a point to handle these claims promptly and if they were of a nature to justify payment by this association such payment has been made without any unnecessary delay. On the other hand if no liability rested against the association, the claimants have been promptly notified that their claims were denied.

The establishment of a system of the organization coupled with prompt action on the affairs of the inspection department cannot fail to commend itself to all members who are brought into contact with that feature of the work of the association. It is not my purpose to claim that perfection in detail has been attained, for perfection is a thing of the future. But a reasonable degree of progress has been made in the proper directions which justifies the belief that still better conditions will prevail in the near future. In the selection of new inspectors extreme care has been taken to admit only those of high

tioned integrity and greatest ability, and every practical lumberman will appreciate the difficulty of establishing and maintaining a corps of inspectors of such a quality in the markets.

There have been instances during the past year wherein association members have not hesitated to prevail upon inspectors of this association to leave its service and enter into their employment. Such action, while possibly not irregular even from an associate standpoint, is at times very embarrassing to the service. The only suggestion I can offer to insure the retention of inspectors in our service when it is to the interest of the association to so retain them, is to increase the compensation to a degree that will prohibit their employment by individuals. I offer this suggestion under the belief that the strength of this association is sufficient to enable it to command the services of an inspector against the competition of any individual.

While much of my time has thus been occupied in the discharge of duties newly assigned to the office of the secretary, I have not been unmindful of the necessity existing for a continued increase in membership, and although the important increase of the previous year has not been equalled during the year just ended, I trust the following figures will be approved by the membership.

Since May, 1906, 169 new firms have been added to the membership roll. During the same period a number of firms who have been identified with the work have retired from business or sold out and we have dropped several names as delinquent. Details are as follows:

GARDNER I. JONES, BOSTON, DIRECTOR.

Membership May, 1906	503
Applications received since	177
Applications rejected since	8
Total accepted	169
Resignation and withdrawals by reason of going out of business	58
Dropped as delinquent	20
	78

Association membership May 23, 1907, 594

The manner in which a majority of our members have remitted dues and inspection fees has supplied the treasury with sufficient funds to discharge all indebtedness promptly. Details of receipts and disbursements from my office are as follows:

RECEIPTS	
From membership dues	\$15,175.00
From inspection fees	28,148.95
From inspection fines	691.17
From cash deposits	450.00
	\$44,465.12
DISBURSMENTS	
Remitted to cash	\$44,279.81
Cash and checks on hand	185.31
	\$44,465.12

Results obtained from the publication in a number of the proceedings of the meeting prompted the executive committee to similar action on the Memphis convention. Several thousand copies were distributed among the membership and others interested in the work.

A new edition of the official handbook was issued November 1, 1906, and has been

of assistance in acquainting the trade at large with the methods of the Inspection Bureau, and as a considerable percentage of the delay in inspection work can be traced to the fact that all of our members are not familiar with the system, it is perhaps proper that I urge a careful study on the part of members of this handbook.

At our ninth annual meeting, held last year at Memphis, the committee, appointed by the president, on officers' reports recommended that the emblem in use on the association letter-heads and all printed matter coming from the executive office be adopted by our members for use on their business stationery.

About twenty-five per cent of our members have adopted this suggestion and employ the cut on their checks as well as stationery. I have a supply of the electrotypes of this design on hand and should be pleased if the balance of the members would adopt it.

During this year the executive committee have held eight meetings, and on four occasions the full Board of Directors have been called in conference as follows:

May 4, 1906.
June 14 and 15, 1906.
July 16 and 17, 1906.
October 25 and 26, 1906.
November 22, 1906.
January 11, 1907.
February 27, 1907.
March 28, 1907.

All of these meetings except two were held in the executive offices in Chicago, the exceptions being Board of Managers' meeting of May 4, 1906, which was held at Memphis, and Board of Managers' meeting of January 11, 1907, held in Indianapolis, on which occasion we were the guests of the Indiana Hardwood Lumbermen's Association at their annual meeting.

Before entering the service of this association my occupation was such as to bring me into close touch with many lines of business and also with the men in charge and I became more or less acquainted with the methods by which such lines of business were conducted. I may therefore be qualified to a certain extent to express expert opinion regarding business methods and business men. It is a source of much satisfaction to me to have this opportunity to testify to the high quality of ability and the unselfish devotion shown by those gentlemen who have had in charge the destiny of this association during my brief connection therewith. If I possessed any doubts as to the ultimate attainment of the objects toward which the efforts of this membership have been directed, such doubts have long since been dissipated by the sincerity and enthusiasm which I have seen brought into the work by these members.

If this enthusiasm were contagious and if all members of this association should become inoculated therewith, enormous gains would be immediately shown in the affairs of the association. I would not be understood, how-

W. A. BONSAK, ST. LOUIS, DIRECTOR.

ever, as implying that this membership is lacking in interest in associate affairs, because the attendance at this meeting is a sufficient contradiction of any such implication. It is my belief that the National Hardwood Lumber Association is not only growing stronger numerically but that the sentiment of unity is also increasing in the membership, which cannot fail to add materially to the strength of the association.

That national inspection is firmly established throughout the country cannot be successfully denied. There is no hardwood market in this country that does not recognize it as the basis for grading hardwood lumber. Therefore, so far as it is proper for an employee to congratulate his employer, I desire to express that sentiment to this membership for the quality of the organization which has been developed by their efforts, for the position which it occupies in the trade today and for the success which has attended upon its endeavors to improve conditions under which that trade is conducted. The future progress of the association will depend, in large measure, upon the efficiency of its officers and the enthusiastic loyalty of its members. If the experience of the past year is a criterion there is every reason to look forward to large accomplishments in the near future.

Respectfully submitted,
FRANK F. FISH, Secretary.

The report was received with applause.

J. W. Thompson moved that the address of the president and the report of the secretary be referred to a committee to consider the recommendations contained therein, which was duly seconded and carried.

The chair appointed as such committee: Samuel E. Parr of New York, D. F. Clark of Minneapolis and George W. Stoneman of Devils Bluff, Ark.

President Russe—I hope the committee will get to work as soon as they get the reports so they will be able to make their reports not later than tomorrow morning at the opening session.

Treasurer Graham read his report, as follows:

Respectfully submitted,

J. WATT GRAHAM, Treasurer.

President Russe—I think that shows we are still alive—and we don't owe anything. We have paid our debts and still we have money.

The program shows at this time an intermission for lunch. I believe, however, if there are no objections, that we ought to get in one or two more reports so that we will be sure to get through tomorrow. Of course, if it is the sense of the meeting, we can adjourn now for lunch. If not, we will hear the report of the Inspection Bureau committee, W. W. Knight, chairman.

Mr. Lloyd The big hotels have dinner at 1 o'clock, but if you have a short report you might take it up.

President Russe—This is not a long report and we had better get rid of it. We will adjourn after this report. We want to get through as soon as we can. In this town there is nothing to do but have fun.

Mr. Knight This report is practically a repetition of what has been said by Mr. Russe and Mr. Fish.

inspectors employed by the association where bonded certificates have been issued and by no means cover, even approximately, the total amount inspected under the rules of the National Hardwood Lumber Association.

At the present time there is a demand for several salaried inspectors in the sawmill district, and it is believed that such places as New York city, Philadelphia, Boston, Baltimore, etc., the cities now having only one inspector, will

C. F. SWEET, GRAND RAPIDS, MICH., DIRECTOR.

require the appointment of an assistant in the near future.

In the report of last year attention was called particularly to the scarcity of competent inspectors, and the difficulty of getting them to enter the employ of the national association. The situation, under the present conditions governing the lumber industry, is even more complicated than ever, but by systematic effort we have been successful in getting on file applications from nearly one hundred inspectors now employed by other parties.

During the year no less than five of our salaried inspectors, who have been successfully trained by the chief inspector and located at considerable expense, have been taken from the association's employ by association members in various sections of the country.

Such action on the part of members renders it even more difficult to maintain an efficient and sufficient force to produce prompt service, and the chairman wishes to urge on the members that they kindly keep "hands off" from the association inspectors until such time as the bureau is in better position to spare these men. There should be a hearty response to this request and the loyal support of the members to the management in their efforts to put this branch of the association on a thorough working basis. The taking away of competent men by some of the members is not what the chairman considers "loyal support," as the practical result of this sort of work is to weaken the force and discredit the efforts of the management.

In last year's report it was urged on the members to familiarize themselves with the rules governing the inspection. Reference is again called to this subject, and a study of the hand-book issued from the executive office is strongly recommended as there seems to be a general lack of information on the part of many members as to just what is necessary for them to do in order to get a reinspection in the regular way. Your attention is particularly called to the fact that when they wish to obtain an official reinspection where bonded certificates have already been issued, the application must be made to the office of the secretary, as applications made direct to the deputy inspector for official reinspection will not be recognized under any circumstances.

Your committee submits that the gain in the work of the inspection department is absolute proof that we are working along right lines, and numerous letters from shippers to the secretary expressing satisfaction with the work of salaried inspectors in large wholesale markets are among the most encouraging features of the present year's work.

The general satisfaction among the membership over the service rendered by the inspection department is really due, in great part, to the fact that care has been exercised in the selection of new men appointed as inspectors to admit only those of unquestioned integrity and

G. E. HIBBARD, ST. LOUIS, DIRECTOR.

Report of the Inspection Bureau Committee.

Mr. President and Gentlemen: The chairman of this committee begs to submit the following report of the workings of this branch of the association which has been, almost exclusively, in the hands of the Executive Committee, and of Mr. Fish, the secretary.

In compiling figures showing the result of the work of the Inspection Bureau for the past year the secretary submits, on separate sheets marked "Exhibit A" and "B," the figures necessary for a comparison with the work of the preceding year, and the chairman submits that the monthly cost to the association of the Inspection Bureau has been slightly less, under the present management, than for the year which closed May 1, 1906.

In the report made at the last annual meeting we showed that ten salaried inspectors were in the employ of the association, located in the principal cities of the country, where the demands of the hardwood trade warranted their steady employment. At the present time there are in the employ of the association seventeen salaried inspectors, located as follows: Chicago, three; Memphis, two; Cincinnati, two; Milwaukee, one; Minneapolis and St. Paul, one; Grand Rapids, one; St. Louis, one; New Orleans, one; Buffalo, one; New York City, one; Philadelphia, one; and Baltimore one.

During the past year the salaried and fee inspectors have issued bonded certificates for 123,186,828 feet of lumber, an increase over last year of practically 25,552,000 feet. These figures cover only the amount inspected by the

EARL PALMER, PADUCAH, KY., DIRECTOR.

DISBURSEMENTS.

President's office.....\$35.60

W. W. KNIGHT, Chairman

President Russe—That only took six minutes. The Inspection Rules Committee is not ready to report, but if we can get the reports of the Forestry and Transportation Committees, let's do that.

Mr. Wall here read his report as follows:

Report of Committee on Forestry.

To the president and members of the National Hardwood Lumber Association: Your committee in submitting its report for the current year begs to state that it has been in correspondence and held conferences with the forestry bureau at Washington, the forestry commission of the states of New York, Pennsylvania, California and other commonwealths, and has done as much as lay in its power to get comprehensive information regarding the matter of stumpage in the United States, to learn of plans for reforestation, to know the best methods of preventing disastrous forest fires and to determine the solution of practical forestry.

Your committee, as a result of its investigations, begs to urge that it remains for the general government and the government of the several states to pass proper laws to protect the present stumpage.

If there is to be any hardwood lumber in the

United States after the next thirty-five years, it will only be by means of federal and state legislation because the standing timber is being rapidly depleted by the saw and by forest fires and wilful waste.

The United States Forest Service in a paper on "Forestry and Irrigation," in April of the current year, says: "Data upon the output of the forests in 1906 are now being rapidly collected by the forest service in co-operation with the Bureau of Census. Figures upon the rate of growth of the commercial valuable species are being gradually collected and tabulated for us, so that before long it will be possible to say what the annual increment should be in typical forests throughout the United States."

There have been but two attempts made by the Bureau of Census, in 1880 and 1900, to tabulate the stumpage of this country. What is needed is an accurate determination of our forest resources based upon thousands of cruises or forest surveys. This is an immense piece of work, formidable more because of its magnitude than its difficulty. The machinery for it already exists in the Bureau of the Census and the Forest Service. Let congress provide the means and give authority to do the work and it can be speedily accomplished. The proper time is that of the next decennial census in 1910, and your committee urges upon the members of the National Hardwood Lumber Association to use every means in their power to invoke their congressmen, senators and state legislatures, to take this most necessary census made.

Pennsylvania is taking active steps to establish what is known as auxiliary forest reserves. Several bills were introduced in the legislature and ultimately were referred back to the Forestry Committee. One act provides that no

C. H. BARNABY, GREENCASTLE, IND., DIRECTOR.

lands so certified as auxiliary forest reserves shall be assessed in excess of \$1 per acre for the purpose of taxation. Another act provides that the state should pay to municipalities an annual charge of one cent per acre and to the school districts an annual charge of 2 cents per acre on all auxiliary forest reserves situated within their respective limits.

Your committee begs to state that it believes some such legislation as introduced in Pennsylvania for the protection of auxiliary forest reserves, should be passed by the legislatures of every commonwealth in the United States.

It is important that new methods be used for the cutting of hardwood lumber, so that the enormous wastes will be curtailed to the minimum and also that active steps be taken toward immediate reforestation. On the basis that there remains so little hardwood stumpage in the country, it is an easy matter to see that unless some radical action is taken and both state and national government encourage the replanting of our forests, the hardwood lumber industry will all too soon become a thing of the past.

Last year your committee urged that state legislative bodies and the American congress be petitioned for the enactment of the following laws:

First. To relieve for a long period of years lands owned by individuals which shall be devoted to forest growth under practical supervision.

Second. To provide legislation that shall insure individual timber owners protection from fire and depredation.

Third. That the several states shall take up, in a comprehensive and practical way, the replanting of lands, undesirable for agriculture, to timber.

Fourth. That national legislation be invoked to prohibit the exportation of logs.

We again urge that legislation such as indicated should be passed, and your committee begs to insist that every means possible be taken to induce the federal government to make a census of the stumpage of the United States.

M. M. WALL, Chairman.

The report was enthusiastically received.

Mr. Palmer moved that the two reports, viz., those of the Inspection Bureau and Forestry Committees, be accepted. Motion seconded and agreed to.

Mr. Lloyd—Before we adjourn I want to call the attention of the members to two or three points. One is relative to railroad certificates, which should be left at the gate as you go out. Also, will those members having their families with them please be sure and tell them of the entertainment tonight? The entertainment will be right here. The gentlemen's entertainment will be a smoker at the Hotel Rudolph, three blocks up the Board Walk. [Applause.]

The convention here adjourned until 2:30 p. m.

THURSDAY AFTERNOON SESSION.

The convention was called to order by President Russe at 3 p. m.

President Russe—We will now have the report of the Transportation Committee.

Report of Transportation Committee.

To the National Hardwood Lumber Association—Gentlemen: This Transportation Committee was appointed a year ago for the purpose of attempting to secure a reduction in the west-bound rate from the central states and Mississippi river territory to the Pacific coast. This rate was 85 cents per hundred pounds, while the railroads were making the same haul east-bound on coast products at as low a rate as 40 cents. Your committee co-operated with another committee of the National Lumber Manufacturers' Association, consisting of Mr. Arpin, Mr. Shaw and Mr. Ransom, who were appointed for the same purpose. We met in Chicago on June 6, and again on July 16 to 18, when we were given a hearing by the Transcontinental Freight Bureau. The matter was argued by each member of the committee, but a week later we were notified that the request had been denied. A fourth meeting was held on August 16 and the matter was taken up with various western trunk lines but, up to this time, we have been unsuccessful in securing a reduction in the rate.

Your committee also filed with the Interstate Commerce Commission a protest against the reduction, by ten days, of the time allowed at New Orleans for unloading export products and another against the advance in rates to eastern points to take effect June 1.

THEO. FATHAUER, CHICAGO, DIRECTOR.

We regret that more has not been accomplished, but we have kept in touch with matters pertaining to transportation, etc., and feel that we have accumulated some information that may be used for the benefit of all members in the future. Respectfully submitted,

O. O. AGLER,
J. M. PRITCHARD,
G. J. LANDECK.

President Russe—You have heard the report of the Transportation Committee. If there are no objections it will be received and filed.

We are now at the point of the program where you get the pie and the cake. Mr. Currie, being on the entertainment committee, has asked me to let him speak before Mr. Palmer. Is Mr. Currie present? [No response.]

We will proceed with the regular order of business and have the address by Earl Palmer on "Associate Obligations."

Earl Palmer's Address.

In accepting the honor, so courteously extended by the Committee on Arrangements, to deliver an address before this magnificent assemblage of lumbermen, I greatly fear that I have rushed in where another, wiser than I, would have hesitated to enter. The only excuse possible for me to urge in extenuation of my temerity is the high esteem and honor in which I hold the National Hardwood Lumber Association, on account of which I have never hesitated to make a sacrifice when it has appeared to me that the interests of the association might be advanced in any degree by so doing.

The subject which I have selected as a basis for my remarks is that of "Associate Obligations;" or, to amplify the text: The reciprocal obligations imposed by and arising from the association or combination of effort on the part of many for the accomplishment of a common purpose which will result to the advantage of all.

The term obligation, in the sense in which it is used, expresses a duty to be performed, a debt to be paid, a contract to be carried into effect.

Obligations may be divided into two general classes—those which are compulsory, or which are imposed by the state, society or environment, and those which are voluntary or which are assumed by our own volition. It is this latter class of obligations, those which are voluntary in their nature, which I shall attempt to discuss.

Few, if any, obligations were imposed upon man in his primal condition. Nature was in a prodigal mood when man first entered upon the scene. The rigors of the glacial period had been superseded by an almost universally tropical climate, vegetation flourished mightily and the forests and oceans teemed with animal life. Man at that period was a highly developed animal, but as yet his moral and intellectual faculties lay dormant. The caves, excavated by natural causes, supplied him with rude shelter ready at hand, the fruitage of the forest was his for the gathering, while the skins of animals, which fell beneath his ponderous ax of stone, were quite sufficient to furnish his wardrobe with such raiment as his scanty necessities demanded. His existence was individualistic. He relied only upon the strength of his own arms and the fleet-

ence. This was the dawning of responsibility, the first awakening to a sense of obligation.

Again, after a lapse of another period in the existence of the *homo sapiens*, a still greater change transpired. Whether from a desire for greater protection, or from sheer loneliness or from whatever other reason, we find these primo-genital families gathering into communities. This new assembling called for the recognition of a new set of obligations. Man had begun his ascent by the help of man. A new horizon was developed, comprehending other men beyond the radius of the family circle. The individual had been merged into the community. And so, through a period of evolutionary development, covering a thousand centuries, man ascended each step upward in the scale removing him farther from his individualistic condition and being attended by a correspondingly wider circle of obligations, the recognition, acceptance and discharge of which being first required before the next step could be taken.

Today we are standing upon the apex of the highest civilization that the world has ever produced and are surrounded by and subject to a multiplicity of complex obligations which demand recognition and upon the manner in which they are discharged depends whether the human race shall still continue its ascent, or whether it shall begin to retrace its steps toward the caves formerly occupied by its remote progenitors.

The obligations imposed by our present civilization constitute the only cohesive force of sufficient strength to hold in position the units of society. If these obligations were universally

A proper and satisfactory discharge of this obligation on the part of an association does not, however, necessarily comprehend finality in accomplishment. A consistent, well sustained and effective effort toward attaining the goal of ultimate achievement operates as a competent and satisfactory discharge of this primary obligation. If to this be added progress of such a

G. J. LANDECK, MILWAUKEE, DIRECTOR.

nature as to place finality well within the grasp of an association, it may be maintained, beyond all successful refutation, that such an association does not occupy the relationship of a debtor to its members.

The responsibility of an association does not cease, however, with the approach of finality in its original undertaking. Opportunity creates obligation. As the horizon of opportunity expands with the progress of the association, there comes a relative increase in the number of obligations imposed, and further progress depends upon the manner in which these new obligations are met and disposed of. If all of these obligations have been recognized, accepted and satisfactorily discharged by an association, it thereby places its members in the position of debtors to itself.

This brings us in orderly sequence to the consideration of the second class of associate obligations: those which are due from the individual to the association of which he is a member.

The first and most important obligation imposed upon the member of an association is to possess faith in its sincerity and in its ability to accomplish the purpose to which it stands committed.

Of all the elements which go to make up that complex and intangible force which is called the human mind faith exercises the most compelling influence in the affairs of this life. Faith is strengthened by exercise, it is developed by intelligent investigation of the object upon which it is bestowed, provided that object be worthy, and it is justified by a proper appreciation of the fruits resulting from the operation of the forces called into action by its object.

To believe in victory discounts defeat. To believe in success renders failure improbable. To believe in life robs death of its terrors. Faith spans the gloomy confines of the grave and sets beyond the Star of Hope to shine until the morning of the Resurrection. It is therefore an obligation of pressing importance that we do not deny to an association of which we may be members this prime attribute to success in all of its undertakings.

Possessing faith, the next obligation imposed upon the individual member of an association is that of loyalty. Loyalty must ever be regarded as constituting the keystone to the arch of associated effort. Without the unswerving allegiance of each of its supporters, no cause can achieve complete success. All that is good in man instinctively responds to the call of loyalty and as readily shrinks from that which is disloyal. The obligation of loyalty transcends the scope of associate obligations. It properly belongs to that of *noblest obligation*. It is an obligation imposed by the primal rank of manhood and can never be ignored without consequent dishonor.

If it develop that a member can no longer maintain a proper degree of loyalty toward an association of which he is a component part it were infinitely better that he immediately conclude his membership than to continue a connection which has become, for him, dishonorable and which, if maintained, under such a condition, might eventually develop a traitor at a

F. A. DIGGINS, CADILLAC, MICH., DIRECTOR.

to be ignored humanity would drop with the speed of a plummet to the former level of the cave dwellers.

This brief historical transcript of the ascent of man from a condition but one degree above the level of the animals by which he was surrounded to his present state of mental and moral development is typical of all human efforts when a number of units are joined for the successful accomplishment of a specific purpose: beginning in lowly places, subject to unfavorable conditions, yet accepting and discharging each obligation as it is imposed, thereby ultimately eventuating into the palace of successful achievement.

Voluntary obligations are those which arise from our connection with any organization or association composed of our fellowmen, whether of a religious, fraternal or secular nature. We may escape such obligations by simply refraining from entering into such a connection. But if the connection be formed, the obligations imposed thereby are as binding in effect as are the more generally recognized obligations imposed by the state of society under which we exist. These obligations are either expressed or implied, and upon the manner of their discharge depends the success or failure of the organization or association by which they are imposed.

Associate obligations are naturally divided into three classes. Those due from the association to its membership, those due from the individual members to the association and those due from the individual members to each other.

It is apparent that the primary obligation due from an association to its membership is that of successful accomplishment of the object or objects constituting the *raison d'être*, which supply the moving cause for the existence of the organization.

GEO. W. STONEMAN, DEVALLS BLUFF, ARK., DIRECTOR.

ness of his own feet for subsistence and protection. Therefore, owing no debt to his fellowmen, he acknowledged no obligations incumbent upon himself to discharge.

But, with the passage of time, came a change. Man was no longer to occupy his cave in solitude. He took to himself a mate, who was to abide permanently with him, and who was to rely on him, in part, for protection and subsist-

critical juncture in the affairs of the association.

The third obligation imposed upon association members is that of devotion. Possessing faith and loyalty, the recognition of this obligation is a natural consequence. The degree of our devotion, however, depends upon the intimacy existing between us and the object upon which it is bestowed. In order to love an individual we must first develop an acquaintance of a sufficient degree to become possessed of a knowledge regarding his desirable qualities, and this condition applies with equal force to an association

B. C. CURRIE, JR., PHILADELPHIA, SECRETARY ENTERTAINMENT COMMITTEE.

for which it is our duty to cultivate a lively affection.

In order to acquire this close acquaintanceship with an association of which we are members we should familiarize ourselves with its purposes, methods and achievements and if we find them to be worthy, a proper degree of devotion will necessarily result.

When once this sentiment is thoroughly aroused it is wonderful what a change will occur in our attitude toward a proper discharge of all associate obligations. We then shall be ever on the alert for some opportunity to advance associate interests. Our faith and loyalty will be strengthened. Our interest in the outcome of the work of the association will become intensified and a spirit of personal sacrifice will take possession of us.

This spirit of personal sacrifice is the fourth obligation to be considered. In the prosecution of the work outlined by an association a conflict sometimes appears to exist between personal and associate interests. I use the word appears advisedly, for, if the work of the association be conducted in the interests of its members, no such conflict can exist in reality. There may be a temporary personal advantage to be secured at the expense of betraying the interests of the association, but it is vastly outweighed by the permanent advantage to be obtained by preserving inviolate our associate allegiance and the spirit of personal sacrifice is a safe mentor upon which to rely for guidance when a question of divided allegiance is presented.

Personal sacrifice also comprehends a duty to the association above and beyond the payment of annual dues. It properly implies a degree of devotion of time, thought and service to the affairs of the association. The force, for the accomplishment of its purpose, which an association can exert, is only equal to the sum of the force contributed by each of the units of which it is constituted. No inherent force exists in numbers other than that which is exerted by the individuals comprising the combination. It is only through sacrificial endeavor on the part of the individual that great undertakings are brought to successful issue. Therefore, the recognition and discharge of this fourth obligation on the part of the members of an association is of vital importance.

The fifth and last obligation imposed by association members to which I shall call attention is that of patience. We are prone to become impatient when finality in our undertakings is deferred, and this feeling sometimes carries with it sentiments of resentment and distrust. We lose sight of or fail to appreciate the obstacles that cumber our associate pathway and perhaps fail to understand the magnitude of the task we have set before us.

A thorough understanding of the progress that

already has been made will make the discharge of this obligation more easy. To arrive at such an understanding we may compare conditions existing at present with those which existed before the work of the association began and we shall find that reasonable progress has been made. We shall find justification for the discharge of this important obligation due from the individual members of the association.

While the number of obligations in this class might be indefinitely multiplied, upon a close analysis it would be discovered that each one would be but a subdivision of some one of those already considered and the time allotted to me for consideration of these subdivisions is limited.

The third class of associate obligations, due from the individual members to each other, are of a fraternal rather than a contractual nature, and as such may readily be recognized. It is not necessary, therefore, to consider them in detail. Their importance, however, in the work of building up an enduring organization cannot be overestimated. The closer the relationship existing between individuals constituting an organization, the stronger the organization. Therefore no opportunity should be lost to promote a feeling of genuine good fellowship and of mutual interest, independent of the main work of the association among the association's members.

And now to briefly recapitulate and apply the argument. We have seen that upon primitive man, as an individual, few or no obligations were imposed. We also have seen that man made no progress until he exchanged his individualistic existence for a communal existence and then, only by a proper recognition and discharge of the obligations imposed by the new conditions; that his progress was ever accompanied by the

JOHN J. RUMBARGER, PHILADELPHIA, ONE OF THE HOSTS.

imposition of a relatively increasing number of obligations. We have seen that there is no escape from these conditions, which apply with equal force to the entire race or to any organization or association composed of individuals. We have defined and analyzed certain reciprocal obligations, equally binding upon the association and upon its members, the mutual discharge of which is imperative if the results desired are to be obtained.

While this argument abstractly considered applies to all forms of organized effort, the intention is obvious, that it shall apply with special force to a concrete object. In the discussion of a subject of this nature it is permissible to select a specific example from the class under consideration, as approximating an ideal type.

When the purposes, the methods and the achievements of the National Hardwood Lumber Association are considered, I believe that I am fully justified in claiming it to be typical of the best form of organized effort that thus far has been produced in the special field covered by the scope of its activities, that it has discharged in a most capable manner every obligation due from it to its membership, and therefore, that it does not occupy the position of a debtor to any of its members.

Before this condition of excellence could be attained, however, it was necessary, first, for the members to possess an intelligent conception of the nature of the obligations due from them as individuals to the association and to enter upon a conscientious discharge of the same. The results thus far obtained from the operation of the association afford eloquent testimony as to the

manner in which its members have met and discharged of these associate obligations.

The purpose of this address is twofold; to develop a sentiment of increased gratitude on the part of its members toward the National Hardwood Lumber Association and to promote a higher sense of individual responsibility among its members, to the end that this association may exert a still greater force for good among those who live by the manufacture and sale of hardwood lumber.

No more fitting opportunity could be presented for a new birth of interest in the affairs of this association than is afforded by the representative gathering of lumbermen assembled here today.

There is ever an inspiration in numbers and this meeting, representing in its attendance many markets, many localities and many states, is sufficient in itself to awaken in the hearts of all members a new and higher regard for an organization, the purposes of which are of enough importance to assemble at an annual meeting so large a percentage of its membership. If those who are present will firmly resolve to recognize and discharge every obligation due from them to the association, a spirit of enthusiasm will be developed that will not only make this meeting memorable in the history of the organization but will also be apparent in the quality of the association's work in the nature of its achievements throughout the coming year.

At this point a photograph was taken of the convention in session.

President Russe—Next is the address by B. C. Currie, Jr., on "A School of Inspection."

B. C. Currie's Address.

I realize in presenting to this convention the subject, "A School of Inspection," that many of you have probably given the subject previous thought, and I have found in considering the matter from time to time that the more thought I gave it the more fully convinced I became that to cover the ground thoroughly at this time would be to rob this convention of too much of its valuable time.

In looking over the field of professional and commercial activity I find but few instances where the development and subsequent growth of any branch of trade has not depended largely on the early training and elementary schooling of those into whose hands the direction of such business has been entrusted.

This is true in a great measure of the industry "in which we are so deeply and vitally interested," taken as a whole, but subdividing it into individual departments there are, unfortunately, some who display a lack of progressive development and I am of the opinion that the inspection department will be found weakest in this respect. This is the more deplorable when we realize that this should be the strongest

JOS. P. DUNWOODY, PHILADELPHIA, ONE OF THE HOSTS.

branch of the business, and should at all times be in the hands of competent men.

You will agree with me, I am sure, when I say that the backbone and sinew of our trade depends largely on our inspection, and the thought long ago presented itself to me, "Why should not an industry of importance second only to the steel trade of our country take some definite action toward strengthening the weak spots in its organization and inaugurate a school for the

training of inspectors?" With this thought still in mind I have come before you in order to have the subject given broader thought and more open discussion.

In order to cover the ground quickly and concisely I have seen fit to divide my subject into four component parts.

First. The advisability and necessity of a school of inspection.

Second. The class of men eligible for scholarship and term of instruction.

Third. The location of such a school and its maintenance.

Fourth. The direction and administration of the school.

In taking up the first division I would call your attention to the strides that the lumber business has taken in the past ten or fifteen years. Notwithstanding the many storms that it has passed through, the seasons of unrest and discontent, from which it has emerged safely, all the better for having passed through them, it has constantly drawn closer together on stronger and better organized lines.

This condition has been made possible largely through our trade associations and the general tendency toward a universal adoption of an inspection and set of inspection rules which could at all times be used as a basis of equitable adjustment between buyer and seller.

We now have such rules in active force throughout our country and covering every class of lumber that is manufactured, but we frequently find instances where men entrusted with their interpretation are wholly unfit and whose judgment and ability do not permit of the rules being properly applied. In consequence we are brought face to face with the annoying claim and the subsequent reinspection by a licensed inspector which in many cases is unsatisfactory to one party or the other.

This brings me to the point where I contend that we should have a training school to endeavor to overcome this feature.

To take the young man and start him in with the A B C of inspection, train him by regular courses of instruction and bring him finally to the point where, when he passes his judgment on lumber, it will be the expression of the judgment of his classmates, who have been trained in the same school, who are going out into the world of activity, endowed with the same idea of inspection as his, then you are properly sowing a seed of universalism which cannot help but prove of inestimable value and benefit to the trade, decrease the number of claims and do away, in a great measure, with the necessity of reinspection.

Our national and state governments have long since seen the necessity of applied forestry and have established well equipped systems and bureaus devoted entirely to the furtherance of this work. We also have established at one of the leading colleges a chair of forestry which many of you have helped make possible by your contributions.

JOHN L. ALCOCK, BALTIMORE, ONE OF THE HOSTS.

tributions. Why is it not of equal importance to train men to properly handle the forest product after it is manufactured and to establish a school for this purpose?

If a system of this sort had been in operation thirty years ago millions of feet of marketable lumber which was thought of no value would have been saved, our early box manufacturers would not have made packing boxes from uppers and that great statesman, Senator Dalzell, would

have been spared the stupendous task of endeavoring to locate a lumber trust.

And now as to the class of men eligible to scholarship in such a school and term of instruction, I would not consider it advisable to include in the list of students such men as have had the advantage of advanced or technical experience in inspection. The school would be purely to give systematic aid and opportunity to men and boys who have some previous knowledge of the lumber business and are desirous of fitting themselves for a higher position and whose judgment has not already been distorted and contaminated by previous falsely acquired ideas. They should be men of at least ordinary school education and should pass an examination on entrance in such branches as mathematics, orthography and penmanship.

The term of instruction, I have thought, should be of at least eighteen months' duration, the first six months of this time to be devoted to sawmill training, where the student can more readily understand the possibilities and difficulties attending the manufacture of lumber. At the end of this period he should pass an examination covering points that he should have gained in his six months' training. If he passes successfully he then should enter the class of inspection to which, I have thought, a full year should be devoted. The last six months of this year to be taken up by having the student visit different localities with an opportunity of inspecting under actual conditions.

From this source there would naturally be a certain amount of revenue obtained which would revert to the school and be used to reimburse those who had contributed toward its support.

At the end of this time the student or students should be given a final examination cover-

R. E. WOOD, BALTIMORE, ONE OF THE HOSTS.

ing their entire course and their fitness to occupy positions as inspectors should be determined entirely by their individual average, a failure to attain required standard necessitating their taking all or a part of the course over.

I am confident that an opportunity to advance themselves so rapidly would be an incentive to each and every one to excel and to fit themselves for a position which is at once a profitable and independent one.

You who have experienced the many difficulties of obtaining competent inspectors can readily understand what a great satisfaction it would be to be able to draw from such a school trained men in whom you could place entire confidence as to ability and this association would always have a reserve force to draw from and be assured of the character of the men they were employing.

The third division of this subject is the one that has given me more cause for thought than the rest. "A suitable location for this school," but I am almost convinced that Memphis, Tenn., or Cincinnati, O., would be the most desirable points from the fact that both branches of training, the mill and inspection, could be pursued at these points.

I have thought that if a school of this character could be established independently, have its own sawmill, buy its own logs, manufacture its own lumber and market its own product, the income in addition to the tuition fees would keep an institution of this kind on an absolutely independent footing. But if it was thought inadvisable to establish an independent school, by locating at Memphis or Cincinnati the scholar could secure the benefit of a thorough mill edu-

cation and subsequent inspection experience in many of the mills and yards at these points.

The direction and administration of a school of this character should be entirely in the hands of an educational committee or board to be established with careful consideration of their individual fitness, this board to be appointed by the president of this association and to work at all times in conjunction with the Board of Directors and Inspection Bureau Committee, and the combined members of the Board of Directors, Inspection Bureau Committee and Educational Committee should elect an instructor of well

I. F. BALSLEY, PITTSBURGH, ONE OF THE HOSTS.

known ability to have full charge of the tuition, after he has carefully prescribed a thorough course of training, the same to be approved by the combined members of the committee.

I would in this connection suggest that as a basis of inspection the national rules as they are at present or as they may be revised be used in the inspection course.

In conclusion I wish to thank you for the time that I have taken up and I sincerely hope that some action along these lines will be taken in this convention, as I feel that even should it be found necessary to raise the annual dues of this association in order to start a movement of this kind each individual member would early realize that he had aided his own business far in excess of the small monetary outlay and contributed to the greatest movement toward a universal inspection that has ever been inaugurated.

Mr. Currie—I hope some action will be taken by this convention along these lines, as I feel confident even should it be found necessary to increase the dues of this association each individual member would early realize that he has been benefited far in excess of the small outlay, having contributed to the greatest movement toward universal inspection that has ever been inaugurated. [Applause.]

President Russe—Mr. Currie's address has certainly given us food for thought. I trust these addresses will be gotten up in such shape that you will all receive a copy.

Mr. Thompson—We have just listened to an address which this association ought to take under consideration. I have worked three or four years on the inspection bureau of this association and I know how hard it is to get competent inspection. We may get a man to inspect one class of goods, for instance, in Memphis or maybe in Wisconsin, and he would not be capable of inspecting in New York. Or, this association might employ a man to take care of the market in New York who might know nothing of mahogany, cherry or walnut, while he might be an expert on oak. This association needs right now more than any other thing the right kind of men to take care of this thing. We cannot get protection in the different markets simply because the man who is representing the association there as inspector doesn't know how to inspect the goods we ship to certain localities.

He may be good on birch or maple, but shy on something else. I make a motion that you appoint a committee to take this matter up and see if something tangible cannot be done. I agree with Mr. Currie in everything he has said. We should have intelligent men to inspect lumber. It occurs to me that if you take these men and put them in the south for a time, then in the north, then in the east, and let them shift around and become acquainted with these goods, you will

H. M. DICKSON, NORFOLK, ONE OF THE HOSTS.

be able to get good men for the different markets.

Mr. Guenther—I would move that this be laid over until tomorrow under the head of "new business." Just as soon as you start in to accept motions, the program cannot be carried out. I trust the gentleman will present this matter to the convention tomorrow in the same manner as he has done this afternoon.

President Russe, addressing Mr. Thompson—I would prefer that you withdraw the motion for the present.

Motion withdrawn.

President Russe—We will now have the report of the Inspection Rules Committee. I want to say in connection with this that it is a report that has taken much time and thought; in fact, it is the basis of our organization—inspection.

Mr. Fathauer read the report of the Inspection Rules committee, as follows:

Report of Inspection Rules Committee.

Mr. President and Gentlemen of the Convention: Since our last annual meeting, but particularly since our semiannual meeting held October 25 in Cincinnati, the resolution adopted in Buffalo in May, 1905, viz.: "Rules to take effect December 1, 1905; these rules not to be changed for a period of three years," has been discussed a great deal, and inasmuch as your chairman supported that resolution, and furthermore, since I have in the past vigorously opposed all attempts to annul same, I wish to avail myself of this opportunity to explain to this convention why I took that position in the past, and also my present attitude regarding same. In doing so I believe I am not digressing from the subject assigned to me. In my judgment, to change inspection rules at each and every meeting of our association is a serious mistake, for such action is adopting a policy of vacillation. It also retards the uniform application of said rules, for uniform inspection rules are of little use if the uniform application of said rules is not accomplished. I believed at that time that not to change the rules for a period of three years would give them the much-needed stability, and would also give the inspectors a chance to familiarize themselves with same, thus accomplishing uniform application. The above are the reasons, as stated before, why your chairman was in favor of the Buffalo resolution and why, in the past, he has protested against any and all efforts to annul same.

I also consider that we made a pledge to the public, viz.: hardwood lumber consumers, and to break faith with them is a serious proposition. Before we discontinue the life of our present rules, which we advertised would remain in force until December 1, 1908, through the distribution of 25,000 copies from our secretary's office, we should give the subject thoughtful consideration. To discontinue an agreement among ourselves is a matter easily disposed of, and need not concern anyone but our members. If we can substitute a set of rules that will be more easily understood by the inspectors who apply the rules, then we have furthered the uniform application of our rules by such substitution rather than retarded it. If we can prove to the public (the consuming trade) that we have not broken faith with them, if they are convinced that our substitution is not revolutionizing the present classification and that our standard is practically the same, if the new rules are plainer and the classification in some instances more varied, I believe they will be pleased with the change. These are the reasons why I believe we can favorably entertain the suspension of the Buffalo resolution with all propriety.

Conditions which have confronted the association for a year past, especially for the last six months, were of such a character that to assume an attitude of inflexible firmness regarding the Buffalo resolution would have been interpreted as an arbitrary and unpardonable act. Therefore, when a request was received from another association some months ago, that their inspection rules committee meet a like committee from this association, the executive board of this association wisely decided that they should be met, and so directed our inspection

HARRY S. DEWEY, NEW YORK, ONE OF THE HOSTS.

rules committee. This brought about the first meeting, in November, 1906, of the committee representing the Michigan Hardwood Manufacturers' Association and our committee. Later a similar request was received from the Wisconsin Hardwood Manufacturers' Association to meet us, and it likewise was granted. The latter meeting developed into a joint conference of the Wisconsin, Michigan and Indiana Associations, and the National Association's rules committee, which was held in Chicago, May 8 and 9.

During these meetings the inspection rules were discussed at length. All of the meetings were amicable, and I can testify, from the viewpoint of our committee at least, that the result of this conference was gratifying, and I believe that the visiting committee will offer similar testimony. Immediately after the conference of May 8 and 9, your committee began to prepare its report in order to have same in readiness to present following the suspension of the Buffalo resolution. Pardon the assertion, your committee believes it has prepared the best report that has ever been presented to this association. This by no means is a reflection on the efforts of former committees, for they were never given sufficient time to do themselves and this association full justice. I make all of these statements as I consider them relevant and to have bearing on the suspension of the Buffalo resolution. Now, your inspection rules committee believes that the rules report which it has prepared is an improvement over the present rules; further, that the new rules will

make the application easier and that the public will gladly change the new for the old. In view of the fact that our board of managers, through the act of directing your inspection rules committee to meet like committees of various associations already referred to, favored the suspension of the Buffalo resolution, your committee has pledged itself repeatedly to the visiting committees to favor the annulment of the Buffalo resolution.

I therefore appeal to you most earnestly that when at the proper time the resolution is brought before this convention, to decide by vote whether or not it shall be suspended, you will help us redeem our pledge, and vote for the suspension of the Buffalo resolution.

Uniform inspection, of which so much has been said and written, especially of late years, can only be attained through the agency of an association which is broad in its scope. No association can ever hope to accomplish uniform inspection unless all hardwood lumbermen are eligible to its membership. If it can be proven that a hardwood dealer is not a hardwood lumberman, then I am willing to concede some chance to an opposition. My personal curiosity is very much aroused to know what in reality a hardwood lumber dealer is if not a hardwood lumberman. There is only one agency through which uniform inspection can be attained and that is through the National Hardwood Lumber Association. There is absolutely no question about it. To oppose the National Hardwood Lumber Association through personal or collective efforts is simply opposing uniform inspection, for such action is simply going on record that uniform inspection is not desired, for we all know "that actions speak louder than words."

THEODORE FATHAUER, Chairman.

J. M. Pritchard moved the report be accepted, which was seconded and agreed.

President Russe We will continue the subject by listening to an address on Cherry Inspection by W. L. Sikes.

Mr. Lloyd—Mr. Sikes has not arrived. I do not know where he is, but he will probably be here tomorrow.

President Russe—Mr. Higbie was not expected to speak until tomorrow. I am glad he is here. We have a lot of work for tomorrow and we would like to hear all the good things today and get to work tomorrow.

Mr. Higbie then gave the following interesting address on "The Wholesaler—Some Reasons Why He Is a Necessity":

Mr. Higbie's Address.

When the invitation to address you was given me by the chairman of your committee, I felt complimented indeed, but I want to confess

E. S. FOSTER, NEW YORK, ONE OF THE HOSTS.

to you that at that time I did not fully realize how great that compliment was.

A short time after the invitation was received, it was my good fortune to meet, as a member of the inspection committee of the New York Lumber Trade Association, with the committee of your association for the purpose of

trying to remove the difficulties that have heretofore prevented the New York Association from adopting your inspection rules, and I want to say that the two days' session in conference with the four men of your committee made me more than willing to come to this beautiful place and look you all in the face and get better acquainted with you.

This meeting in New York with your representatives was so very pleasant that I was constantly reminded of that future state of perpetual bliss to which we all hope to attain. Every picture of the heavenly city which I have ever seen has had somewhere in it a beautiful river, with overhanging trees and velvety green banks, where we may all enjoy ourselves without stint. I just want to say to you, however, that the number of "green rivers" that were flashed before my eyes by your committee during those two days in New York made me think that your members must have already attained to that state of perpetual and ecstatic bliss even here on this earth. At the end of those two days I began to comprehend the great compliment paid me by your invitation. I am glad to be here and promise you now that I will talk to you only a short time, for I am sure you would all prefer to enjoy the breezes from the old Atlantic and watch the beauties of both land and sea from the Board Walk.

The topic assigned to me is the relations of the various divisions of the lumber trade to each other in general and the place the wholesaler occupies in that division in particular; in other words, the reason why the wholesaler is necessary; for that he is necessary no one would seriously question. Just why your committee chose that particular subject at this particular time I do not know.

I am sure that the position of the wholesaler in the lumber trade is not in any danger. It is possible that there is here and there some fellow who thinks he is the "whole thing" and so wants to occupy the entire field, but I imagine that these men are very scarce and that they remind us of a certain Royal Person. We all have great respect for the German Kaiser. He is without doubt a great man, in fact, a genius, but like every other genius he has certain eccentricities, one of the Kaiser's being his inability to forget his own importance. One of his sons, a prince of the blood, tells this little pleasantry about his father. "The trouble with dad," says the prince, "is that if he goes to a christening he somehow, after a little, seems to think he is the baby; if he goes to a wedding he will, by the time the ceremony commences, imagine he is the bride; and if he goes to a funeral, he just can't help it, but before the services are over he is perfectly sure he is the corpse." So with these lumbermen, few and far between as they are, they can't rest unless they are in the limelight all the time. But the wholesalers need not worry. We all know we cannot get along without him. Of course, little differences arise once in a while between friends, but they only serve to make life interesting.

N. H. WALCOTT, PROVIDENCE, ONE OF THE HOSTS.

Two little girls had one day been playing in the park. They had been having a good time; in fact, so good that they finally quarreled. They sat down on a settee and turned their backs upon each other. They sat still for awhile, when one of them said to the other: "If one of us would get off this settee I would

have more room." This same kind of thing happens occasionally to the wholesaler. Some manufacturer, who has been having a good trade in some special thing, thinks he would have more room if the wholesaler would get up and leave the field to him. But it isn't so.

The conditions under which not only the lumber business but every business is carried on, are the results of many years of growth and have only been brought about because many men in common have found them to be the best for all. All conditions change slowly, and rightly so, for one of the most important of all business needs is that of permanency and stability; otherwise we would not know where we are at. The easiest way to do anything is very apt to be the natural way. That is only another way of stating the natural law that moving bodies go along the lines of least resistance. Water will of its own motion run down hill and if the volume is large enough will produce a flood, but it takes power and push to get this same water to go up a hill; so in business, as long as we follow the natural channels, or the lines of least resistance, we do not encounter many obstacles, things go smoothly and the results are more than likely to be found satisfactory.

It is only when we leave these natural channels and undertake new and untried paths that we meet with unusual conditions and make trouble for ourselves as well as for other people.

The lumber business, as a result of many years of development, has naturally divided itself into four classes or branches, viz.: first, the manufacturer or producer; second, the wholesaler, jobber and commission merchant, or, if you please, the middleman; third, the

W. W. KNIGHT, INDIANAPOLIS.

retailer, including the large factory trade, the door, sash and trim trade, etc.; fourth, the consumer. We find similar divisions in nearly all kinds of business, which fact only proves that we must be carrying on our business in the right way.

Many years of experience have demonstrated that the best interests of all lumbermen are best conserved if the above lines are observed. I do not mean that these lines are hard and fast. As a matter of fact these divisions do overlap. There are many wholesalers who have found it necessary, in order to make sure of all or a part of their supply, to go into the manufacturing of lumber either directly or indirectly; and, on the other hand, some manufacturers have found it both desirable and profitable to market part or all of their own product. This does not affect the general proposition as laid down above. These wholesalers who manufacture, have not hereby ceased to be wholesalers; they are wholesalers and manufacturers; and these manufacturers who sell their own products have not ceased to be manufacturers; they are both manufacturers and wholesalers. But these men who thus carry on the double business, must maintain separate departments for both manufacturing and wholesaling.

It goes without saying that the place for the manufacturer or producer is at his place of production, and generally speaking each manufacturer has only one such place. In order that he may get the most out of his logs with the least possible cost it is his business to be on the ground. That he may succeed, his best

efforts must be given and even then his task is not an easy one, and without this close personal attention the best results are rarely if ever attained. Fully two-thirds of your members are, I believe, manufacturers, and it needs no argument of mine to convince this audience that after the manufacturer has done his duty by his mill he has little or no time left for anything else.

This personal attention is as true of selling lumber as it is of producing it. A man must know his customer, his wants, his peculiarities, his methods; in short, he must know in a large

J. V. STIMSON, HUNTINGBURG, IND.

degree the customer's business in order to please him. This the wholesaler can and does do. Things go wrong in the selling and delivery of lumber as well as in the producing of it. To keep the trade moving requires close personal attention. This close attention the manufacturer cannot give without, in a measure at least, neglecting his business at the mill or producing point. That some manufacturers distribute their own product is true, but in order to do so to good advantage they become to all intents and purposes wholesalers as well as manufacturers; they employ salesmen and install a complete outfit that corresponds fully with that of any other wholesaler as already stated.

It is just as true in the lumber world as anywhere else that no man can be in two places at the same time. Therefore, when a man, either by himself or by his representative, is meeting his customers he ceases to that extent to be a manufacturer and becomes a wholesaler. Whether a man or a firm wishes to be this is purely a matter of policy which each one must decide for himself. In any event the fact remains that the seller of lumber is the function of the wholesaler and is as firmly established as that of the manufacturer or retailer.

There is another function and a most important one which the wholesaler has performed, and which he must not overlook. In every lumber producing section there are small manufacturers who produce comparatively a small amount of lumber when each one is considered by himself but in the aggregate the result is very large. These men are good, honest, industrious men, but they are men of small capital and they find it almost impossible to carry their operations without outside help. In order to keep their operations alive and to support themselves and their families they turn to someone for assistance. Many wholesalers, in order to secure supplies of lumber, make advances to these small manufacturers, depending oftentimes upon nothing but the honesty of the men to whom these advances are made and it is a great tribute to the lumber trade in general that only in the rarest of instances are the wholesalers disappointed in their men or lose any part of the money which they advance. It is no reflection at all upon these small manufacturers that they are thus compelled to seek aid and assistance. The larger manufacturers do the same thing only in another way. They go to their banks and have the banks discount notes, the proceeds of which are used to carry on their operations during the long time of getting lumber in shipping conditions. We all know these men. We all know how hard they work. We all know what difficulties they have to overcome, for it is no easy matter, particularly in certain sections of our country, as the mountains of

the South, to get the logs cut, hauled in many instances several miles to the mill, and then hauled in many other instances a great number of miles to the railroad tracks. The weather is bad, the roads in certain seasons of the year are impassable, and even after these difficulties are overcome it is often necessary for these men to wait days and weeks before the railroad companies deliver to them cars on which the lumber can be shipped. This advancing of money to the small manufacturer by the wholesaler has become a recognized function in the

R. F. SWAIN, SHELBYVILLE, IND.

trade and is only an added reason why the wholesaler is a necessity in our business.

Up to this time we have considered this matter entirely from the viewpoint of policy, but there is, I think, another side to it, namely, that of the ethics of the trade, and I do not know how better to touch this side than by relating an incident that is said to have happened in the state of Connecticut—the home of the genuine "yankee." The incident is a story — with a sequel.

One hot summer afternoon, many years ago, the small boys of a country village in the beautiful valley of the Connecticut river were gathered, as boys were wont to gather, in the country store. There was nothing unusual about the store or the boys. The boys were full of fun and innocent mischief. It so happened that on the counter was a box of marbles, dear to the heart of every boy, and while indulging in some boyish trick this box of marbles was upset and the marbles were scattered on the floor among boxes, barrels, nail kegs, etc.

The proprietor, who was a young man with an eye for the main chance, wished to get the marbles again and proposed to the boys that they should pick them up, and as an inducement promised them that he would give each boy one-half of all he found. The boys fell to with great industry and shortly all the marbles had been found. Now the proprietor, still, as he thought, with an eye to the main chance, quietly locked the front door and put the key in his pocket. He then proceeded to take each boy and empty out of his pockets every last marble, and, not dividing at all, put each boy out of doors in turn, again carefully locking the door. This operation he continued until all the marbles were again in the box and all the boys were out of doors, sadder but wiser. It was a sharp trick, but there was a sequel.

Twenty-five years passed. The boys had grown to be men and the shrewd storekeeper had outgrown the country village and had moved to town. He was prosperous and rich, but not so rich that he did not crave more money, even as he craved more marbles. He had an opportunity to increase his wealth but he needed more ready money than he had, so he did what we all do—he went to his bank. He laid his case, his need and his collateral before the cashier; the cashier examined them all, was willing to consider the loan and asked our old friend to call again the next day.

In the meantime the cashier called on a young and rising lawyer who was well known to him. He told the lawyer about the man and his application for the loan. He said the man was likely to do, his project feasible and his collateral satisfactory, but the loan was a large one and he wanted to know something about the man himself. In other words, he wanted to know the "moral hazard." Now it so happened that the young and rising lawyer was

one of the little boys who had taken part in the marble episode twenty-five years ago, and the whole scene recalled itself to him so vividly that he just related it to the bank cashier exactly as it had happened without any comment.

The cashier listened and went away, but the next day when our old friend came in he returned him his collateral and declined to make the loan because the moral collateral would not bear inspection.

Gentlemen, I do not vouch for the truth of the story, although it was told me as having actually taken place. I care not whether it is true or not, for the principle is as true as the everlasting hills.

The application is perfectly plain: Our friends, the wholesalers, have gone into byways and highways and gathered up the trade (the marbles, if you please); they have brought this trade to the manufacturer and have given it to him; even perhaps educated him and told him who the customer is and where he lives; in short, have educated the manufacturer. The wholesalers not only expect, but they are entitled to their fair share of the division of the profits (the marbles, if you please) and I firmly believe that in the vast majority of cases they are getting all they are entitled to. Further, I believe that they are getting their part of the division without any trouble, for in most cases the manufacturer recognizes the wholesaler as his friend and co-laborer; he divides the "marbles" willingly and asks the wholesaler to come again.

The foundation of business is confidence in each other and fair dealing with each other. Sharp practices may succeed occasionally, but permanent success has a most lasting founda-

J. M. PRITCHARD, INDIANAPOLIS.

tion; it recognizes the claims of other men and is content with a fair division of the good things of life; it recognizes that there is enough for all and that it does not pay to lower the grades.

Gentlemen, in closing I want again to thank you for the privilege which you have given me of talking to you in this informal way. I have said little or nothing new, but it is not perhaps a waste of time to be reminded of old truths. I want to congratulate you upon the splendid work your association is doing for the lumber trade and to wish you every success and bid you "godspeed."

Mr. Lloyd—I move a vote of thanks be tendered Mr. Higbie for coming here and talking to us. He is a prominent member of the wholesalers, and we do appreciate it.

The motion was seconded and carried.

President Russe—About 60 per cent of our members are manufacturers and we believe in having the wholesaler with us. [Applause.]

Mr. Lloyd—Tomorrow morning at 10 o'clock is to be the trolley ride for the ladies. They will take the cars at the Board Walk and Virginia avenue. There will be special cars.

Also, the photographer wants to take a picture outside immediately after the meeting.

On the Waterways of the Country.

President Russe—A gentlemen whom I referred to in my address this morning, we have with us, John A. Fox, special director of the National Rivers and Harbors Congress. He

has written upon the subject which I believe is the vital one of the country today. I believe before we get through with it, it will become a matter for political campaigns—whether you are for or against it. I have the pleasure of introducing to you Mr. Fox.

Mr. Fox—Mr. President, it is with a feeling of pride that I look out upon a body of men so national, so representative and so capable of judging this question and assisting us in this great opportunity to bring about such improved conditions in our waterways system as will relieve the congestion.

After this brief introductory speech Mr. Fox delivered a most interesting and valuable address on Rivers and Harbors, which met with enthusiastic applause. It is not reproduced here, as it was practically the same as was given before the Hardwood Manufacturers' Association at its annual meeting at Memphis in January last, which appeared in these columns in full at that time.

Mr. Fox—I would recommend that strong resolutions be passed and a committee be appointed to attend the coming congress. I hope you will help the men who will be present from every state in the Union so a cry will go up that will reverberate backward and forward between the Pacific and the Atlantic so the halls of congress may resound until every man has pledged himself to rectify and regulate and systematically improve these American systems of matchless waterways in this great country. [Long applause.]

The convention then adjourned until 9:30 a. m. Friday, May 24.

FRIDAY MORNING SESSION.

The convention was called to order by President Russe at 11 o'clock a. m.

Endorse Work of Rivers & Harbors Congress.

Mr. Nolan—I want to offer a resolution on the subject of Mr. Fox's able address of yesterday. I am satisfied the members of this association agree with every word said. We are all in sympathy with the movement for improved waterways in the United States. I have a set of resolutions here I would like to introduce at this time, if, in your judgment, it be pertinent:

THOMAS J. MOFFETT, CINCINNATI.

Whereas, The National Hardwood Lumber Association is directly concerned with matters of transportation, and as an organization is a factor in solving economic questions; and,

Whereas, The abnormally congested conditions of traffic during the past year have served to demonstrate that the railroads of the country are of themselves not wholly inadequate to cope with the situation; and,

Whereas, The opening of the Panama canal, the rapid development of our western states and the promise of increased commercial relations with the South American countries will tend to aggravate such a condition in the near future if not now wisely provided for; and,

Whereas, The great natural waterways of this country, reaching more than forty states and aggregating more than 38,000 miles will, if properly improved and developed, serve not only to relieve this congestion, but also be the means of effective railroad rate regulation; and,

Whereas, The National Rivers and Harbors Congress is now striving to bring about such a change of policy as will lead to the systematic and efficient development of these waterways; therefore, be it

Resolved, By the National Hardwood Lumber Association assembled in convention this 24th day of May, 1907, that we heartily commend the timely and efficient work of this association and pledge it our aid in the crusade of publicity now being carried on to bring about a wholesome, comprehensive and systematic improvement of these natural highways and that we join them in their plea for large and regular appropriations on the part of the national government to the end that the immediate and efficient development of our worthy rivers and harbors may be brought about. Be it further

Resolved, That copies of these resolutions be sent to the Hon. Theodore Roosevelt, president of the United States; to the Hon. Joseph E. Ransdell, president of the National Rivers and Harbors Congress and to every member of the Senate and House of Representatives of Congress.

Mr. Nolan moved that the resolution as read be adopted. Motion was seconded and agreed.

President Russe—The next in the order of business is the report of the committee on officers' reports.

Sam E. Barr, chairman of said committee, presented the following:

Report of Committee on Officers' Reports.

Gentlemen: Your committee on officers' reports have carefully considered the president's address and the report of your secretary in detail. These papers are well worthy the most particular attention of the membership and your committee recommends them to every member for careful consideration. In an association of this character such reports are practically the only means of giving to the members a statement of the work accomplished and of the developments contemplated. For this reason, and in view of the fact that the officers have given their time and labored hard for the welfare of the organization, it is certainly incumbent upon every member of this association to give these reports the proper consideration that is due.

We, the committee, recommend that the asso-

Discussion on Suspension of Buffalo Agreement.

Mr. Palmer—I move the adoption of that report. I believe, in the adoption of that report, we have reached a crisis moment in our deliberations, and not only a crisis moment in this meeting, but, also, a moment of vital importance in the history of this association. Upon other occasions this association has been called upon to pass similar action and the good judgment and loyalty of the membership has always been of sufficient caliber to enable us to pass this danger point not only in safety but in triumph.

I am here today as the spokesman for an absent constituency. I am representing the sawmill men of this country, the men from the foothills of the mountains of Tennessee and Virginia, from Mississippi, the men of Indiana and Ohio, and the men who are producing hardwood lumber in Michigan and Wisconsin. To these men I made a public promise that I would attend this meeting and here upon the floor—not on the stage, gentlemen—upon the floor would advocate the suspension of the Buffalo resolution and a reasonable revision of the rules. I am here today to redeem that promise.

F. W. MOWBRAY, CINCINNATI.

In the past I have not been tardy in my defence of the wholesaler, who, from his lofty location in some multi-story building, has overlooked the entire hardwood trade. But, gentlemen, I am here today to urge upon you the necessity for considering the sawmill man.

It is well sometimes to go back to the genesis of things. I want to tell you that you will find in the sawmill man the beginning of all that has to do with the lumber business, including the city offices, the city yards and this association as well. And for that reason, gentlemen, the sawmill man enters as a factor in this question. The demand for this revision is not the growth of a day. It has been the growth of many months. At the semi-annual meeting of this association, held in Cincinnati last summer, it was my privilege to introduce a motion paving the way for a revision of the rules at this meeting, but owing to the fact that a majority of the members present had not yet heard the rumbling that motion was lost. Today, gentlemen, that rumbling has become a ground-swell.

It is going to be hard to tell just what would happen among our manufacturing members if this resolution fails to pass—the resolution to suspend the Buffalo resolution. I am not here to make any personal threats. It don't make any difference whether the Buffalo reso-

lution is suspended or not, whether this association takes the right action or wrong action, I am with this association always. [Applause.] The primal reason for our apparent inconsistency in saying that we would do a thing and then doing something slightly different from that thing is due to the changed conditions which exist in the manufacture of hardwood lumber as between the present and what it was

W. N. KELLEY, TRAVERSE CITY, MICH.

at the Buffalo meeting. These conditions are pronounced and are apparent to every one who is thoroughly posted on the manufacture of lumber. The price of lumber has advanced since that time twenty-five, thirty or fifty per cent; the cost of production of lumber has advanced fully thirty per cent; the cost of stumpage has advanced one hundred per cent. But another point, and the vital point, is that the quality of lumber is deteriorating and it is impossible to produce from logs that can be secured at the present time some of the grades contemplated by our present rules. That is one reason why we are consistent in our seeming inconsistency in this matter. Another reason is, there is an earnest desire on the part of all true-hearted lumbermen to get down to a universal basis of inspection. I have always argued and will argue and am willing to contest the point with any gentleman at any time and place that we have practically universal inspection, and that is National inspection. [Applause.] You can go into any market in this whole country where lumber is consumed and you can talk about National inspection and the buyer will listen to you and listen understandingly because he knows just exactly what it means. It is a fair and square inspection and it is an inspection that is as universal as Christianity, at least.

Now, it has been argued and may possibly be argued again, that in the suspension of the Buffalo resolution we are breaking a contract. But, gentlemen, let us see whether there is any contract or not. Two of the principal elements of a contract are parties and consideration. You cannot have a contract without having at least two parties, and no contract is valid unless there is a consideration. Now, we are the parties to this Buffalo contract, if you are going to call it a contract? We will admit the national association is one party to that, but who is the other party and with whom did we contract? Where is the other party to the contract? Then, again, what was the consideration? Did anybody promise to pay this association anything to do anything or not to do anything, if we passed the rules that were adopted at the Buffalo meeting and maintain

W. O. KING, CHICAGO.

ciation adopt the suggestion of the president in regard to the suspension of the Buffalo resolution, and opening the way to a conservative revision of the inspection rules of the association at this meeting.

We further recommend that the reports of the secretary and treasurer be adopted as set forth.

SAM E. BARR.

GEORGE W. STONEMAN.

D. F. CLARK.

them in full force and effect for three years. what was the consideration? Gentlemen, there was not any consideration. Nobody has paid us anything. The result of the thing is there wasn't any contract. There were two elements of a contract lacking. It was simply our association getting together and we agreed among ourselves, among our membership, that we would adopt these rules and that we would maintain

D. H. DAY, GLEN HAVEN, MICH.

them for a period of three years. Now, there is nothing under the shining canopy of heaven to prevent this association from getting together and shortening the period if it appears to be desirable for the members of this association to do that thing. [Applause.] There is no inconsistency about it, gentlemen. It is a business proposition. A good many of you have made your plans and set your pace for a year or two years. Some contingency comes along and changes your plans, changes them entirely. Your office force or partner don't get up and say to you: "We are breaking a contract. You have made a contract." You were going to do that thing. You had probably put it in a letter you were going to do that thing, but there is no consideration and no other party and you did not break any contract. You were reasonable. Why were you reasonable? Simply because it was the thing to do. That is why you were reasonable. It is the thing to do today, and that is why the association should be reasonable. [Applause.]

Now, gentlemen, it is to the interest of every man at this meeting who has the interest of this association at heart to participate in the process of letting down the bars. It is the proper time for action. You can go with the current today. You can steer the ship from the rocks of radicalism today. Wait one year and defer action until the time has expired, and what will be the result? If action is not taken the manufacturers are going to come in here and demand revision as a right. They have sixty per cent of the membership and they are pretty near going to dictate what that revision will be, provided you have a single manufacturer left in the association. [Applause.]

Again, let me issue a note of warning to the wholesalers, who may, possibly, in numbers dominate this meeting. Do not insert a wedge between yourselves and the manufacturers at this time. It is not the proper time, gentlemen. It is not the good time to do it. The manufacturers are as necessary to you as you are to the manufacturers and you want to work with them. You want to develop the spirit of unity that has been growing through the efforts of

this association, the only association that is promoting any harmony in the lumber trade today. [Applause.] You want to meet it half way. This is the time to do it. It must be done today if it is done. Some people may say I have a selfish interest in this thing simply because I happen to be a manufacturer. Gentlemen, that is not true. I am not considering any personal interest in this matter whatever. The only interest I have in this question is the interest of the association, the interest of the entire hardwood trade. I don't want to see this association destroyed. I believe this association is the only common ground where the manufacturer and the wholesaler can meet in a spirit of perfect fellowship. There is no other. And we don't want to have that ground cut out from under the feet of either the manufacturer or the wholesaler. You want to preserve the association, gentlemen. You want to do it above all things, because it is the one vital force that is doing something in this country for the hardwood trade. I do not know of any other. [Applause.]

Let us take this matter up in a spirit of brotherhood, in a spirit of unity. Let us not make any personal matter of this thing. Because we have somebody that don't want the rules revised at this meeting, don't let us take our spite out on the association. But stand

D. F. CLARK, MINNEAPOLIS.

by the association. Say to the association, you can make the rules what you please when the question of rules comes up. If this resolution comes up, you won't find me talking about any rules. I don't know much about rules. I don't know much about them. I know any rules this association will adopt are good enough rules for me. I am going to stay by them. [Applause.] Whether poplar shall be six inches wide or seven inches, grade first or second, that don't make much difference and won't break up the association. But I do know if you take arbitrary action, it is going to have a ruinous effect upon this association and the association is the thing I am working for, and I want to see it saved because it is worth saving. [Applause.]

Mr. Guenther. Let me call your attention to the fact that a motion is before this convention and a vote has not been taken. After you have done that, Mr. President, I would like to make a suggestion. I would suggest that no speaker shall talk more than ten minutes and shall not have the floor more than twice. I make this suggestion because we are about to enter into a very important discussion. Everybody who wants to ventilate himself should have the opportunity. But if you make the

opportunity to speak unlimited I fear we will not proceed as quickly as we should.

Mr. Scatterd—What is before the convention?

President Russe—The report of the committee on officers' reports.

Mr. Wall—I want to know what that means. Does it mean the officers' suggestions have been acted upon and the Buffalo resolution is rescinded if that motion is carried? What is your ruling upon that, Mr. President?

Mr. Scatterd—I move to amend that the report be laid upon the table. I don't want to be tied up by that kind of a report. I want a chance to express myself.

Mr. Diggins—It appears to me this is an opportune time. There is a question before the house.

President Russe—The motion was to adopt the report, and Mr. Palmer's remarks were in favor of adoption. The motion to adopt the report of the committee is before the house.

Mr. Scatterd—Up to the present time there has been no succinct expression of criticism relating to the Buffalo agreement. There is the idea that we should suspend but no specific reason why. If you adopt that there is nothing to show what will follow. It may be chaos for the next year. Let us have the reason why.

President Russe—If this report is adopted, my ruling is the Buffalo resolution is suspended. I do not see why we cannot thresh the question out right now.

Mr. Scatterd—Because there is no reason at the present time why the Buffalo resolution should be suspended, except the report of the committee endorsing the report you made. In your address you give no specific reason why the resolution should be suspended. Before we suspend that agreement we should have a reason and a good reason for breaking faith with a three-year contract. Before we do it we should have some reason. I may be in accord with it when I hear the reason.

Dr. Schenk—It seems to me as the Buffalo resolution was made for a purpose, that purpose having been accomplished, we can suspend it. The purpose was to give stability. If in eighteen months we have secured that stability what

JOHN P. HANNA, CINCINNATI.

is the use of carrying along the foundation for three years without putting on the top? That seems to me the first purpose of the Buffalo resolution—stability. The second purpose was to increase our membership. Our membership has increased wonderfully since that time, and the second purpose has been obtained. Another specific reason why we should suspend the Buf-

falo resolution is—and Mr. Palmer has told it better than I can—conditions have changed. Gentlemen, good logs are getting scarce. Another reason is, the desire deep in the heart of every hardwood lumberman to get uniform inspection. If uniform inspection can be reached it ought to be reached. [Applause.]

Mr. Scatcherd—The gentleman who has just addressed you has told the truth. The fundamental part of the success of universal inspection rules of this organization has been that they have been lived up to. If a mistake was made it was made in adopting the Buffalo resolution for three years. We have lived two years under that resolution, and I say he tells the truth when he says in two years we accomplished the fact of increasing our membership and made our rules possible and established the fact that we meant what we said. Yet, on the very threshold of carrying out that agreement, why transgress the rules of honor and of personal contract? Mr. Palmer said in his address yesterday—led up to it beautifully—the duty of the membership of this association is to live up to the honor of the membership of this association and carry it out, notwithstanding it might be against his pocket. The fact is that this resolution was passed, was sent out to the world at large, not only America but abroad—for the first time in the history of this country you established the fact that a man in London could write you, knowing full well that within the next year, he could get what he ordered. I, personally, have a contract based on these rules which does not expire until October 1, 1909, which is a year beyond the limit of this agreement. And I have to live up to it. I cannot go to these men and say the trees are getting poor. Our friends want us to legislate to make good trees. The trees were here long before we were born. Don't let us stultify ourselves as honorable men, simply because the manufacturer—and, who is he, he isn't any better than we are and we are no better than he is—buys the trees and so do you and so do I. We get the best we can. But when you sign a contract between yourselves and your fellowmen you have to live up to it. If you don't your end is sure—absolutely certain. I say the thing that binds this association and is the basis of

be changed. And if nothing of that kind is suggested, why suspend? Bring the reasons—if the reasons are potent, which I don't believe they can be, and then we can discuss suspension.

Mr. Kelsey—I want to reply in part to Mr. Palmer's statement that there is no second party to the obligation. I consider the public as a second party. We took the public into confidence and the public is really the second party. The promise to make no change for three years was an obligation to the public which should be considered, honor being the consideration. We want stability, we want to get something that the public can rely upon. So far as I know, on the part of the wholesalers, they took special pains to get the rules before the public. We insisted on our salesmen as well as ourselves carrying a copy of these rules. A primary reason for a change in the rules is that the manufacturers are going to receive more for their product. Then there is another point to be considered and that is the matter of odd lengths. That gain don't average more than 1½ per cent, which they claimed would be the gain of the consumer, but at the same time you have the rule that requires the consumer and wholesaler to take lumber that may have splits in either end or each end not to exceed the width of the board. When such boards are put to the bench they must necessarily be trimmed off and the

that will be stable, for it is not only an annoyance but a great detriment upon the trade as a whole to have constant changes in the rules.

Mr. Guenther—Perhaps Mr. Scatcherd will accept an amendment to lay on the table until this afternoon.

Mr. Scatcherd—I am willing to accept any suggestion that will bring about a fair discussion of this matter. Up to this time, neither

DR. C. A. SCHENK, BILTMORE, N. C.

in a written address nor a verbal expression on this floor has there been a succinct statement as to why we should rescind the Buffalo resolution. No gentleman has given me any reason for a specific change. That is what I contend for. Don't throw down the bars until you know what you are going to do. Bring the reasons before us, and I am ready to accept suggestions if they are good ones. When there is a good reason I am perfectly willing to consider it. I want something to consider and not simply certain changes should be made without any statement as to why such changes should be made. I will accept the amendment that this be laid on the table until 3 o'clock this afternoon, when it shall be the first order of business.

Mr. Palmer—I cannot understand why Mr. Scatcherd prefers to sit in absolute darkness until 3 o'clock this afternoon. If he is seeking light he ought to have it. Why not let this discussion take place now? The members are here now and we don't know whether they will be here this afternoon. When I want light I turn it on immediately. I don't wait for three or four hours. There is not a man in this house who can claim this matter has been sprung on him. Every member has had several letters that there would be important changes considered at this meeting. Why defer it until 3 o'clock? There is the election this afternoon. If we do take down the bars and suspend the Buffalo resolution—which we are going to do—then comes revision of the rules. It is going to take a long time. We are here now and let's work at it now.

Mr. Andridge It seems to me unwise to pass a motion to lay on the table. We are not now discussing a change in the rules but we are discussing the question of whether we will discuss a change in the rules. Whether we will suspend the Buffalo resolution simply opens the way. If it is unwise for this association to change any rules at the present time I feel sure the good sense of the gentlemen present will see the rules are not changed. If wise for all of us that the rules be changed I feel sure the rules will be changed. Why not open the door

C. A. BIGELOW, BAY CITY, MICH.

loss would be from 5 per cent to 8 per cent. Then taking the matter of width, these boards are taken out in a stage of dryness, and sometime between the time the boards leave the mill and reach the bench there is bound to be a shrinkage. Using 11½-inch boards, for illustration, where the purchaser has paid for 12-inch, it would invariably result in having to use about 11 feet, which means a loss of 8 per cent. And the same feature holds good in reference to asking the wholesaler or consumer to purchase lumber that is good on one face but with serious defects on the other. There is bound to be a depreciation. If this change is insisted upon to be fair to the wholesalers, lumber should remain in the yard one year drying. Referring to classification of lumber, which we have already adopted, it seems to me it answers every purpose. It has made it possible for us to hold our ground between each other. It also made it easy for the purchaser to select about what he wanted. In place of changing the rules the manufacturers should get together and increase their prices which would eliminate any desire to change the rules. They would accomplish the same object. Hold together, gentlemen, and agree upon something

JAMES BUCKLEY, BROOKVILLE, IND.

the whole thing is the inspection rules. They have accomplished a purpose I never believed was possible, and I hate to see the whole thing shattered simply because of not carrying out an agreement for a paltry ten or twelve months. That is why I want this laid on the table. There may be some specific reason. No official suggests whether inspection of oak or poplar should

so that we can intelligently discuss whether or not it is wise to change the rules? Therefore, it seems to me the question before us is this—Shall we open the door for a discussion leading up to a possible change of the rules? I don't know anything about changing the rules. I would prefer to leave that with a good and sufficient committee. They can talk it over better than we can.

How can we get together? By having uniform

EDW. J. YOUNG, MADISON, WIS.

inspection rules that will be good everywhere. I would rather have a single set of rules, and a single set of intelligent inspectors to interpret these rules, than to have two sets. So would you all. It is a business proposition. You sell according to the rules which will give you the most easy kind of grade and you buy according to the rules giving you the highest quality of lumber. Why not have one set that will meet the wants of the manufacturers and the wants of the wholesalers as well as the consumer, and then we will all be on a par, an equal basis, and have a certain set of rules for everybody in the association. I believe the association will establish the wisest set of rules possible. It seems to me we should point the way, and if anybody can suggest a better combination of rules than we have, let's have them.

Mr. Pritchard I want to answer the question asked by Mr. Scatterd. The reason for asking for a suspension of the rules is to give the Inspection Rules Committee an opportunity to present their report. According to the Buffalo resolution we haven't any right to present any report for your consideration. That is the purpose of this motion to adopt the report suspending the Buffalo resolution.

Mr. Scatterd—I want to be understood in this matter. I don't want to shut off discussion on changing the rules of inspection, but I do believe we should go at it in the right way. The rules committee has a right to make us a report at any time because they are a part of us. But let us have the reasons why we should suspend the resolution? That is all I contend for. I want specific reasons for the changes we should adopt. If they are right, we should adopt them. If they are not, we should not adopt them. Don't begin consideration by breaking faith with the trade at large.

President Russe I would certainly rule that a discussion of a change in the rules is out of order until the Buffalo agreement is suspended. We agreed at Buffalo, by passing a resolution, that we would not change the rules for three years. And if a discussion should come up about changing the rules when we have agreed not to change them, that would certainly be a waste

of our time, and I would rule it out of order.

Mr. Scatterd—You put yourself on record as to what you are going to do, and I want to change that. You say to me "why"? You wouldn't change it until I told you why, would you? That is all I ask. I want to know the reason why.

Mr. Babcock—When is the exact termination of the Buffalo resolution?

President Russe—December, 1908—eighteen months from now.

Mr. Babcock It is a wise man who changes his mind. Whether the resolution can be or will be suspended doesn't mean that any radical changes of the inspection rules will follow. I agree that you will have to suspend the resolution if you want to make any changes. The men here advocating a change, undoubtedly are backing and supporting this association. The same men ought to have and will have something to do with the new rules. Let them make such rules as we can back in the same spirit that we back the association in all its work. [Applause.]

Mr. Guenther There is no intention on my part to retard the progress of this convention. I simply thought, in order to satisfy Mr. Scatterd, that it is the universal opinion that the contract should be shortened, it should be laid on the table until 3 o'clock and we can discuss it this afternoon.

E. F. DODGE, CHICAGO.

The question being on the amendment to lay the report of the committee on officers' reports on the table until 3 o'clock, was duly seconded, but not agreed to.

The Agreement Suspended and Amended Rules Read.

The question recurring on the original motion to adopt the report of said committee, which was duly seconded was carried.

Mr. Fathauer Some time ago the secretary, under instructions of the Board of Directors, mailed a letter to you, which you no doubt have all received, asking you for suggestions pertaining to the present rules of inspection, so as to enable the committee to present its report in case the Buffalo resolution was suspended, which you have already done. I wish to state to you that each and every communication, whether from an individual or a collective body, received due and full consideration. Before the committee reports I would ask that printed copies of the report be distributed.

Mr. Palmer I want to make a suggestion, to avoid any suspicion that this is a cut and dried program to be shoved through without giving the members a full opportunity to know

just exactly what we are going to vote upon, that further discussion of a change of rules be deferred until 2 o'clock this afternoon.

Mr. Guenther—That was my amendment in the first place. [Laughter.]

Mr. Palmer's motion, given as a suggestion, was seconded and carried.

Mr. Fathauer—When we revised our report we found there were some few errors. We have a supplement we will read in connection with the printed report which has been distributed.

Mr. Fathauer here read the printed report and supplemental changes in connection therewith as follows:

CHANGES IN RULES.

Under caption GENERAL INSTRUCTIONS, Add a new paragraph, viz.: Exceptions to the general rules are stated under the caption of the respective woods.

Referring to our present Paragraph 1, substitute the following: inspectors inspecting under these rules are instructed to use their best judgment based on these rules.

Paragraph 2, change the phraseology which reads, "Inspection must be made from the worst side of the board," etc., and substitute, "Inspection must be made from the poor side of the piece."

Paragraph 3, substitute the following: "Lumber should be properly manufactured, of good average widths and lengths. It should be sawed plump and even thickness, and have parallel edges, and all ragged and bad ends should be trimmed off. Tapering lumber in standard lengths must be measured one-third the length of the piece from the narrow end. Minimum widths mentioned in any grade of lumber must be of full width."

Paragraph 4. In the measurement of lumber of random widths fractions of over $\frac{1}{2}$ foot as shown on board rule, must be counted up to the next higher figure; fractions of less than $\frac{1}{2}$ foot must be counted back to the next lower figure; fractions of exactly $\frac{1}{2}$ foot must be divided equally between buyer and seller.

The number of defects admitted in any piece must be determined in accordance with the surface measurement as defined by this rule.

A piece tally in feet must be made of all random widths lumber. When strips or stock widths are measured, then a piece tally showing widths and lengths must be made. All lumber in standard grades must be tallied face or surface measure, and the additional thickness over 1 inch to be added. All lumber less than 1 inch in thickness must be counted face measure.

J. S. TRAINER, CHICAGO.

Unevenly sawn lumber must be accepted and inspected into any of the grades of No. 3 common and better to which its quality entitles it; must be tallied at the standard thickness of the piece measured at its thinnest part and must not be more than 1 16 inch thicker at any point in stock cut $\frac{1}{2}$ inches or less thick, or more than $\frac{1}{8}$ inch thicker in $\frac{3}{4}$ and $\frac{1}{2}$ inch stock, or more than $\frac{1}{4}$ inch thicker in 1 inch to 2 inch stock, or more than $\frac{3}{8}$ inch thicker in 2 1/2 inch or up stock. Lumber showing

greater variation in thickness than is allowed under this rule, must be classed as missawn, and graded and reported as such.

These rules define the poorest piece in any given grade, but the respective grades must contain all pieces up to the next higher grade.

Under caption STANDARD GRADES:

Eliminate "There must be at least one-third firsts," etc., and substitute the following: "Firsts and seconds are combined as one grade."

In the grade of No. 1 common, heart must not show more than one-half the length of the piece in the aggregate.

In the grade of No. 2 common, heart must not show more than three-fourths the length of the piece in the aggregate.

Under caption STANDARD LENGTHS:

Substitute the following: Standard lengths are 4, 5, 6, 7, 8, 9, 10, 11, 12, 13, 14, 15 and 16 feet, but not over 15 per cent, of odd lengths are admitted.

In the grade of firsts and seconds the lengths are 8 to 16 feet, but there must not be more than 20 per cent under 12 feet, and not to exceed 10 per cent of 8 and 9 feet lengths.

Under caption STANDARD THICKNESS:

Add to the present standard thickness the following: $\frac{1}{2}$ inch, $\frac{3}{4}$ inch, $4\frac{1}{2}$ inch, 5 inch, $5\frac{1}{2}$ inch and 6 inch.

Under caption STANDARD DEFECTS.

Each of the following defines one standard defect:

Two knots not exceeding in extent or damage one $1\frac{1}{4}$ inch knot.

Eliminate in its entirety "1 inch of bright sap," etc.

Splits—In lumber of random widths, one split not diverging more than 1 inch to a foot, and not exceeding in length in inches the surface measure of the piece in feet. Not more than two defects of this character are admitted in a piece of the grade of firsts and seconds. Lumber sold for special widths will not allow more than one standard defect of this character.

Under caption EXPLANATION:

Eliminate in its entirety the third paragraph and substitute the following: Stain that will surface off in dressing to the standard thickness must not be considered a defect.

Eliminate the fourth paragraph in its entirety and substitute the following:

Wane in lumber $\frac{3}{8}$ and $\frac{1}{2}$ inch in thickness, not over $\frac{1}{4}$ inch in width; 1 inch to 2 inches in thickness, not over $\frac{1}{2}$ inch in width; $2\frac{1}{2}$ inches or over in thickness, not over 1 inch in width; not over one-fourth of the thickness of the piece and one-sixth of the length of the piece or its equivalent, must not be considered a defect. Wane of more than the above description is a defect and must be considered by the inspector.

W. A. DOLPH, MEMPHIS.

"Clear face cutting," as used in these rules, means one face clear. Reverse face must be sound.

Defects not enumerated as standard defects that do not damage the piece more than the standard defects allowed are equivalent defects.

Under caption SPECIAL INSPECTION:

No. 1 common and better means the full run of the log with No. 2 and No. 3 common out.

Eliminate in its entirety the rule defining Merchantable.

Finish—Finish must be 4 inches or over wide, 8 to 16 feet long, not exceeding 10 per cent 8 and 9 feet. Pieces 6 feet surface may have one, 9 feet two, 12 feet three, and 16 feet four standard defects or their equivalent. Inspection must be made from the good face of the piece. The reverse face must be sound.

The grade of No. 3 common when desired may be divided as follows:

No. 3-A must be 3 inches or over wide, 4 feet and longer. This grade will admit of shake, knots, heart, wane and any other defects which do not materially affect the strength of the piece or its use as a whole. The grade to be determined from the good face. An occasional knot-hole will be admitted in this grade.

No. 3-B consists of all lumber below the grade of 3-A which will cut 25 per cent or over sound.

Squares—All woods excepting maple.

Splits 6 inches in length in one end not to be considered a defect. Splits in excess not admitted.

No. 1 Lengths 8 to 16 feet. Four and 5 inch squares will admit one, 6 and 7 inch squares two, 8 and 9 inch squares three and 10 and 12 inch squares four sound standard defects.

No. 2 are such squares that grade below No. 1. Same must cut two-thirds sound in not over three pieces. No piece to be shorter than two feet.

Under caption STANDARD INSPECTION:

In the following woods (lumber) viz.: Ash, basswood, beech, birch, butternut, cherry, soft elm, maple and sycamore, the following standard defects are admitted in the grade of firsts

A. R. VINNEDGE, CHICAGO.

and seconds, according to the surface measure:

Firsts—Firsts must be 8 inches or over wide, 10 to 16 feet long, and free from all defects, except in pieces showing 12 feet or over surface measure, which may have one standard defect.

Seconds—Six feet of surface measure will admit one standard defect or its equivalent; 9 feet of surface measure will admit two standard defects or their equivalent; 12 feet of surface measure will admit three standard defects or their equivalent; 16 feet of surface measure will admit four standard defects or their equivalent.

No. 1 common must be 3 inches and over wide, 4 to 16 feet long. Pieces 3 and 4 inches wide, 4 to 7 feet long, must be clear; pieces 8, 9, 10 and 11 feet long must work two-thirds clear face in not over two pieces; 12 feet and over must work two-thirds clear face in not over three pieces. No piece of cutting to be less than 2 feet long by the full width of the piece. Pieces 5 inches or over wide, 4 to 11 feet long, must work two-thirds clear face in not over two pieces; 12 feet or over long must work two-thirds clear face in not over three pieces.

No. 2 Common—Change from 6 feet or over long to 4 feet or over long.

No. 3 Common—Eliminate the size of cuttings in No. 3 common.

Establish a new caption as STRIP INSPECTION.

Ash, basswood, beech, birch, butternut, soft elm, maple and sycamore.

Grades—Clear and No. 1 common. Widths— $2\frac{1}{2}$, 3, $3\frac{1}{2}$, 4, $4\frac{1}{2}$, 5 or $5\frac{1}{2}$ inches. Lengths—6 feet or over. Thickness—1 inch and $1\frac{1}{4}$ inch. Bright sap is no defect.

Clear strips must be 8 to 16 feet long, and must show one face and two edges clear. The reverse face must be sound.

No. 1 common strips are 6 to 12 feet long, 6 and 7 feet must be one face and two edges clear. Reverse face must be sound. Eight, 9 and 10 feet must work two-thirds clear face in

W. T. SCHNAUFFER, MARIETTA, O.

not over two pieces; 12 feet or over must work two-thirds clear face in not over three pieces. No piece of cutting to be considered which is less than 2 feet long by the full width of the piece. Reverse face of cutting must be sound.

Cherry and plain sawn oak strips grade as above, except that sap is a defect on face.

Quarter sawn oak strips grade as above, except that $2\frac{1}{2}$, 3 and $3\frac{1}{2}$ inches wide will admit $\frac{1}{2}$ inch of bright sap on face; 4 to $5\frac{1}{2}$ inches wide will admit 1 inch of bright sap on face.

Box Boards Gum, cottonwood, basswood, tupelo and poplar.

Wide—13 to 17 inches, 11 to 16 feet long.

Narrow—8 to 12 inches, 11 to 16 feet long.

In both wide and narrow the 11, 12 and 13 foot lengths must work 10 feet 6 inches in one piece; 14, 15 and 16 foot lengths must work 14 feet in two pieces, viz.: 10 feet 6 inches and 3 feet 6 inches clear, excepting sound, discolored sap and one sound standard knot that shows on one face only; 14 foot lengths will admit 15 per cent of split piece, such splits not to exceed 18 inches in length in one end, or its equivalent in length in both ends.

Under caption SOFT ELM. Change the cutting in No. 2 common soft elm from "clear" to "sound."

Under caption ASH. Eliminate "Tapering pieces 20 feet or over long must be measured one-third the distance from the narrow end."

In the following woods, viz.: Bay poplar, cottonwood and sap gum, the following standard defects are admitted in the grade of firsts and seconds, according to the surface measure:

Firsts—Firsts must be 8 inches or over wide, 10 to 16 feet long, and free from all defects, except that pieces showing 12 feet or over surface measure may have one standard defect.

Seconds—Six feet of surface measure will admit one standard defect or its equivalent; 9 feet of surface measure will admit two standard defects or their equivalent; 12 feet of surface measure will admit three standard defects or their equivalent; 16 feet of surface measure will admit four standard defects or their equivalent.

No. 1 Common—Four inches or over wide, 6 to 16 feet long. Pieces 4 inches wide, 6 and 7 feet long must be clear; 8, 9, 10 and 11 feet long must work two-thirds clear face in not over two pieces; 12 feet or over long must work two-thirds clear face in not over three pieces. No piece of cutting to be less than 2 feet long by the full width of the piece. Pieces 5 inches or over wide, 6 to 11 feet long, must work two-thirds clear face in not over two pieces; 12 feet or over long must work two-thirds clear face in not over three pieces.

No. 2 Common—Four to sixteen feet long, change cutting from "clear" to "sound."

Under caption BAY POPLAR, sound discolored sap is no defect in the common grade.

Red Gum.

Grades, widths, lengths and thickness standard.

Seconds Same as ash.

Substitute for the present rule, which reads, "In firsts and seconds pieces must have one red face, etc." the following: Firsts and seconds pieces may have one inch of bright sap on one face and not to exceed one-fifth on the reverse face in the aggregate.

F. S. UNDERHILL, PHILADELPHIA.

No. 1 Common.—

Eliminate the first paragraph in its entirety. Widths, 4 inches or over; lengths, 6 to 16 feet. Pieces 4 inches wide, 6 and 7 feet long, must be clear red; pieces 4 inches wide, 8 to 11 feet long, must work two-thirds clear red face in not over two pieces; pieces 4 inches wide, 12 feet or over long, must work two-thirds clear red face in not over three pieces. No piece of cutting to be considered which is less than two feet long by full width of the piece; pieces 5 inches or over wide, 6 to 11 feet long, must work two-thirds clear red face in not over two pieces; 12 feet or over long must work two-thirds clear red face in not over three pieces.

No piece of cutting to be considered which is less than 4 inches wide and 2 feet long or 3 inches wide and 3 feet long.

Under caption SAP GUM. Sound discolored sap is no defect.

Under caption CHERRY. One inch of bright sap is a standard defect. In No. 1 and No. 2 common there is no restriction as to heart.

Under caption NOTE. Eliminate the last sentence of Note, and substitute the following: Gum spots are no defect in the No. 2 common grade.

Under caption CHESTNUT.

Same rule applies as Bay Poplar excepting wormy. Add under caption WORMY, the following:

This grade to be the same as No. 1 common, excepting that worm holes without limit are considered no defect.

Under caption ROCK ELM, HICKORY and PECAN.

In firsts and seconds change size of cuttings and substitute the following: No piece of cutting to be less than 4 inches wide by 4 feet long.

Under caption No. 1 Common, substitute the following: No piece of cutting in the No. 1 common grade considered which is less than 4 inches wide by 2 feet long or 3 inches wide by 3 feet long.

Under caption HICKORY and PECAN.

In No. 2 common change "clear cutting" to "sound cutting."

MEXICAN AND AFRICAN MAHOGANY

Grades—Firsts and seconds, No. 1 common, No. 2 common, shorts and counters.

Lengths—Two feet or over.

Widths and Thickness Standard. No restriction on amount of odd lengths.

Firsts are 7 inches or over wide, 10 feet or over long, and free from all defects, except that pieces showing 12 feet or over surface measure may have one standard defect.

Seconds—Six inches or over, 8 feet or over long.

Six feet of surface measure will admit one standard defect or its equivalent; 9 feet of surface measure will admit two standard defects or their equivalent; 12 feet of surface measure will admit three standard defects or their equivalent; 16 feet of surface measure will admit four standard defects or their equivalent.

Change caption from Common to No. 1 Common.

No. 1 Common—Four inches or over wide, 8 feet or over long.

Pieces 4 inches wide, 8, 9, 10 and 11 feet long must work 75 per cent clear in not over two pieces; 12 feet or over long must work 75 per cent clear in not over three pieces. No piece of cutting to be less than 2 feet long by the full width of the piece. Pieces 5 inches or over wide, 8 to 11 feet long, must work 75 per cent clear in not over two pieces; 12 feet or over long must work 75 per cent clear in not over three pieces. No piece of cutting to be considered that is less than 4 inches wide by 2 feet long, or 3 inches wide by 3 feet long.

Change term "Cull" to "No. 2 Common."

Shorts Four inches or over wide, 2 to 7 feet long.

Pieces 4 and 5 inches wide must be clear.

Pieces 6 inches or up 2 feet surface measure will admit one standard defect; 4 feet surface measure, two standard defects; 5½ feet surface measure, three standard defects, and 6½ feet surface measure, four standard defects.

CURAN MAHOGANY.

Grades Prime, selects, rejects, shorts and counters.

Lengths Two feet or over.

CAPT. C. F. LIEKE, ST. LOUIS.

Widths—Three inches or over.

Thicknesses Three-eighths inch or over.

Odd lengths are measured in mahogany.

Prime—Must be 6 inches or over wide, 8 feet or over long, with not to exceed 25 per cent of 8 and 9 foot lengths. Pieces 6 or 7 inches wide may have one standard defect or its equivalent. Pieces 8 or 9 inches wide may have two standard defects or their equivalent. Pieces 10 or 11 inches wide may have three standard defects or their equivalent. Pieces 12 inches wide may have four standard defects or their equivalent.

Selects—Must be 4 inches or over wide, 6 feet or over long. Must work two-thirds clear with no cutting less than 4 inches wide, 3 feet long, or 3 inches wide, 4 feet long.

Rejects—Are 3 inches or over wide, 6 feet or over long, and will admit all lumber not up to the grade of No. 1 common that will work 50 per cent clear. No piece of cutting in the No. 2 common grade considered which is less than 4 inches wide and 2 feet long, or 3 inches wide and 3 feet long.

Shorts—To be 3 inches or over wide, 2 to 7 feet long and must be firsts and seconds in quality. Pieces 3, 4, 5 inches must be graded. Pieces 6 inches and over wide to be graded same as Prime.

Counters—Are 12 to 40 feet long, 16 to 24 inches wide.

Clear Strips—Are 2½ to 5½ inches wide, 5 feet or over long. Clear of defects, one face and two edges.

Under caption PLAIN SAWN RED AND WHITE OAK.

Firsts and Seconds—Standard defects are admitted in this grade according to surface measure, same as ash.

No. 1 Common—Grade same as bay poplar.

Add grade of wormy, same as chestnut.

Under caption QUARTER SAWN RED AND WHITE OAK.

Firsts and Seconds—Standard defects are admitted in this grade according to surface measure, same as ash.

No. 1 Common—Grading same as bay poplar.

One inch of bright sap is no defect; each additional 1 inch of bright sap must be considered as one standard defect.

Add Note—All quarter sawn oak must show figure on one face not less than 90 per cent in the aggregate. Eliminate last sentence of note: "All quarter sawn oak must show figure on one face."

Fifteen per cent may be 1/16 inch scant on heart edges, provided sap edge is full thickness.

Under caption POPLAR.

Lengths, widths and thicknesses standard.

Grades—Firsts and seconds, sap, stained sap, selects, No. 1 common, No. 2 common and No. 3 common.

Firsts and Seconds—Eight to 16 feet long.

Firsts—Ten to 16 feet long, 8 inches or over wide. Pieces up to 13 foot surface measure must be clear, excepting pieces 11 and 12 inches wide will allow 2 inches of bright sap; 14 to 16 feet surface measure will allow one standard defect, or 2 inches of bright sap; 17 feet or over surface measure will allow two standard defects or 3 inches of bright sap.

Seconds—Eight to 16 feet long, 6 inches or over wide; 6 and 7 inches wide must be clear, 8 and 9 inches wide may have 1 inch of bright sap; 11 to 14 foot surface measure may have three inches of bright sap and one standard defect, or two standard defects, if there is no sap; 15 to 20 foot surface measure may have 5 inches of bright sap and one standard defect, or 3 inches of bright sap and two standard defects, or three standard defects if there is no sap; 21 foot or over surface measure may have 5 inches of bright sap and two standard defects, or 3 inches of bright sap and three standard defects, or four standard defects if there is no sap.

Saps—Must be 5 inches or over wide, 8 to 16 feet long. Pieces 5 to 8 inches wide must be clear, excepting one straight split not exceeding in length the width of the piece; 9 inches or over wide may have one standard defect showing on one face.

Stained Sap—Same as sap, excepting any amount of sound discolored sap will be admitted.

Selects—Six inches or over wide, 8 to 16 feet long, must grade firsts and seconds on one face. The reverse face must not be below the grade of No. 1 common.

No. 1 Common Five inches or over wide, 8 to 16 feet long. Pieces 5 inches wide must work two-thirds clear face in not over two

J. W. THOMPSON, MEMPHIS.

pieces. No piece of cutting to be considered that is less than 2 feet long by the full width of the piece. Pieces 6 inches or over wide, 8 to 11 feet long, must work two-thirds clear face in not over two pieces; 12 feet or over long must work two-thirds clear face in not over three pieces. No piece of cutting considered which is less than 4 inches wide by 2 feet long, or 3 inches wide by 3 feet long.

No. 2 Common—Widths, 4 inches and over; lengths, 4 feet and over.

Change cutting from "clear" to "sound."

Under caption POPLAR PANELS.

Lengths—Ten to 20 feet, admitting 10 per cent of 10 foot.

Widths—Eighteen to 23 inches, 24 to 27 inches, 28 inches and over.

Thicknesses—Five-eighths, 1 and 1 1/4 inches.

Seventy-five per cent of the total quantity must be clear of knots on both sides. Balance of the quantity may contain defects, provided 90 per cent of the piece can be used for panels 4 feet or longer, and the full width of the board.

Three inches of bright sap, or slightly stained sap on each edge or its equivalent in the aggregate, admitted on any board.

Six inch splits in one end of board, not to be considered a defect.

Under caption QUARTER SAWN POPLAR: Grades firsts and seconds, No. 1 and No. 2 common; lengths and thicknesses, standard.

Firsts and seconds—Five inches or over wide; 6 feet of surface measure will admit one, 9 feet two, 12 feet three and 16 feet four standard defects or their equivalent.

No. 1 Common:

Must be 4 inches or over wide, 8 to 16 feet long. Pieces 4 inches wide must work three-fourths clear face in not over two pieces; pieces 5 inches or over wide, 8 to 11 feet long, must work three-fourths clear face in not over two pieces; 12 feet or over long, must work three-fourths clear face in not over two pieces; 12 feet or over long, must work three-fourths clear face in not over three pieces. No piece of cutting considered which is less than 4 inches wide by 2 feet long or 3 inches wide by 3 feet long.

No. 2 Common:

Must be 3 inches or over wide, 6 to 16 feet long. Pieces 6 to 11 feet long must work 50 per cent clear face in not over three pieces. Pieces 12 feet or over long must work 50 per cent clear face in not over four pieces.

No piece of cutting in No. 2 common grade considered which is less than 3 inches wide and 2 feet long.

Under caption WALNUT:

In No. 1 and No. 2 common there is no restriction as to heart.

Respectfully submitted,

THEO. FATHAUER, Chairman.

Mr. Fathauer—The committee also recommends the adoption of these rules to go into effect December 1 of this year.

President Russe—J. M. Woods has something he would like to bring before you.

The Question of a Lumber Trust.

Mr. Woods—I haven't any motion to make.

J. B. WALL, BUFFALO.

only a suggestion to offer. I want to call your attention to the following, and if the convention thinks it wise they can take action. This appeared in this morning's Philadelphia paper:

"LUMBERMEN TO TALK OF TRUSTS."

"Atlantic City, May 23. Facts as to the

high price of lumber and the trust's domination of prices will be taken up by the American Hardwood Lumbermen's Association, at the annual convention, which opens on the steel pier tomorrow. The convention opened with a smoker at the Hotel Rudolph tonight. Several hundred lumbermen arrived this morning."

In the press of this country there is more or less said about this trust. One of the papers of the city of Boston has had a great many cartoons representing the trust as a rotund individual, and calling attention to the fact that the high price of lumber is due to this trust. A short time ago I wrote the editor of that paper and said: "Put up or shut up." I asked him to name the time and place where this trust was organized, who belonged to it, who were its officers and where its headquarters were. I said I considered it an insult to the business interests of the commonwealth of the country that this thing should go broadcast. A lie travels a great deal faster than the truth.

It seems to me that we who have helped develop this country, some of us having served on the fields of battle on southern soil, patriotic, high-minded citizens, conducting an honorable business and not making much money either, should cause to go broadcast a reply so we will stand before the country as we ought to, high

F. W. VETTER, BUFFALO.

minded, honorable men, doing that which is for the best interest of the whole country.

Mr. Palmer—I move Mr. Wood be delegated to write a reply, have it incorporated in our report, and to send it to any paper that he desires to have it printed in, having the full backing of this association in anything he may write.

This motion was seconded and carried.

President Russe—I know Mr. Woods will assume that duty and do it justice.

The convention here adjourned until 2 o'clock p. m.

FRIDAY AFTERNOON SESSION.

Discussion on Changes in Inspection Rules.

The convention was called to order by President Russe at 3 o'clock p. m.

President Russe—We deferred discussion on the report of the Inspection Rules Committee, to be taken up at this time.

Mr. Guenther moved that the report be adopted as a whole. Motion was seconded.

Mr. Barksdale moved to amend that no member be allowed the floor but ten minutes and only twice. Motion seconded and carried.

The question recurred on the adoption of the report as a whole.

Mr. Scatcherd—When does it become operative?

President Russe—December 1.

Mr. Scatcherd—Which year?

President Russe—1907.

Mr. Scatcherd—As I remember, a committee was sent by your association—I say it provided—

I. N. STEWART, BUFFALO.

ly, advisedly, too—to consult with the New York members of the trade, and sought to have them co-operate with us in that we might extend the influence of this association. You invited them to join us in what we thought was the right basis on a three-year contract. You did not tell these gentlemen, that committee did not, and I say it advisedly, that you proposed to change the rules when you asked them to co-operate with us in this convention which is held here today. They are here, and as a matter of courtesy, before we take a vote, I would like to have Mr. White, who represents that committee, tell us his position so far as he represents the New York Lumber Dealers' Association.

Mr. Palmer In the first place, I want to represent the imputation by the gentleman who last spoke that this is any one man's association. This is not your association, Mr. President. This is our association.

President Russe—None of us took him seriously.

Mr. Palmer As to the conference in New York, I want to tell the members of this association that the basis of our understanding there in New York, if any understanding existed whatever, was that the rules of this association were going to be changed at this meeting.

Richard White, president Eastern States Retail Lumber Dealers' Association—I was at this conference held in New York City, and the result of the negotiations was that we offered certain suggestions, slight changes. I am not here today possessed of full information as to what the changes are, nor am I here to throw anything in the way which will conflict, but I do say that all the work that we have done up to this point would have been done for nothing so far as any immediate action toward adoption of these rules providing changes is concerned. At a recent meeting of the Board of Directors of the Eastern States Association, resolutions were adopted providing that the changes suggested at New York be accepted here, and the directors recommended to the constituent associations their adoption for hardwood inspection. It was understood there would be no changes.

Mr. Price here read certain action of the Baltimore members relative to rescinding the Buf-

falo resolution and changing inspection rules.

Frank W. Vetter, on behalf of the Hardwood Lumber Exchange of Buffalo, presented the following:

BUFFALO, N. Y., May 18, 1907.

At a regular meeting of the Hardwood Lumber Exchange of Buffalo, N. Y., Saturday, May 18, 1907, the following preamble and resolution was adopted:

WILLIAM E. LITCHFIELD, BOSTON.

"Whereas, There has been some discussion in the lumber press and otherwise that the Buffalo resolution not to change the grading rules of the National Hardwood Lumber Association for three years from December 1, 1905, be modified or rescinded:

"Therefore, be it resolved, that it is the sense of the members of the Hardwood Lumber Exchange of Buffalo that said resolution be not rescinded or modified in any way, but shall stand as adopted at the Buffalo meeting, May 18 and 19, 1905."

G. ELIAS, President.

FRANK A. BLYER, Secretary.

Mr. Trainer. We had recently an attendance of seventy-five per cent of the members of the Chicago Hardwood Lumber Exchange, which I have the honor to represent as president, and there was a unanimous expression of opinion that it would be justifiable that the resolution be rescinded and we were all in favor of the endorsement of the work of Mr. Fathauer and the inspection rules committee; that it would be acceptable to the hardwood lumbermen, the manufacturers, wholesalers or consumers.

Mr. Liebke. The general in the field has his plans laid. Grant or any of them and if conditions come along which warrant it the plans are changed. Conditions have changed with us, and, therefore, I think we ought to change our rules. I think the rules the committee made are liberal indeed.

Mr. Litchfield. It is evident that there are two different factions in this association. One made up of the manufacturer and the other of those who buy lumber. It is acknowledged on the floor by members that they buy lumber on one inspection and sell it on another. [Laughter.] And whenever it is possible they sell it on lower grade. The reason for having changes made is this: When it is possible to adopt rules for all members to abide by, then we will have rules understandingly. I believe that we should have an inspection that the members will abide by. It is evident the buyers of lumber want the most liberal inspection. They are honest in their opinion that this resolution should stand. It is not right that one part of the industry should manufacture lumber and sell it under certain inspection, and another part be obliged to sell lumber under some other inspection. The time has come when

we should get together and make rules of inspection that we will live under. I believe if we change these rules it will help our association to stand together. But if one side insists on certain inspection, where do we stand? I think it is possible that we may lose some of our membership. Let us get together on some certain plan which will be satisfactory to all.

Mr. Scatcherd—I want to ask the gentleman how long he thinks any inspection rules will hold and be universal. We started at Buffalo to make it for three years. I want some statement, judging from the three-year agreement, as to how long an agreement adopted today will be binding.

Mr. Clark—I was one of the members of the committee when we passed the resolution at Buffalo, and I want to say I listened attentively to the report of our chairman this morning, where he advised this association that we never had time previous to this meeting to go into the rules of inspection and discuss them fully. He also stated that he advised with every member of this association whether they would suggest making a change and suspend the Buffalo resolution. I want to say the majority were in favor of a change. I want to say further that we took into consideration every letter written, and we endeavored to be broad and bring in an acceptable set of rules for all sections of this

E. V. BABCOCK, PITTSBURG.

country. We worked hard for five days. We have done our best and we have worked hard. We have undertaken to satisfy you. If we haven't done it, it is not our fault. We believe they are nearer to being satisfactory to all inspectors than any rules ever written. In these local associations it is harder to agree on inspection than anything else that comes before them. I represent the Northwest. These rules may not suit them, but we are willing to compromise and fix a set of rules, giving way a little and accepting these rules. We think they are the proper rules.

Mr. Scatcherd Has this committee reported as to how long these rules will apply?

Mr. Clark As long as the customers of the country will accept them.

Mr. Scatcherd Have the criticisms of the rules now existing come from the consumer and buyer or the producer?

All sides.

Mr. Scatcherd Illustrate one side. Has any committee you have met asked for a change of the rules, that is, the buyers? I don't care for the man who sells lumber because he will take my price. I want to ask, can you give me an illustration of anybody asking for a change of these rules. Are we going to dwarf this asso-

ciation and make it bow down to an institution whose birth is after ours and whose rules are after ours? They never had an association of manufacturers until after this association was established and they never had rules until we made our rules. There is not a sensible reason for changing from the Buffalo agreement.

Mr. Stimson—It seems to me there has been some comment here about what was accomplished recently in New York. Mr. White stated that they hadn't accepted our rules of inspection. They had agreed to accept these rules of inspection if we would make certain amendments which they suggested. There is where we stand on that proposition. They may have to consider the rules again and their added changes. I do not know. I want to say that the strength of our position today depends upon the honor, integrity, courage and tact of the officers and the strength of the rank and file of its membership. If this association is appreciated, you must know something of the efforts in time and money that its officers have been giving in the last two years. This present committee on inspection rules drafted the rules that gave us recognition. They suggested the changes. We have followed down the line since. You know there is no more conservative man in the membership of this body than the chairman of this inspection committee. [Applause.] You know there is no man in this association who has opposed any changes in the rules more strongly than has he. He has been perfectly consistent, but he was led to the conclusion that something must be done here at this time or there was danger of disintegration, and there is strength in numbers. I acknowledge the rules of inspection and a systematic application is all we have got, and this body must elect to do with these rules as they see fit in their conservative judgment. They must draft rules as nearly consistent as they can, not to cause a disgruntled element here and there, but on broad-gauged lines. This is an assembly of business men. They are to consider this from the standpoint of common sense. They elect to do the things they see fit, and which in their best judgment are for the best interest of the asso-

VAN B. PERRINE, FORT WAYNE, IND.

ciation. The chairman and some of this committee have spent half their time during the last six weeks gathering together this information. They have been earnest and consistent. They have gone over this matter and drafted a set of rules. They are conservative. There are no radical changes in what is proposed here today. We have elected to rescind the old resolution. That has been your judgment? The

next move is to pass your judgment upon the report of the committee. I would urge that you consider it carefully, as a member of this association, and I have been a member for a long time. I am willing to abide by the result of the majority vote, let it lead us where it may, and I will support the association after that just as loyally as I support it today. [Applause.] We are not wanting to take the other fellow's thunder. Not a bit of it. But there are conscientious lumbermen in this body who desire as nearly as possible a universal system of inspection of lumber and a universal and practicable system of applying the same.

Mr. Scatcherd—How long?

Mr. Stimson—As long as the majority wills it to be. [Applause.] I am willing to trust the people and abide by the result. This committee who presented this report drafted rules and made a system of applying the same that attracted the attention of the gentleman from Buffalo and caused him to come into this association three years ago. This committee is just as earnest in what it proposes to do today as it was then. At the time the gentleman's attention was attracted to the association nobody told him then how long, and he didn't ask. Vote according to the dictates of your conscience and we will stand by the result.

Mr. Thompson—We have made our contract and said we would not change it for three years. If we made that contract why not stand good?

As illustrative of his position, Mr. Thompson related numerous personal experiences.

Mr. Woods—I am all the time learning something and I have learned something since coming here this afternoon. Mr. Chairman, I think everybody in this convention knows my attitude. Up to three or four years ago I fought National inspection rules because we had in our own commonwealth a law that governed this matter absolutely. But like Paul on the road to Damascus I have seen a great light. I want to say, representing as I believe I do every man who handles hardwood lumber, at a meeting of the Metropolitan Lumber Exchange there were unanimously adopted the rules of National inspection of hardwood lumber. That is a won-

derful change in the attitude New England took up to a year or two ago. We realize that conditions have changed, and if any man did not find that out before he came here he hasn't had much experience in the lumber business. We realize it. We have to adapt ourselves to these changed conditions. We believe we should keep step with the situation as it is, realizing that conditions have changed altogether in the

last three or four years. So far as we are concerned we are satisfied to get lumber of any kind. So far as the Buffalo agreement is concerned, it seems to me idle and useless to argue that. This was no iron-clad agreement, not like the laws of the Medes and Persians. Two thousand years ago the whole religion changed from an eye for an eye and the laws of Moses to the teachings of Jesus Christ. We want to recognize changed conditions. [Applause.]

Mr. Scatcherd—Has the committee recommended a time when this will apply?

Mr. Fathauer—The committee recommends that the rules go into effect December 1 of this year. This committee does not recommend how long they shall be operative. [Applause.]

Mr. Underhill—Whether manufacturers or wholesalers, or retailers or consumers, the most desirable condition that could exist would be to agree on a standard that would apply to all shippers. I wish further to say that whilst some of the changes appeal to me as rather radical, yet, the adoption of them is not going to be such a great hardship after all, judging from a recent experience.

I think the adoption of the rules proposed, while I don't agree to all of them readily, yet, it is bringing us close to the place where we are willing to sell on National inspection. [Applause.]

pose to be used during the first twelve months if said school is started.

Dr. Schenk—I think Mr. Currie's paper appealed to all of us. We need educated inspectors and we need them in the yard and the mill as well. The boys should know inspection. We should establish a school for inspectors, where our youngsters, the young men in the trade and in whom we have confidence, can

ROBERT D. McLEAN, BUFFALO.

be trained to inspect lumber. I move the resolution be adopted.

Motion was seconded and carried.

Mr. Thompson—I move a vote of thanks be extended to the Inspection Rules Committee, of which Mr. Fathauer is chairman, for their untiring efforts and the extraordinary amount of work done in bringing about this change in the rules. I said if there is any change to be made I shall be willing to trust myself to Fathauer.

Motion was seconded and unanimously agreed to by a rising vote.

Mr. Thompson—I wish to offer a vote of thanks for the excellent entertainment given the members of this association by the members who have had charge of that matter, especially the entertainment for the ladies and the smoker last night, as well as other arrangements for our amusement.

President Russe It gives me great pleasure to ask you to vote on that proposition. I think the members of the East who have taken charge of us have given us a grand and glorious time. I am only sorry the railroad would not give us special rates from different parts of the country, for we would have had at least 50 per cent more present than there are. I will ask you to rise in voting on this motion.

The motion was unanimously agreed to by a rising vote.

John M. Woods then offered the following resolution:

Strong Resolution on Lumber Trust Controversy.

Whereas, Certain newspapers and persons have published and circulated statements that the National Wholesale Hardwood Lumber Dealers' Association has met in convention to discuss subjects in connection with the lumber trust; therefore, be it

Resolved, By the aforesaid association in convention assembled, that we denounce as absolutely false such statements and brand the authors of them guilty of deliberate misrepresentation. And we proclaim the principal object of this association is the uniform inspection and grading of hardwood lumber throughout the United States, to the end that manufacturers, dealers and consumers of lumber shall alike have a square deal; that the questions of raising or lowering the price of lumber or of in-

C. A. PHELPS, GRAND RAPIDS, MICH.

Amended Inspection Rules Adopted.

The question being on the adoption of the report of the committee as a whole, the yeas and nays were called, and were as follows:

Yeas 93
Nays 15

[Applause.]

Mr. Lloyd—I have here a resolution which I have been requested to read, on the line of remarks made yesterday afternoon.

For a School of Inspectors.

Resolved, That the president appoint within thirty days a committee of five, to be known as the Inspection School Committee, to take up the question of the establishment of a School for Inspectors, under the control of this association. This school committee shall fully canvass the possibilities, cost and income from such a school, and report to the Board of Managers, and also to the next annual convention.

It is further resolved that the Board of Managers have authority to accept and act on such report at any time they find it desirable, and may start a school for inspectors if in their judgment it can be done to the benefit of this association.

And be it further resolved, that the Board of Managers is authorized to appropriate the sum of twenty thousand dollars for this pur-

W. E. DOUGLASS, COLUMBUS, O.

creasing or diminishing the output or in any way affecting either, are absolutely foreign to the purposes of this association.

Resolved, That a copy of these resolutions be sent to the president of the United States and each member of the Congress.

J. M. Pritchard moved the resolution be adopted, seconded and agreed to.

Gardner I. Jones offered the following resolution:

GEORGE F. CRAIG, PHILADELPHIA.

Ask a Census of Standing Timber.

Resolved, That we believe the timber supply of the United States is being rapidly decreased and, therefore, urge the Federal Government at the earliest practicable time to make a complete census of the standing timber of the country.

Resolved, That the National Hardwood Lumber Association endorses the survey provided for by the last Congress looking toward the establishment of forest reserves in the Appalachian and White Mountains, and that in view of the rapid exhaustion of hardwood timber and the importance of these regions for hardwood production, we urge the next Congress to inaugurate a system of Appalachian forest reserves in order that the hardwood supply of the future may be maintained.

Mr. Underhill moved the resolutions be adopted. Seconded and carried.

Election of Officers.

During the voting for president First Vice-President O. O. Agler occupied the chair.

Mr. Barksdale -I desire to place before this convention the name of our honored president, W. H. Russe, and ask for an endorsement of his first term. I don't believe there is a man who has paid any attention to the business of this association for the last twelve months, but what fully appreciates the work that has been done by my fellow townsman. When he was elected a year ago we felt that we knew Bill Russe would be an honor to the association and to our city, and we do not now feel that we have missed our mark or that we misjudged our man. I trust he will be elected without opposition.

Mr. Palmer In rising to second the nomination, I wish to say at Memphis he stated the only remuneration he desired for his services was that the association at the end of his term would say that he has "made good." I am here to state that in my judgment Mr. Russe has "made good," and the only way that you can put the seal of approval upon what he has done is to re-elect him for a second term. I know of my own personal knowledge that he has no desire to accept the office, but he has consented to sacrifice another year provided he has the help of the members of this association. The quality of the work he has done as president certainly entitles him to the unanimous endorsement of the meeting.

Therefore, I move that the nominations close, and the nominee, W. H. Russe, be elected by a rising vote.

Motion carried.

President Russe then resumed the chair.

President Russe—Gentlemen, I can hardly express how I feel at this unanimous endorsement of the work of the past year. I did not know when you made me president at Memphis what it really meant. The work is not only a serious one but it occupies much time. However, I made up my mind that, with the advice of the Board of Managers, we would try to give you a business administration; we would try to bring about an application of the rules so that they would be endorsed by both branches of the trade. It seemed to me two or three years ago that we were trying the impossible, but I am now convinced that our efforts will not be in vain. This association in bringing together the manufacturer and wholesaler and having them in one body is working on broad and progressive lines. The manufacturer sells the bulk of his product to the wholesaler, and the wholesaler being a member of the same organization, thus obtains his information from a source that he knows to be reliable. He hears at this convention expressions from the wholesaler and the manufacturer, and is thus enabled to come in closer touch with the wants of the entire trade. I feel with the adoption of the report

R. L. WALKLEY, NEW HAVEN, CONN.

of your inspection committee that this coming year will be one of pleasant work for the officers, and that at the end of the administrative year we will all feel that we have made wonderful progress and we will have a convention in 1908 at which we will be able to again congratulate ourselves. I am not a speechmaker, as you all know, but I want to assure you that while I felt that I should not accept the office again on account of the time it takes me away from my business, that, having done so (and who could refuse it under the circumstances) that I will give you the best I have in me for the coming year. I cannot do more. [Applause.]

J. W. Thompson nominated O. O. Agler of Chicago for first vice-president.

Motion was seconded and Mr. Stimson moved the nominations close and the election of Mr. Agler be declared by a rising vote, which was unanimous.

Mr. Guenther—I have been requested to place in nomination a gentleman who deserves the office of second vice-president, on account of his loyalty and the good work he has done for the National Hardwood Lumber Association. In

doing so, I want to express to you the gratitude and appreciation of our city for having honored our fellow townsman. In doing so we feel that you recognize the younger element. Without the young man no association is a success. I want to place in nomination a gentleman well known to us all—the reason I said by request was so you won't feel Philadelphia is unreasonable—C. E. Lloyd.

Mr. Barksdale seconded the nomination and C. E. Lloyd was unanimously elected.

C. H. Barnaby nominated Sam E. Barr of New York for the office of third vice president.

Mr. Guenther moved the nominations close, which carried and Mr. Barr was unanimously elected.

Mr. Barr—I did not expect to be nominated for the office of third vice president. I can only endorse the expression of a gentleman behind me, who, when he heard my election declared, said that I should buy a good bottle of wine. I hope you won't all fall in on that, but I am there. I thank you for the honor you have conferred upon me.

The proposition was made that the offices of secretary and treasurer be combined, but there was a difference of opinion as to whether this could be done without notice, necessitating a change in the by-laws.

C. H. Barnaby then nominated Claude Maley of Evansville, Ind., for treasurer, and Mr. Maley was unanimously elected.

Mr. Palmer—The name of Maley will look awfully good on our list of officers.

Mr. Bonsack—I move the chair appoint a committee of five to nominate directors.

Motion carried and President Russe appointed B. C. Currie, Jr., chairman; J. S. Trainer, C. H. Barnaby, G. E. Hibbard and D. F. Clark as such committee.

Next Meeting Place.

Mr. Landeck—I wish to place before you the name of a city that has extended an invitation to you twice before. I have a letter from the mayor of Milwaukee which I will read.

Mr. Barr—I want to second the nomination of Milwaukee and I will tell you the reason why. Last year at Memphis, when we were there, I worked against Milwaukee and to bring

H. A. REEVES, PHILADELPHIA.

the convention to Atlantic City. Now, I think Milwaukee ought to have had it this year. She didn't get it. I want to second the nomination.

Mr. Rumbarger—Milwaukee, the place of beautiful shores, where the Indians used to roam the woods and prairies—and then the breweries went there. I am in favor of Milwaukee. East you find Milwaukee beer everywhere, but I

want to get some of the genuine suds. Milwaukee deserves the convention because she ought to have had it this year. I think we should give it to her next.

Mr. Palmer—I want to amplify Mr. Rumbarger's statement that a good many years ago Indians roamed there. I want to say to Mr. Rumbarger in Milwaukee there are a lot of Indians yet.

Mr. Lloyd—The eastern members will not only vote for Milwaukee, but will try to take the entire delegation there.

President Russe then read telegrams from the mayor and R. B. Watrous, secretary of the Citizens' Business League of Milwaukee, inviting the association to hold its next annual at their city.

Mr. Barksdale moved that the choice be unanimous, and Milwaukee was unanimously chosen as the convention city for 1908.

Mr. Nolan—I want to ask if it is possible at this time to say what time we will meet in Milwaukee next year. In view of the change of weather all over the country I would think it wiser to meet at a later date. Living pretty close to Wisconsin, I find June 16 to 19 about the nicest dates. I have had occasion to watch this thing for the last twenty years and we find almost invariably two of the four days are the most beautiful of the whole year.

President Russe—In reference to that, the date has been changed not only this year but it was changed last year. Last year at Memphis we were up against the proposition of the engineers having their convention there and we had no room, so the convention met a week earlier. This year, at the request of the eastern committee, we have met a week later. The Board of Directors took it upon themselves to make that change. There was no criticism in either case, and I do not see why, if weather conditions are such, that we cannot do it again.

Mr. Rumbarger—At Oklahoma last year at the Hoo-Hoo convention we decided to come to Atlantic City this fall. We have to raise money to entertain these people next fall and have provided between five and six thousand dollars. We expect between 1,000 and 1,500, besides some of their wives and some of their sweet-

do not know that I can better explain than to read it.

Mr. Wall here read a letter asking for subscriptions to the fund for the endowment of a chair of lumbering in the Yale Forest School.

Mr. Wall—All I can say is, if the members of this convention desire to see this a success the committee will be delighted to receive assistance.

President Russe—I suggest that a donation of that kind had better come from our Forestry Committee and we can then acknowledge it in the proper way.

Report of Committee to Nominate Directors.

Mr. Currie—Your committee has endeavored to pick out five men who are live wires. This association needs them right now. While there are many good names, the list we have to present you is as follows:

Directors to serve three years—
Theodore Fathauer, Chicago, Ill.
George W. Stoneman, Devalls Bluff, Ark.
F. A. Diggins, Cadillac, Mich.
G. J. Landeck, Milwaukee, Wis.
J. H. P. Smith, Parkersburg, W. Va.

Mr. Woods moved the report be adopted. Motion seconded and agreed.

President Russe—I would like to have the directors meet immediately upon adjournment. We can have a meeting in this hall. We have some applications received during this meeting we wish to pass upon.

W. A. Bonsack of St. Louis, F. A. Diggins of Cadillac, Theodore Fathauer of Chicago and George W. Stoneman of De Valls Bluff, Ark.

Attendance.

hearts. We have on the entertainment committee R. F. Whitmer, W. D. Gill of Baltimore and myself. We are going to give you the best show you ever saw or heard of. We have provided for all the features of this show, so you will be pretty well looked after in that line. Being a Hoo-Hoo means goodfellowship. All these eastern people ought to be Hoo-Hoo.

Mr. Wall—I have a letter here written to me as chairman of the Forestry Committee. I

W. R. BARKSDALE, MEMPHIS.

On motion of Mr. Landeck the convention adjourned.

Meeting of Officers and Directors.

At the conclusion of the meeting a session of the officers and directors of the association was called, which was presided over by President Russe. In a general way individuals were selected to serve on various committees, but it is not deemed best to print the list of these committees until all have accepted the appointments.

Arrangements were made to increase the inspection force of the association in several localities.

It is understood that Theodore Fathauer declined to longer serve in the arduous position of chairman of the Inspection Rules Committee, and that J. M. Pritchard has been appointed in his place. It is sincerely to be hoped that Mr. Pritchard will qualify for this office, as he is undeniably one of the best exponents of just hardwood inspection in the country. But one committee has been fully organized, that being the one having in hand the proposed school of inspection. It consists of C. E. Lloyd, jr., of Philadelphia, chairman;

Lumber Cut of Michigan and Minnesota.

The director of the census, United States Department of Commerce and Labor, announces a preliminary report of the production of lumber, lath and shingles in the states of Michigan and Minnesota for the year ending Dec. 31, 1906. Statistics concerning the production of lumber and timber products have heretofore been collected in connection with the decennial and quinquennial censuses of manufacturers. To satisfy the urgent demand for more frequent information relating to these important products, the Forest Service collected statistics pertaining to the production of 1905, and for purposes of comparison these totals are also presented below. In order to avoid duplication of work, however, and insure uniformity of results, the preparation of the annual statistics has been consigned to the Bureau of the Census, which has worked in co-operation with the Forest Service. The figures herewith given for Minnesota represent the lumber cut of 318 mills in 1906 and 174 mills in 1905; the totals for Michigan covering the lumber cut of 437 mills in 1905 and 774 mills in 1906:

MICHIGAN.

Kind of wood	Lumber—thousand feet, B. M.	
	1906.	1905.
Total	2,094,279	1,719,687
Hemlock	797,883	569,810
Maple	492,845	357,611
White pine	357,867	463,308
Norway pine	77,344	*
Beech	76,281	59,896
Basswood	73,458	46,759
Birch	55,949	39,693
Tamarack	34,205	18,726
Elm	29,261	57,305
All other	99,186	106,579

MINNESOTA.

Kind of wood	Lumber—thousand feet, B. M.	
	1906.	1905.
Total	1,794,144	1,925,804
White pine	1,138,172	1,847,072
Norway pine	546,116	*
Tamarack	47,433	13,017
Spruce	27,682	5,592
Basswood	10,743	7,926
White oak	4,859	3,671
Hemlock	3,744	24,144
Birch	3,364	4,228
Ash	2,724	2,063
All other	9,307	18,091

*Included with white pine in 1905.

Annual National Lumber Manufacturers' Association.

On Tuesday, May 28, the fifth annual meeting of the National Lumber Manufacturers' Association was called to order in the auditorium of the Jamestown Exposition grounds at Norfolk, Va. The weather was extremely favorable and a large number of delegates and guests was in attendance.

The convention opened with an address of welcome by Harry St. George Tucker, president of the exposition. Mr. Tucker said it was a great pleasure for him to welcome so important and distinguished a body of visitors.

President William Irvine responded in a fitting manner, and then presented his annual address. He reviewed the general prosperity in the lumber trade as well as in other great industries of the country, touched upon insurance matters, car equipment, the work of standing committees, forestry matters, etc., and stated that the association had labored in the direction of effecting economy in handling forest products, in promoting uniform grades and sizes, lumber insurance, proper credit ratings, and cordial relations between manufacturers and shippers and carriers. He pointed out the wide field of usefulness covered by the organization and particularly called attention to the efficient and strenuous work that has been accomplished by Secretary George K. Smith.

Secretary Smith then read his report and that of the treasurer. He stated that one member had been added to the association during the year, the Western Pine Manufacturers' Association of Spokane, Wash., bringing the individual membership up to 1,400, representing an annual output for 1906 of 14,327,914,986 feet of lumber. Mr. Smith reviewed the work of the credit rating department, which has become an important one and is steadily broadening its field of usefulness.

The treasurer's report showed net receipts of \$31,656.89, with disbursements amounting to \$30,441.42, leaving cash on hand May 1, \$1,215.47. The report was referred to an auditing committee.

J. B. White of Kansas City, Mo., delivered a masterly and exhaustive address on "The Growing Need of Accurate Knowledge as to the Standing Timber in the United States Available for the Manufacture of Lumber." Mr. White presented statistics covering the various phases of forest denudation and lumber production, and laid great stress on the importance of an accurate timber census, that it may be known how many acres of timber there are standing in the United States, how much waste land is ir reclaimable and how much brush land can ultimately produce forest trees. He urged that lumbermen give every aid possible to the Bureau of the Census in collecting statistics for the report of 1910, that data may be on hand which will enable the government and

individuals to successfully cope with the great problems which are confronting them.

R. S. Kellogg of the Forest Service, Washington, D. C., made a brief address on "The Lumber Cut of the United States for 1906," after which Henry F. Graves delivered a paper on the Yale Forest School, covering the valuable work accomplished there and the crying need for trained foresters. He stated that the work does not deal solely with tree planting, botany and the like, but embraces the more practical phases of forestry; the matter of lumbering had even been taken up as far as funds permitted; that the university welcomes the alliance with lumbermen which the proposed chair of lumbering will afford, and that a department can be built up which will become a powerful force in the future of the industry by training the young men in the practical and technical sides of the question.

James M. Hammill read an interesting paper on "Adjustment of Lumber Fire Losses." Mr. Hammill laid particular stress upon two matters connected with this subject: first, the necessity of a thorough examination of the policy when received, since it alone, according to law, must govern the relations of the parties under it; and, second, whether in case of loss of manufactured lumber by fire the assured can recover from the underwriters the market value of the lumber at the time and place of loss, or merely the cost of producing the lumber. Mr. Hammill cited several instances and decisions pertaining to the principles involved and covered the two subjects very thoroughly.

Committees Appointed.

President Irvine then appointed the following committees:

Resolutions—J. A. Freeman, St. Louis, Mo.; H. C. Hornby, Cloquet, Minn.; John W. Love, Nashville, Tenn.; S. M. Bloss, Garyville, La.; V. H. Beckman, Seattle, Wash.; C. A. Doty, Doty, Wash.; H. H. Foster, Malvern, Ark.

Creditals—A. J. Niemeyer, St. Louis, Mo.; Lewis Doster, Chicago, Ill.; F. H. Pardoe, Wausau, Wis.

Credit Rating—J. B. White, Kansas City, Mo.; William B. Stillwell, Savannah, Ga.; Edw. Hines, Chicago, Ill.; E. C. Fosburgh, Norfolk, Va.; R. A. Long, Kansas City, Mo.

Auditing Committee—H. H. Foster, chairman, Malvern, Ark.; F. E. Waymer, Lakeland, Fla.; George E. Watson, New Orleans, La.

Credit Indemnity—Drew Musser, Little Falls, Minn.; William B. Stillwell, Savannah, Ga.; J. A. Freeman, St. Louis, Mo.; W. F. Biederman, St. Louis, Mo.; E. C. Fosburgh, Norfolk, Va.

Conference Committee on Car Stake—Edw. Hines, Chicago, Ill.; C. A. Doty, Doty, Wash.; R. A. Long, Kansas City, Mo.; J. B. White, Kansas City, Mo.; George E. Watson, New Orleans, La.

E. V. Babcock told of the work which has been accomplished with the railroads and the Interstate Commerce Commission, after which E. F. Perry, W. B. Stilwell and W. W. Ross spoke.

John A. Fox of the National Rivers and

Harbors Congress delivered an impromptu address on the necessity for improvement of the great system of waterways of the United States, drawing an unfavorable comparison between what has been accomplished along these lines by foreign nations and our own country. Overattention has been given to railroad development here, while the rivers and harbors have been neglected. Mr. Fox stated that 37,000 miles of waterways could be made efficient at a cost of about \$500,000,000 and would effectively solve the problems of freight congestion and railroad regulation. He urged hearty coöperation of the lumbermen in securing the necessary appropriations.

WEDNESDAY'S SESSION.

The association reconvened at 10 a. m. on Wednesday in the assembly room of the Hotel Chamberlin at Old Point Comfort. The Committee on Credentials gave a satisfactory report which was ordered filed. C. I. Millard sent in his report as chairman of the Committee on Transportation, which covered various phases of lumber traffic, car stake allowance, freight rates and claims, weight contentions, etc., and gave it as his opinion that the railroads themselves as well as the Interstate Commerce Commission are trying to be fair in adjusting their business to public demand and legislative restrictions.

The Committee on Hardwood Rates to West Coast Points, consisting of E. P. Arpin, Eugene Shaw and John B. Ransom, next presented its report. It referred to conferences with a joint committee from the National Hardwood Lumber Association and the Hardwood Manufacturers' Association when a statement was prepared for presentation to R. H. Countiss, agent of the Transcontinental Freight Bureau; also to the courteous reception given it later by the bureau itself. In spite of various negotiations and strong effort there has been no disposition shown by railways to justify the present excessive rate, although they do not deny that it is detrimental to their own interests. The committee recommend the appointment of another committee to take up the matter further with the freight bureau, securing necessary funds from the various hardwood associations, and to go before the Interstate Commerce Commission if no justice is obtained.

The report of the Committee on Credit Indemnity was read by the chairman, Drew Musser; it was received and the committee continued, after which the entire matter was taken up in active discussion.

A letter was read from F. E. Weyerhaeuser, chairman of the Committee on Yale Forest School Endowment, in which he stated that \$54,000 has been subscribed, of which \$35,000 has been paid and invested in bonds; subscriptions are being added from time to time. After much discussion a motion to the effect that the present fund be turned over to the school was carried; the president urged that strenuous efforts to raise the balance of the funds be continued, so that the matter may be settled before the end of the year.

Chairman J. H. Freeman presented the report of the Committee on Resolutions, which embodied a request that the Forest Service and Census Bureau gather accurate information as to standing timber; expressed hearty approval of the government's forest reserve plan and of the work of the National Rivers and Harbors Congress in its effort to bring about such a change of policy as will lead to the systematic and efficient development of our waterways, pledging the association's coöperation in securing sufficient appropriations. Copies of these resolutions were ordered sent to President Roosevelt, Hon. Ransdell and every member of the Senate and House of Representatives. It was voted that an initiation fee of \$100 be paid to constitute the association a member of the National Rivers and Harbors Congress, which will give it twenty delegates to the annual meeting.

Votes of thanks were offered those who delivered the valuable papers presented, to the management of the Jamestown Exposition and to the Chamberlin hotel, after which reports of the Auditing Committee and on the Credit Rating Department were read and approved, as well as one from Edward Hines, chairman of a special committee on car stake equipment.

Election of Officers.

J. B. White, E. C. Fosburgh and C. A. Doty were appointed to nominate officers. In accordance with their report the secretary was instructed to cast one ballot, unanimously re-electing the same ones. The choice of officers and Board of Governors is as follows:

President—William Irvine, Chippewa Falls, Wis.

Vice President—R. A. Long, Kansas City, Mo.
Treasurer—J. A. Freeman, St. Louis, Mo.

Secretary—George K. Smith, St. Louis, Mo.
Superintendent—George F. Biederman, St. Louis, Mo.

Yellow Pine Manufacturers' Association—H. M. Graham, Brinston, Ga.; J. B. White, Kansas City, Mo., governors.

Hardwood Manufacturers' Association of the United States—John B. Ransom, Nashville, Tenn.

Pacific Coast Lumber Manufacturers' Association—Everett G. Griggs, Tacoma, Wash.

Wisconsin Hardwood Lumbermen's Association—F. H. Pardoe, Wausau.

Northwestern Hemlock Manufacturers' Association—George H. Chapman, Stanley, Wis.

Southern Cypress Manufacturers' Association—R. H. Downman, New Orleans, La.

North Carolina Pine Association—E. C. Fosburgh, Norfolk, Va.

Northern Pine Manufacturers' Association—Edward Hines, Chicago.

Western Pine Manufacturers' Association—J. R. Toole, Missoula, Mont.; N. W. McLeod, ex-officio, St. Louis, Mo.

Entertainment.

The business sessions ended on May 29 and on the following day the lumbermen of Norfolk tendered the guests a delightful trip to the site of old Jamestown, forty miles up the James River, on the steamer Old Point Comfort. About seventy-five guests participated and thoroughly enjoyed every moment of the excursion. A fleet of American battle-ships was anchored in Hampton Roads and

a fine view was had of Newport News with its wonderful shipbuilding yards and other interesting features. The time spent at historic Jamestown was equally pleasant, and

the party returned to Old Point Comfort at six o'clock. An elaborate luncheon was served on the steamer and the management of the affair was perfect in every detail.

Why Editors Swear.

By VAN B. PERRINE.

[The following contribution is from Van B. Perrine, the well-known manufacturer of hardwoods at Ft. Wayne, Ind., who during the last few months has contributed several specimens of pertinent verse to the columns of the *Record*, which have been highly appreciated by its readers. In the appended verses Mr. Perrine takes a new departure and discusses matters from the standpoint of a lumber newspaper editor. Everyone will concede that Van Perrine is not only one of the best hardwood lumbermen of the country but one of the best fellows withal. At the same time, in all verity, Mr. Perrine's analysis of a newspaper man's troubles is entirely from a theoretical standpoint; he discusses the subject about as well as the average lumber newspaper man does the lumber business. An editor is always glad to get inquiries from subscribers, asking anything, from the probability of Roosevelt's running for another term to the proper color to paint his barn. However, the suggestion in the writer's verse that pains us most is the inference that lumber editors occasionally swear. His long association with them should teach him that this is a base slander.]

When you get your Hardwood Record, do you look it through and through?
Do you read the ads as well as jokes, as you really ought to do?
Don't you know the man who runs it spends a lot of time and care
To gather all the information which he prints from here and there?
Don't you know he does some thinking, and it takes a mighty lot,
To give you what he knows is good, and cut out all the "rot"?
If you chance to be in the city and have some time to spare,
Drop into the office when he opens the mail—you'll learn why editors swear.

He gets a letter from Arkansas, in replying he's taking a chance,
As it asks if he thinks the price of gum or poplar will advance?
Of course from an old subscriber, who's taken his paper long,
Who will gamble on what the editor says, as editors can't be wrong.
Another comes in from Tennessee, from a man who owns a mill,
With a lot of logs and timber to cut, and wants an order to fill.
Of course he's an old subscriber, but he never paid for an ad.
We won't mention here what the editor said, as editors cuss when they're mad.

The next was from Mississippi, where a millman wanted to know
Whether to cut his trees all up, or let them in timber grow.
Would the editor send statistics of all the timber that stood?
And didn't he think that coal might give out, so's to raise the price of wood?
Besides he should have more money, as his mill was needing repair,
And a lot more "stuff," but never a cent—this made the editor swear.
And when it comes to swearing, be it city, town or woods,
You can gamble sure on the editor man, he'll always deliver the goods.

Another from out in Missouri, the writer wants to "be shown"
How he could build a sawmill, and where he could get a loan.
Did he know of a good bunch of timber, and what would be the price?
Had he better build a band-mill, or would a circular one suffice?
Being an old subscriber, if it wouldn't be asking too much,
Please send the plans for building the mill, with price for engine and such.
The editor read it all over, "From Missouri," he breathed with a sigh,
The words that he spoke weren't entered a joke in the *Record* that's kept on high.

The letters were full of questions, of things they wanted to know,
Had they better plant acorns or walnuts? How long would it take 'em to grow?
If he shut his eyes for an instant, some interrogation was plain,
He couldn't get rid of this terrible sign (?), it seemed impressed on his brain,
While he really had some ambitions that required more or less cash,
The mail with its questions, but never a cent, prophesied going to smash.
Do you wonder he felt rather blue-like, as he leaned way back in his chair,
And said, "To H—l with such business!" Do you wonder that editors swear?

But when life's book has been balanced in writing so plain and neat,
To show where we'll go, and in which row we're going to take a seat,
The editor'll see his swear words in a debit column quite long,
Yet when he looks at the credit side, if I'm not entirely wrong,
Things'll be written so clearly, and the many good deeds put down,
His chance will be good for the front row, and for his head a crown.
They will wipe out most of the cuss words—the Ruler on high is square,
And knows about things that happen each day to make an editor swear.

Hardwood Coffins in Foreign Lands.

The designing and constructing of coffins is not the most cheerful topic to discuss. Yet someone must make coffins and this line of work consumes large quantities of hardwoods. Of course, there are thousands of softwood caskets manufactured, some of which are of the softest pine. Others are of soft material inside, veneered with hardwood. There are other caskets which are constructed of the finest types of wood and elegantly finished.

There are men in the business who rescue discarded caskets from waste box piles and restore them to suitable condition for further service by patching up defective portions and applying polishes to the wood. Some of these caskets which are taken from abandoned heaps are fitted with metal corners and nickel handles, and made to appear quite salable. There are casket makers who actually manufacture both the soft and hardwood types of burial boxes for rental purposes. This practice prevails in the Philippine Islands, in Cuba, and in other foreign lands. The writer has noted coffins advertised for rent, direct from the shops of the makers. These coffins are of different patterns, so that the poor man can be accommodated with a cheap, pine casket, while the rich man may have the use of an expensive hardwood one. Many men plan years ahead for their final resting place. The ordering of the proper type of coffin is sometimes given when selecting the plot of land in the burial ground. Not infrequently caskets thus ordered are made from the very toughest woods, so they will last an indefinite time.

The roughest coffin which is made from hardwood is shown in Fig. 1, and is intended for the use of the poorest classes. There is no shape or form to the box. It is simply nailed up with the straight pieces. Such a box can be produced at little more than the cost of the lumber and time expended in putting it together. The type shown in Fig. 2 is also intended for the poorer classes. The stock is of the usual grade, but lacking in finishing. The parts are simply put together, common nails are used, and there is no tenoning or mortising. The object is to get the box set up as quickly and cheaply as possible. Wholesale lots are usually run off in this way.

Sometimes in order to fulfil certain preferences of the customer, common metal disks are nailed in rotation along the edges of the coffin as in Fig. 3. If these disks are made of finished metal, and are evenly secured in position, they improve the appearance of the casket considerably.

Considerable veneer is used in the make-up and ornamentation of caskets in some countries; note Fig. 4. American manufacturers do not go into this very extensively. In Cuba, for illustration, the coffin-makers of America ship partly finished coffins to the domestic makers, who proceed to ornament their sur-

faces with hardwood veneering, made to form a pattern.

In all countries, hardwood coffin-makers devote considerable attention to the quality of lumber used. It often happens that the coffin must remain indefinitely on the exhibition shelf of the warehouse or in the salesroom of the funeral director. In such cases, poorly seasoned lumber would warp and crack. Coffin-makers are usually careful as to the condition of the stock before making it up. Manufacturers in America usually depend upon funeral directors to handle the finished product. In some countries through which the writer recently traveled hardwood cof-

Fig 1

Fig 2

Fig 3

Fig 4

fins were observed being carried through a town on a pole as in Fig. 5. The casket seemed to be too light to be weighted with a body, and investigation revealed the fact that it was constructed only for the purpose of being exhibited and advertised by the maker.

Some very beautiful specimens of hardwood coffins are turned out by experienced coffin manufacturing concerns. They represent a great deal of time and energy. The casket for the rich man is one on which no expense is spared. Since the introduction of cloth covered caskets, there has been some-

what of a falling off in the request for finely polished hardwood surfaces. Nevertheless, there is and always will be a demand for the plain, well-finished casket. This type is a staple article. Various kinds of metal-trimmed, cloth-covered, veneered, and odd caskets are constantly coming into use, only to last a short time and then disappear, while the plain, finished hardwood casket lives on, year after year, and the manufacturers are almost always busy.

Recently there has been a fad for heavy and finely-designed handles on caskets used by the better classes. These heavy metal devices are costly and they add much to the weight and cost of the casket.

A white enameled casket is shown in Fig. 7. Hardwood surfaces are sometimes enam-

Fig 5

Fig 6

Fig 7

eled by casket makers for the purpose of getting the finest possible finish. An enameling plant has to be in connection with the shop. Transparent enamel is used and some of the figure in the wood shows through, exhibiting the natural grain. Special efforts are made to get smooth and glossy surfaces on these enameled caskets.

Competition in this industry is keen, but the price paid for the finely made product fully warrants the large expenditures necessary to purchase the costly materials employed and keep such plants running.

News Miscellany.

Immense Wood-Preserving Plant.

Contractors have commenced work on what is to be the largest wood preserving plant in the world, located at Galesburg, Ill. The buildings will be of concrete, and the yard will cover eighty acres, with five miles of track. The

works will be used to chemically preserve woods for track ties, bridge timbers and piling for the Burlington railroad system. Two million ties, as well as thousands of feet of lumber and piling, will be treated each year; the woods used will include all the inferior oaks, certain species

of pine, tamarack, maple, elm, hickory, spruce, fir and cottonwood. The plant will commence operations about Sept. 1.

Texas Post Oak.

Lumbermen of Waco, Tex., are of the opinion that they have been overlooking a great opportunity in the timber line, and are enthusiastic over the possibilities of the post oak of that section. Messrs. Moore and Mallander have been making experiments and tests, and if they continue to be satisfactory, there may be built a plant for the manufacture of the wood into lumber. The timber is plentiful in the district, and it is believed that it can be extensively used for furniture. Polished pieces are smooth and beautiful, the grain being handsome for use in desks, tables, etc., while its closeness insures durability. When properly kiln dried, it is thought it can be successfully employed even for buggies and wagons.

Building Operations for May.

Building operations from some fifty leading cities throughout the country as officially reported to The American Contractor, Chicago, and tabulated, indicate a far greater activity than could be expected under the favorable circumstances of a backward season and unpropitious agricultural reports, which play an important part when actual money is to be liberated for building construction. Compared with May, 1906, the past month shows a loss of only 1 per cent in the aggregate building construction in some fifty cities. The losses and gains are in cities widely scattered throughout the country plainly indicating local causes:

City	May, 1907, cost.	May, 1906, cost.	Per cent gain.	Per cent loss.

New Representative at Chicago.

The Mason-Donaldson Lumber Company of Rhinelander, Wis., which maintains an office at

1621 First National Bank building, Chicago, has appointed E. C. Dawley of Antigo, Wis., as its representative, to succeed A. C. Quixley, who resigned to enter business on his own account as a member of the firm of Quixley & McArthur, at Beloit.

While the Chicago trade is sorry to lose Mr. Quixley, it will find Mr. Dawley a welcome addition. Although a very young man, he has been engaged in the lumber business, in one capacity or another, for eleven years, and has been employed by the T. D. Kellogg Lumber & Manufacturing Company of Antigo and the Page

Tower Lumber Trimmer.

That enterprising house, the Gordon Hollow Blast Grate Company of Greenville, Mich., in pursuance of its traditional policy to keep all its machinery thoroughly up-to-date, has within the last year remodeled its entire line of "Tower" edgers and trimmers, consisting of forty different sizes and kinds. Our readers cannot fail to be interested in sawmill machinery representing the most advanced ideas, and herewith are shown two views of the Tower one-man two-saw trimmer, small size. As is well known, the distinguishing fea-

Form Large Lumber Concern.

Advices from Saginaw, Mich., under date of May 28 announce that Congressman J. W. Fordney of Saginaw and F. W. Gilchrist of Alpena, with his three sons, Frank R. of Cleveland, Ralph of Alpena, and W. A. of Memphis, are the incorporators of a large lumber concern to be known as the Gilchrist Fordney Company, with a capital of \$1,200,000. The company has purchased 50,000 acres of timber land near Laurel, Miss., estimated to contain 600,000,000 feet of logs, mostly pine, some of it hardwood, however. The Kingston Lumber Company's plant at Laurel has also been purchased; it has a capacity of 150,000 feet a day. The sales department of the new concern will be conducted through the office of the Three States Lumber Company of Memphis, another Gilchrist institution.

Important Lumber Deal.

One of the most important lumber transactions occurring in Pittsburg recently was the taking over of the properties of A. Thompson of Philadelphia, the Blackwater Lumber Company and the Thompson Lumber Company of Davis, W. Va., by the Babcock Lumber & Boom Company, composed of Pittsburg men. These properties are some of the most valuable in West Virginia, and are rated at considerably over \$1,000,000. The deal involves about 1,000,000 feet of cut lumber and the same amount of logs, the remaining stumpage amounting to 350,000,000 feet. The development of the tract will be continued at the rate of about 2,800,000 feet monthly. The same interests recently bought holdings of about the same magnitude in eastern Tennessee.

to remove the bridge-tree at the end of the machine. The legs, of which there are four, are of iron. Observe the extreme simplicity of the entire machine.

The Forests of Norway.

Although 26,324 square miles, or twenty-one per cent of the total area of Norway is still said to be covered with forests, having an estimated value of about \$122,000,000, the products of these woods remain, as they have for years, the principal item on that country's export list. Real forests, where lumber of useful sizes is found, are now confined to the eastern and central part of the country, while on the coast land, from the southern part to the Russian frontier bordering the Arctic Ocean, there is hardly anything left of the abundance of large trees which formerly covered those districts.

The real forest trees of the country are the birch, spruce and the Scotch fir. The two latter grow intermingled, the fir predominating on dry ground and extending to a higher altitude than does the spruce, which will not thrive north of the polar circle. These three varieties prevail in nearly all parts of the country, often in un-mixed heavy forests, but usually intermingled, or with other less common species of trees. North of the polar circle the birch forms the great bulk of the forests and it is particularly plentiful on the coast. The conifers grow as high up as 2,600 feet, while the birches may be found at an altitude of 3,500 feet. Three-fourths of the forest area is covered with conifers.

The annual lumber production is about 344,000,000 cubic feet for the entire country, or 203 cubic feet per acre of forest land. About one-fifth of this quantity is exported, the remainder consumed in Norway. About 20,000 persons

earn their livelihood by working in the forests out of a total population of 2,000,000.

The time required by the conifers to reach timber size varies greatly in Norway, where climate and other conditions vary so much on account of the topography of the country. In the southern part the pine when from 75 to 100 years old is usually sufficiently large to yield timber of from 23 to 25 feet in length and 9 or 10 inches in diameter at the top. The spruce grows faster, but felling usually takes place when it is 120 or more years old. The cutting is estimated at 21.7 cubic feet to each acre of forest, while the growth averages 20.7, so that more wood is taken out of them than is supplied each year. The forestry department is controlled by the department of agriculture, and one director, four inspectors, twenty-five managers, two assistants, ten planters and 385 overseers and rangers are maintained. Nurseries have been established in several places and agencies for the collection and sale of tree seed. Instruction in forestry is given at three schools and one agricultural college.

Vice-Consul Alger of Christiania furnishes statistics showing that of Norway's forest area the state owns 3,335 square miles, which bring an annual income of about \$268,000. The annual expenses connected with the public forests, as they are called, amount to about \$128,000. The yearly profit derived by the state from this

publications issued by the society free of charge. The state appropriates about \$30,000 annually for the use of the society.

There were 6,800,000 trees planted and 748 pounds of seed sown in 1905, of which 1,487,400 trees were planted and 176 pounds of seed sown by school children and other young people. Forest planting is gradually being introduced as a subject in the public schools. In a single parish 100,000 trees have been planted by them during the last three or four years.

About one-third of the total exports from Norway in 1905 consisted of lumber and wooden goods. The values of the different classes of these products were: Lumber, \$9,355,500; manufactures of lumber, \$656,000; wood pulp, \$7,402,300; paper, \$3,324,700; total, \$20,738,500. Included in manufactures of lumber are about 3,000 tons of matches, valued at \$326,700.

Mershon Feed Works for Band Resaw.

The illustration presented in connection with this article shows the band resaw feed works which Wm. B. Mershon & Co. of Saginaw, Mich., are prepared to supply anyone desiring to transform a band log mill of standard construction into a band resaw. It sometimes happens that a sawmill man has a band log mill which is serviceable and reliable and which carries a narrow saw, but which is lighter or of an older type than he cares to use as the main part of

MERSHON FEED WORKS FOR BAND RESAW.

source is thus about \$140,000. About \$15,500 are actual running expenses, while about \$20,000 is used for planting new trees and seed, and the rest for purchase and improvements and for aid to private forest cultivation. In 1898 a forestry society was established, of which a forestry engineer paid by the state has the professional management. The aim of the society is the preservation and cultivation of Norway's forests. The membership fee is 54 cents annually, or \$8.10 for lifetime membership. The members, at present about 20,000, receive the

his equipment—in other words, as the actual mill for breaking down the logs, sawing plank, bill stuff, etc. However, he may wish to use this mill as an auxiliary to the main log mill, and the feed works illustrated are so constructed that they can be used in connection with most such band mills. There has been a considerable demand for feed works of this description, and it is to cater to this requirement that the Mershon equipment has been placed upon the market. Applications to the company's office will bring full particulars concerning it.

New Cut-Off Saw.

In the ad of the E. & B. Holmes Machinery Company in this issue of the RECORD is illustrated a new type of cut-off saw known as the Holmes "Clipper." It is a new and improved type of cut-off saw designed especially to trim the ends of hardwood flooring and for cutting off stock in box and furniture factories. It is said to be the most rapid and accurate machine for the purpose now on the market. The saw is completely housed, thus making it perfectly safe to operate. The machine designed for trimming hardwood flooring will cut up to five inches wide, and the one for box and furniture factories will cut up to twelve inches wide. The manufacturers, the E. & B. Holmes Machinery Company, will be very glad to supply prospective purchasers with full details.

Logging in Honduras.

R. H. Ormsby, one of the English owners of the Belize State and Produce Company of British Honduras, which largely controls the mahogany and other lumber interests of that country, has arrived in Houston, Tex., and will make a special study of methods of transportation and removal of timber from the pine forests of that state. His company controls more than 370,000 acres of pine land and equally large forests of mahogany. The method in use for removing Honduras mahogany is by means of oxen, and only about eight weeks in the year are seasonable for logging. The laborers are hired for one year or for a great number of months, an agreement is signed in the court house and about three months' wages are paid in advance. The men go to the woods and labor in getting the timber ready and do not return until Christmas. When they do come they bring, as a rule, several months' pay with them, which they have had no occasion nor opportunity to spend, and receive a further advance of several months. Then everybody goes on a big spree that lasts for a month and all the money is spent in carousing and jollification. Then the men go back to the forests again.

Burbank's New Walnuts.

Luther Burbank, the California botanical genius, is superintending the introduction of two new hybrid timber walnut trees this year. One of them, the "Paradox," he especially commends for fuel and shade. It is a rapidly growing tree of fine shape and heavy wood. It is a hybrid of the California black walnut and the English walnut. In producing this species, Mr. Burbank is catering to the local demand for a rapidly growing tree for fuel and lumber purposes, shade and ornament, not to take the place of the eucalyptus, which will always hold its own among evergreen trees, but which will occupy first place where a deciduous tree is required.

The Paradox distances all other nut trees in rapidity of growth, beauty of outline, and amount of foliage. Mr. Burbank has shown that budded trees at six years of age are twice as large as black walnut trees at ten, or Persians at fifteen years of age. Twelve to sixteen feet is not an unusual growth for the first year; thus it will be seen that the new walnut grows twice as fast as the combined growth of its parents. The leaves are glossy and bright green, and have a delicious fragrance. The bark is thin and smooth, light gray and mottled with white. The wood is very compact, and has a handsome, lustrous grain; it takes a high polish, and the effect given by the annual layers and the medullary rays is unique. Though blossoming freely every year, the new walnut seldom bears nuts. The characteristics which make it valuable as lumber, as well as its great beauty, offset this defect, however. It will be planted to take the place of the eucalyptus where a large

amount of shade is wanted around homes and gardens in summer, and unlike the former will not intensify gloom or dampness during the rainy season by shutting out the sunshine.

Death of W. E. Smith.

On May 23 at Eau Claire, Wis., occurred the death of William Emerson Smith, president of the W. E. Smith Lumber Company, and secretary of the Three States Lumber Company of Memphis. Although Mr. Smith's health had not been good for a year or more and he went north to recuperate and rest, his parents and friends did not look for so sudden a termination of his life. Paralysis was the immediate cause of his death.

Few men are better or more favorably known in lumber circles throughout the country than he: in the words of a friend, "Everybody loved 'Billy' Smith." He was born at Eau Claire, Wis., in 1869, and began life as a newspaper reporter for the Eau Claire Leader. About twelve years ago he entered the lumber business, associating himself with the Three States Lumber Company

THE LATE W. E. SMITH OF MEMPHIS, TENN.

of Cairo, Ill., in a minor position from which he continually advanced until he became a power in the concern, and was one of its officers at the time of his death. About three years ago he moved the company's headquarters to Memphis, where he became actively interested in lumber affairs of that district. Nearly a year ago he was obliged to retire from active business on account of poor health. Mr. Smith's funeral was at the home of his parents in Eau Claire the Sunday following his demise, and interment took place in that city.

Litigation Over Export Shipment.

A legal case has just been fought out in the Liverpool law courts between Smith & Tyrer of Liverpool and Adams & Co. of Gloucester, which is of considerable interest to lumber circles. Smith & Tyrer, on behalf of the W. A. Powell Lumber Company of New Orleans, La., sold a large quantity of lumber to the Adams concern. The lumber was duly shipped and Smith & Tyrer received a draft in exchange for the shipping documents, of course before the lumber had been inspected by Adams & Co. The wood when it arrived was not in order and a considerable award was made to the Messrs. Adams.

Before the acceptance became due for payment the W. A. Powell Lumber Company, the shippers, failed, and Adams & Co. were left with a claim against a bankrupt firm. The action they then took seemed to put them at

once out of court, as they instructed their bankers to dishonor the draft. Smith & Tyrer then sued for the value of the draft and of course succeeded.

The case, however, opens up a field for discussion as to the relative position of the shipper, broker and merchant. Undoubtedly, the merchant is placed in a somewhat unfair position and has a genuine grievance. He makes a contract with a firm of brokers of undoubted financial stability, who in turn place the contract with a shipper in the states who may be entirely a man of straw. Again he may make a contract for say a carload of firsts and seconds quartered oak boards, which bears the notation, "Should any dispute arise in connection with this contract the buyer shall nevertheless take delivery of the goods as shipped and make due payment as herein agreed."

It necessarily follows then that if the shipper should happen to ship No. 1 common plain oak the buyer must not refuse delivery or payment. If he gets an award from arbitration the broker generally pleads that he has no funds belonging to the shipper and tells the merchant to go himself and obtain his money by suing the shipper in the American courts. The shipper in this case is in a safe position and unless the amount is large the legal costs would make it so that it was not worth while; in a case such as that of the Powell concern, of course when a verdict has been obtained there would be no assets to pay the claim which has been awarded.

Quite an agitation is being formed by English merchants here to try and force shippers to make brokers responsible to pay the claims made against them.

The Hardwood Situation.

The Hardwood Manufacturers' Association of the United States recently sent out a series of questions to members with the request that accurate and full replies be made, for the purpose of enabling the secretary to compile a summary of trade conditions which should represent a consensus of opinion from manufacturers in all the states in the hardwood belt. The questions were as follows:

Are your inquiries satisfactory in volume?

How do your unfiled orders compare with Jan. 1, 1907?

How long will your present supply of orders keep your shipping department busy?

Are your stocks on hand at present larger or smaller than on Jan. 1, 1907?

What are your prospects for production during the balance of this year? Will it be larger or smaller compared with the first four months?

How is your car supply at present?

Have you any accumulation of any kind of wood? If so, state below.

State the woods which you have in shortest supply over demand.

Conditions of trade, outlook, etc.

What suggestions have you to offer for the benefit of other members?

While answers were not numerous, it was deduced from the material sent in in reply to the questions and an accompanying letter, that building conditions throughout the entire northern country have been delayed owing to the later spring, but notwithstanding this permits for the month of April, 1907, in fifty leading cities of the United States, show a gain of five per cent over the same month for 1906.

It is expected that a large corn acreage will be planted this year to overcome the scarcity of wheat which is caused by the late spring.

The prospects for hardwood production are only fair and not up to the average. The consuming markets, especially in furniture and construction work, are busy using hardwoods and are in the market to purchase.

In the seventh question as to accumulations

of wood it is found in sections where the largest production should be noted, it is light, and shows that hardwoods are in short supply as compared with the demand.

A general feeling exists that there is no reason for prices to change except to a higher trend.

Producers have enough business to carry them on an average of from three to four months, and an exceptionally strong fall trade is looked for.

In comparison with the pines and west coast products the hardwood industry is in much better shape; production is lighter and conditions in markets better than in any other branches of the lumber business.

Heroes of the Board Walk.

Conspicuous among the throng of illustrious personages in attendance at the recent meeting of the National Hardwood Lumber Association at Atlantic City was the ubiquitous presence of the pair of distinguished lumbermen portrayed herewith. This snapshot was taken on the Board Walk, and exhibits them as they appeared in one of Atlantic City's famous roller chairs. It is

"HOME AIN'T NOTHING LIKE THIS"

hardly necessary to state who they are, but for the minority not acquainted with them who thereby acknowledge themselves unknown—it may be said that these real heroes of the hour were Sam E. Barr, the famous shellbark hickory dealer of New York City, and J. H. P. Smith, the equally well-known purveyor of poplar and other wooden plunder of Parkersburg, W. Va.

New Lumber Dock for New Orleans.

Following out the plan of keeping the several associations advised of important matters being handled for the general benefit of the export lumber trade, the New Orleans Lumber Exporters' Association advises that in investigating conditions at New Orleans and recognizing the fact that it was impossible for lumber to move through that market in anything like the volume it should by reason of the city's geographical situation and natural advantages, it conceived the idea of going before the Board of Port Commissioners and suggesting to them the erection of a dock for the purpose of handling all wood goods where handling charges might be reduced to a minimum and where the lumbermen might exercise some reasonable control over their own products. Following out this idea, it succeeded in meeting the Dock Board at a special meeting called for that purpose and with the hearty support of a committee from the Belt Railroad Commission headed by the Hon. Martin Behrman, president, put the matter in a manner that

permitted of no doubt as to the advisability of the construction of such facilities in New Orleans as would insure the movement of the volume of export lumber traffic to which the port is properly entitled. The idea was received with unanimous approval and resulted in instructions being given to the engineer of the Port Commission and the engineer of the Public Belt Railroad Commission to draw up plans with the assistance of the lumbermen, for the construction of such a dock, the same to be considered at a meeting to be held for the purpose in the near future.

The association was especially careful to secure the hearty support of the Belt Railroad Commission, inasmuch as it intends that this dock shall be accessible to all roads so that an exporter may be enabled to accumulate cargo arriving over different lines and deliver to a steamer at one point. J. H. Hinton, president, addressed the meeting, outlining the plans as above stated, and exporters are now confident that the erection of these facilities is only a question of a short time.

Miscellaneous Notes.

A bill now before the legislature of Michigan, which is backed by the Forestry Association of that state, provides for the appointment of nine men, who during the next two years shall make an examination of the waste lands of the state and report the wisest method of administering them. According to the state forest warden, there are 6,000,000 acres of waste land in Michigan which produce little of value. Because of the denuded condition of the water sheds Michigan towns and cities are subject to floods. A great part of this waste land can be made to grow trees, and this is one of the important problems that should have the early attention of the legislature.

The Ohio Sash & Door Company of Cleveland has increased its capital from \$60,000 to \$100,000.

The Adams Wood Products Company has been incorporated at Cleveland, O., with a capital of \$100,000, by A. J. Adams, John McDonald, P. F. Brady, A. E. Powell and M. A. Foran.

The schooner Oneida, bound from Cecil bay to Chicago with a cargo of hardwood lumber, was stranded during the night of May 27 on North Manitou island. The crew escaped.

The Interstate Veneer Company has been incorporated at Emporia, Va., with D. E. Stone of Baltimore as president.

The Salmon Brick & Lumber Company of New Orleans has landed a big contract for piling to be used on the Isthmus of Panama. The contract amounts to over \$45,000 and this is the second contract of that size to be secured for furnishing piles within the last few weeks.

Pandora, Kan., is shipping out quite a large number of walnut logs of late. Recently eleven log heaps were noted in the yard of the depot, each heap containing on an average of 22 walnut logs, or about 240 in all. They were from 8 to 18 feet in length and 1 to 2½ feet in diameter.

The Cornie Stave Company of Junction City, Ark., has purchased a large tract of land in Winn Parish, La., from the Gulf Land Company.

The Henry Qualmalz Lumber Company has filed articles of incorporation at Little Rock, Ark., capital \$100,000.

The Joseph T. Steinacker Lumber Company, capitalized at \$50,000, has filed articles of incorporation at Baltimore.

S. G. M. Gates of Bay City, Mich., has sold 1,500,000 feet of hardwood lumber to be cut at his mill to the McCormick-Hay Lumber Company of Saginaw.

The fifteenth session of the National Irrigation & Forestry Congress will be held in Sacramento, Cal., in September. The expenses of the conventions are defrayed by the cities in which they are held.

Col. Charles Bogardus, late of Paxton, Ill., re-

cently purchased the extensive plant of the Lakewood Lumber Company at Lakewood, Mich., five miles north of Pellston, where he resides. The property purchased consists of the mills and machinery of every kind, tramways, boarding houses, stores and fifty-two dwelling houses. The purchase was made for the Bogardus Land & Lumber Company, which owns quite a lot of fine timber near by.

About 400 acres of fine timber land was destroyed on South Mountain near Leesburg, N. Y., recently. The fire started in several places at once and about thirty men were employed to stop its further progression.

Two thousand woodworkers employed by the Fixture Manufacturers' Association were granted an increase in wages by agreement with the officers of the Carpenters' District Council of Chicago.

The Ohio-Pennsylvania Lumber Company has been incorporated under the laws of Alabama, with principal place of business at Axis. A woodworking plant will be operated by the company.

High water carried out the mill dam of the North Wisconsin Lumber Company at Hayward recently, as well as the trestle of the railway spur. Three million feet of logs were carried out and scattered along the river.

J. D. Tennant and G. E. Grant of Cygnet, O., recently closed a deal at Laporte, Ind., by which they became the owners of a large factory at that place where all kinds of woodwork is manufactured.

The lumber mill of B. Grier at Montreal was destroyed by fire the afternoon of May 24, and adjoining buildings also badly damaged. The loss is estimated at \$40,000.

Case & Crotser, extensive hardwood dealers at Kingsley, Mich., have acquired considerable timber in Matchwood township and it is reported that they will build a large mill there.

Walter McCormick of the Hay-McCormick Lumber Company of Saginaw, Mich., was in Bay City recently purchasing a million and a half feet of hardwood lumber which is being manufactured at the Gates sawmill.

About 18,000 acres of timber land in Wayne county, Tennessee, have been purchased by T. S. Hassel of Clifton. The land is estimated to cut close to 51,000,000 feet of lumber, and large quantities of cross-ties, hickory and stave timber.

A woodworking plant is to be established at Crossville, Tenn., by E. S. Cram & Co. They have purchased several thousand acres of timber land and will manufacture all kinds of house trimming. About \$50,000 will be invested in the plant.

The Lester Mill Company of Lester, Ark., is equipping its pine mill so as to saw hardwood.

Good & Miller of Camden, Ark., were compelled to close down last week on account of high water.

R. D. Newton of Camden, Ark., is putting in a small mill near Louann, Ark., where he expects to cut considerable pine.

Weather conditions the past two weeks in southern Arkansas have been very unfavorable for logging.

Q. McCracken, manufacturer of hardwood lumber at Mound City, Ill., and D. E. Taylor, have

just started a factory at Joppa, Ill., for the manufacture of elm hubs. They are getting in a fine lot of poles and turning out some nice stock. The firm name is Taylor & Co.

Sturm & Sturm, manufacturers of special wagon stock at Calhoun, Ky., have incorporated their business and changed the name to the Sturm Lumber Company. The capitalization is \$15,000, and the officers are E. Sturm, president; H. A. Sturm, vice president; J. L. Schutt, secretary.

At a meeting of employing carpenters and builders of Dubuque, Ia., it was decided to suspend all building operations June 1 unless the boycotts of the woodworkers against the local sash and door factories be raised or the builders be allowed to use the product of the factories. Building at Dubuque is now practically at a standstill; the factories are continuing work with a two-thirds crew.

The Hilton Lumber Company has just been incorporated at Belleview, Fla., with a capitalization of \$20,000. C. W. Hilton of New Haven, Conn., who has an option on a large tract of timber land at Belleview, is the founder of the company. Interested with him in the project are J. W. Palmatter, E. C. Sloan and William Aufort, all of New Haven. The general offices of the company will be at New Haven and a small mill will be erected at Belleview. The company will produce, oak, baywood, other hardwoods and pine.

The Hay Land & Lumber Company of Dardanelle, Ark., has been incorporated with a capital stock of \$50,000, fully paid in, to buy and sell lands and timber, manufacture and sell lumber, ties and piling, build and operate railroads and tramways, sawmills, planing mills, etc. The incorporators are Alfred G. Hay, J. B. Crownover, C. B. Cotton, F. H. Phillips, H. Crownover, J. H. Crownover and George N. Goodier.

The Pioneer Coopers Company of St. Louis, which operates a large sawmill and heading factory at Forest, La., is building a twenty-mile broad-gauge railroad extending through fine hardwood timber sections. It is thought that the line will be extended to the Iron Mountain. Both freight and passenger service will be maintained.

The Novelty Hardwood Company has been organized at Durham, N. C., with a paid in capital of \$10,000. The company will manufacture hardwood specialties of all kinds. A plant will be built and up-to-date machinery installed. The directors are R. G. Jones, J. E. McDowell, A. Crumpacker, N. M. Johnson, W. J. Griswold, J. H. Erwin and R. L. Lindsey.

J. M. Carpenter of Corinth, Miss., will establish a sawmill at Raymondsville, Tex., for the purpose of working up mesquite, ebony, guayacan and other hardwoods. The introduction of mesquite for furniture will be something entirely new; the wood can also be used for veneering.

The sawmill of the Upham Manufacturing Company at Marshfield, Wis., has sawed its last log, and is now in the hands of the United States Leather Company. This mill has been an important factor in the lumber history of Wisconsin, having been in operation since 1878, its yearly cut of logs averaging 12,000,000 feet, or about 348,000,000 feet for the entire period. It is not decided whether or not the leather company will continue milling operations.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

A. R. Vinnedge has returned from the East, where he went to attend the annual of the National Hardwood Lumber Association at Atlantic City. Mrs. Vinnedge accompanied him, and in addition to the stop there they visited other cities and took in the Jamestown Exposition.

E. P. Arpin, the well-known hardwood lumberman of Grand Rapids, Wis., was a welcome caller

at the the Record office last Thursday.

A strike of thirty woodworkers and carpenters in the shop of the Commercial Cabinet Company, Halsted and Division streets, has completely tied up work in that establishment. The strike was called because one of the carpenters, who was boarding with the foreman of the shop, changed his boarding place. The foreman had the man discharged. The discharged mechanic appealed

to President Kermse of the company, who reinstated him and discharged the foreman. This was followed by a walk-out of the men in the shop. The woodworkers were ordered back to work, but the carpenters will remain out.

"C. M. Crim of C. M. Crim & Son, manufacturer of Indiana hardwood lumber at Salem, Ind., was a caller at the Record office on June 7.

"Business is very good for this season of the year," said A. H. Ruth of the G. W. Jones Lumber Company. "Our mills both in the South and the North are running and keeping up to the limit."

Frank Ingram, manager of the American Hardwood Lumber Company, has been out of the city for the past few weeks.

L. D. Benedict of the L. D. Benedict Lumber Company was having troubles of his own when the Record man called. Three cars shipped from his mill were lost in the shuffle. Speaking of trade he said that there is less dry stock on hand this season than at the same time last year. He said trade was keeping up splendidly and he had a good supply of orders on hand.

"It pays to keep up the condition of the lumber yard," said a Chicago millman the other day. "When lumber comes from the mill we have it neatly and regularly piled. It is not only much easier to go at and handle in this way but it keeps the stock in good condition. When a customer visits our yard he is much more impressed by the way we handle our stock than any other thing. We have tried it and found that it brings good results with little effort."

It seems to be the general opinion among the trade that there is less dry stock on hand this year than ever before. Stock is coming into the markets which has been cut only about sixty days and consequently is very green. A large local lumber shipper says that green stock is running up the price of freight. He showed the bill of lading on a shipment just received which figured that the stock weighed on an average of five pounds to the foot. Of course on a 10 or 11 cent rate this does not amount to much but where it is more it adds considerably to the freight.

Charles A. Goodyear of Tomah, Wis., was in Chicago last week. Mr. Goodyear is a well-known lumberman and his trip here was a business one.

J. W. Kitchen was in Chicago on a brief business visit June 6. He is treasurer of Van Sant, Kitchen & Co., well-known manufacturers and wholesalers of high-grade poplar and oak lumber at Ashland, Ky.

F. W. Gilchrist of Alpena, Mich., and his son, W. A. Gilchrist of Memphis, Tenn., were in Chicago recently on a trip which combined business and pleasure. F. W. Gilchrist is one of the best known lumbermen of the white pine region of Michigan.

Harry S. Hayden of the Hayden & Westcott Lumber Company attended the fifth annual meeting of the National Hardwood Lumber Association at Norfolk, Va., and while in the east went on to Princeton, N. J., to visit his old home. The Hayden & Westcott Company is a wholesaler of hardwood lumber with offices in the Railway Exchange building.

Frank Hendrickson of the F. S. Hendrickson Lumber Company has been away on a trip for the past week.

F. B. McMullen, manager of the Fullerton-Powell Hardwood Lumber Company, states that business with his company has been keeping up, though he thinks that most of the buyers have fairly good stocks on hand.

Friends of Edward L. Davis, the well-known Louisville lumberman, will regret to know that he has been having serious trouble with his eyes of late, which has necessitated his giving up close attention to business.

C. D. Boynton of St. Louis, the well-known lumberman-wit of Missouri, was a caller at the Record office on June 3. Mr. Boynton was in

the city to meet his wife and his mother, who have just returned from a winter's trip to Japan.

The Lumbermen's Golf Association of Chicago has been organized to further acquaintance among lumbermen golfers and for the purpose of having a lumbermen's annual tournament. The membership is open to all the fraternity, regardless of residence, and this year's tournament will be held at the Glenview Golf Club on June 25. It is hoped that the attendance will be large. Lumbermen are invited to send in applications for membership accompanied by check for \$5 to cover initiation fee and dues for the present year. C. F. Thompson is president; Frank B. Stone, secretary, and C. F. True, treasurer. Headquarters of the association are at 701 Railway Exchange, Chicago.

The Record is in receipt of the revised grading rules of the Southern Cypress Manufacturers' Association, as adopted at the annual meeting May 15 and 16. Secretary G. E. Watson, Hibernia Bank building, New Orleans, announces that he has a supply of these rules and can furnish a reasonable number to any member desiring them, free of charge.

The Hurley Machine Company, 153-9 South Jefferson street, Chicago, has started suit in the United States Circuit Court over infringement on their "Little Giant" floor scraper patent.

I. F. Balsley, manager of the hardwood department of Willson Brothers' Lumber Company of Pittsburg, presented to his friends at the recent Atlantic City convention a pocket blank book conveniently and suitably ruled to show at a glance stock lists and price lists of lumber of all kinds located at various shipping points. In short, if it is properly filled out, a salesman will find it a compendium of all the information he requires for making sales. The book is spaced not only for lumber of all varieties, but for flooring, siding, etc., as well. It is an admirable short-cut system for every lumber salesman, and for the ingenuity of the plan and its execution Mr. Balsley deserves the thanks of his friends in the trade.

George E. Youle, vice president and Pacific coast representative of the S. A. Woods Machine Company of Boston, was called east recently by the serious illness of his mother, reaching her bedside shortly before she died. Mr. Youle went to Boston for a conference with the principals of his house before returning to Seattle.

John D. Spaulding made a recent trip to the upper Mississippi valley on behalf of Upham & Agler, with whom he has lately resumed connection.

The summer residence of H. Paepcke, president of the Paepcke-Leicht Lumber Company, at Glencoe, was burned June 1; the loss amounted to about \$20,000.

A. Jarvis of the Steven & Jarvis Lumber Company of Eau Claire, Wis., was a visitor to this market a few days ago, en route to Michigan points.

E. J. Ostrander, secretary, and J. W. Embree, vice president, of the Rittenhouse & Embree Company, have returned from a trip to the operations of the Arkansas Lumber Company, located at Warren, Ark.

E. S. Hartwell, of the well-known lumber house of that name, has gone to Wilmington, N. C., to look after his interests in the Waccamaw Lumber Company, in which he is interested. This company owns 200,000 acres of timber in that state, consisting of cedar, gum, cypress and pine, and has one of the finest plants in the district.

The Shavings & Sawdust Company has given to John A. Chapman, as trustee, for use of Cyrus H. McCormick, a trust deed to the property at the northwest corner of Western avenue and Twenty-third street, to secure a loan of \$33,750 for seven years at 6 per cent.

George Kern of the well-known wholesale hardwood house, the Kern Lumber Company of Free-

port, Ill., was in town June 4, calling on the trade.

F. B. Sprague, formerly associated with the D. W. Higbie Lumber Company, has formed the F. B. Sprague Lumber Company, with offices at 748 First National Bank building, Chicago. Mr. Sprague will specialize in hardwood lumber of all varieties, and is in a position to assure excellent service.

Boston.

The Boston hardwood lumbermen who attended the recent convention of the National Hardwood Lumber Association at Atlantic City have all returned to Boston. They report a splendid meeting both from a business and social standpoint.

Benjamin Pope of the Curtis & Pope Lumber Company has gone to his stock farm in Concord, Mass., where he will spend the summer.

R. L. Abbott, who has served two terms as surveyor general of lumber of Massachusetts, has been re-appointed for a third term by the governor of this state. Mr. Abbott is a capable and popular man.

The Blanchard Lumber Company has engaged W. A. Webster as salesman to cover western Massachusetts and Maine. He has been associated with the Shepard & Morse Lumber Company and more recently with the Palmer-Hunter Lumber Company.

The planing mill business in Northampton, Mass., formerly conducted by Lancelot & Gagne, has been purchased by Delos T. Pepin. Mr. Pepin will make extensive improvements.

Robert C. Lippincott of Philadelphia visited the eastern trade recently.

W. W. Reilley of Buffalo, N. Y., was in Boston last week. Mr. Reilley reported the hardwood market as very firm.

Charles S. Wentworth of C. S. Wentworth & Co. has returned from a trip to New Brunswick.

The W. O. McDuffee Company has been incorporated in Boston to carry on a general wood-working business, with a capital stock of \$4,000. The promoters are J. Sherman Richardson, William O. McDuffee and Frank H. McDuffee.

The Hoosatic Lumber Company has been organized with a capital stock of \$20,000, and will be located in Derby, Vt. The stock and plant of the Carter & Hubbell Company, which business has been conducted by Linn E. Lockwood, has been taken over by this new corporation. R. W. Chatfield, who has been vice-president of the Ansonia Lumber Company, for many years is also interested in the new company. The sash, door and blind business will be under the personal supervision of Mr. Lockwood.

A shipment of 50,500 feet of oak was made from Boston last week to South America.

Philadelphia.

The Lumbermen's Exchange held its second meeting under the newly elected officers on June 6. It was well attended, but nothing of especial interest came up. Haney-Henson & Co. were elected members of the exchange. Recent visitors to the exchange rooms were Edwin Gaskill of Sue, W. Va.; E. H. Silliman of the Waccamaw Lumber Company, Waccamaw, S. C.; John J. Duffy, Sr., of the La Fayette Mill & Lumber Company, Baltimore, Md.; George E. Major of Major & Loomis Company, Hartford, N. C.; James C. Cowen of Schultz Bros. & Cowen, Chicago, Ill., and L. L. Barth of Edward Hines Lumber Company, Chicago.

Schofield Brothers, though a comparatively young firm, has always been among the hustlers. Their success was conclusive from the beginning, and their latest venture certainly accentuates the fact. The Saltkeatchie Lumber Company of Ufers, S. C., in which they are largely interested, is fast shaping itself for business. They are now installing band saws, automatic trimmer steam-set works from the Allis-Chalmers Com-

pany, a large Corliss engine and high pressure boiler equipped with Gordon blast grates used in forced draft systems. They have purchased a Lidgerwood skidding machine costing \$9,000, use the American log loaders made by the American Hoist & Derrick Company, New York; the Shay geared locomotive from the Lima Locomotive & Machine Company, and the Russell logging cars of 60,000 pounds capacity from the Russell Wheel & Foundry Company, Detroit, Mich. Nothing is omitted in the way of latest equipments to render the plant thoroughly complete and up-to-date. The machinery is the heaviest ever installed in the South and they are beginning to build six miles of railroad through their timber. This tract comprises about 150,000,000 feet of cypress, poplar, walnut, long and short leaf pine, gum and ash. R. W. Schofield is now at the mill superintending the work. This firm has also contracted for the entire output of Hoover Lumber Company, Cash, S. C., running about 12,000,000 white oak, short leaf pine, ash, poplar and some gum; the white oak especially, they claim, is the best grade ever placed on the market. The mill is equipped with the latest band saw, dry kiln and up-to-date planing mill. John H. Schofield is touring Wisconsin and Minnesota contracting for a block of white pine. R. P. Ashley of this firm recently spent a week at the West Virginia mills familiarizing himself with stocks.

George F. Craig of George F. Craig & Co., this city, and Lewis Dill of Lewis Dill & Co. of Baltimore, Md., sailed for Europe on May 29. Mr. Craig will remain about a month. Mr. Dill joins his wife, who preceded him on the trip.

Paul W. Fleck Lumber Company reports busy; has no fault to find with conditions. Their mill is working right along filling orders. Many inquiries are coming in and they are looking forward to good summer trading.

Haney Henson & Co., lumber and millwork, consider last month the best in the year for them, all departments kept busy. Mr. Haney asserts they have excellent orders on hand and that business is coming in every day.

Samuel H. Shearer & Son report May a very fair month, considering that the labor troubles have interfered more or less with work in the various trading centers. They are receiving good orders right along and have no doubt as to prospects for summer business.

The prosperous firm of W. H. Fritz & Co. has felt the necessity of increasing its staff and extending its territory. Their hardwood department is doing well and they are going more extensively into the maple flooring line. They have also added North Carolina and yellow pine. They recently engaged E. D. Wood, well known in New York and Pennsylvania, to look after this territory for them, and B. T. Bethune, formerly an operator in the South, to look after Philadelphia, Baltimore and Washington. The friends of E. B. Hayman of this firm will be glad to learn that he is able to be around again.

The Lycoming Lumber Company, Greensburg, Pa., was incorporated under Pennsylvania laws on May 10. Authorized capital \$10,000.

Hummer & York Lumber Company, Bloomsburg, Pa., was granted a charter under Delaware laws on May 29, capitalization \$100,000.

Babcock Lumber & Boom Company, Davis, W. Va., a recently chartered company, purchased all the lumber interests of A. Thompson, Thompson Lumber Company and Blackwater Lumber Company of Davis, W. Va. The sale of the lumber will be made by E. V. Babcock & Co. of Pittsburg, Pa. They will retain the Philadelphia office, 903 Betz Building, formerly occupied by A. Thompson, of which Charles G. Blake, manager, will have charge. The capitalization of the new company is \$500,000. No details are given out, however, by the officers for publication concerning money considerations. The deal was consummated on May 21.

The final concatenation of the eastern Penn-

sylvania Hoo-Hoo before the Annual was held at the Hotel Walton on May 31. Owing to the necessary absence from the city of a number of prospective kittens only three frisky felines were received into Hoo-Hoo. Frank Carlton Snedaker of F. C. Snedaker & Co., Horace Kent Walton of Coppock-Warner Lumber Company and Benjamin Thomas Bethune of W. H. Fritz & Co. The convention on the roof, though not so largely attended as was at first promised, proved a most interesting and enjoyable affair. Addresses were made by Vicegerent Jerome H. Sheip and Benjamin C. Currie, Jr., on matters pertaining to the coming Annual to be held on September 9, 10 and 11 at Atlantic City, N. J. Judging from the reports coming in from the various committees there can be no doubt of its being a tremendous success. Hundreds of letters have been received from cities between here and Texas and from the far Northwest requesting details and notifying the chairman ex-officio, Jerome H. Sheip, that the boys from these sections are coming on in crowds. B. C. Mason of Mason-Featherstone Lumber Company, Asheville, N. C., and H. G. Barrington of Lidgerwood Manufacturing Company, New York, were guests at the concatenation.

A. Lincoln, the old established furniture manufacturing concern, will shortly erect another large factory.

J. Gibson McIlvain & Co., Fifty-eighth street and Woodland avenue, have their main office now in the Crozer Building, 501-2-3-4. This firm is one of the oldest and best known houses in this city. They report business a little slow of late, but on the whole satisfactory. They carry an immense stock of hardwoods in their large yards at Fifty-eighth street and have just received 100,000 feet of dry 5, 6 and 8, 4 cherry.

Wistar, Underhill & Co. report good orders coming in right along. R. W. Wistar is on a trip to Evergreen, N. C.; will also go to Georgia to look after the firm's interests. H. E. Baes of this house is on a selling trip in New York and James W. Anderson, who has just recovered from a slight illness, is traveling through the New Jersey section. Percy H. Jarratt is their southern representative and looks after the buying and shipping in Georgia.

Among the many recent visitors to the trade were Albert Haas of Albert Haas Lumber Company, Atlanta, Ga.; Nelson H. Wolcott of L. H. Gage Lumber Company, Providence, R. I.; Fred Pyfer of B. B. Martin Company, Lancaster, Pa.; Harry J. Myers of Brown-Borhek Lumber Company, Bethlehem, Pa.; J. H. Chapman of Chapman & Hoover, Diana, W. Va.; Stephen S. Mann of Mann & Parker, Baltimore, Md.; Frank F. Fish, secretary National Hardwood Lumber Association, Chicago; Lewis Foster, secretary Hardwood Manufacturers' Association, Chicago; W. W. Reiley of W. W. Reiley & Bro., Buffalo, N. Y.; the popular sales agent of Bowman Lumber Company, St. Albans, W. Va.; Van R. Perrine of Perrine, Armstrong & Co., Fort Wayne, Ind., who with his wife is visiting friends in New York City; E. J. Hoover of E. J. Hoover & Bro., Durbin, W. Va., and B. W. Bowden of Mt. Sterling, N. C.

Pittsburg.

The Linehan Lumber Company is pounding away at the hardwood market and keeps up a steady fire of orders. Its stock, secured from the International Hardwood Floor Company, is proving first class goods for a high class of customers. The Linehans are also handling a fine lot of mixed hardwoods, much of which go to eastern plants.

The E. T. Lippert Saw Company has been chartered in Pittsburg. Its members are E. T. Lippert, E. W. B. Pischner, Fred J. Pischner, William F. Pischner, John G. Pischner and Oscar T. Dittich. The company will have a plant in the Pittsburg district.

The demand for ash is increasing steadily in local offices. The railroads are again enter-

ing the market and seem to be anxious to secure considerable quantities of ash for baggage car building. White ash is very scarce and is commanding the best of prices. Eastern Ohio is furnishing much of the stock that goes to the handle factories.

The Cheat River Lumber Company reports that it is necessary to keep on the lookout for business continually if you want it. Chestnut and oak are selling with less effort than the other woods, but there is a disposition among big buyers to hedge their orders, preferring to wait apparently for better prices for fall delivery.

The C. P. Caughey Lumber Company has two mills in western Pennsylvania cutting oak. A large part of this is heavy timbers for railroad use. The firm has been very successful in bidding on large jobs this spring and is doing a fine business in all sorts of oak lumber.

The Nicholasville Lumber Company, which has recently been incorporated, has decided to build a planing mill, 50 by 60 feet, at Nicholasville, Ky. It will make a specialty of dressed lumber for the retail trade, tobacco hogsheads and cases.

The Nicola Lumber Company is capturing its full share of the hardwood trade this summer and has had a good season in all lines so far. Its stocks of hardwood are quite complete and it is a hard competitor in bidding for large bills in the Pittsburg district and its traveling men are taking a splendid lot of orders for oak outside this territory.

George Grim of Richmond, Ohio, has secured the contract for cutting a large amount of hardwood timber near Follansbee, W. Va. The lumber will be shipped to Pittsburg.

The Pittsburg schools are taking an exceptional interest this year in the planting of trees. In this they are receiving more than the customary encouragement from the daily press, which is stimulated to talk more of the need of forest trees by the Pennsylvania Railroad Company and some of the big coal and coke companies, which have set out immense forests during the past two years.

Two lumbermen of Bradford, Pa., are receiving the congratulations of their friends on one of the best timber deals that has fallen to the lot of Pennsylvania capitalists for years. About a year ago S. A. Holbrook and P. C. Blaisdell, both members of the Tennessee Lumber Company, bought a tract of timber in the South and about a month ago sold it at a price which brought them a very handsome profit.

The Ironton Lumber Company is building a large new planing mill at Ironton, O. The machinery is being installed and by July 1 it is expected that the plant will be in full operation.

The Juniata Lumber Company of Pennsylvania has been incorporated by G. S. Grove and B. F. Grove, A. I. Harris, W. B. Hicks and Levi Sparr. It will operate in the neighborhood of Altoona and ship its stock to the eastern markets.

The Hood Lumber Company of Parkersburg, W. Va., has opened offices in the Schulbach building in Wheeling, where it will handle most of its product. It recently bought 5,000 acres of hardwood timber in Wetzel county, West Virginia, for \$50,000. For this tract it has since been offered \$75,000. It is estimated that it will cut about 50,000,000 feet of lumber.

The Reitz & Martin Lumber Company has bought 2,000 acres of timber land along Burning Creek, Mingo county, W. Va., from Philadelphia owners for \$25,000. Among those interested in the deal are: Thomas G. Reitz, H. G. Martin, G. L. Dudley, G. B. Collins, James Creighton, W. D. Camden. The tract is on the Norfolk & Western railroad and will be cut off at once.

John A. Crawford, who is known throughout Pennsylvania as an old and successful lumberman, and the inventor of many appliances for

use in sawmills, died at his home in Allegheny, Pa., two weeks ago. He was 69 years old and had formerly run a large sawmill on Herr's Island in the Allegheny river prior to that place having been taken over by the Pennsylvania Railroad Company for its big livestock yards.

The lumber mill owned and operated by J. A. Petty at Sycamore, O., near Upper Sandusky, was destroyed by a boiler explosion May 17. Parts of the boiler and engine were found 400 feet from the mill site.

The Schaffer Lumber Company of Irwin, Pa., has bought 1,500 acres of oak, spruce and hemlock in West Virginia. The company expects to get 7,000,000 feet of lumber from the tract and will build mills at once.

J. E. McIlvain & Co. are not having any trouble to get orders for their specialties in oak. J. J. T. Penney of this company keeps busy hunting stocks as well as orders and has secured some fine lots of hardwood under contract in West Virginia.

The Pittsburg Veneer Barrel Company is a new corporation backed by C. A. and J. H. Johns, G. A. Gage, G. E. Hardie and will operate under a Pennsylvania charter. It will erect a plant in or near Pittsburg.

It is announced that the Ford Lumber Company, Burt & Brabb Lumber Company, Hughes Lumber Company, Kentucky River Poplar Lumber Company and Southern Lumber Company have united their interests under the caption of the Kentucky River Sawmill & Lumber Company. The company will have mills at Ford, Nicholasville, Frankfort and Valley View, Ky., and will raft its stock down the Kentucky river.

The Willson Brothers Lumber Company is making a big spring sale of hardwoods. Manager I. F. Balsley of that department has been kept busy the past three months getting available stock and hustling up the railroads to get cars enough to get out the finished stock. The car situation is slightly better but is far from what it should be at this season of the year.

The Buckeye Lumber Company is doing considerable business in wagon stock. Its officers report that the car manufacturers are buying some lumber but at a lower price than formerly and that buyers in general are beginning to hedge on their orders unless some concessions in quotations are made to them. This company is making a specialty of hickory and ash to good advantage.

The Webster-Keasey Lumber Company, which lately opened offices in the Bessemer building, is getting into the pole and tie market in good shape. The demand for the former is not so brisk, they say, as two months ago, but the supply of chestnut poles is nevertheless small. White oak piling is also hard to get and the small mills are being canvassed pretty thoroughly for any chance stocks.

The Union City Chair Company, whose plant at Union City, Pa., was burned a few weeks ago, has decided to rebuild in that city instead of accepting some of the flattering offers made to it by business men's associations in other near-by towns. Work on the new plant will be started at once in order to get it ready to operate in the fall.

The Clay-Schoppe Lumber Company is headquarters for piling in spite of the fact that it has only been listed as a wholesale lumber firm but a short while. Its mills are at Ligonier, Pa., and its offices in the House building at Smithfield and Water streets.

The Herman H. Hettler Lumber Company is keeping up its sales record in this city remarkably well and in May sold over 1,100,000 feet of lumber through the efforts of its local manager, G. W. Cantrell. Most of this was car stock and a good share of it went direct to the eastern market.

The Babcock lumber interests have completed the purchase of 22,000 acres of timber in West Virginia and have formed a new corporation

which has a capital of \$500,000 and is known as the Babcock Boom & Lumber Company. This concern has bought the stock and business of A. Thompson of Philadelphia and the Blackwater and Thompson lumber companies of Davis, W. Va. The tract secured is estimated to cut 22,000,000 feet of lumber and the new company gets 25 miles of tram road fully equipped in the deal. E. V. Babcock will be president of the company, F. R. Babcock secretary and treasurer, and O. H. Babcock general manager. The business will be handled from the Pittsburg offices of E. V. Babcock & Co. in the Frick building.

There is a general feeling among the best-posted wholesalers of Greater Pittsburg that the man who lands a lot of business in any line of lumber outside of oak and chestnut between now and September will have to go after it and hustle for it hard and long. Competition is getting fiercer according to all reports and firms are taking pains with customers and going after orders that were "passed up" a year ago. This closer attention to the minor points of the game is evidence that the market is slowing down, although no serious disturbance is anticipated this year. The manufactories, especially the steel mills, are working overtime and with seasonable weather the mercantile trade in this section would have been in good shape. Wholesalers as a rule are inclined to note carefully the attempts of several large concerns the past two weeks to break down prices on the plea that they cannot be sustained at the present high notch very much longer and that for large orders booked now for fall delivery concessions should be made. So far the buyers have gained little by this style of dealing but it remains to be seen whether their contention is true.

The Seanoor Lumber Company, in which several capitalists from Fayette and Westmoreland counties are interested, has bought 1,500 acres of hardwood timber land in the Cheat River district about four miles from Kingwood and near the extension of the M. & K. railroad. A tramway will be built at once so that the lumber can be rushed to market. The company had previously cut off a tract of 3,200 acres of timber in the Bluefield district in West Virginia.

The Big Tree Lumber Corporation property in West Virginia has been sold to the Kanawha & West Virginia railroad through the agency of DeWitt Gallagher of Charleston. This lot gives the railroad a clean right of way into Charleston. The price was about \$40,000.

Independent contractors in Youngstown, O., are in trouble again. It is reported on good authority that they will not be able to buy lumber at the Youngstown mills after June 1. This results from the continued trouble over the carpenters' wage scale and may cause a serious delay in building in that locality.

Detroit.

An assignment for the benefit of creditors will be made by Henry George & Son, interior hardwood finish contractors, of Detroit. This was decided upon at a meeting of the Union Trust Company's officials, in whose hands the affairs of the company have been placed. Charles W. Leach was made the common law assignee, and creditors will effect some settlement with him. The committee appointed for this purpose was composed of A. C. Stellwagen, W. C. Browlee, Walter S. Russell, C. W. Restrict and E. L. Thompson.

The Great Western Timber and Lumber Company, with offices in the Majestic building, Detroit, is now planning to invest heavily in the lumber business in Washington and Oregon. A large number of Detroiters have taken stock in the concern.

The real estate firm of Homer Warren & Co. will erect 300 houses in Detroit this summer. This is but an indication of the boom in home-building in Detroit.

Amos Opdyke, 87 years old, a pioneer lumberman, died last week at his daughter's home in Detroit. He carried on his trade most of the time in Hudson, Mich.

Delmar C. Ross has been appointed master car builder of the Michigan Central railroad. He has been twenty-two years in the service of the road, the first four years of which he was a foreman of the West Detroit shops and now is coach carpenter. He finally rose to be general master car builder of the whole system.

The E. R. Thomas Automobile Company will build another factory in Detroit. It will be located on Jefferson avenue. It will use a large quantity of auto bodies.

Grand Rapids.

The Thomas MacBride Lumber Company has removed its offices from the Michigan Trust to the Murray building.

C. H. Leonard of the Leonard Refrigerator Company says that the company will occupy its new factory, in process of erection on Clyde Park avenue, about Nov. 1. The three buildings now occupied by the company on Ottawa and Market streets will be fitted up for furniture exhibition purposes.

The board of trade has erected a big electric sign over the gates at the union station, which reads: "Grand Rapids, the Furniture City. Water-power electricity. We welcome you." The Grand Rapids-Muskegon Power Company will have its second dam completed across the Muskegon river at Croton soon and the 10,000 additional units of power will be carried by cable lines to this city.

The Holly Cabinet Company, manufacturing high-grade parlor tables, will remove its plant from Holly to Lansing. Additional capital has been subscribed in Lansing.

F. A. Mitchell has been promoted to the position of general traffic manager of the Manistee & Northeastern railroad, and his successor as freight and passenger agent is Dennis Riley, who will remove with his family to Manistee.

Congressman George A. Loud of Au Sable, who is interested with the Louds in timber operations in eastern Michigan, lectured on "The Panama Canal" at the Ryerson library in this city June 4. Mr. Loud accompanied the congressional party that visited the isthmus last spring and is the best posted man in the state on conditions there.

A representative of the R. G. Peters Salt & Lumber Company of Manistee was in Cadillac recently for the purpose of hiring men for camps.

The Moon Desk Company of Muskegon is building a brick addition 48x115 feet, four stories high, to its plant, which will greatly increase its floor space.

Will Mitchell's generosity towards Cadillac, his home town, was recently further exemplified. On his return from an extended southern trip it came to his notice that about \$5,000 additional was needed in order to go ahead with the construction of the Y. M. C. A. building along the original lines, and he promptly assured the building committee that the sum would be forthcoming when needed. Mr. Mitchell has already contributed \$20,000 towards the building. The contract for its construction has been awarded and the building will be completed by Dec. 1.

Keys & Warboys are building a sawmill at Onaway. The mill is 31x150 feet, two stories high, and will be completed Sept. 1.

Four cars loaded with logs broke loose on the oval Wood Irish Company's siding at Traverse City and crashed into a Grand Rapids & Indiana passenger train. The fact that no one was killed or seriously injured is due to the heroism displayed by Philip Bellinger, engineer, who stuck to his cab and brought the passenger train to a stop amid the flying logs.

The Detroit Free Press quotes a lumberman of Cadillac as follows: "Michigan has more hardwood timber standing today than any other state in the Union, and the largest part of it is

maple. Three of the largest lumber firms here—Cobbs & Mitchell, Ltd.; Mitchell Brothers Company, and Cummer, Diggins & Co., who operate half a dozen mills, own enough hardwood timber in the southern peninsula to keep their mills busy making lumber for over twenty-five years, full time. And there are a half dozen other firms here who do a large business. Cadillac lumbermen also have immense holdings in hardwood in the upper peninsula, but that timber will be sawed up at Green Bay, Wis., at some time in the future, the freight rates being too expensive to get the logs to this city, to say nothing about the difficulty of transportation.

The Jones & Green maple flooring plant, which is being built at Dighton, will be in shape to start operations this month.

A bill has passed both houses of the legislature, which abolishes the measure restricting the mining companies of the state to ownership of 50,000 acres of land. The bill was urged in its passage on the ground that the companies require largely in excess of 50,000 acres of timber land in their mine-timbering operations. The governor will grant a public hearing on the bill before signing it.

President Roosevelt is credited with having advised Gov. Warner to go slow in railroad legislation and to let the Interstate Commerce Commission work out the problems now under consideration, on the occasion of his recent visit at Lansing. Three railroad commission bills have been introduced during the present session, and such a wide difference of opinion has developed as to the powers that should be invested in such a body that there is little hope of the passage of any one of them.

W. H. Thompson, formerly manager of the American Handle Company of Grand Rapids, has bought a tract of timber in Washington and is operating a mill at Centralia. His successor here is D. A. Stratton, formerly of Tower.

The Michigan Maple Company is closing up its affairs as fast as possible and will go out of business as soon as its stocks are disposed of, which will probably be a matter of three or four months. The company's offices in the Michigan Trust building have been closed and the business removed to the Stearns Company's offices in the Houseman building, where H. N. Stone is looking after its affairs. W. A. Spencer, who has been in charge for some time, has gone to Stearns, Ky., where he takes a position in the office of the Stearns Company.

Indianapolis.

The Walnut Lumber Company on Lewis street has made a number of improvements, among which is an addition to its office building. At present the company is enjoying the largest business in its history and requires more elbow room to take care of it in.

It is announced, through a notice filed with the secretary of state, that the L. C. Thompson Manufacturing Company of this city has changed its name to the Furnas Office & Bank Furniture Company, and the new name has gone into effect.

At a meeting held last week the Indiana Commercial League was permanently organized. The new organization is composed of two representatives from each of twenty-five commercial organizations in the state, the hardwood dealers' association and the retail lumber dealers being represented. Legislation tending to improve shipping will be looked after both in the Indiana legislature and congress.

Safe blowers visited the offices of the Cline Brothers' Lumber Company and of the Kendallville Manufacturing Company at Kendallville on the night of May 30. At the former place a sign above the safe stated that it contained nothing but books, but the safe blowers were not willing to take it for granted. At the latter place they were scared away before getting any-

thing and their net profit from the two places consisted of a few cents.

The Bedford Handle Company is a new corporation at Bedford and has \$10,000 capital stock. The directors are George M. Dodd, Boone Leonard and James W. Douthitt, all well-known business men of Bedford.

Two large barges, loaded with lumber from the south, have arrived at Evansville, via the Ohio and Mississippi rivers. One of these barges, the Louisa Barrett, contains 500,000 feet of lumber for Evansville lumber men, but heavy rains have made it impossible for wagons to get to the levee where the barges are ready to unload.

One of the cheapest sales of timbered land on record has been made to David Naroun of Knightstown, who has purchased ten acres of fine timber land from Linville Wallace, a farmer near Milton. The sale price was \$100 an acre, or \$1,000. The land had belonged to the Wallace family for eighty years.

The Caswell-Runyan Company has been incorporated at Huntington to do a general wood-working business. The capital stock is \$75,000, which is held by David R. Hemmick, Winfred Runyan, John W. Caswell and John A. Snyder. A modern plant will be occupied and the company will start business operations within a short time.

Quite a pretty custom was observed by employees of E. C. Atkins & Co. on Memorial Day, when they decorated the graves of seventy-six deceased employees of the plant. Committees from the various departments visited the different cemeteries of the city. The custom was started several years ago and there is a permanent organization for the purpose.

The Long-Knight Lumber Company is now receiving hardwood shipments with a certain degree of promptness and has a better supply of all grades of hardwoods on hand than for some time. Southern shipments, which were delayed for a time because of car shortage are said to be arriving nicely and the company anticipates a big business on account of the universal prosperity of manufacturing plants of the city and because of unusual activity in building.

A fire which for a time assumed threatening proportions and entailed damage amounting to \$12,000 occurred last week at the plant of E. C. Atkins & Co., Inc., on the south side. The flames were confined to the west building, a four-story structure of brick, concrete and iron, and fire-proof. For this reason the chief damage done was to machinery and stock in the two upper floors of the building comprising the polishing department of the plant. The factory was not disabled for more than a day. The Indianapolis fire follows but a little over a week a \$10,000 fire in the Chicago warehouse.

Bristol, Va.-Tenn.

The Montezuma Lumber Company has been organized here and the company will at once begin business at Montezuma, N. C. The organizers are George H. Mell of Kane, Pa., president, and George H. Jones, secretary and treasurer. The capital stock is \$25,000, fully paid in. The company owns about 15,000,000 feet of timber near Montezuma.

Frank R. Whiting of Philadelphia, president of the Janney Whiting Lumber Company of that city and the Whiting Manufacturing Company of Abingdon, Va., was in the city recently on business. Mr. Whiting was in company with his brother, W. S. Whiting, and visited the mills at Abingdon. Speaking of trade conditions, he said: "Business with us is good. Our Abingdon mill has averaged over a million feet a month for over a year. We have about 175,000,000 feet of timber here, which is, I estimate, seven or eight years' cut. I have recently heard some complaint, but, as I say, with us business is good and if there is any change for the worse in the market we haven't observed it."

J. Walter Wright of the J. Walter Wright Lumber Company of Mountain City, Tenn., is preparing to build a five-mile flume to transport logs and bark and will expend \$10,000 on the project.

E. C. Crow, who has been manager of the Stuart, Va., office of J. A. Wilkinson, has been Stuart. E. W. Reed has resigned his position with the Ferd Brenner Lumber Company at Norfolk to accept a position with Mr. Wilkinson. W. H. Waters and John Butler also entered the employ of Mr. Wilkinson last week.

W. G. Offutt of Parkersburg, W. Va., is visiting his brother, M. N. Offutt of the Tug River Lumber Company. Mr. Offutt is in the lumber business in West Virginia and contemplates entering it here.

Frank B. Folsom of Soble Bros., Philadelphia, is buying lumber in this section. Mr. Folsom was with Rode & Horn of New York until a short time ago.

"The export business is not as good as it should be," said Dwight D. Hartlove, representing W. O. Price of Baltimore, who was in the city last week. "The market is inclined to be dull. It is my belief that it is the result of shippers sending too much stuff over on consignment, just to keep up their shipments. This can only affect the market temporarily."

C. H. Smith, Jr., of Philadelphia, representing R. A. and J. J. Williams, will make Bristol headquarters in the future. Mr. Smith is buying lumber in east Tennessee, southwest Virginia and western North Carolina.

Curtis Rush of the Duff & Rush Lumber Company of St. Paul, Va., was in the city last week. He reports that construction work on the South & Western railway is progressing and that trains will be running between St. Paul and Clinchport by December 1, if there is no hitch in present plans.

W. H. Yates, representing the Rumbarger Lumber Company of Philadelphia, came to the city this week to buy lumber in this section.

J. H. Bryan of the Bryan Lumber Company is at his mills in North Carolina.

B. C. Shelton of Elizabethton was in the city this week. Mr. Shelton now has mills running near Cranberry, N. C.

W. G. McCain of W. G. McCain & Sons was here from Neva, Johnson county, Tenn., on business this week.

James Faulkner, Jr., of the Faulkner Lumber Company of Crandall, Tenn., was in the city last week. Mr. Faulkner reports that his company has seven mills in operation near Crandall and that business in that section is very brisk.

A syndicate headed by John Laing, T. L. Telford and others of West Virginia has purchased an immense tract of timber lying in Craig and Giles counties, Virginia, and extending into West Virginia. Surveyors are now at work going over the property.

E. K. Bradley, who has been at Elizabethton for the past five or six years, has returned to his home at Ray City, Mich., with his family. Mr. Bradley decided upon this course after the death of his father, the late N. B. Bradley, one of the best known lumbermen in Michigan. Nathan Bradley, Jr., has charge of the company's business at Elizabethton.

Among the visitors on the local market last week and the earlier part of this week were: J. M. McRea, Laurel Fork Lumber Company, Mount Sterling, N. C.; T. K. Garland, T. K. Garland Lumber Company, Johnson county, Tennessee; J. E. Ballard, Paul W. Fleck Lumber Company, Butler, Johnson county, Tenn.; Va. Luppert, Luppert Lumber Company, Butler, Johnson county, Tenn.; C. Boice, Boice Lumber Company, Abingdon, Va.; B. C. Shelton, Elizabethton; S. D. Hoover, James Kennedy & Co., Cincinnati; J. R. Lowe, Montezuma Lumber Company, Montezuma, N. C.

Columbus Crussell, son of a prominent citizen

of this county, who went to Alaska to engage in the lumber business about six years ago, was killed in an accident at his lumber operations, May 21. The body was shipped to Bristol for burial and arrived here June 3. Young Crussell was a member of the firm of Crussell & Ewbanks. He was superintending the loading of logs in the mountains when a log fell on him and he was killed almost instantly. The body was accompanied back by the deceased's partner, Walter Ewbanks of Kentucky.

Horace M. Hoskins, president of the H. M. Hoskins Lumber Company of this city, and vice president of the Little Creek Lumber Company, was married Tuesday, June 4, to Miss Mary E. McKinney, at the home of the bride's parents at Lynchburg, Va. Mr. and Mrs. Hoskins will be at home in Bristol after a honeymoon trip. Mr. Hoskins is one of the best known young lumbermen in this section. He started in the business with English & Co. at Knoxville about ten years ago. He was in the business in New York and later in London. In 1904 he became sales manager in the offices of J. A. Wilkinson in this city. He held this position until the latter part of 1906, when he organized the H. M. Hoskins Lumber Company, which now has offices in the First National Bank Building.

The Tug River Lumber Company of this city is erecting a band mill on its timber property in Scott county, Virginia, which it will operate in addition to several circular mills. The company has lately purchased additional timber in that section.

Charles H. Fuller of Macon, Ga., representing the Massee & Felton Lumber Company, was in the city on business last week.

The Tipp City Lumber Company, recently organized here by Paul Cline, J. M. Sanders, E. A. Scott and others, has installed several circular mills on its timber property on the South & Western railway near Altapass, N. C.

The Little Creek Lumber Company of this city has purchased a 20,000-acre tract of land in Pulaski county, Virginia, and proposes to at once install a big band mill. The company has leased a line of railroad traversing the property. The road is standard gauge and eight miles long.

The plant of the Empire Manufacturing Company, which was destroyed at Elizabethton about two weeks ago with a loss of about \$60,000, will, it is believed here, be rebuilt. The company's loss was reduced by an insurance policy to the extent of about \$21,000.

The Hassinger Lumber Company has put its big band mill at Azen, Va., in operation. This company owns a vast area of timber land in the White Top mountain section and an extension of the Virginia-Carolina railway, known as the Virginia-Carolina Southern, has been built from Taylor's Valley to Azen by the company.

"Of course I can only speak from my own experience—I am doing the best business I have ever done," said J. A. Wilkinson this week. "I find the market in fine shape. I put on no less than a half dozen new inspectors within the past two weeks and have all the business I can handle."

Cincinnati.

The Supreme court decision sustaining the Interstate Commerce Commission against the Southern railway, in which H. H. Tift of Tifton, Ga., was the original petitioner, means that the Southern will have to refund at least \$35,000 and possibly \$50,000 in overcharges to Cincinnati lumbermen and many times that amount to shippers in general. The case started four years ago when the southern roads announced an increase of 2 cents per 100 feet in rates on pine lumber from the south to Ohio river points. H. H. Tift, representing the lumber interests, complained, and the commission sustained them, prohibiting the increase. The railroads appealed to the United States courts of Georgia. The court held that, pending final decision, the roads could collect the 2 cents overcharge, but a bond of \$500,000 must be given to protect the ship-

pers' interests in case they won the final decision. The victory for the shippers in the Supreme court decision means that the overcharge was illegal, and that all the money so collected since action was started, must be refunded. The amount they will have to disgorge is estimated at close to half a million dollars.

"Within the next sixty days the Maley, Thompson & Moffett Lumber Company will be located in new headquarters," said Thomas J. Moffett in a recent interview. "The erection of the new concrete structure is progressing rapidly and within the above-said time we will be comfortably stationed in our new home. During the last three years we have been compelled to vacate our headquarters because of fires, but by constructing a concrete building it is hoped that we will be protected from the fire bugs and not forced to locate elsewhere in a hurry. Our being compelled to locate elsewhere has not cramped business to any extent but has prevented us from putting lumber in stock. We have stacked up a large number of logs, however, and by the time our new sawmill is erected the pile will almost double itself and will keep double force hard at work for many months to cut it. The new structure is much larger than the former one so that we will be able to do business on a broader scale and incidentally push things so as to compare favorably with the work of the eastern office."

The new upper sawmill of C. Crane & Co. on Eastern avenue has been completed, and is rated one of the best in the Queen City. Fires during the last year made it necessary for the concern to build a number of new sawmills and now they are about all completed. The large lumber piles in the company's yards situated on the bank of the Ohio river have caused much comment. The concern is so situated as to have advantage of excellent shipping facilities; it is within a stone's throw of the Pennsylvania railroad and very near the river, thus giving both rail and water service.

Benjamin Dulweber, who has been suffering with stomach trouble for some time, is rapidly improving at the Good Samaritan hospital. He expects to return to active business within a few weeks. During his absence J. Putman assumes charge.

The Coppel Furniture Company of Dayton has been granted incorporation papers with a capital stock of \$200,000. The incorporators were Fred Coppel, Anna L. Coppel, Harry F. Coppel, Carl L. Coppel and Cora M. Coppel.

Messrs. Bender and Miller, members of the Board of Public Service, have returned from a visit to Indianapolis, where they inspected wooden block paving. Both were much impressed with it, and now it is highly probable that many Cincinnati streets will be paved with wooden blocks.

The Brazos Lumber Company, Paulding, O., has been incorporated with a capital stock of \$27,500 by James Gasser, C. H. Allen, D. J. Harkless, John A. Mohr and F. F. Goodwin.

The next monthly meeting of the Manufacturers' Club will be held at the Queen City Club, June 10 instead of June 3. The speakers of the evening are M. B. Farrin and Edward Hargrave, both of whom will talk on their recent foreign trips. Mr. Farrin visited Egypt and Mr. Hargrave made the trip around Cape Horn. Both men are excellent speakers and a large evening is promised.

Dr. Thomas M. Stewart, president of the Axis Coal and Timber Land Company, and Dr. E. C. Buck, secretary, left recently for New York to arrange for the final details of taking over a large tract of coal and timber land in fee simple for themselves and associates.

During the month of May a larger volume of business has been transacted than for some time; a big increase was recorded over the same month of last year. The total number of cars received during that time was 9,312, compared with last year 6,847. The shipments show a healthy in-

crease, being 7,274 as compared with 5,598 of last year. The above will serve to emphasize the fact that the lumber trade in this city is very good.

Chester L. Korn of the Farrin-Korn Lumber Company left last week for a business trip to Mississippi and other points in that vicinity. He expects to return within a week.

The large delegation of Cincinnati lumbermen that attended the convention of the National Hardwood Lumber Association at Atlantic City have returned well pleased with everything that was transacted. The convention was in session but two days, but local lumbermen did not return until a week or so after. Some of whom spent time on the seashore while others attended to business while in the East.

A. Fenton of the Ohio Veneer Company has returned from a most successful business trip South and Southwest. "Business in the South is good," said Mr. Fenton, "but Cincinnati I think has a little the best of it."

William E. Delaney, general manager of the Kentucky Lumber Company, returned recently from a business trip to Burnside, Ky., and soon after departed for Williamsburg, where the company has another sawmill. He expects to return to the local office within a week or ten days.

George Littleford of the Littleford Lumber Company has returned to his office after an absence of several weeks' suffering with a severe attack of typhoid fever.

President Thomas J. Moffett of the Cincinnati Lumbermen's Club is arranging the standing committees for the year and will announce them within the next week. The annual outing of the club will be held some time in June, the exact date not being as yet set.

The William T. Rosser Lumber Company of Arcanum, O., was incorporated last week with a capital stock of \$40,000 by Carl A. Rosser, W. S. Rosser, Sarah A. Rosser, Nona B. Rosser and William H. Francis.

Cincinnati lumber dealers were much wrought up over the raise in freight rates on lumber which went into effect June 1. The raise applies to all central and eastern territory and amount to 5 cents per 100 pounds, making the new rate 25 cents.

St. Louis.

Lafayette Lamb, of C. Lamb & Sons, Clinton, Ia., paid his regular spring visit to St. Louis recently, accompanied by several personal friends. They came on Mr. Lamb's handsome steamer, the "Wanderer," which is a marvel among pleasure boats. It is electric-lighted and finished in mahogany.

George Cottrill of the American Hardwood Lumber Company has returned from a business trip to Ohio.

W. W. Dings of the Garetson-Greason Lumber Company visited the company's plants at Fisk and Campbell, Mo., and Prescott, Ark., recently. He spent ten days in that section and says that conditions are still very unfavorable and it will be some time before the woods will dry out.

W. R. Chivvis has lately shipped a car of walnut to Rotterdam, Holland, and another to Belfast, Ireland. He is handling a large amount of this wood, and also of gum.

B. D. Hussey has the contract for furnishing railroad ties and timber to the Missouri, Kansas & Texas railroad; also crossing planks and other stock. He employs the cuts of three sawmills for these purposes. The road uses over 1,500,000 annually.

The International Hardwood Lumber Company of St. Louis and Mobile has purchased the business of Younce & Gracey Co., at Iuka, Miss. Several hundred thousand feet of lumber are on hand at that place, and the deal puts the International company in an excellent position to take care of requirements for all sorts of stock with dispatch.

The Plummer Lumber Company recently sold a car of thick, wide poplar to a local manufacturer, and received \$1,837 for the shipment, which they considered excellent value.

The factory of the Shultz Belting Company is running to full capacity, and business with them is excellent, the export trade as well as domestic.

The Frost-Johnson Lumber Company has been incorporated with a capital stock of \$1,500,000. The main office will be in St. Louis, and the principals are E. A. Frost, Shreveport, La.; N. W. McLeod, St. Louis; C. W. Mansur, St. Louis; C. D. Johnson and C. W. Nelson. Mr. Johnson is president, Mr. Frost vice president and Mr. McLeod secretary and treasurer.

C. D. Boynton left a few days ago for Chicago, to meet his mother and wife, who have been taking a winter's trip to Japan.

Theodore M. Plummer, secretary of the Plummer Lumber Company, has gone to southern California to study methods of raising fruit, nuts, etc., and will retire from the lumber business in the fall. He has purchased a large tract of land in southwestern Texas and will have it irrigated and turned into fertile soil for the raising of farm and fruit products. Mr. Plummer, though a young man, has an important place in the lumber industry; in addition to his St. Louis interests he is president of the Mississippi Cypress Company of Marks, Miss., and of the Bayou Chicot Lumber Company of Bayou Chicot, La.

The Garetson-Greason Lumber Company has moved its offices from suite 1212-13-14 Times building to 1001-15 Times building. This change was necessary as the old quarters were too small to comfortably accommodate the office force.

Lloyd G. Harris represented the St. Louis Lumbermen's Exchange of St. Louis at a recent meeting of interests controlling local industries, which was held at the rooms of the Civic League to consider a revision of the city's charter. A permanent committee was appointed to create agitation toward securing this end.

C. E. Thomas of the Thomas & Proetz Lumber Company has returned from a trip through the mill districts of Arkansas and Louisiana. He reports that weather conditions are slightly improved, though still very bad.

Thomas E. Powe, vice president of the Plummer Lumber Company, is making a southern tour which will take him as far as New Orleans before his return.

Capt. C. F. Liebke, who went east to attend the Atlantic City convention, remained several days after the meeting for recreation and pleasure.

Memphis.

There have been further heavy rains in the Memphis hardwood producing territory during the past fortnight and these have interfered with the progress of both milling and logging operations. However, taken as a whole, weather conditions show some tendency toward improvement and lumber interests are hopeful that this prospect may be fully realized, because production is not up to normal and can hardly reach that point until there is decided improvement over conditions which have prevailed for some time.

The Anderson-Tully Company, manufacturers of cottonwood, gum and cypress and other hardwood lumber and operators of large box and veneer factories in North Memphis, are erecting a machine shop and foundry for the purpose of taking care of the greater portion of the repair work necessary to keep their plants in operation.

The Illinois Central Railroad Company is making preparations to erect extensive terminal facilities in New South Memphis, including an incline. A short time ago the company purchased a large tract of land on the river front and an-

nounced that these terminals would be erected in the hope that they might facilitate the handling of lumber and logs to such an extent as to greatly stimulate the establishment of lumber and woodworking plants in that section of the city. The Belt Line is interested with the Illinois Central in this move and the establishment of these terminal facilities will give every road entering Memphis connection with the river and make the distribution of receipts a very easy matter, at the same time providing facilities for delivering lumber to the river where shipment by water is desirable. For this reason lumbermen are much encouraged over the announcement.

Henry C. Osterman of Chicago has purchased ten acres of land adjoining the new yards of the Paepcke-Leicht Lumber Company in New South Memphis from the South Memphis Land Company and he and associates have formed the Memphis Car Company and are preparing to establish thereon a plant for the repairing of freight cars and for the manufacture of stock to be used in the factory of the Osterman Manufacturing Company at West Pullman, Ill. Application will be made for a charter under the laws of this state. The officers are: Henry C. Osterman, president, and E. H. Ward, secretary-treasurer. The latter will be in charge of the interests of the company here. Other cities made efforts to land this industry, but Memphis won on its splendid railroad facilities and its proximity to the base of hardwood lumber supply.

The Consolidated Handle Company, with headquarters in Memphis and branches in Arkansas, has refused to make payment of the charter fees required of foreign corporations seeking to do, or actually engaged in, business in that state, declaring that it only recently paid out money for the privilege of doing business in Arkansas. Practically all the other corporations engaged in the lumber industry with headquarters in Memphis have complied with the Arkansas law in cases where they have interests in that state.

The jury in the federal court has returned a verdict of not guilty in the case of Hugh Murdoch, a prominent Memphis lumberman, whose retrial occurred here this week. He was charged with having raised two-dollar bank notes to twenty dollars and with having attempted to put these in circulation. Important witnesses for the prosecution failed to agree at vital points in their testimony, and this fact, together with the excellent standing of Mr. Murdoch and the favorable testimony of character witnesses, explains the verdict. Lumbermen express pleasure that the case has ended in this manner.

Lumber interests here are congratulating Memphis on having captured for the second time the presidency of the National Hardwood Lumber Association through the reelection of W. H. Russe at the recent annual at Atlantic City. The announcement of his reelection was made at the last meeting of the Lumbermen's Club and it occasioned much enthusiasm. This was all the more pronounced because it was known that Mr. Russe had declared, prior to leaving Memphis for Atlantic City, that he would not have the office again except upon a platform calling for some modification of the rules governing inspection and grading. Local lumber interests were much in favor of some revision of these rules.

There is much interest in lumber circles here over the announcement from Saginaw, Mich., to the effect that F. W. Gilchrist, president of the Three States Lumber Company and the W. E. Smith Lumber Company, together with three of his sons and Congressman J. W. Fordney, has formed the Gilchrist-Fordney Lumber Company with a capital stock of \$1,200,000, and that they have purchased 50,000 acres of timber lands near Laurel, Miss., estimated to contain approximately 400,000,000 feet of timber. It is further stated that the plant of the Kingston Lumber Company, with a capacity of 150,000 feet daily, has been purchased by the company and that

this will be used in the development of the resources on the acquired property. The headquarters of the two lumber companies of which Mr. Gilchrist is president are in Memphis.

Charles Rippin, general agent of the Missouri Pacific, with headquarters in Memphis, has been transferred to St. Louis, where he becomes general agent of the freight department of that company. He is succeeded in Memphis by C. McD. Adams, heretofore commercial agent of the same road in Memphis.

Henry W. Tiernan, connected with the St. Louis branch of the Deep Waterways Association, has been in Memphis during the past few days and is quite enthusiastic over the developments which have taken place lately. He declares that public sentiment is becoming strong in favor of the fourteen-foot channel and that it only needs to be educated further in the same direction in order to make it demand the building of such a channel. He believes there will be a large appropriation from Congress at the next session for the inauguration of the movement; he is of the opinion that Chairman Burton, who has recently been south on a tour of inspection, is much more strongly in favor of the movement than at any previous time and that he will lend his support toward securing the appropriation.

The death of W. E. Smith, affectionately known to most lumbermen as "Billy," which occurred at his home in Eau Claire, Wis., a short time ago, came as a rather sudden shock to local lumber interests, with whom he had been closely associated for a number of years. He left Memphis about a year ago in search of health, but never improved materially. Paralysis followed general breakdown and put an end to Mr. Smith's long suffering.

George W. Fooshe, secretary of the Robertson-Fooshe Lumber Company, has been elected a member of the Lumbermen's Club of Memphis.

George C. Ehemann of Bennett & Witte was married June 6 to Miss Lilian Morris, daughter of Mr. and Mrs. J. S. Morris. The ceremony was performed at the Mississippi Avenue Methodist church in the presence of a large number of friends and relatives. Mr. Ehemann is one of the most popular lumbermen of this city. His bride is the daughter of a gentleman who has been closely associated with the hardwood lumber interests of both Cincinnati and Memphis and this has lent an additional interest to the ceremony from the standpoint of lumbermen of this and other cities. Mr. Ehemann and his bride were the recipients of many handsome gifts, among the number being a silver service from members of the Lumbermen's Club of this city.

Wedding bells will ring in a very short time for another of the younger lumber set of Memphis—R. J. Wiggs, secretary-treasurer of R. J. Darnell, Inc., and the Darnell-Love Lumber Company. Cards are out announcing his approaching marriage to Miss Ethel, daughter of Mr. and Mrs. Giles Reynolds of Pulaski, Tenn., which will be solemnized there June 11. Mr. Wiggs is quite prominent in social as well as lumber circles and has a large host of friends who will wish him well.

A large force has been put to work near Helena, Ark., clearing the right of way for the Missouri & North Arkansas railroad. Construction work is to begin shortly. The line is to be extended southward from Seligman, Mo., to Helena, Ark., and it is stated that construction work between Leslie and Searcy, Ark., has been practically completed. The road will prove an important factor in the development of the timber resources of eastern Arkansas through which it will run.

The Eudora-Calvert branch of the Memphis, Helena & Louisiana line of the Missouri Pacific system has been completed and trains are now being operated thereon. This is a 40-mile stretch of road that will be used as a feeder for the water-level line of the Missouri Pacific system between Memphis and New Orleans.

Lumber interests here are much pleased with the announcement of the success of the yellow pines in Mississippi in their fight against the railroads on the advance in freight rates ordered several years ago and later countermanded by the Interstate Commerce Commission on the ground that the advanced rate was unreasonable and unjustifiable. They express the belief that the upholding of the ruling of the commission by the Supreme Court of the United States will have a most salutary influence upon the work of the former body in its effort to protect shippers from unjust and unreasonable rates on the part of the railroads.

The Robertson-Fooshe Lumber Company has completed its office building in North Memphis. It is located near the intersection of the Illinois Central and Randolph roads.

New Orleans.

Lumber exporters of New Orleans as well as exporters in other lines are still fighting with the railroads for additional free time on cars used by them in handling export shipments, and the battle being waged between the two big forces is now at its height. The New Orleans Lumber Exporters' Association is taking a prominent part in the matter and hopes to secure an adjustment that will enable those firms exporting lumber through this port to handle their business in better shape. Several big meetings of individuals and bodies interested in this matter have been held and several days ago the Board of Trade representatives decided to ask for thirty days' free time. This ultimatum of the exporters will, it is believed, cause a deadlock, as there is said to be no prospect that the car service association will accede to this demand, and whether or not a compromise will be offered remains to be seen. The fight has grown to large proportions and a dead-lock at this time will be somewhat unfortunate for all concerned. For that reason there are indications that strong efforts will be made to adjust the matter in a manner that will suit everybody.

Announcement is made that the big woodworking plant which has just been completed by the John C. Stone Company, Ltd., of New Orleans will be ready for operation in the next week or ten days. The plant is situated at Hagan avenue and Melpomene street, this city, and is one of the largest of its kind in this territory. It will manufacture all kinds of wood products, devoting itself largely to interior finish work in hardwood lines. The company which will operate the plant is a new concern and was organized here some time ago with an authorized capital of \$30,000. It is headed by John C. Stone of New Orleans.

The New Orleans Lumber Exporters and the Board of Port Commissioners are now working on plans to finance the building of the 2,000-foot lumber dock that the lumbermen have asked for on the river front. Recently J. H. Hinton, president of the Exporters' Association, appeared before the dock board and submitted the lumbermen's request for a specially constructed lumber dock. The matter was given consideration and the two interests are now working together on the financial plans. The docks is to cost between \$300,000 and \$400,000. It will be located somewhere above Napoleon avenue and will be specially constructed for lumber shipments. Mr. Hinton declares that the construction of this dock will increase the lumber exports at New Orleans more than 500 cargoes per year. At present a miserably small amount of lumber is exported from here because of inadequate facilities.

Advices from Monroe, La., state that the mill and holdings of the Cheniere Land & Lumber Company, a bankrupt concern, have been sold by J. C. Theus, trustee, for \$98,000. The Bankers' Trust Company of St. Louis was the purchaser.

A large tract of hardwood timber land in

Winn parish, this state, has just been sold by the Gulf Land Company of Calcasieu to the Cornie Stave Company of Junction City, Ark. The consideration was \$50,000.

James H. Heald, head of the firm of James H. Heald of Lynchburg, Va., extensive manufacturers of woodwork, was at Pascagoula, Miss., several days ago looking for a location for a branch factory.

J. D. Taylor, secretary of the Honey Island Land & Timber Company of Honey Island, La., died in New Orleans May 18. Mr. Taylor was a well-known lumberman of this section, and devoted considerable attention to the export trade. In 1884 he began shipping red gum logs to England, and christened the wood American "satinwood." Mr. Taylor was a veteran of the Civil War, having been a member of Dreux's Louisiana Cavalry; he was wounded at the battle of Shiloh, but served to the end of the war and surrendered with his command at Meridian, Miss. He was a Mason, and past master of his lodge.

Ashland.

The W. H. Dawkins Lumber Company has closed a deal for the output of a large band mill at Saginaw, N. C., near Asheville. The mill began sawing May 15 and the company hopes to begin shipping by July 1. There are 40,000,000 feet of lumber involved, of which 1,000,000 feet will be cut each month. The lumber is mostly hemlock, but there is also some fine poplar, chestnut and oak.

Owing to a large increase in business the Dawkins Company has been obliged to put its fronton mill on double turn, and put an extra force of men at their mills. They hope thereby to be able to supply their trade.

Kenova is soon to have another large sawmill. Messrs. Scott and Vanhorn of Catlettsburg have secured a site and will soon begin to build a large band mill for the manufacture of all kinds of lumber.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

To say the least, hardwood trade conditions locally are "spotted." While the call for oak, basswood and poplar remains strong, most all the other woods are dragging. This is notably true of firsts and seconds and sap gum; manufacturers are having difficulty in disposing of any quantity in Chicago at this time. The general opinion seems to prevail that the present draggy condition of trade is attributable to the fact that speculative building has largely ceased, which is making business dull with the interior finish makers; the furniture sales are not up to expectations, with the consequent curtailment of demand for lumber in this branch of trade, and even wagon makers are holding off on lumber shipments owing to a considerable decline in demand. Back of it all is the feeling on the part of buyers that the top of values in hardwoods has been reached for the present and that stock may possibly be bought cheaper at a later period. In spite of the conditions outlined, trade on the whole might still be called fair, and there is every prospect of increasing demand as the season advances. Outside of gum all hardwood prices remain firm.

Boston.

Hardwood values are held on a much higher level than ever before. The high prices have checked the demand to some extent, but leading dealers say a good business is being done in the most desirable grades at full asking prices. Consumers, as a whole, are carrying moderate stocks only. Many have confined their purchases to just what they have needed to carry them along, owing to the high prices ruling. Furniture manufacturers are busy.

An unknown person went to the sawmill of Paxton Trimble on Salt Lick creek, in the absence of the watchman and cut into small pieces all the belting of the mill and also damaged the machinery.

A big timber deal has recently been consummated in Mingo county, West Virginia. The Reitz & Martin Lumber Company purchased 2,000 acres of fine timber land on Burning creek from Stuart Wood of Philadelphia, and others, the price paid being \$20,000 cash. G. L. Dudley is the president of the company; Ralph B. Martin, vice president; T. G. Martin, secretary and treasurer. This company has been incorporated under the laws of West Virginia with a capital stock of \$24,000. Thomas G. Martin, W. D. Camden and Ralph D. Martin are going to the tract immediately and will remain there until all the timber is cleared away. According to the agreement the company must clear the land within six years, and then the land reverts to the original owners. The land lies along the line of the Norfolk & Western railroad, and the shipping facilities are of the best. Nearly all the timber is oak, and the investment is thought to be a good one.

Another large deal was the sale of 30,000 trees situated on Pigeon creek, in the vicinity of Elk and Rock House, to C. Crane & Co., the big Cincinnati firm. About 6,000 acres of land are involved, the timber only being sold. The timber averaged about \$2 per tree.

R. G. Page has returned from Johnson county, where he looked over the valuable tract of timber land recently purchased by his company and arranged to rush the tramroad and mill being erected.

Mr. and Mrs. C. K. Chadwick have gone to Hagerstown, Md., to attend the commencement exercises of Kee Mar College, their daughter, Miss Helen, being one of the graduates.

Mr. and Mrs. O. F. L. Beckette have returned from a month's tour of California.

The backward spring has checked building with the result that there is less interior finish wanted at present than usual.

The demand for plain oak, one inch, ones and twos, is moderately active. Some dealers report a good demand, while others find that orders come hard. Prices range from \$57 to \$59. Quartered oak is firm. There are no indications that prices will be any lower right away. One of the leading dealers predicts a \$90 market before prices are lower. Desirable grades are in comparatively small offering. Shipments of oak are being made to South America. Quite a little more interest in black walnut is reported. Dealers state that this wood is beginning to receive more attention from furniture manufacturers. Brown ash is firmly held under small offerings of desirable lumber. A large business is being done in mahogany veneers. Maple flooring is well held. The market for whitewood is still strong, although some are beginning to feel that larger offerings are coming forward and that prices will soften a little in consequence. One inch, ones and twos, is held at \$59 to \$60 and sales have been made at the outside figure. Many are using cypress as a substitute for whitewood. The former is in good call.

Philadelphia.

There seems to be no radical change in the hardwood situation in this city since a fortnight ago, except perhaps a slight falling off of the volume of business, the natural result of the unsettled labor question throughout most of the eastern states; even in this city it is rumored that the recent strike between the bricklayers, stonemasons and stonecutters is likely to break

out again at any moment, in the event of which building work will be greatly interfered with. As it is, it is predicted that building operation work for the summer will fall off somewhat on account of the high values in lumber, etc. It is nothing unusual that the furniture factories show a comparative dullness at this period, notwithstanding a good many plants are working actively. Sash and door mills are slacking up a little with the exception of a few of the large concerns, which have orders to keep them going some time. Indoor finish work is unaffected and veneer and cigar box makers are rushed. Values remain about the same, with ash, chestnut and basswood in the lead, but very scarce. Oak generally is a little more plentiful; white oak is showing up better, and red oak keeps stiff. Poplar is very strong; maple, both lumber and flooring, holds firm, and cherry runs smoothly. Apparently there is no sign of weakening in any of the hardwoods.

Baltimore.

There are no developments of note in the hardwood trade of this section. All kinds of lumber continues to be in brisk demand and prices are holding their own very well. There are no indications of a drop at any time in the near future, and all the mills are being operated to the limit of their capacity. The foreign business is not as brisk as was expected earlier in the season, but a fair demand prevails and no complaints are heard. The inquiry from abroad is active enough to prevent a positive decline in values, and the belief is entertained that the foreign market will develop more snap later on. Oak, of course, leads all the other woods in point of inquiry, stock being called for in large quantities, and the mills being pushed for supplies. The situation, however, presents some improvement because the car famine is less acute than it has been at times, and the responses to calls for lumber are as a rule fairly prompt, though more or less delay cannot be avoided. The range of values is everything that could be desired, and every effort is being made to get out stocks, especially in view of the floods that have occurred at different places in the south, putting many sawmills out of business for the time being and to an appreciable extent curtailing the available supplies of lumber. This new impediment in the way of liberal offerings is held to preclude all possibility of congestion during the current year and not a few of the plants are making preparations to increase their output. In cases where mill construction has been more or less delayed the projectors of plants are putting forth every effort to get the work under way and to a point where these plants can be made productive. Ash is also in excellent request at prices that stimulate manufacture. Poplar appears to retain its strength and is being moved as fast as the mills can turn out lumber. Prices are attractive. Walnut shows no marked change, good marketable lumber being freely taken, while the demand for mahogany and other woods is about up to the record of any previous time during the past year. Stocks in the hands of local dealers are comparatively small and there appears to be no need for making concessions in order to effect sales.

Pittsburg.

Those who have hardwood are busy selling it and those who have none are busy trying to get some.

The men who anticipated that this was going to be a banner hardwood year are feeling good. They have no trouble in selling their stock. On the other hand it is chiefly a question of getting good dry stock for early delivery. Traveling men report more than double the current demand for oak and maple than for pine and hemlock and prices are accordingly firm.

So far in spite of the general feeling that the summer market is going to be dull there are no evidences of it in the hardwood trade. If any-

thing, prices are a little stiffer than a month ago. Oak especially is selling at the wholesaler's figures if he can deliver it with any promptness. Within the last two weeks the railroad companies have shown their hand in the oak market again and are getting figures on some big lists. Timbers are a big factor in the general demand, but oak mill stuff is also leading most of the calls on the lumberman's board. Piles and ties are selling quite as well as a month ago, and are hard to get in some sources. The West Virginia mills are all busy and there is little rumor of apathy in the small country mills of western Pennsylvania and Ohio, which supply so much of the white oak for piling, etc.

Indianapolis.

The local market continues about the same as it has for several weeks. Shipments are coming in better and the demand for hardwoods is increasing with the beginning of really good weather. Prices, however, remain practically unchanged. The new law, going into effect June 1, requiring that all shippers must make requisition in writing for cars to be loaded and that cars must be supplied in the order in which requisitions are received, is expected to give lumbermen a better show for cars in the future. At present there are no surplus cars on tracks to meet emergencies. Rates are ruling steady and there is no perceptible decrease in freight traffic.

Bristol, Va.-Tenn.

Activity continues to characterize the lumber industry in this section. The mills are all running and lumbermen report good business and fine prospects, though eastern lumbermen coming here do not seem to entertain such a rosy view of the future. Local exporters report that the foreign market is not quite as good as it has been, though this lull is believed to be only temporary. The car supply is satisfactory on nearly all the roads in this section, though some manufacturers in remote sections complain that they are not getting an ample supply.

Cincinnati.

The local hardwood market has shown little during the past two weeks, with the possible exception of building material, which has received a more brisk call than for many months. The weather has been very disagreeable, being rainy, but the market did not weaken any. The good demand that has predominated for many months continues and prospects are that it will continue for some time to come. As usual poplar is the leader in this market but is given a merry pace by oak. Both are readily absorbed at prices asked. Chestnut during the last two weeks has stiffened in price, but this did not affect the demand. Gum and hickory are holding their own, with prices steady. Cypress is salable at firm prices, as are also mahogany and walnut. The market as a whole is firm, with stocks low and the demand brisk. If the weather improves any it will bring many of the summer orders into the market. Building is being delayed by the rain, while other outdoor work is crippled as well.

St. Louis.

A feature of the situation is that buyers are awakening to the fact that they must commence to contract for future supplies. There being no great amount of logs at the mills for future operations, and the labor question being still unsolved, there is no immediate prospect for extensive summer milling. The decline in prices which some had looked forward to has not materialized, and probably will not. Ash, poplar and cottonwood, quartered oak and gum are having as strong a run as ever, and plain oak is stronger. The weather in Missouri and Arkansas bids fair to improve, but has been exceedingly unfavorable for weeks. Although demand has not been rushing, it is considerably better than shipments from the mills, and the

latter cannot promise anything owing to the uncertainty of good logging conditions.

Memphis.

The demand for hardwood lumber while not pressing is still satisfactory, and the volume of business is about as large as the limited stock of dry lumber will allow. In some directions there is pronounced scarcity of dry lumber, there having been little increase during the past few weeks in holdings here. Buyers are inclined to go a little slower in placing orders but they are buying freely enough to enable the market to display a very healthy undertone. There is some shading of red gum in firsts and seconds and clear saps, just as there has been for the past four or five weeks, but the lower grades of this lumber are in excellent demand. Cypress, too, is a shade easier in the higher grades, while the lower, as is the case with gum, are relatively firmer than the higher. Ash is scarce and hard to get in good quantities, with the result that ter sawn oak are not available in large quantities and manufacturers and wholesalers alike are having practically no difficulty in disposing of what they have for sale. Cottonwood is firm in all grades though the lower are perhaps even firmer than the higher. The output of this wood during the spring has been greatly restricted by the unfavorable weather, while consumption has been of record proportions. The demand for poplar is satisfactory and prices are well maintained. The export trade is not especially active. Holders, however, are generally firm in their views of the situation and outlook and this explains in some measure the firmness with which values are maintained.

New Orleans.

Heavy general rains through this section in the last two months have interfered seriously with the operations of millmen and though the weather has been good during the last week or so hardwood manufacturers are still feeling the effects of the almost unprecedented rains that were experienced during May. Severe thunderstorms accompanied these heavy showers and a good deal of damage resulted. The interior demand on hardwoods is still good, though the export market has fallen off slightly. Prices have not been affected to any great extent by this falling off, however, and though the exports have declined somewhat the market is still in fairly good shape.

Liverpool.

The boom in trade which was confidently anticipated a few weeks ago has not continued and business has dwindled to a state of lethargy.

Poplar, ash and oak lumber are still strong, anything approaching seasoned stock is easily sold. Lower prices are not expected here for some little time to come, such is the very low condition of stocks.

Mahogany is firm. It is safe to say that next sale prices will be much higher. The sale yards are very empty and it is openly announced by brokers here that they have instructions to hold their wood at the next sale for higher prices.

The absence of any import of any West Indian or South American mahogany and the approaching close of the season for shipment from the west coast of Africa point to higher prices being easily obtained.

POPLAR

Rough and Dressed
SOUTHERN HARDWOODS

HARRY RANKIN & CO. Kansas City, Mo.

Wanted and For Sale -SECTION-

Advertisements will be inserted in this section at the following rates:

For one insertion 20 cents a line
For two insertions 35 cents a line
For three insertions 50 cents a line
For four insertions 60 cents a line

Eight words of ordinary length make one line. Heading counts as two lines. No display except the headings can be admitted.

Remittances to accompany the order. No extra charges for copies of paper containing the advertisement.

EMPLOYEES WANTED.

A GENERAL SUPERINTENDENT

Wanted for a miscellaneous hardwood proposition. One who thoroughly understands hardwood from the stump to the consumer, also the grading and working of poplar dimension and white pine, oak flooring, etc., for the yard trade. In a good healthy town of 1,000 inhabitants. Reply, stating experience and salary expected. Also want two good Hardwood Lumber Inspectors. Address "J. B." care HARDWOOD RECORD.

INSPECTOR AND BUYER

Of hardwoods wanted. One familiar with source of supply of southern districts, and section of country acquainted with. Give salary expected, experience, and last or present employer. Replies confidential. Address J. R. WILLIAMS, 909 Land Title Bldg., Philadelphia, Pa.

MANAGER WANTED

In chair factory at Gardner, Mass. Man to run 12 dry kilns, who has had experience in the handling of hardwood dimension lumber for drying. State wages and experience. Address "E 25," care HARDWOOD RECORD.

HARDWOOD SALESMAN

Wanted—An A1 hardwood salesman acquainted with New York state, Eastern Pennsylvania and Northern New Jersey trade. Sobriety and ability essential. Give age, experience and references. Address J. R. WILLIAMS, 909 Land Title Bldg., Philadelphia, Pa.

LUMBER WANTED

WANTED—ONE OR MORE CARS

of the following stock:
Qtd. & Plain Red & White Oak.
4/4" to 16/4" 1sts & 2nds, and No. 1 Com.
4/4" to 16/4" 1sts & 2nds, and No. 1 and No. 2 Com. Hickory.

By Using the

RED BOOK

Published Semi-Annually
in January and July

It contains a carefully prepared list of the
buyers of lumber in car lots, both among
the dealers and manufacturers.

The book indicates their financial stand-
ing and manner of meeting obligations.
Covers the UNITED STATES and MANI-
TOBA.

The trade recognizes this book as the au-
thority on the lines it covers.

A well organized Collection Department
is also operated and the same is open to you.

MENTION THIS PAPER

10% MORE LUMBER WITH THE SAME MACHINERY AND CREW

If you have to shut down occasionally to wait for steam to rise,
THE GORDON HOLLOW BLAST GRATE

would enable you to increase your cut 10% without buying an
additional machine or hiring an additional man.

This is a very conservative estimate, in many cases.

Just think of it! A gain of 10% in your output without
increasing your operating expenses one penny!

Can you wonder at it that users pronounce the Gordon
Hollow Blast Grate

The Best Investment They Ever Made?

Every set sold is a
standing advertisement.

We point with pride
to the fact that while
attempts have been
made ever since the
middle of the last cen-
tury to devise an appar-
atus that would suc-
cessfully burn wet,
green and frozen saw-
dust, etc., The Gordon
Hollow Blast Grate was
the first to achieve suc-
cess.

and it is the only one today in which both efficiency and
durability are found in any high degree. All the men that re-
duced it to a practical basis and made it famous are still identi-
fied with the company, and in soliciting your business we are
tendering you the services of those who have had fifteen years
experience in the business.

The Gordon Hollow Blast Grate Co.

GREENVILLE, MICH.

The largest manufacturer of blast grates, edgers and trimmers in the world.

**SMITH of
SMITHVILLE**

NO. 105-A, EXTRA HEAVY 12-INCH MOULDER

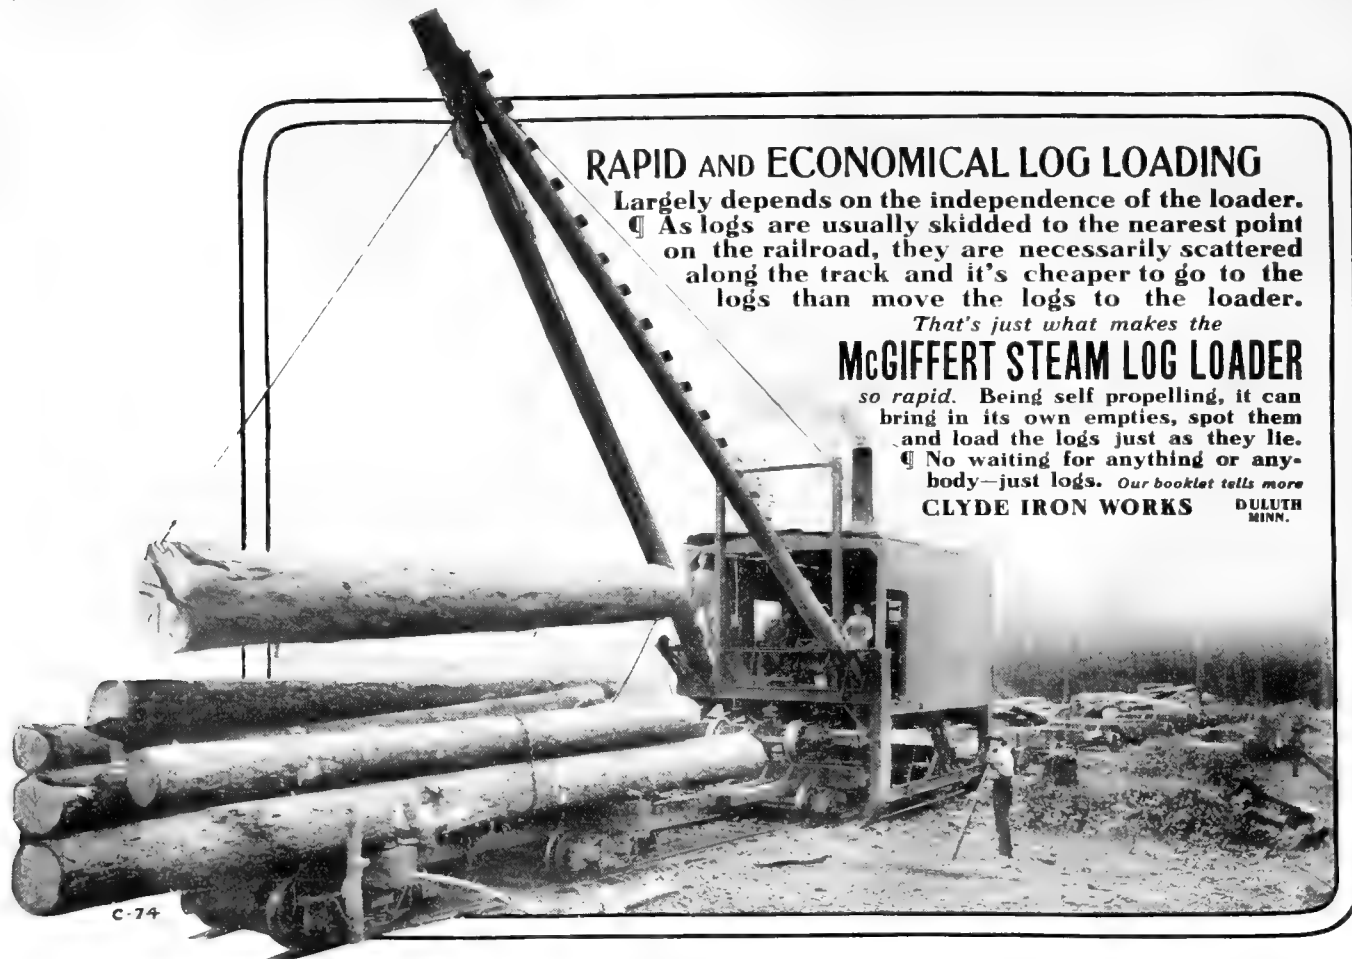

IT HAS been our purpose during the last half century to develop a line of wood working machines containing the best workmanship and material that American skill and wisdom can afford. This fact we are proud to say is well established in the minds of our many patrons. We have, however, now exceeded ourselves by the development of a remarkable Moulder, the excellence of which is due to our obtaining written suggestions from more than a thousand operators throughout America. This machine stands alone as being the composite idea of the thinking operators of this country. One year's test of its work has convinced us that it is impossible for you to compete successfully against the Smith Moulder with any other machine. Can't we send you prices and literature?

RAPID AND ECONOMICAL LOG LOADING
 Largely depends on the independence of the loader.
 ¶ As logs are usually skidded to the nearest point on the railroad, they are necessarily scattered along the track and it's cheaper to go to the logs than move the logs to the loader.
That's just what makes the
McGIFFERT STEAM LOG LOADER
so rapid. Being self propelling, it can bring in its own empties, spot them and load the logs just as they lie.
 ¶ No waiting for anything or anybody—just logs. *Our booklet tells more*
CLYDE IRON WORKS DULUTH MINN.

C-74

ATKINS Silver Steel SAWS

cost more than other Saws, because they are BETTER. The First cost of a Saw does not count for much. What you want is your Money's Worth. Isn't it better to pay a fair price and get the best rather than a low price and get poor goods? Try an ATKINS SAW. They're better.

E. C. ATKINS & CO., Inc.

The Silver Steel Saw People.

Lidgerwood Combination Hardwood Logger

(Patented)

Especially Designed to Log the Hardwood Flats Bordering on the Mississippi River. A Machine that Can be Used Twelve Months in the year.

RIGGED AS A CABLEWAY SKIDDER.

To be used in sloughs, swampy places and during the wet season, especially where the timber runs high to the acre per thousand feet, or where the timber is thick and small with lots of underbrush.

RIGGED AS A SNAKER.

Should be used when flats are dry enough for a horse to return tongs into the woods, especially where the timber is large and scattering.

RIGGED AS A SLACK ROPE MACHINE.

To be used only when impossible to operate either the snaking or cableway system, or when the railroad is so located that a slough or low swampy place must be crossed, thus preventing the return of line by horse.

Lidgerwood Manufacturing Co.

96 LIBERTY STREET, NEW YORK

Logging Machinery Branch Houses: ATLANTA, GA., SEATTLE, WASH.
Agency: WOODWARD, WIGHT & CO., New Orleans, La.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock $17\frac{1}{2}$ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

Write for Full Description.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing.

Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

CELEBRATED FOR HIGH STANDARD OF QUALITY AND MILL WORK

Mitchells - Make

Rockhard, Maple and Beech

FLOORING

The Northern part of the lower peninsula of Michigan is noted for the finest Maple and Beech timber that grows.

We own enough of this timber to keep our flooring factory running ten to twelve years.

We do our own logging, sawing and handling, and are so organized that we control every step of the manufacturing from the stump to finished product.

All of our lumber is first air dried and then kiln dried.

All of our 13-16 inch Flooring is thoroly kiln dried, end matched, machine scraped and polished, bored and bundled.

Our grades are of a high standard, and under no condition do we mix them to enable us to meet competition and low prices.

Please keep in mind also that especially is it true of Hardwood Flooring that

Quality is Remembered after Price is Forgotten

PLEASE SEND US YOUR INQUIRIES

INDUCTION MOTOR

In all sawmill work the power required varies with the kind of timber handled and according to its condition when passing through the mill. In a day's work heavy logs follow on the heels of smaller ones, partially seasoned timber is mixed with green and the work is constantly changing.

These conditions can be met only with a motor of ample over-load capacity and the simplest possible construction—qualities which are featured in the General Electric Induction Motors for sawmill work. Upon demand these motors will supply 200 per cent to 300 per cent of their normal output.

One Man Said:—

"The 100 h. p. (GE) Induction Motor driving our 9-foot sawmill shows absolutely no drop in speed no matter what load the sawyer puts on it, and can hum thro' a 30 in. birch at as good a clip as it can thro' a poplar log."

He has more to say in booklet 4470-H.

General Market Conditions.

The hardwood market the country over is holding up remarkably well. Two weeks ago it looked as though trade might decline to such a material extent as to affect values, but there seems to have been a general resumption of buying and most all items of stock, with the possible exception of firsts and seconds and sap gum, are in good call, at full list prices.

The good end of poplar leads the van in active demand. Stock is undeniably very short and the recent loss of logs from the upper Ohio tributaries will make the future supply still shorter than was anticipated. The slight decline of two weeks ago in West Virginia oak in the Eastern markets seems to have been recovered, and there is no indication of lowering values.

There is a strong and insistent demand for cottonwood box qualities, and recent orders have been placed in single lots for as high as 10,000,000 feet, comprising the full season's cut of several large mills. Basswood is a close second to poplar and cottonwood in demand and there is very little in sight for the last of the year.

Stocks of northern hardwoods are generally pretty well sold up to the saw, and in many cases the season's cut has been sold to jobbers and large consumers.

In the South weather conditions are a little better than they have been, but still the ground in the delta country is very soft and logging operations are carried on with difficulty. Probably not more than half the mills of that district are in commission. The heavy rains of the last few days have also played havoc with the tram-roads in the mountain country and a good many of these mills are shut down for want of transportation facilities to the mill from the woods. In the Charleston district a tremendous fall of rain occurred a few days ago, which is the heaviest that has obtained during the last eighteen months. Many operators had many miles of their rail-roads washed completely away, which will interrupt logging and sawing for the next month.

The trade in mahogany, cherry and walnut is above normal and stocks of all these woods are comparatively light. Most of the hardwood flooring manufacturers report that they have a large number of orders on hand and are valiantly striving to catch up with orders.

While practically all the veneer factories are today fully occupied in filling orders, in some quarters it is reported that there is a slight diminution in inquiry and placing of new orders. There is an immense volume of veneers being turned out, but on the whole prices are far from satisfactory to the manufacturers.

The Saving Grace.

The interest that the public at large is taking in the forest policy of the Roosevelt administration is remarkable. Men and women in all ranges of society seem to have awakened to the importance of forest conservation and rehabilitation. An editorial from a recent drug paper, under the head of "The Nation's Power," aptly illustrates this statement. The publication says that as the states acting separately could not end slavery in 1861, so the states acting separately cannot end the piracies of capital in 1907. The states could not end the poisoning of people by adulterated food, so the nation is ending it. The states could not preserve the country's forests, so the nation is preserving them. It says the constitution is our ordinance of national life, and not the articles of our national death. It was meant to free the hundreds of American people and not to shackle them. Marshall so interpreted it in the courts; Lincoln so interpreted it in the council chamber; Grant so interpreted it on the battlefield, and today Roosevelt is following in their footsteps and thus obeying the will of the American people.

The HARDWOOD RECORD is fully in accord with the sentiments expressed by its contemporary, and it is full time that the selfishness of some of the people of our far western states who disapprove of the nation's timber saving policy should be promptly and vigorously sat down upon.

The United States government should be a pretty good landlord, and it is to be hoped it will retain its hold on its own, and not turn the remainder of the public domain over to individual states to be dissipated by local politicians and railroad corporations, as it did with the splendid timber of Michigan, Wisconsin and Minnesota twenty-five to forty years ago.

The Veneer Meeting.

There are many deductions that can be made from a perusal of the proceedings of the meetings of the National Veneer and Panel Manufacturers' Association, which held its semi-annual session at Chicago last week. Primarily, it was shown that the output of veneers has been doubled during the last eighteen months, and that the industry is the fastest growing one in the United States. It was shown that log and manufacturing cost during the past ten years have practically doubled, and furthermore it was demonstrated that the prices now secured for veneers are in many cases less than those of ten years ago. However, through the efforts of the association, prices have been materially enhanced during the last year and comparatively speaking, are fairly satisfactory.

In legislation the most important thing done at this meeting was establishing a set of uniform classification and grading rules to cover all varieties of plain rotary cut thin lumber. These rules, in sympathy with those of various lumber associations, have been somewhat lowered in both quality and sizes, as compared with former standards, but still it is thought they will be entirely satisfactory to the consuming trade.

It was shown that a good many improvements are being made in machinery to produce veneers with a minimum of waste, and especially in drying apparatus for seasoning them without discoloration or splits. The meeting, while not large in numbers, was attended by representative men cutting all varieties of American woods, and there was lots of enthusiasm manifested over the present and prospective success of the work of the organization.

To the student of commercial affairs the salient point brought out in the various discussions during the meeting was the fact that the veneer business is passing through a state of evolution. From a small industry it has suddenly jumped to a great one, and comparatively few people are as yet able to estimate cost with accuracy. Again, thus far since the making of veneers has become a great commercial pursuit, there has been no great amount of money made out of the business. People have entered it without an authentic cost basis, with the result that there have been a great many commercial failures, and that the rank and file of veneer producers are now doing business at cost; it is only the exceptional man that is making any considerable profit.

It goes without saying that with the immense demand for veneers throughout this country and abroad, association effort along these lines is going to mutually educate every one connected with it, and that very soon the business will stand on the same good lines that the lumber business does. This result is already in sight.

Use Birch.

"Use birch" is the slogan by which one of the best known northern operators addresses his trade on envelopes, slips, circulars, blotters, and in letters. He says it is the logical successor of oak, which is becoming so scarce and expensive. He alleges that birch does not warp, split, shrink or swell; that it will finish in any color or take any stain in competition with the finest mahogany. Above all things else, it is cheap, and is easy to work; it is eminently desirable for all-around work and can be had at a reasonable price.

The HARDWOOD RECORD is fully in accord with the opinions of this manufacturer of birch. It is a great wood and its merits are not appreciated as they should be save in a small portion of the eastern country. The wood has character in every foot of it; it has density; it has strength; its working qualities are splendid; no wood takes a finer stain and finish when properly handled; it is the peer of any hardwood that ever grew.

The Hardwood Flooring Business.

Of all the materials that enter into the production of flooring there never has been such a marvelous development as there has been in the last ten years in the making of floors from hardwood lumber. The great increase in output of hardwood flooring materials has been from Michigan and Wisconsin hard or sugar maple, but during this time there has also been a remarkable increase in the production of oak flooring, and during the last few years birch and beech are cutting a considerable figure in production.

Maple for years was one of the little-thought-of forest trees of the northern range of hardwood growth. It was simply the basis of the maple sugar industry of the farmer and for the firewood of the villages and cities. Such has been the increased estimate of the value of the wood that high class hardwood stumpage in Michigan that will show even 40 per cent maple will sell as high as \$40 an acre, and that with a total average stand of less than 7,000 feet per acre. This has been brought about by the growing appreciation of maple flooring. For this purpose maple is really a marvelous wood. It lays little claim to beauty, but it has a density that will withstand the severest kind of wear and abuse, and stands up under such treatment for many years after nearly any other kind of flooring would require replacing. People who have experimented with beech and birch flooring in many instances seem to think it is of almost as high a type as maple. Clear heart red beech flooring commands a relatively high price in the market and birch flooring is fast coming into general use.

When you get to oak flooring, of course this will always be the aristocrat of the flooring woods, and when the architect specifies a fancy floor, oak always has first call. Up to within a few years it has been impossible to secure oak flooring manufactured in a workmanlike manner at a reasonable cost above the value of oak lumber, but during the last few years several first class and highly efficient oak flooring plants have been put in commission, and today flooring of excellent quality can be secured at a price within the reach of a builder of even ordinary houses.

Hardwood floors of these various kinds of woods are constantly replacing the worn out white pine, yellow pine and other soft wood floors laid from five to fifteen years ago. In fact it would not be surprising if a large percentage of the output of the flooring factories was being used for relaying purposes rather than for new structures. This is a source of flooring demand that is tremendous in its entirety, and will keep many flooring plants busy even if general building should be very much less in the future than it promises to be.

Canadian Timber Values.

The Department of Commerce and Labor has received information from Canadian sources which indicates that lumber prices in the Dominion are surely moving upward. The government has used all possible means to protect her great lumber industry, even including the imposition of an export duty on logs, and is now seeking a market for her finished lumber product in the United States. At the present time logs cut upon provincial lands in British Columbia must be manufactured within the province and are not allowed to be exported. Manufacturers feel that the present cost of logs will compel them to make another advance in the price of lumber. Loggers say that the cost of getting logs out of the woods has increased their value immensely on account of the greatly augmented price of labor and equipment. Millmen contend that the cost of manufacture has also become much greater during the last twelve months, and that with logs where they now stand profits are not anything like what they were or what they should be. Facing a positive deficit of logs the coming winter, loggers state that they are subject to still another advance, so that under these combined circumstances it is generally conceded that the prices of lumber will go much higher. The shortage of logs will, it is estimated, amount to about 25,000,000 feet by next year.

The Furniture Buying Season.

The sales situation surrounding the furniture buying seasons of January and July is always of interest to the hardwood trade. Nominally the furniture expositions at Grand Rapids, Mich., opened a week ago Monday, and the great Chicago show-rooms of sample furniture are supposed to open their doors July 1, which probably means July 5. It is said that buyers not to exceed fifty, and they from the East, have put in an appearance at the Grand Rapids show. The number of exhibitors at the furniture city is from 225 to 250—about the usual number; according to the reservation of space at the Chicago show there will be from 400 to 425 lines of goods in evidence.

Manufacturers of furniture are a good deal encouraged over the prospects of a good fall trade, although a month ago they were fearful that there was to be a marked suspension of buying. This feature obtains, however—that it is now known orders are going to be placed pretty late, and that trade will drag a good deal further into the season than it did at the first of the year. The knowledge that a good fall furniture trade is likely to prevail is further emphasized by the fact that furniture manufacturers during the last two weeks have again become quite heavy buyers of lumber, while a month ago they had practically suspended purchases owing to the uncertainty of the situation and to the possible hope of buying their lumber supplies later at lower prices.

Pert, Pertinent and Impertinent.

Forget It.

If you see a tall fellow ahead of a crowd.
A leader of men, marching fearless and proud.
And you know of a tale whose mere telling
aloud
Would cause his proud head to in anguish be
bowed,
It's a pretty good plan to forget it.

If you know of a skeleton hidden away
In a closet, and guarded, and kept from the day
In the dark; and whose showing, whose sudden
display
Would cause grief and sorrow and lifelong dis-
may,
It's a pretty good plan to forget it.

If you know of a thing that will darken the joy
Of a man or a woman, a girl or a boy
That will wipe out a smile, or the best way
annoy
A fellow, or cause any gladness to ebb
It's a pretty good plan to forget it.

Reaching the Top.

A man is a coward
if he lets another
knock him down when
climbing, and still
more of a coward if
he tries to rise by
knocking another
down.

Need Pruning.

Now that foresters
are looking after the
shade-trees, why not
some official to watch
family trees a little
closer?

The Test.

When a woman
will wear unbecoming
clothes in the interest
of reform, she is cer-
tainly in dead earn-
est.

Go Slowly.

A step in the right
direction may save
you from putting your
foot in it.

Very, Very Young.

When a man says
he knows women thor-
oughly, guess him at
about twenty-one.

Look at Home.

It's generally your
own fault when peo-
ple give you the
"busy" signal.

Inconsistent.

The men who eter-
nally prate about the
evils of "booze"
usually wind up with
the boast that they
never tasted it.

WAKING UP TO FACTS.

Hardwood Scalper: These associations are surely fixing things so that scalping is going to be a science.

The Difference.

Good fortune usu-
ally wears soft gloves
when she knocks; bad
luck uses brass knuck-
les.

All Want It.

The "fatal gift of
beauty" is not al-
ways as deadly as it
is painted. Most wo-
men would take
chances.

Often.

Bad luck is about
fifty per cent laziness
and the rest bad man-
agement.

Their Long Suit.

Some wills are very
hard to break, but
usually a lawyer is to
be found who can
succeed.

Traditional.

Many an all-around
musician falls down
when it comes to the
horn of plenty.

Wants to Know.

It's a man's fu-
ture and a woman's
past in which the
world is interested.

Don't Worry.

Worry is the bane
of the age; work is
the antidote.

A Strong Tie.

Such little things
as "stitches in time"
keep a man good-na-
tured and even save
many a divorce suit.

A Case of Logic.

But how to bring the thing about
I owned, to my confusion,
'Twas difficult, indeed, without
Some warrant for intrusion.

She pored o'er "Science and the Key"
In prayerful meditation,
And I, from Mother Eddy, gleaned
A sudden inspiration.

I rose and said, "You'll not deny
This logical deduction:
Mind over matter is supreme;
We'll think an introduction."

"Your logic, sir," she sweetly said,
"Is of the faultless kind.
I'll give you absent treatment, sir;
The smoking-car's behind."

—LIFE.

A pretty Christian Scientist
Sat opposite to me.
Her eyes were blue, her hair was fair,
She was gowned most charmingly.

The way was long, the car was hot,
The train some hours late.
Small wonder, then, my fancy stirred
With hopes of tete-a-tete.

AMERICAN FOREST TREES.

FIFTY-FIFTH PAPER.

White Willow.

Salix alba—Linn.

This species of the willow family is known by but few names, although it is found in nearly all parts of the country. Those most commonly given to it are white willow, yellow willow and golden osier.

The various members of the genus *Salix*—170 distinct species and numerous hybrids—are found growing from the Arctic circle to the equator, under the greatest possible varieties of soil and climate, on the tops of mountains and at the sea level.

The white willow was imported to this country from Europe, where it grows in equal or even greater abundance. There are several varieties of the species *alba*; in its typical form the twigs are olive green, and the leaves are silky on both sides, while in the variety *argentea* the foliage is quite gray and silvery; in *caerulea* the twigs are olive, the leaves smooth above and slightly greenish-blue; in the variety *Salix alba vitellina*, which is the one pictured herewith, the twigs are smooth and brittle at the base, and yellowish, hence the common name golden osier. Says Lounsberry, "Early in the spring especially, a golden glow from this willow appears to lighten the whole of its surrounding atmosphere. It is a tree very common in America, perhaps the most so of any one of the family. Even about old houses it is found, and it grows abundantly in low places." In shape and general contour the leaves of all three varieties are alike—tapering both ways, and having sharply defined teeth; they are simple, alternate and lanceolate; silky white hairs appear on the upper surface as well as underneath, particularly when young; the leaves grow from two to four inches long.

Both staminate and pistillate flowers grow in long slender catkins, appearing when the leaves do, usually in May. The fruit is flask-shaped and sessile.

In general appearance the *Salix alba vitellina* is often a venerable-looking tree, with its short erect trunk and regular broadly-spreading top. It reaches a height of from forty to sixty feet. Very few become exceedingly large trees.

This American off-shoot of the white willow of Europe is far more common in cultivation than is the parent tree, and is one of the most vigorous and useful of all the willows found in the United States. Its yellow twigs are its best means of identification. The many varieties and often even species

of willow are difficult to distinguish.

The wood of willow is invariably light and weak. However, uses for it have always been found. The wood is a favorite material for the manufacture of wooden limbs, and the soft light timber makes excellent charcoal for gunpowder and is largely employed for fuel when a hot, quick fire is essential. The wiry, flexible twigs of many

them soon grow into an avenue of saplings, and in damp places their roots drain and improve the soil. Some of the species have twigs which will strike root if they fall on rich earth, especially the waterside willows; a stream will carry them along with its current and when they eventually lodge upon some shoal they take root and a clump of trees springs up. This characteristic is

advantageous to many localities where the sands and banks are thus firmly established and made sightly.

The British claim that the willow timber grown in England is far ahead of that imported either from America, Australia or the Continent for the purposes to which it is put, being more springy, less brittle and more lasting. Unpollarded willow trees, that is, those which have not been denuded of the top and upper branches, are most suitable for the making of cricket bats, and in England the selling price of excellent, clean willow for that purpose is now about 5s. and upward per cubic foot. The people are being urged to set out willow plantations in all parts of the country. There are a few stations, in Bedfordshire, the fen districts of Lincoln and Cambridge, and along portions of the Thames river, where willow culture is engaged in, covering in all perhaps 7,000 acres, the product being devoted to basket making. Foreign competition has been so keen that in spite of the fact that English makers prefer the home species, cultivation of willow has decreased remarkably during the past thirty years. The sorting and harvesting of osiers gave good employment to many people, and rather damp land that could not be used for other purposes brought good returns when planted with willows.

The illustration accompanying this article is from a photograph of one of the many willows growing in Washington Park, Chicago. It often happens that these trees are planted without any regard to fitness or arrangement, and in such cases they mar rather than enhance the general appearance of the landscape. In the Chicago parks, how-

ever, they have been placed with such good taste that they form a fitting and graceful foil to larger and more handsome trees, making the general effect very pleasing.

On account of the rapid growth of willow, its hardiness and other qualities, it is often planted freely in residence districts where it is desired to produce shade and shelter in a very short space of time.

TYPICAL FIELD GROWTH WHITE WILLOW, WASHINGTON PARK, CHICAGO.

varieties are staple articles in the wickerware industry, and tannin is obtained from the bark. The fondness of the tree for water has permitted its use in Holland and other countries to hold up the banks of streams and canals. The cultivation of willows is very simple, since a twig stuck into damp earth will develop into a little tree in a comparatively short time. Posts made of

JOHN M. WOODS
EAST CAMBRIDGE, MASS.

Builders of Lumber History.

NUMBER XLVII.

John M. Woods.

(See Portrait Supplement.)

To write the life history of Hon. John M. Woods, lumberman, orator, politician, philanthropist, is to tell of early privations and difficulties surmounted by indomitable will and remarkable ability—not employed as excuses for indifferent achievements, but used as stepping-stones to unquestionable success.

Mr. Woods was born in Pelham, N. H., Oct. 22, 1839, and his early life was devoted to hard work in field and shop rather than to the care-free fun and frolic and happy school life which are childhood's due. At the age of twenty-one he had mastered the shoemaker's trade and left home to practice it in Salem, N. H., at a salary of \$4 a month. It is worthy of note that today no employee of John M. Woods & Co. receives less than ten times the salary at which his principal commenced a business career.

Mr. Woods divided his time between his work at the bench and in the field until 1862, when he enlisted in the Union Army, Thirtieth New Hampshire Volunteers, for three years' service in the Civil War. Of his regiment's long and honorable record he is justly proud. In his memory the battles of Cold Harbor and Fredericksburg stand out most vividly. During the latter engagement he was wounded and left on the field as dead, but in the night regained consciousness and escaped to his comrades. Probably no "old soldier" in the country has more love for the army, or retains in more marked degree the patriotic enthusiasm engendered by the nation's peril in those dark days than does Mr. Wood, and his friends and fellow citizens delight in hearing him voice his sentiments and reminiscences. Three times he has delivered the Memorial Day oration in Somerville, Mass., where he now resides, and he often addresses other posts in surrounding states. He has been prominently mentioned as department commander of the Grand Army of the Republic, but has never cared to conduct a campaign to that end. Mr. Woods has achieved distinction as an after-dinner speaker and writer on various subjects. His brochure on "The Forest and Its Uses" is particularly noteworthy.

In March, 1867, he began his career in the lumber business as a clerk for Clark & Smith, hardwood dealers of Boston, at a salary of \$12 per week. In November of that year he married Sarah E. Drake of Effingham, N. H. Notwithstanding their meager resources the young couple managed carefully and prospered. Each year Mr. Woods' salary was advanced, and in 1868 he moved to Charlestown; in 1870 he went to Indianapolis as buyer for the firm, and in 1872 was admitted to partnership. This

arrangement was dissolved in '73, however, and in the panic of that year he lost practically all he had, about \$7,000, but his dauntless spirit refused to be downed by reverses and he began anew as buyer and salesman for Holt & Bugbee, with whom he remained until '79. He then became eastern agent for George D. Emery of Indianapolis with whom he continued until 1884. In that year he began business for himself, and in '98 moved to the present location of John M. Woods & Co., 223 to 253 Bridge street, East Cambridge, Mass.

His concern has the highest possible reputation for integrity of dealing and high business standards. It does an average business of half a million dollars annually, comprising the handling of 6,000,000 feet or more of mahogany and other hardwood lumber and veneers. More than twenty-five years ago it advocated then almost unknown measures for the benefit of employees, among them the early Saturday closing movement; and it was the first lumber firm to voluntarily advance the wages of its men, thus forcing the scale up in every other house in the metropolitan district. Mr. Woods has taken as partners young men who began at the very bottom of the ladder—Messrs. E. D. Walker and W. E. Chamberlin, as well as his son-in-law, C. H. Sherburne, and to them he feels that he owes no inconsiderable measure of the prestige of his house.

Twice in the past few years Mr. Woods has made a European trip for combined business and pleasure.

Several notable contracts have been filled by the concern, among them the furnishing of mahogany for the state capitol at Indianapolis, much of the hardwood for the state house in Boston, for the addition to the White House at Washington, and the famous palace of Mrs. Jack Gardner in Boston, as well as for several handsome steamers and office buildings owned by eastern capitalists.

Mr. Woods is prominent in lumber association affairs and has been president of the Massachusetts Retail Lumber Dealers' Association; he is invariably a prominent speaker at meetings and banquets of the National Wholesale Lumber Dealers' Association and is a leading spirit in the National Hardwood Lumber Association.

In 1904 Mr. Woods was nominated for state senator from the Third Middlesex district and, after a campaign carried on along his own original ideas, was elected. That his services were appreciated was shown by re-election the following year. During his terms in the Senate Mr. Woods was a member of many important committees and invariably distinguished himself for his clean, open, honorable position with regard to every measure which demanded his attention.

For more than twenty-five years he has been a member of Somerville Royal Arch Chapter A. F. and A. M.; is a member of Coeur de Lion commandery, K. T.; and of Aleppo temple, Mystic Shrine; also of Oasis Lodge I. O. O. F.; Ancient Order of United Workmen, the Royal Society of Good Fellows, Massachusetts Forestry Association, International Society of Arboriculture, and the Corinthian Yacht Club. Mr. Woods is prominent in the Congregational Church, and in the Somerville Y. M. C. A., and is a member of several political and social clubs.

In 1884 he was married the second time to Mrs. Almira J. Folsom, a sister of his first wife. He has one daughter and one step-daughter, both of whom are married and reside near him.

In political matters Mr. Woods always insisted upon his enthusiastic friends and supporters following out three distinct rules: That nothing should ever be said or done to reflect upon any opposing candidate; that the means employed toward his election should be honorable and legitimate; and that no political work should be done upon Sunday. Likewise in all his personal achievements, three principles have guided him—to name them is to summarize the splendid, positive character of the man—to make his word as good as his bond; to master all the details of his own business: to be considerate of all mankind.

Production of Lumber in 1906.

The director of the census announces the following preliminary report of the production of lumber in the United States for the calendar year ending December 31, 1906. Statistics concerning the production of lumber and timber products have heretofore been collected in connection with the decennial and quinquennial censuses of manufactures. To satisfy the urgent demand for more frequent information relating to these important products, the Forest Service of the Department of Agriculture collected statistics pertaining to the production of 1905, and for purposes of comparison these totals are presented below. In order to avoid duplication of work, however, and insure uniformity of results, the preparation of the annual statistics has been committed to the Bureau of the Census, which has worked in cooperation with the Forest Service.

The figures cover the cut of 21,077 mills in 1906 and 11,666 mills in 1905:

Kind of wood	Lumber, thousand feet B. M.	
	1906 (1).	1905.
Yellow pine.....	13,049,769	9,760,508

(1) New York cut for 1905 included herein; totals for 1906 being prepared by the State Forest, Fish and Game Commission, not yet available.

National Veneer and Panel Manufacturers' Association

That husky, 18-months-old organization, the National Veneer & Panel Manufacturers' Association, is giving promise of great accomplishments and usefulness. It is fast getting the demoralized and unprofitable veneer business lined up into an industry that shall be satisfactory and well worth while to those engaged in it.

On Thursday, June 20, at 10 a. m., this association assembled in semi-annual convention in the green room of the Auditorium Annex, Chicago, with President D. E. Kline in the chair and Secretary Defebaugh recording. The good work accomplished for the veneer makers at this meeting is fully recorded in the following pages.

On assembling President Kline addressed the meeting as follows:

Gentlemen, I have no intention of making an address—just simply want to say that the progress of the association in the

never taken any action in that direction, for I think the subject is worthy of considerable consideration. We would certainly make more progress if we had someone plugging for us all the time.

One of the most important matters that came up was regarding classification and grading rules. Additional members of that committee were appointed at that time. The original committee consisted of Messrs. Lord, Williams and Roberts, and to it were added Messrs. Underwood, Thompson and Pierpont on northern woods, and Messrs. Anderson and Groffman on southern woods. I believe that the committee has never gotten together, but I want to state that the so-called Veneer Manufacturers' Club, of which a number of our people are also members, has taken up and canvassed the subject of classification of these woods very thoroughly and has a report which it wishes to submit; it would, of course, like to have the association adopt that report as its official classification and grading rules. The report will be submitted in due course of business.

I think, gentlemen, that is all I have to say just now. The secretary will kindly offer his report.

Secretary Defebaugh read his report in the form of a studiously prepared paper, as follows:

Secretary's Report.

Mr. President and Gentlemen of the Association: To those of you who have not kept in close touch with the development of the veneer industry it will be of more than passing interest to have figures submitted to your attention indicative of the vast strides that are being made in this line.

Up to 1905 there had never been any statistics better than guess-work covering the quantity of logs cut into veneers in this country and the amount of the resultant product. Early in 1906 the director of the census collated this information for the year 1905. He secured reports from 128 factories, which showed that 181,146,000 feet of domestic logs were consumed in veneer making during that year, and that the resultant veneer product amounted to 1,108,518,000 square feet. The figures just completed for the year 1906 involve a total of 315 factories and show that the consumption of logs for veneer purposes during last year had risen to 326,567,000 feet, and that the product had grown to 1,965,948,000 superficial feet, an apparent increase in output of approximately 857,430,000 feet. We can naturally assume that the proportionate increase for the year 1907 will be almost as great as in 1906.

Of the woods cut into veneers red gum was nearly doubled in consumption in 1906 over 1905; yellow pine was nearly quadrupled; white oak more than doubled; maple showed an increase of about twenty per cent; cottonwood was nearly doubled; yellow poplar showed a slight falling off; basswood increased about twenty per cent; birch about ten per cent; elm more than doubled; tupelo grew from a fraction less than 300,000 to more than 8,000,000 feet; red oak was nearly doubled; spruce from an unknown veneer quantity increased to nearly 6,500,000 feet; beech was quadrupled; ash more than doubled; walnut trebled; sycamore was as eight to one of its 1905 output.

These figures unmistakably show one important thing: that the veneer industry is growing more rapidly than any other in the United States. It is not exceeded by even electrical development, which is held up as an example of remarkable increase as the years go by. The lesson to be learned is that this industry, which is a great commercial pursuit, is a new one well worth the individual and joint protection of those engaged therein. This protection lies in your hands. You all know that the results of the devotion of your capital, time, experience and labors has not been as profitable in the past as it should be. Up to this time the veneer industry may be said to have

been in an experimental stage. It is for you to put it on a permanent and paying basis. This you, and you only, who are able to figure cost and the just profit to which you are entitled can do. It is only through your efforts that the desideratum can be attained, and this is the object, as I see it, of the National Veneer & Panel Manufacturers' Association.

A report which you will consider today—the recommendation of your inspection committee—is a matter that should receive personal attention and careful thought, so that the report adopted on this subject will cover the points up to date. Rules should be prepared which will insure to the veneer manufacturer the full value of his log when sold to the consumer. This is one way to get more money for your product. Those of you who measure the logs as they go into the mill and then keep a tally of the lumber shipped know conclusively that the waste pile is the biggest item of cost. It is so costly that it has eliminated almost entirely from many a manufacturer his profit, because in figuring his price he was satisfied to add 10 per cent instead of 30 per cent to the labor and timber cost before he added his overhead expenses. The result is that, after sitting down with some of the most aggressive men in this organization, men who have figured carefully and know exactly what they are doing, we find they have made practically no money out of the business. For this reason the valuation committee, in addition to the work of the inspection committee, should be very careful to recommend prices for the last half of this year which will really indicate the

D. E. KLINE, PRESIDENT, LOUISVILLE VENEER MILLS, LOUISVILLE, KY.

past six months has not been as great as it should be. There have been no withdrawals and there have been some acquisitions to our membership; but things, nevertheless, have not progressed as rapidly as we had anticipated and hoped, rather to my surprise.

No new branch association has been started since our last meeting. At that time there were several matters referred to the president for attention, among them a communication to be directed to the Chief Forester. A letter has been written and the secretary has received a reply which he will read later on.

Another matter which arose at our last meeting was in regard to the employment of a working assistant to the secretary under a salary. Such a person should devote his entire time to the work. It is to be regretted that the executive committee has

J. A. UNDERWOOD, FIRST VICE PRESIDENT, UNDERWOOD VENEER CO., WAUSAU, WIS.

true value of your goods, covering the cost with a fair added profit.

For several reasons, although the membership of the association is not as great as it should be, the benefits derived have far exceeded the expectations of the officers when this organization was effected eighteen months ago. The bulletin service seems to have attracted the interest of the member and nonmember, and some very trite personal talk has been heard by the secretary from the manufacturers of this organization. There are greater possibilities, however, on this score and it will be possible to furnish bulletins if you will do your share of the work, giving consumption and the value of the various woods from month to month in the different sections. This will provide the necessary information to guide you as to the prices to be quoted for the next thirty days.

One manufacturer in a letter to the secretary on this subject said: "We have made great progress in our association and there is more in store for us, but we have been too bashful in our statistics committee in telling the trade what our product is worth, and it is to be hoped that at tomorrow's conference the exchange of information will be so free and general that each member present will go home with new ideas as to values, and a good, stiff backbone to ask the price and get it."

We are to be favored today with several papers on subjects in which you are no doubt interested. We have, however, been unfortunate

in not gaining several addresses that would have given us more light on the necessities of the case before us.

It has at times seemed that the manufacturers were not sufficiently considerate of other individuals in this association, but I am glad to say that reciprocity has prevailed in so many cases that it leads me to believe that it will be easy next year for members to gain the co-operation desired on this score.

The object of this meeting is more for conference and exchange of information than for carrying out a fixed program. The president and secretary therefore suggest that you make it a point to ask questions and answer them on the various subjects brought up for your consideration and endeavor to stay in the meeting until its close, as there will be one session per day, starting at 10 a. m. and adjourning about 4 p. m.

Mr. Kline: In regard to the secretary's report—shall it be referred to a committee or accepted?

Upon motion duly seconded and carried the report was adopted as read.

Mr. Kline: The next thing in order is the report of Mr. Defebaugh as treasurer.

The report follows:

Treasurer's Report.

Balance December 10, 1906.....	\$ 86.91
Receipts to date from dues.....	290.00
Total	\$376.91
Disbursements per statement.....	104.09
Balance	\$272.82

W. H. RODDIS, THIRD VICE PRESIDENT.
RODDIS LUMBER & VENEER CO.,
MARSHFIELD, WIS.

Mr. Kline: As the treasurer and secretary states, the balance now in our favor would be considerably larger if all our expenses had not been met with the dues that have already come in, rather if we had the money which is now outstanding. But this is a matter to take up later on. This report, with your permission, will be referred to the Auditing Committee, consisting of Messrs. Groffman, Richardson and Benjamin.

Mr. Kline: The next matter we will take up will be the classification and grading rules on all kinds of woods that are rotary cut. With your permission we will take up the matter as an association, passing by the fact that we have a committee on classification and grading rules, which has not taken any action. As this report of the club is in my own hand writing I will make it,

first calling upon Burdis Anderson to take the chair in the absence of both our vice-presidents.

Report on Classification and Grading Rules.

Mr. Kline: Mr. Chairman, I will distribute mimeograph copies of the rules which have been changed considerably by the action of the club mentioned, and we will follow these forms together while I read, and note the changes as they come:

CLASSIFICATION AND GRADING RULES FOR ROTARY CUT ASH, BASSWOOD, BEECH, BIRCH, CHESTNUT, COTTONWOOD, ELM, GUM, MAPLE, POPLAR AND SYCAMORE.

DIMENSION SELECTS

consists of stock of any thickness, machine cut to dimension sizes; shall admit of sap, splits that close, and slight discolorations.

DIMENSION FACES

consists of stock of any thickness, machine cut to dimension sizes; shall admit of sap, splits that close, discolorations or streaks where firm, tight knots and scattered pinworm holes when strength of sheet is not impaired.

RANDOM

consists of stock cut sundry lengths, 4 feet and up, and sundry widths, 12 inches and up, and shall admit of same defects as Dimension Faces.

FLITCHES

consists of stock cut sundry lengths, 4 feet and up, and sundry widths, 10 inches and up; the sheets are kept in consecutive order as they are cut from the flitch; shall admit of sap, splits, discolorations or streaks, pinworm holes when strength of sheet is not impaired, and heart knots where the sheet will cut two-thirds faces.

LOG RUN

consists of stock of such widths and lengths as the log will make, 6 inches and up wide; not over 25 per cent to be under 12 inches wide, not under 50 per cent faces, and remainder can be defective as the log may turn out.

DIMENSION CENTERS AND BACKS

consists of stock of any thickness, machine cut to dimension sizes, not suitable for faces but reasonably sound.

BACKING

consists of stock of random widths and lengths, suitable for backing only.

CROSS BANDING

consists of stock 1, 20-inch thick or thinner cut to required sizes, under 49 inches long and under 73 inches wide; shall admit of sap, splits, discolorations or streaks, wormholes, small knots and bark spots, not over 25 per cent may be in fractional pieces.

DRAWER BOTTOMS

consists of stock 3/16-inch and thicker, machine cut to dimension sizes; shall admit of sap, splits that close, discolorations or streaks where firm, knots and wormholes when strength of piece is not impaired.

Mr. Lord: The committee has tried to see how much it can make the rules benefit the millmen. The Hardwood Manufacturers' Association raised their grading rules, and the consumers said they would not accept them. That was two years ago and now they are accepting them all right. The millmen are getting the benefit of it. Logs are not growing any better. In fact, they are every year full of more defects. We do not want to make grading rules for a few years back, or for what our customers would like. We want to force it as hard as we can for if we do not do it now, we will have to in a very short time. There are many men who would like to get perfectly clear stock when they do need it clear at all, and if they have to take it a little hard they will.

Mr. B. Anderson: It would be easier to have customers take something a trifle better than something worse. However, if a

manufacturer has special customers that require something better and can get the price, that makes a difference. What is your pleasure in regard to these rules on poplar, ash, etc., as read?

Mr. Kline: I move their adoption.

The motion was duly seconded and carried, whereupon Chairman Anderson called for the rules on oak, which were read by Mr. Kline as follows:

CLASSIFICATION AND GRADING RULES FOR PLAIN ROTARY CUT OAK.

DIMENSION FACES

consists of stock cut to required sizes, under 12 inches wide and under 48 inches long; shall admit of closed splits; 12 to 18 inches wide and under 48 inches long shall admit of sap and closed splits; 19 to 30 inches wide and under 48 inches long shall admit of sap, closed splits and two small bark sores. Sizes over 48 inches long shall admit of sap, closed splits, and not over three 1/4-inch or smaller knots, or bark sores, when tight and firm.

RANDOM

consists of stock cut sundry lengths, 4 feet and up long, and sundry widths, 6 inches and up, and shall admit of same defects as Dimension Faces.

FLITCHES

consists of stock cut sundry lengths, 4 feet and up long, and sundry widths, 10 inches and up; the sheets are kept in consecutive order as they are cut from the flitch. This stock shall be at least two-thirds faces.

S. B. ANDERSON, DIRECTOR. ANDERSON-TULLY CO., MEMPHIS, TENN.

LOG RUN

consists of stock of such widths and lengths as the log will make, 6 inches and up wide; not over 25 per cent to be under 12 inches wide, not under 50 per cent faces, and remainder can be defective, as the log may turn out.

BACKS

consists of stock of all thickness cut to required sizes not suitable for faces but reasonably sound.

BACKING

consists of stock of random widths and lengths suitable for backing only.

The rules as read were adopted by the association, after which those prepared to govern walnut and cherry were taken up and also adopted, as follows:

CLASSIFICATION AND GRADING RULES FOR ROTARY CUT WALNUT AND CHERRY.

DIMENSION FACES

consists of stock that shall admit of not over 1/2-inch sap along the edge, splits that close and small tight knots.

consists of stock of sundry lengths, 3 feet and up, and sundry widths, 6 inches and up, and will admit of same defects as Dimension Faces.

FLITCHES

consists of stock cut sundry lengths, 4 feet and up, and sundry widths, 6 inches and up; the sheets are kept in consecutive order as they are cut from the flitch; shall admit of not over 50 per cent sap in any one sheet, splits and heart knots where the sheets will cut 50 per cent faces.

LOG RUN

consists of stock of such widths and lengths as the log will make, 6 inches and up wide; not over 25 per cent to be under 12 inches wide, not under 50 per cent faces, and remainder can be defective, as the log may turn out.

BACKS

consists of stock of all thicknesses cut to required sizes not suitable for faces but reasonably sound and shall admit of sap.

BACKING

consists of stock of random widths and lengths suitable for backing only.

Mr. Defebaugh: It seems to me there has been a great variety of rules in the past and it would be a good thing if these were sent out to all of your customers so that when you get around to making a price for anybody next time, he will know on what basis he is buying his stock.

Mr. Kline resumed his seat as presiding officer and said:

These rules are now the classification and

really belongs, and the other stock we make be known as thin cut lumber.

Mr. B. Anderson: I move that the association have the grading rules printed as adopted, leaving out the word "veneer" as suggested, and sending two or three hundred copies to each member.

The motion was seconded and carried.

Mr. Kline: Gentlemen, it has been suggested that the question of price, or perhaps trade conditions, is one that should be discussed by the association. I would like the views of members upon the subject.

Mr. Defebaugh: Every once in a while we get a letter from some one who says, "We want to work in harmony with this proposition, we want to get a top-notch price for our goods, but we have no guide to go by." Perhaps this person is not as active in the trade as some other manufacturer and he does not know what ought to be a minimum price. I think if you will discuss conditions as they are—the prices you are paying for logs, etc.—you will come to a conclusion that a price-list sent out as a guide to the trade, without being an established selling price, will bring some people in line who are now selling stock for much less than other manufacturers. It is true that those who are in the clubs are in close touch, but there are a lot of people who are not in touch even with the association. They can be benefited by some discussions here, and the appointment of a committee to make what should be a valuation for the various classes of veneer without regard to any fixed price, or any thing of that kind.

Discussion of Log Prices.

Mr. Lord: With regard to trade conditions, taking the northern market, the wood I am most in touch with is poplar. Sawn poplar lumber is selling today higher than it ever has before; poplar timber is higher; logs are higher and harder to get; they do not run as good; you have to take a harder grade. Now if that condition exists in the other woods your raw material, which is your principal cost and your base, is costing you more money. Unless you can get your raw material down there is very little hope of lowering prices in any way. Of course there are bound to be depressions when business is not quite as good, but if your raw material still stays at the same point, you have no hope of decreasing your cost of production. I cannot understand why poplar lumber should advance under present conditions when a great many of the veneer men are inclined to ease off a little on their prices, and two or three large operators in poplar lumber and veneer say they could make more money in sawing logs into boards than in cutting them. That is the condition in our section of the country with regard to poplar.

Mr. Underwood: As far as I am concerned in our northern woods we make very little headway in making any change in prices

except once a year because furniture people all go ahead about the first of January or last of December to make prices for the coming year and they expect those to prevail. Of course the panel business is a separate thing. But with veneers we cannot go out today and make any advance in price. I know what my logs cost me for last winter, and I base my prices on the cost of those logs to go through to another season. You cannot go over to Grand Rapids and make any changes in your prices. Those people follow the prices in making their goods; the furniture manufacturers make a price and they expect the stuff to continue going into their goods at the same price.

Mr. Raymond: Down in our section and further south it is impossible to buy logs today at what we did last January. As the price advances we have to advance the price of our stuff and the men in the north have the benefit of our advances whether they buy their logs at the same price as last January or not, and they are the men who should profit. Poplar logs today cannot

M. C. DOW, DIRECTOR, GOSHEN VENEER CO., GOSHEN, IND.

grading rules adopted by the National Veneer and Panel Manufacturers' Association; why should not they go into print with that official announcement?

Mr. Lord: I recommend that they be printed and sold all members; when they are printed, have them printed on thin paper to facilitate distribution of a number at a time by mail.

Mr. Raymond: You will note we have left the word "veneer" out of the headings. The dictionary definition of veneer being an "outside decoration" makes the freight charge on some of our stock ridiculous. The railroads make no discrimination between the fine finished product and the common grades, charging the same rate for Cross Banding as for the others. Through the Interstate Commerce Commission we expect to get a different rate, and this change in name will let "veneer" come in where it

F. D. HATCH, DIRECTOR, JAMESTOWN VENEER & PANEL CO., JAMESTOWN, N. Y.

be bought in our section for less than \$40 and even last week I was compelled to pay \$50. Last winter we bought them for \$30, but I cannot keep my prices down to the \$30 basis and pay \$50 for logs, and I do not think any one else can do it very long. The price should advance all over the country as logs advance in different sections of the country. As far as advancing the price to northern manufacturers, we do it right along and are getting in Grand Rapids more money today than we did three months ago.

Mr. Wilson: We have thought that owing to the fact that these furniture men establish a price, we could not raise on them, but as timber advanced we discovered that if we furnished at that price we would go in the hole, so we got just a little hard-hearted and regardless of their wishes advanced prices, and are doing business just the same today. We simply had to do it. As re-

gards poplar I am a little bit surprised the way most of you here talk. In New York state we had always supposed nearly every one is better situated in regard to poplar than ourselves and we let that market alone as much as possible. Nevertheless, there is some one shipping poplar Cross Banding for not to exceed \$3.

Mr. Groffman: Just to keep the ball rolling—relative to the logging situation I want to say briefly that with the heavy rains we have had, especially in Missouri—and I think they were general—it was next to impossible to do anything in the way of logging. We have found ourselves practically down and out; even with all the resources we have we could not get in logs, and we are just running from hand to mouth, so to speak, and have no assurance we will be able to get logs enough to keep us running. As to trade conditions we have found it very quiet the last few weeks. We do not know whether that applies to us alone or not, and I should like to know whether this lull is general. We are in hopes that

the veneer business on a good basis as compared with theirs. The buyers want to buy for a year, but very few lumbermen can buy logs that way. They have to take them as they come and pay whatever is demanded for them. I think we want to work along the line of running our own affairs, and not let buyers do it for us.

Mr. Defebaugh: Has it not been true that the veneer business up to this time has been chaotic because you have not talked to each other? The buyer has had you where he wanted you, because there has not been an exchange of ideas on these matters. Tell each other what your stock is worth. Lots of people don't ask more for theirs because they are not in touch with you. One of the strongest points in organization is to show a man what he should ask for his goods, and why.

Some interesting discussion on prices followed.

Mr. Defebaugh then read the following letter from an interested manufacturer:

Mr. E. H. Defebaugh, Secretary the National Veneer & Panel Manufacturers' Association.

Dear Sir: Undoubtedly we will not be able to attend the meeting in June on account of the floods and continued wet weather. We are away behind in our orders.

Out of the demoralizing conditions of the veneer trade just consider what a great amount of good the recently printed market conditions on the poplar rotary cut veneers has done. Little did the poplar manufacturers realize their strength when they joined the association. We considered the real top market price was, at that time, 50 cents to \$1 per thousand feet higher than was printed, and if it had been printed higher all would have been benefited just that much more. This is certainly a real live object lesson. It has been tried and we all know it. If there are any manufacturers still in the dark it is because they have not become members of the association. Generally speaking, what one sees in print is so.

This also shows what great amount of good a like treatment of all the other different varieties of woods will do.

There is no doubt but that the market will stand an advance on all veneers and panels. The association way is the only way for manufacturers to arrive at the true and proper market conditions on all of their products. It is now apparent that it is an absolute necessity for veneer manufacturers to join the association to protect themselves. The middle men and the buyers are the ones that have caused the demoralizing conditions.

All who are interested in their own future welfare must all stand together and "stand pat."

In speaking of profits, when you take into consideration that the timber supply is fast disappearing, also the great risk one takes in operating a mill, the manufacturer should earn the price of his mill, viz., the cost to date, every four or five years as a profit to lay aside for a rainy day. Why not? No manufacturer can afford to do business on a 10 per cent margin, or even a 20 per cent. Just consider the wear and tear on machinery and buildings; also that we are called upon often to put in new and improved machines. What can you sell a wornout manufacturing plant for, say, after four to six years of running? What has the average veneer man to show for his wornout plant and efforts at the end of a period of six years?

Another great trouble is that it looks as if a great majority of veneer and panel manufacturers have never figured the real, true cost of production. It seems to us that it would be a very wise plan to have more figures along the line of costs; also to have a revised printed market condition on all the different varieties of veneers and panels, with grading rules.

We feel that the association has been a decided success up to date. The future should be even more so.

With best wishes, we are, yours truly,

AMERICAN PANEL & LUMBER CO.

Mr. Defebaugh: The man who wrote this has never been to these meetings. If we can get a hundred other such fellows to come

and help us, as well as themselves, to get the most out of the business, we will have accomplished a great deal. I think we are making a mistake by not being more frank on the subject of prices, and putting them in such shape that you will help the other fellow to get in line. He will be low enough all the time, do not worry about that. That has always been the trouble.

After further discussion of prices, upon motion the convention adjourned to the main dining room of the Auditorium where a delightful luncheon was served.

AFTERNOON SESSION.

The meeting reconvened at 2:30 p. m.

Mr. B. Anderson: I move that a paragraph be printed on the grading rules providing that all the dimensions shall be stated in order of thickness, width across the grain and length, according to a resolution adopted last year.

The motion was seconded and carried.

Mr. Kline: Another matter to which your attention is called is the instruction to the Executive Committee to employ an assist-

L. P. GROFFMAN, DIRECTOR, ST. LOUIS BASKET & BOX CO., ST. LOUIS, MO.

in the course of a few weeks, with a little sunshine, we will have a general revival of business, and I think if we do have it this is the time to talk better prices.

Mr. Underwood: I think the conditions in these various localities are quite different. Take the logging operations Mr. Groffman refers to; where we operate in the South the more rain we have the better. We are just luxuriating in rain. Up North we cannot do much.

Mr. Lord: I do not like to talk twice on the same subject, but there is one point in regard to the general custom of making prices each year. We have all done it. We have all done a lot these buyers wanted us to do. In fact they dictate very largely to the millman as to what he shall do. And I believe unless millmen wake up and tell buyers what they must do, we cannot put

R. C. DAYTON, WISCONSIN VENEER CO., RHINELANDER, WIS.

ant secretary. No action has been taken by them and if you have any further instructions to give will be pleased to hear them. Is it your desire to allow the matter to still remain in the hands of the Executive Committee?

Mr. B. Anderson: I make that motion.

On being seconded and put to vote the motion prevailed.

Mr. Kline: Mr. Roddis has promised to tell us something about fire in a veneer plant.

On Insurance.

Mr. Roddis: Gentlemen, I have not prepared any address on this subject, but the first thing that occurs to me is that every veneer plant should be well insured. It certainly is a dangerous business. The number of veneer plants burned out at one time or another must be very nearly the to-

tal number of those in business today. I think that it pays a business man to be well insured. I know I have never carried anywhere near the insurance I should have. For the future at least I am going to be pretty well insured; I have made up my mind to that.

Another thing occurs to me: Every business man should have an exact inventory of his entire plant in his safe at all times, so that he can get at it the morning after a fire—where he can show to the underwriters exactly what his loss has been—not what it cost him, because they care very little about that, but exactly what the component parts of that plant were—how much lumber—how much hardware—machinery, shafting, etc. If a man has such an inventory now he will find out there is a vast difference in its value today and what it cost several years ago.

In rebuilding at Marshfield we are putting in a sprinkler plant. The cost of sprinkling a plant will be repaid to the man who pays the insurance in about two and one-half years. There are companies who go around and offer to install sprinkler plants anywhere, and they will take the saving in insurance. You can continue to pay your insurance to them, and they will re-insure you. They will put in a plant and ask you to pay just what you have been paying. They will start in by asking you a payment for seven years. Even then they make nearly one hundred percent on their money. There is no way a manufacturer can save money as well as by putting in a sprinkler plant.

In regard to rebuilding, I can only say that it is an enormous amount of work. We are putting up a much larger plant than we had before the fire, and everything is on a different scale. A great deal of the apparatus we had formerly would be useless to us now. Therefore, every item has to be considered, gone over, and talked up. It makes an immense amount of work; I am heartily sick and tired of it, and if I burn out again I want to assure my competitors I shall not rebuild. I hope this is the last time.

I can wind up only by saying "keep insured!" You can't have too much insurance! It is indeed money well spent.

Mr. Kline: We will now hear the report of the Auditing Committee on the treasurer's accounts.

Mr. Groffman: Your committee has carefully perused the bills and statements and find same correct. We recommend that the report of the treasurer be adopted.

The recommendation was acted upon favorably and the report spread upon the records.

Mr. Kline: The matter of forestry will now be taken up, and the secretary will read our letter to Chief Forester Pinchot, and the reply received thereto.

Hon. Gifford Pinchot, United States Department of Agriculture, Forest Service, Washington

Dear Sir: At the last meeting of this asso-

ciation the following resolution was adopted: "Resolved, that previous to the next meeting of this association, president is requested and authorized to write to the Hon. Gifford Pinchot, head of the Forestry Department, Washington, stating that this association would be pleased to adopt resolutions in support of his work and appreciation of its service, and asking him for his suggestions along these lines." This resolution explains my letter to you, and as the next meeting of the association will take place in Chicago on June 20, I will be pleased to hear from you at the above address at your earliest convenience.

Yours truly,

D. E. KLINE, President.

The reply received was from R. S. Kellogg, assistant forester, acting in the absence of Mr. Pinchot, who stated that the association's desire to endorse the work of the Forest Service was very much appreciated, and that his chief would heartily approve of any resolutions that might be passed in its behalf, calling attention to those recently adopted by the National Association of Box Manufacturers and the National Lumber Manufacturers' Association.

Mr. Roddis: I move that the secretary be instructed to draw up resolutions in line with those suggested, and that the officers of this association be authorized to sign

E. F. SAWYER, CADILLAC VENEER CO.
CADILLAC, MICH.

and forward same to the Hon. Gifford Pinchot. I want to say right here that I had the pleasure of hearing him in Chicago about a year ago, and he is a first-class gentleman in every respect. He is not devoting his time to this work merely for money. I understand that even his salary is little, and does not enter in any way into consideration. He is a man of wealth and position, and is giving his whole life to this work purely for the love of it. Any support we can give him either as an association or as individuals is certainly the correct and proper thing for us to do.

The motion was seconded and carried, and the secretary introduced the following resolutions for the signatures of the officers, to be forwarded to Washington.

Resolved, That the National Veneer and Panel Manufacturers' Association as a body herewith expresses its earnest approbation of the policy of the federal government in setting aside large tracts of timber land in various parts of the

United States for forest reserves, and desires that congress carefully consider and support such measures.

Resolved, That since it is of vast importance that the kind and quantity of timber now standing in our country be accurately known, because of the rapidly decreasing forests and the necessity of immediately adopting plans for conservation and regrowing, we earnestly request the Forest Service and the Bureau of the Census to commence work along these lines as soon as possible, at the same time assuring them of our intention to assist in every way possible to secure any information which may be used to the benefit of the lumber and veneer industries.

D. E. KLINE, President.

J. A. UNDELWOOD, First Vice President.

W. S. WALKER, Second Vice President.

W. H. RODDIS, Third Vice President.

E. H. DEFEBAGH, Secretary-Treasurer.

On the Subject of Waste.

Mr. Kline: It has been suggested that the matter of waste be brought up again. The question has been asked whether there is a larger proportion of waste now than twelve months ago. We would like to have you state your experience.

Mr. Dow: I do not know as I can speak upon that subject very freely. I am inclined to think that the waste is no greater than it was, that the machinery, etc., now being brought out tends to make it less so far as the panel business is concerned, and I cannot speak upon any other subject.

Mr. Kline: As for us we find that we use more inferior timber than we did a year ago. It costs us just as much and we have more waste. We have to figure against that proposition all the time. We cut logs now that we would not think of doing years ago. I would like to be advised what kinds of machinery in use now make it possible for you to use stuff that otherwise would be waste.

Mr. Dow: I notice that the people who are buying veneers now are buying smaller sizes than they used to because they can buy them for less money—that is, people who make panels from veneers which they purchase. They can make a perfect product out of them by splicing them. Wherever there is a splicer they are able to use up more waste than otherwise.

Mechanical Drying of Veneer.

Mr. Kline here introduced W. M. Schwartz of the Philadelphia Textile Machinery Company, Philadelphia, who delivered the following interesting address:

It is with the deepest feeling of gratitude, gentlemen, that we accepted the invitation of your secretary, Mr. Defebaugh, to come here to talk to you on the subject of drying veneers by mechanical process.

My first thought was to commence with the old system of drying by air and to take you step by step through the various stages in the evolution toward perfection, going more or less into the detail of the dry kiln, the roller dryer, the platin system, the apron dryer and lastly to wind up by a discussion of the final achievement of perfection, the Proctor automatic drying machine.

On further consideration I concluded that it would be better to confine myself to a discussion of the merits of my own machine, rather than to a criticism of other processes, with which your able association is more familiar than I.

The Philadelphia Textile Machinery Company was incorporated over twenty-five years ago, and has put forth its efforts ever since that time toward the perfection of dryers for the various industries. We have been building machines for drying cotton, wool, hosiery and other materials. One of our greatest achievements was in the designing and perfecting of a machine for drying tobacco. The delicate nature of tobacco was the cause of much skepticism as to our ability to dry it in an automatic machine.

Today there is scarcely a pound of smoking or chewing tobacco which has not passed through a Proctor dryer at some stage of its manufacture. I mention this to satisfy those who may be doubtful as to our ability to build a machine for handling veneers, not having been in the veneering industry heretofore, because in the tobacco business, when we first concluded to try to build a machine for that purpose, we had never been in a tobacco factory and started in to design a machine and to study the tobacco industry with a view to adapting our knowledge of dryers to this purpose.

It may be of interest to you to know how it happened that we started in to build a dryer for veneers. In 1902 a fire insurance inspector familiar with our drying machines and looking favorably upon them from an insurance standpoint, requested us to try to invent a machine for handling butter-dish blanks made of veneer. A fire had occurred in a dryer for this purpose, and we took the matter up, designing a machine which was approved by the concern having the fire. They placed their order and the first Proctor veneer dryer was installed.

The machine handled the product to perfection. This concern was also in the business of manufacturing veneers for other purposes and called our attention to the field and necessity for good dryers in this business. We then built the Proctor Apron Dryer, and today many of these machines are in operation and are giving entire satisfaction. They entirely overcame the choke-up problem and did not make any gloss on the veneers. They were far from being perfect, however, because some classes of veneer, such as cottonwood, elm, some kinds of gum and kindred woods, could not be dried sufficiently flat. Besides, some difficulty was met with in making the aprons run true, and only two runs could be put into one machine for carrying the veneers through.

At the expense of large sums of money we tried to devise a means for holding the apron down tight on the lower so as to make the veneers lie flat. We placed a series of slides both below and on top of the conveyors so as to keep the veneers from warping. The objection to this arrangement was that it put too great a strain on the apron and pulled them out of true, so that it was practically impossible to adjust them. We afterward placed a series of rollers both above and below the aprons, but this also made the aprons run out of true because sometimes the veneer would warp more on one side than on the other, thus putting an unnatural strain on the aprons.

For a long time we entertained an idea of using slatted conveyors for the veneer, but had not perfected the idea to such an extent as to feel warranted in putting it in a machine. With the assistance, however, of a well known veneer manufacturer, we did perfect an idea which seemed to be practical. We took the aprons out of the machine and put this new system in. This new system was what we now call the Girt Conveyor.

When these were installed the machine surpassed all our hopes and did splendid work. Today we are manufacturing the machine with the same kind of a conveyor which the first machine had in it, there being no criticism that could be made on these conveyors.

If you can picture to yourselves a series of finger racks in which the so-called fingers are $4\frac{1}{2}$ inches apart and in which one series is separated from the other by an eighth of an inch, you will be able to form a good idea of our system, because it practically is a continuous system of finger racks.

A comparison of the veneers dried in the various processes will be convincing of the fact that our machine dries veneer flatter than any other successful automatic system extant.

The Girt Conveyor consists of a series of chains connected together by the so-called girt, the chains being operated on rollers. The design is such that we are able to use very small sprockets to drive the machine, and this permits of the use of four or more runs for the veneer in one machine. In this process it is absolutely impossible for the machine to get choked up and no gloss is made on the veneer, which comes out of the machine bone dry and entirely free at all times from checks or splits.

Of course the conveyors are an important factor in a good veneer dryer, but we doubt whether they are of as great importance as the system for handling the air. To our patented system for handling the air we attribute most of the success of our machine. When the veneers first enter the dryer a great volume of air is passed from one side to the other over the veneer for one or two minutes, when an equal volume of air is passed over the veneer in a reverse direction. This continues, first the blast of air hitting the veneer on one side and then on the other, until finally it comes out of the machine uniformly dry.

It is needless to call your attention to the importance of drying the material uniform, because if the veneer is shrunk on one side more than on the other, it is obvious that it will warp, and in such case unnatural means must be used to keep the veneer flat, with the greater possibility of causing checks.

The air is drawn over the steam coils, where it takes up heat units, then it passes over the veneer, where it evaporates the moisture; then, instead of being thrown away while it still contains valuable heat units, it is passed back again to the heating coils, where it takes up more heat units and is again passed over the veneer. This operation continues until the air is well saturated with moisture, when it is carried off by small exhaust fans furnished for this purpose, then may be thrown away. This system allows great economy in fuel, because warm air is being passed over the coils all the time, instead of cold air as in some other systems, and because the air is not thrown away while still containing a good deal of heat which has not all been used to evaporate the water. The system also involves the use of moist air. All of you who have dried lumber are acquainted with the value of a moist air kiln, and in veneer this is just as important as in lumber, because it does not dry the surface of the veneer so rapidly as to make it difficult to extract the moisture from the center.

It is claimed that our machine requires less than one-half the amount of fuel to dry a given number of square feet of veneer than is required in any other automatic system. This claim seems to be borne out by the fact that one of our machines of equal dimensions and of equal capacity to any other machine has in it less than one-half the amount of pipe for heating surface. It is a fact, of course, that the less number of feet of heating surface will not condense so much water as in a machine where double the amount of heating surface is required.

The use of a large number of steel fans, the 100-foot machine having in it fourteen fans, makes it possible for us to circulate the tre-

that he too would be glad to have any member of this association come to his plant and see the two dryers running.

Some of the sales and installations that we have made within the past few months have been the three machines above mentioned: two machines for the Wills Veneer Company, Plymouth, N. C.; the Roddis Lumber & Veneer Company, Marshfield, Wis.; the Conant Manufacturing Company, Milwaukee; the Williamson Veneer Company, Baltimore, Md. (this being the third machine they have bought); the Park Falls Manufacturing Company, Park Falls, Wis., and the United States Veneer Company, Winston, N. C. All of these concerns were familiar with other drying machines, some of them having had actual experience with them. They gave us their reason for purchasing our machine that it would not choke up, made no gloss on the veneer and was vastly more economical in operation.

So much for the dryer, gentlemen. I hope all of you will grasp the first opportunity that affords itself to see it in operation.

And now let me say a few words of regard for your association. In coming in contact with the various industries it has usually seemed to be the end rather to down one's competitor than to assist him. In the veneer industry the reverse of this condition seems to exist, and I hope you may continue to stand shoulder to shoulder, not only in times of business prosperity but also in times of business depression, should we be so unfortunate as to have such, when of all times cooperation is most to be desired.

Mr. Kline hereupon introduced S. B. Anderson of Memphis, whose comprehensive and authoritative address on prices of logs is given below:

S. B. Anderson's Address.

I am requested by the secretary, at the suggestion of the executive committee, to discuss the price of logs today as compared with former years, and, incidentally, how to get corresponding prices from veneers cut from these logs. It is unnecessary to remind this body of men that timber has advanced in price. I do not need to go back many years to the time when clear whitewood, oak and ash logs were bought, delivered at the mills, in Indiana and Michigan, for \$8 per thousand feet, outside price.

I have very little personal knowledge at present as to the price of logs north of the Ohio river. I think, though, that I am comparatively safe in saying that the supply is so short that the owners of the timber dictate prices entirely, which means, by no means, a low price. I am personally familiar with prices south of the Ohio river. The advance in that section has been very marked. A few years ago, when we began looking in that direction, and leaving the North for the forests of the South, timber was bought at buyer's prices. Vast forests there had never seen an axe, and the original owners of these lands had no conception of the value of the property they held. Lands covered with oak, cottonwood, gum and other timbers were sold in large blocks for taxes—early speculators had become discouraged and were unloading their holdings for any price obtainable, from \$1 to \$2.50 per acre—owners were pressed for money and many very low prices were made, and cheap logs were on the market. Times were hard and prices of forest products ruled low, and fortunes were not made by the pioneer southern lumbermen. But times have changed and values have advanced. No more 75-cent, \$1, \$1.50, \$5 or \$10 lands are offered, but \$15, \$20, \$25 to \$40 is cheerfully quoted by the scalper, who is getting his work in, much to the discouragement of the legitimate lumberman. The advance in the price of acreage, while very great, is not the only factor tending to the advance in the value of logs; additional cost of living, high wages, competition among buyers of logs, high cost of feed and many other items contribute to the enhancement of values.

The prices named for timbered lands now may not appear high to one without knowledge of the peculiar situation in the logging regions in the Mississippi valley south of the Ohio. The expense of logging in that region, as compared with that in the northern section of the country, is very high. The soil is easily affected by rains, which, in certain seasons of all years and all seasons of other years, are excessive, so that logging roads are often impassable for weeks, steel tramways washed out and teams and men laid up in camp at expense of operators and nothing doing. This has notably been the condition during the past two years. In arriving at the value of logs delivered at the mill all these items must, of course, be figured. The consequent advance in price, while very heavy, is entirely legitimate, and a further advance may be anticipated. In addition to all other influences, and outweighing all, the one fact of growing scarcity will, barring unforeseen contingencies, not only support the pres-

J. W. CLINARD, HIGH POINT VENEERING CO., HIGH POINT, N. C.

mentous number of cubic feet of air with a minimum amount of horse power. You understand that we could reduce the number of fans by one-half and double their speed, so as to cheapen the machine, and still move the same amount of air. But this would nearly triple the amount of motive power required for the fans. The amount of air moved by one of our fans at present increases approximately in proportion to its speed; i. e., if the speed is doubled, the amount of air moved will merely be doubled, but the horse power goes up as the cube of its speed, so that it is very bad economy to use a small number of fans at a high speed rather than a large number of fans at a low speed. It may seem a strange assertion, but the fact remains that the small amount of motive power required is due to the large number of fans used.

I have made the assertion to various members of your association at times that there was absolutely not one instance where a machine had been investigated to the extent that it had been seen in operation and compared to other machines, that ours had not received the decision as to merit. I repeat this now, where, if there is anyone who could refute the statement, he would surely be present.

Mr. Dow, of the Goshen Veneer Company, asked me a few minutes ago to extend an invitation to any member of this association to come to his factory at any time to see his dryer in operation. Mr. Anderson of the Great Lakes Veneer Company of Munising, Mich., overheard Mr. Dow make this request to me and suggested

ent high prices, but help towards a further strong advance. There is, in fact, no prospect for lower prices of timber. Higher prices are inevitable, and all plans for the future must take this fact into account. I do not believe that the impending shortage of timber is fully realized, even by those engaged in its destruction. Its consumption is enormous and its growth slow. But little effort is being made to propagate new timber or to check the unreasonable waste of what is already grown. The efforts of the general government, aided by the more enlightened lumbermen, to awaken an interest in reforestry is very encouraging, but so far the results are meager and the interest manifested is, compared with the values involved, very slight. I feel a deep interest in this matter, and it appears to me that every man whose business makes him a tree cutter should, by his example and influence, be a tree planter. But I digress. I am not to read a lecture on reforestry, but on high prices of raw material and low prices obtained for veneer.

A comparison of prices for 1907 with those of eight or ten years ago shows four times the price for cottonwood logs, two to three times the price for gum, the same advance in oak, and no limit to the advance in poplar, ash, etc.

There has been a strong advance in the price of lumber to meet the additional cost of logs, so that in most timbers the sawmill man is not the loser by the high price of timber. Still, contrary to supposition in some quarters, he is not getting all this advance in price of his product for his additional profit; he simply insists on fair returns for his labor and investment. He is not able to do this because the control of the market is in a few hands. The interests are large and varied and the business in many hands.

Now, to get down to what specially interests us—Is the veneer man getting the advance in price for his product that the advanced cost of logs and timber demands, and that the lumberman is getting for his products, and is he educating his customers up to the realization that prices must continue to advance? There are comparatively few men in the business, therefore those interested ought to be susceptible to the influence of reason and should have their business well in hand. From the nature of the business, the output is comparatively limited, so the small per cent of profit cannot be made up by a large output. There has been but little improvement in the method of operation, so the additional cost of logs cannot be overcome by the low cost of labor involved. In fact, probably the advance in wages and business expenses during the past few years will fully offset any advantage from improved plants and methods, so that the cost of manufacture, outside the cost of logs, is higher than ten years ago. Are our prices today, in proportion to cost, as high as in past years, or have they advanced in proportion to the advance in the price of lumber? It is a safe estimate to say that hardwood lumber has, on an average, doubled in price during the past eight years. Is this the case with veneers? Have they doubled in price, or have they advanced 50 per cent, or even 25 per cent? As to the cheap veneer, cottonwood, gum, maple, etc., with which I am personally familiar, even the 25 per cent advance is questionable.

Now, I take it that we are making veneers for what there is in it. The country is passing through a period of great prosperity. Are we handling our business so as to get the benefit of the general good times? If not, why not cut our logs into lumber instead of veneers and get our share of the good things that are being served out? The good times are passing, and if the market will not stand a fair price for our goods, why produce them? I believe the market will stand a fair price, and that present prices are low is entirely our fault. I think there is but one trouble, and that is easily located. The veneer man is too independent; too suspicious of his neighbor. He insists too strenuously on paddling his own canoe. I do not advocate combination, nor trusts, nor anything tending to the restraint of trade. I only advocate association in its broad sense. I advocate frequent meetings; full, free and honest discussions of situations and conditions. This is the policy pursued by the lumbermen, and to which they largely owe their success. They have full faith in their brother lumbermen. They know the value of their own stock, know what their neighbor has to offer, and are not afraid even to discuss markets and prices with him. There is a spirit of brotherly cooperation between the lumbermen, which, while working no injury to the general public, works a great good to themselves. The general public is interested within limits in the prosperity of all legitimate business enterprises. Of course, buyers want to purchase at the lowest possible figure, but no complaint will be made at a fair price for our product as well as for other goods. We should bear in mind that the time is coming, and coming rapidly, when our local stock of timber will be cut off, and we must, if we continue our

work, move on to the next supply. This means that we must not only show a reasonable profit on our books, but that we must make such a profit that our plants can be gradually charged off. Otherwise, when our forests are gone, the outcome of our years of hard and strenuous labor will be represented by good plants, but with no work for them to do. A mill with no logs is of no value. I am a thorough believer in good prices. This only can bring prosperity. I believe as strenuously in association, for I think that only through association can good results from our business be obtained. I do not mean by association that we shall simply form an association, or even continue this association in existence in a perfunctory manner, but I believe we must get together frequently and discuss the condition of our business, its details, its pleasant sides, and the reverse picture, the high and still higher prices we are paying for logs, and everything entering into our work, and the low price at which we are selling our product. I believe by this course it will be possible to secure a fair margin on our product and a fair price for anything we have to offer on the market. I believe, on further acquaintance, we will find that our brother veneer manufacturers are a high class of men, reliable and honest, and in whom we can place full confidence, and it is through acquaintance and friendly intercourse that we will be able to put our business on a satisfactory footing.

Now, I hardly know what to say to the panel contingent in our association. To the casual observer, the interests of the veneer manufacturer and that of the panel manufacturer are opposed. The veneer man must have a good price for his goods and the panel man wants to buy veneers cheap. I presume a large number of our members are both veneer manufacturers

E. W. BENJAMIN, CADILLAC VENEER CO.,
CADILLAC, MICH.

and panel makers. These men can easily see the necessity for advanced prices for veneers, and will, without doubt, make good by higher prices for panels. The exclusive panel maker will probably be harder to convince, but there is nothing like yielding gracefully to the inevitable, and it is certain that the price of veneers must advance. If the panel maker's price is not high enough to absorb this advance, he must get more for his finished product. It is simply a matter of business. Prices of veneer must adjust themselves to the high cost of logs, high wages and high business expenses, and the prices of panels are subject to the same law. To begin with, we must know what our goods cost. We must know how to figure costs. It will not do to figure cost of logs, say, \$15, labor \$10, cost \$25, and then add 10 per cent or 25 per cent and think we are getting that amount of profit. There are many other things to figure—interest, wear and tear, insurance, a few bad debts, salaries and various other fixed charges that must be paid whether the mill runs or not—and the loss of time and earnings, which comes to all manufacturers. And when you have your cost, don't be afraid to ask a fair price. If you don't ask it you won't get it. Don't be too afraid you will lose an order better lose some than to take them at too low a figure. Don't take your neighbor's trade by cutting his prices. He will get back at you. There is work for all. Get together and talk matters over and you will soon be able not only to ask a fair price for your goods, but to get it. Above all, don't be tempted to

make a low price on an order because it is large—the larger the order the greater the necessity that you figure a profit. It may do to sell a single car of goods at a loss, but a hundred cars on this basis would be ruinous.

Now, gentlemen, I hope good to all will result from this meeting and many future meetings of this association. I hope we will all get back to our work encouraged, with more confidence in ourselves, as well as more in our brother manufacturers, and that the future will bring us good business with fair profits.

Mr. Kline: Mr. Anderson's suggestion of getting together frequently, becoming better acquainted and discussing things frankly are, it seems to me, vital to an organization of this kind. If it could be arranged so that we might get together oftener than we do it would be a fine thing. We have practically finished the business of this session, gentlemen, unless some member has some further matter to bring up.

Mr. West: I have never met with your association before and I do not know whether or not some initiatory or secret rite is necessary to enable one to do so. But I should like to make out an application for membership.

Mr. West was duly taken into the organization.

Mr. Defebaugh: For the benefit of Mr. Anderson I will say that just before luncheon we had some discussion on the prices of logs, materials, etc., at the present time. Some were thinking that they were not getting quite enough, and others feeling pretty good because they were getting top-notch prices.

Mr. S. B. Anderson: I am very sorry that I did not hear that discussion, but the train that Mr. West and I came on was several hours late. I would like to hear the views of anyone in regard to prices. But with the very rapid advance in logs, which is going to continue, the prices on veneers are very low. The sawmill men are making a great deal more money in proportion than are veneer men. I would like to hear the view of anyone on the matter.

Mr. Kline: The sawmill man is making the prices on timber for the veneer mill man to take; he is putting prices on timber for you and for me, and everyone else. The sawmill man is getting the benefit of the increased prices brought about by his associations. At any rate he has had things about as he wanted them and made money while the veneer man hasn't. There has been no such thing as a proportionate increase in the price of veneers as compared with lumber. Lumber has doubled in price within the last few years, and veneers, in line with Mr. Anderson's paper, have not by any means.

Mr. B. Anderson: The tendency of buyers is to force the price down, and if we don't boost it it will be our own fault.

Mr. Roddis: Mr. Underwood has just been telling me something that I want to repeat. It isn't the lumbermen alone that are putting up timber. I am a lumberman as well as a veneer man. In our state the principal item of timber left standing is hemlock. Mr. Underwood tells me a large owner of

hemlock stumpage in his city does not expect to cut any more hemlock into lumber but to sell the logs to paper manufacturers at \$14 a thousand in the log, right at the railway station without paying any freight whatever. That is what he can do and he proposes to do it. Today the people who are doing the most to push up the prices of hemlock in that state are the paper manufacturers. Of course the lumberman is doing all he can, but there are other things that assist. The demand for hemlock for the paper industry is enormous. There is a little branch road passing my office and I see every day trainloads of hemlock wood, logs and bolts, as they call them, going past. There are three or four paper plants within about thirty miles of our city located on the Wisconsin river. If I should tell you how much hemlock those three or four plants chew up in a year it would astonish you. The demand for lumber is enormous, and the price for logs, especially veneer logs, is bound to increase year by year. This is something we cannot possibly avoid.

Mr. B. Anderson: There is one point in connection with logs that strikes me, and that is that the lumber associations have gotten together and got prices up to a point where they can afford to pay more for hardwood logs today than the veneer manufacturer can afford to pay for them. Of course the veneer man wants select logs. The lumberman that owns the stumpage figures immediately what he can get for his lumber. The fact is that if he allows them to be selected it degrades his lumber and hurts his price. You offer him any price for his logs and he says he can afford to put logs into lumber for more money than that. I know exactly what some friends of mine have gotten for birch and maple the past year and they could not afford to sell them to me for what I could afford to pay at the present time, although veneer prices are better than they were, I am happy to say. I know several buyers of veneers whom I always quote rock prices every year, but I cannot get the orders, and they pay about two-thirds what I am willing to sell for. I do not know who sells them, but somebody does.

Mr. Wilson: The wood pulp manufacturers in our state not only use hemlock but hardwood, and they buy up various tracts of very thrifty nice timber, but small, which it seems to me is almost murderous. I recently went through a tract which was sold to pulp manufacturers and which in fifteen years would have been large timber and of some benefit, but it was simply cut down in a shameful way.

Mr. Kline: Another thing that has struck me as unjust is shipping out of this country unmanufactured logs to foreign buyers. It is a business of itself, of course, but at the same time while we figure on conserving our forest we are furnishing timber to make lumber for countries to whom we owe

nothing. The stave business is another proposition; some of the materials shipped out of this country would make some of the finest veneers in the world. Some of the veneer manufacturers who buy flitches are paying high prices while the stuff is being shipped out as staves. Again, the porch column business; hundreds of thousands of poplar trees are being cut down annually for porch columns. There should be a law to restrict cutting. Just think of the large number of trees that are annually cut down for telephones and electric lines, which I suppose should be left. However, that is a wide subject.

After some further discussion along these lines it was decided that the convention adjourn to meet next in Chicago on the second Tuesday in December.

The Attendance.

There were present:
P. B. Raymond, Adams & Raymond, Indianapolis.
M. W. Perry, Ahnapee Veneer & Seating Company, Algoma, Wis.
S. K. Anderson, Anderson-Tully Company, Memphis.
E. F. Sawyer, Cadillac Veneer Company, Cadillac, Mich.
S. G. Boyd, Charles C. Boyd & Co., Cincinnati, O.
E. W. Benjamin, Cadillac Veneer Company, Cadillac, Mich.

B. W. Lord, Chicago Veneer Company, Burnside, Ky.
C. F. Crandall, Crandall Panel Company, Brocton, N. Y.
M. C. Low, Goshen Veneer Company, Goshen, Ind.
Jud. West, Ward Kent Company, Greenville, Tenn.
Burdie Anderson, Great Lakes Veneer Company, Munising, Mich.
H. C. Hossatous, Dayton, O.
H. M. McCracken, Kentucky Veneer Works, Louisville, Ky.
L. V. Phillips, Linwood Manufacturing Company, Linwood, N. C.
D. E. Kline, Louisville Veneer Mills, Louisville, Ky.
F. A. Richardson, Michigan Veneer Company, Alpena, Mich.
N. M. Wilson, Pearl City Veneer Company, Jamestown, N. Y.
W. S. Walker, Portsmouth Veneer & Panel Company, Portsmouth, O.
W. H. Roddis, Roddis Lumber & Veneer Company, Marshfield, Wis.
L. P. Groffman, St. Louis Basket & Box Company, St. Louis.
J. A. Underwood, Underwood Veneer Company, Wausau, Wis.
W. W. Branch, W. W. Branch Veneer Company, Charleston, W. Va.
G. B. Peterson, Falconer Veneer Company, Jamestown, N. Y.
E. H. Defebaugh, The Barrel and Box, Chicago.
Henry H. Gibson, HARDWOOD RECORD, Chicago.
W. M. Schwartz, Philadelphia Textile Machinery Company, Philadelphia.
Thomas W. Howlett, Philadelphia Textile Machinery Company, Philadelphia.
H. M. Merritt, Merritt Manufacturing Company, Lockport, N. Y.
M. C. Moore, Packages, Milwaukee, Wis.
F. H. Smith, Lumber World, Chicago.
Samuel B. Wadley, Nashville, Tenn.
A. E. Gordon, HARDWOOD RECORD, Chicago.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Who Wants Pecan Wood?

CINCINNATI, O., June 12.—Editor HARDWOOD RECORD: If you are in a position to do so, will you kindly advise the names of users of pecan? If you have not this information, can you advise where we might be able to find it and oblige?—COMPANY.

The writer has been referred to the HARDWOOD RECORD bulletin service for scattering customers, but anyone who cares to be put in direct communication with him should write this office.—EDITOR.

Cedar Squares.

COVINGTON, VA., June 11.—Editor HARDWOOD RECORD: Please advise if you are in position to give us any information in regard to cedar squares as to quotations and the trade that they are used in. This stock is usually sawed 4x4, 5x5, 6x6, 8x8, 10x10 and runs from 8 to 16 feet. Thanking you in advance for an early reply. LUMBER COMPANY.

We have supplied the writer with the name of a large handler of this stock, who can doubtless give him some valuable information, but if any others wish his address it will be supplied on application.—EDITOR.

Drying Hickory Dimension.

SPRINGFIELD, O., June 14.—Editor HARDWOOD RECORD: In reading your valuable magazine I notice that one of your readers asks for information for drying hickory dimension. Having

had considerable experience in regard to same, will say that first of all, all pieces must be ripped absolutely to dimension, otherwise they will not pile, so that each piece will bind, and be absolutely immovable. They must bind all the way through the pile, each and every piece, and should be protected from the weather, of course, particularly the ends, which should be painted with raw linseed oil, covering tops of piles and binding same down with heavy wire, to keep the top piers from springing up. When about four months in the pile they should be taken down and repiled, care being taken to place the short side down. H. H. FOLCKMER.

Valuable Tree Books.

NEWARK, O., June 14. Editor HARDWOOD RECORD: Please send me a sample copy of your publication, and kindly tell me if there are any books giving definite information regarding the various finish woods, their good and bad qualities, purposes for which they are best adapted, etc., and other useful information. I am taking up the study of hardwood building and car finish materials.—C. H. C.

The HARDWOOD RECORD has for more than two years been running a series of articles under the general heading American Forest Trees, which covers the information desired by this correspondent. They will be continued indefinitely, and owing to the many requests that are received for the series, will eventually be published in book form. Among the books along this line already on the market Julia E. Rogers' "The Tree Book," Alice Lounsberry's "A Guide to the Trees," Stone's "The Timbers of Commerce," and Snow's "The Principal Species of Wood" may be mentioned as of special merit and value. If, however, one cares to invest in something that is more elaborate and comprehensive, Royce B. Hough's

"American Woods" cannot be surpassed. This wonderful publication is illustrated by actual sections of woods, about 2x5 inches in size, and so thin as to allow the transmission of light. Characteristic structures, tints and peculiarities are thus beautifully revealed. Tangential, radial and transverse sections of each are given, and the pages on which they are mounted are separable from the remainder of the book to facilitate examination. The specimens and text go together and in their book-like cover, appear like any other volume. The work is issued in parts each covering twenty-five species, and sample pages can be had from the author, whose postoffice address is Lowville, N. Y., at 25 cents each. Mr. Hough has just issued a beautifully illustrated "Handbook

of the Trees of the Northern States and Canada," designed to meet the wants of the amateur observer of trees, the lumberman and the technical botanist.—EDITOR.

Yellow Pine Wagon Dimension Stock.

ROCK FALLS, ILL., June 20.—Editor HARDWOOD RECORD: Can you furnish us with the names and addresses of manufacturers and dealers in yellow pine wagon dimension stock? —COMPANY.

As this publication devotes itself strictly to the hardwood industry it has never collected a list of manufacturers of this material. If among our readers there are any who would like to have the address of a high-grade vehicle concern seeking yellow pine dimension material, it will be supplied upon request to this office.—EDITOR.

News Miscellany.

The Electric Motor in Sawmill Work.

The electric motor has taken a very important place in sawmill and planing-mill work since the comparatively recent perfecting and cheapening of the alternating current induction motor. There is probably no industry in which the demands are more exacting, as the power required varies with the kind of timber handled and its condition, and the service necessitates large overload capacities and extremely durable construction.

The General Electric Company, Schenectady, N. Y., has issued an interesting bulletin, its No. 4470, in which this application of the induction motor is described. The induction motor is of such rugged construction that it has outstripped its direct current rival when severe requirements are present. Having neither commutator nor brushes it requires no more attention than a jack-shaft, is unaffected by dust or splinters, and has enabled the electrical engineer to solve the problems encountered in sawmill practice. Electric operation by means of individual motors eliminates power waste in shafting (often fifty per cent), reduces the cost of attendance, increases the transmission efficiency over steam piping or belts, and results in general economy. The bulletin describes and illustrates also the Stearns Lumber Company's mills at Stearns, Ky., which are completely equipped with General Electric Form K 550 volt 40 cycle induction motors, ranging from 100 horsepower to drive a 9-foot double-cut band mill, down to 5 horsepower motors for cut-off saws, grinding machinery, etc. The installation of electric drive has made this mill absolutely independent of any steam plant, thus making it a good insurance risk and at the same time much easier to operate. The management has permitted the General Electric Company to use in the bulletin extracts from many commendatory letters on the operation of the electrical equipment and its adaptability to the different requirements.

A partial list of installations of the General Electric Company motors in woodworking mills, covering a total of over 5,200 horsepower, is also given, and the publication will be found of interest to all managers and engineers who are trying to reduce their operating expenses with present equipment, or contemplating extensions to their plants.

Veneer Plant for New Albany.

At a recent meeting of the New Albany, Ind., common council the territory lying between McBeth street and low water mark of the Ohio, Thirteenth and Fourteenth streets, was disannexed in accordance with the application made by the Knight-McLean

Veneering Company, which will build a plant there at once, employing more than 100 operators, with an annual payroll of more than \$50,000. This action of the council exempts the property from municipal taxation as long as it is used for manufacturing purposes; however, the plant must be erected and put in operation within a year. The company will start work on the enterprise at once.

Committees of the N. H. L. A.

The following is the list of the completed committees of the National Hardwood Lumber Association which have been appointed for the ensuing year, all the members of which have signified their acceptance:

Executive Committee.

W. H. Russe, Memphis, Tenn.
Earl Palmer, Paducah, Ky.
O. O. Agier, Chicago.
C. H. Barnaby, Greencastle, Ind.
G. J. Landeck, Milwaukee, Wis.

Inspection Rules Committee.

J. M. Pritchard, chairman, Indianapolis, Ind.
(Terms expire in 1908.)
E. J. Young, Madison, Wis.
J. M. Card, Chattanooga, Tenn.
Hugh McLean, Buffalo, N. Y.

(Terms expire in 1909.)

George Littleford, Cincinnati, Ohio.
D. F. Clark, Minneapolis, Minn.
A. B. Klise, Sturgeon Bay, Wis.

(Terms expire in 1910.)

J. M. Pritchard, Indianapolis, Ind.
E. L. Edwards, Dayton, Ohio.
J. W. Dickson, Memphis, Tenn.

Inspection Bureau Committee.

W. W. Knight, chairman, Indianapolis, Ind.
(Terms expire in 1908.)
J. L. Alcock, Baltimore, Md.
W. J. Wagstaff, Oshkosh, Wis.
W. W. Knight, Indianapolis, Ind.

(Terms expire in 1909.)

A. H. Barnard, Minneapolis, Minn.
J. J. Rumbarger, Philadelphia, Pa.
F. H. Smith, St. Louis, Mo.

(Terms expire in 1910.)

J. W. Thompson, Memphis, Tenn.
E. C. Colcord, St. Albans, W. Va.
R. L. Walkley, New Haven, Conn.

Transportation Committee.

Emil Guenther, chairman, Philadelphia, Pa.
E. V. Babcock, Pittsburgh, Pa.
Ferd Brenner, Norfolk, Va.

Forestry Committee.

M. M. Wall, chairman, Buffalo, N. Y.
T. J. Moffett, Cincinnati, Ohio.
B. F. McMillan, McMillan, Wis.

Waterways Committee.

C. F. Laebke, chairman, St. Louis, Mo.
E. J. Young, Madison, Wis.
George D. Burgess, Memphis, Tenn.

Progress of Grand Rapids Veneer Works' Kilns.

The Grand Rapids Veneer Works, Grand Rapids, Mich., has completed its organization, and the engineering and sales departments are equipped with a competent force, so that the company is now carrying on its business systematically and selling kilns as fast as the drawings can be made. It is pleased to call attention to the fact that those who have already installed the kilns express perfect satisfaction with the process. Among its list of patrons are the John Widdicombe Company and the New England Furniture Company of Grand Rapids; the Moon Desk Company of Muskegon; the E. J. Davis Manufacturing Company of Chicago; the Humphrey Book Case Company, the J. C. Widman Company and the Central Lumber Company of Detroit; the Schiller Piano Company of Oregon, Ill., and the Bain Wagon Company of Woodstock, Ont.—all of whom have made final payment on their kilns, thus admitting that the company's contract and representations have been fulfilled.

A letter voluntarily written by the Moon Desk Company to a New Yorker who was recently investigating the process is herewith reproduced, and it is an eloquent advertisement for the merits of the Grand Rapids Veneer Works' product:

"Referring to our conversation with you while you were in our city looking over the dry kiln installed by us recently under the Grand Rapids Veneer Works system and plans, we wish to confirm our statements to you, that the first lumber through our kiln, when it was green, having just been completed in winter weather, was 4/4 white oak, which came out thoroughly dry in seven days, and in better condition than what we had been getting out of a hot blast kiln where we had been allowing three weeks and over for kiln drying; since then we have been taking out all kinds of lumber, 4/4 red gum, 5/8 beech, 8/4 chestnut, 4/4 maple, 4/4 plain and quartered oak, in seven days, and the stock is softer and works easier than any we ever had in our factory. We are pleased to state further that the kiln has fulfilled every representation made by the Grand Rapids Veneer Works, in every respect, and is entirely satisfactory. If we were to install another kiln, or half a dozen, at this writing, they would all be of that type."

Prompt in Resuming Operations.

Late in February the Roddis Lumber & Veneer Company of Marshfield, Wis., suffered a dual calamity in having destroyed by fire both its big veneer plant at Marshfield as well as its sawmill at Park Falls. With his usual energy President W. H. Roddis broke ground on March 7 for new plants. The sawmill at Park Falls is already in full operation, and he expects to get up steam in the boilers of the veneer plant at Marshfield on July 1. The sawmill that has been constructed is a modern type of band mill and is giving satisfactory service. The veneer plant is nearly double the capacity of the old one and contains three big rotary cutters and the full complement of machinery which goes to make up the modern equipment. The power for this plant is supplied by 600 H. P. tubular boilers and 500 H. P. Corliss engine.

Jamestown Exhibitors.

The S. A. Woods Machine Company of Boston, well-known manufacturer of woodworking machinery, has an exhibit at the Jamestown Exposition in Norfolk, Va., which is attracting a good deal of attention among people interested in tools of that sort. Their Mr. Peterson is in charge of the exhibit, which is located in the Machinery building, Section 15, Aisles B and H. The machines shown are the Woods No. 24 8-inch planer and matcher, and No. 226 automatic knife grinder.

Increase in Veneer Production.

A recent report issued by the director of the United States Census contains statistics covering the manufacture of veneers from domestic woods for the year ending December 31, 1906. Statistics giving the production and consumption of lumber products of various kinds have heretofore been collected in connection with the censuses of manufactures, but to meet the urgent demand for more frequent information the Forest Service collected figures for 1905, which are given below for comparison with those of 1906. These figures are from 128 mills in 1905 and 315 in 1906, showing a wonderful increase in their number during a single year:

Kind of wood—	Logs used—1,000 ft. log scale.		Veneers produced 1,000 square feet.	
	1905.	1906.	1905.	1906.
Red gum	72,862	39,573	317,497	187,940
Yellow pine	45,181	12,688	177,064	41,069
White oak	38,898	16,129	283,050	115,265
Maple	30,386	26,246	310,749	179,809
Cottonwood	29,063	16,357	108,034	45,223
Yellow poplar	21,619	26,164	158,848	151,566
Basswood	15,669	11,376	73,443	82,925
Birch	14,286	12,643	137,065	128,521
Elm	11,982	5,544	91,963	60,768
Tupelo	8,311	3,314	41,755	1,806
Red oak	8,104	4,955	56,712	31,054
Spruce	6,377	59,796
Beech	5,354	1,400	39,855	18,765
Ash	5,214	2,461	27,951	21,648
Walnut	5,121	1,725	45,510	21,181
Sycamore	4,530	576	18,082	1,435
All other	3,639	2,995	18,034	19,605
Total	326,567	181,146	1,965,948	1,108,518

Another Boyntonism.

There are often all sorts of ways and means to the same end, and the following is one idea of presenting a claim against a railroad for the destruction of live stock. Those who know C. D. Boynton, the "lumberman-wit," president of the Boynton Land and Lumber Company of Boynton, Ark., and St. Louis, Mo., would not have to read very far into the missive to recognize his unique and amusing humor; it is safe to say that he'll get the money all right:

June 17, 1907.

"G. G. Beckley, Esq.,

"Live Stock Claim Agent (Cow Coroner),

"Frisco System, Cape Girardeau, Mo.

"My Dear Sir—It is my painful duty to inform you of the melancholy fact that six young and helpless but high-bred and innocent pigs met a sudden and horrible death on your right of way at Boynton, Ark., on or about May 28, 1907, all of which was a great shock to their friends and relatives as well as a sudden reverse in fortune to myself.

"From the testimony of eye-witnesses and others the facts are as hereinafter related:

"I own a pedigreed Arkansas brood sow, whom I named 'Frisco' because she takes everything into her system, although the Frisco is mostly full of water and she generally contained pigs. She, being of a trusting and confiding nature, selected a spongy place in the middle of your track, and, gathering her progeny about her, proceeded to let them draw nourishment from her system. While thus engaged your 'Leachville Flyer' came along on time—when no one was looking for it—broke up this noble family group and mutilated beyond recognition six members of this porcine household. The mother is inconsolable, but I have not heard how the father takes it—in fact, there seems to be a mystery about him or them—of course, there are rumors and all sorts of gossip, as there always are in a small town, but I do not propose to relate any scandal that I may have heard. It is sufficient to state that the pigs were known by their mother's maiden name, 'Frisco.' The deceased are described as follows:

"Hilton Frisco, known by his white hair and sunny disposition.

"Washburn Frisco, easily recognized as the biggest one in the bunch.

"Powe Frisco, wanted everything in sight and then was never satisfied.

"Leith Frisco, never known to give up anything he got hold of.

"Gladys Frisco, would lie perfectly still and never move.

"Gwendolyn Frisco, ditto, ditto—not enumerated by your section man, as she was ground too fine to be identified only as sausage.

"How sad the scene! This frolicsome family, full of contentment and sweet milk, sleeping at train-time in the almost absolute certainty of being undisturbed, and then cut down and ground up by one of your rusty old iron kettles, to suddenly awake in Paradise far, far away from dear old Arkansas, and remote from any Frisco terminal shown in your folders.

"Your scholarly section boss posted their death notices and gave their ages as exactly five weeks; it is very remarkable that you can hire a man at \$37.50 per month who has the intelligence to look a dead pig in the face and tell his exact age to a day—something his own father could not do.

"In view of this bereavement we trust to be favored with your check for at least fifteen dollars (\$15), and as much more as the pedigree, ancestry and high qualities of this bunch of pigs would call for; with the proceeds we propose to erect a suitable monument commemorating the illustrious dead.

"Yours truly

"C. D. BOYNTON."

Splendid Gum Logs.

The little picture accompanying this paragraph shows something of the size and quality of the gum timber that grows on the holdings of the Newhouse Mill & Lumber Company of Gould, Ark. This company is a comparatively new enterprise, of which Samuel Newhouse is president. With Mr. Newhouse are associated the members

FINE ARKANSAS GUM LOGS.

of the well-known wholesale hardwood and wagon stock institution of Chicago—the Estabrook-Skeele Lumber Company, which is made up of T. S. Estabrook, Edward E. Skeele and James H. West. The company has 11,000 acres of fine timber land near Gould, Ark., and has built an up-to-date mill plant and an extensive logging railroad. The output is largely gum and oak.

Hardwood Timber Sales.

A deed to one of the finest tracts of hardwood timber in Louisiana was filed at Covington, June 7. It related to Honey Island, in Pearl river, and was drawn by the Honey Island Land & Timber Company of New Orleans, to Morgan Jones and William A. Hill, conveying the title to 12,841 acres of heavily wooded land. The compensation was given as \$80,000. The transaction also includes the sawmill and other improvements at Honey Island station, on the New Orleans & North-eastern railway.

The above is one of the largest transactions recorded in the parish in several years, and means much to the development of that section. Operations will be commenced, and the necessary machinery placed on the property to turn out staves, spokes and similar products.

Another transfer of good proportions was recorded at Lake Charles June 8, by which a large tract of fine hardwood land along the Colorado Southern, north of that city, changed hands. John S. Alley of West Newton, Mass., and other members of his family transferred to the Evert Lumber Company, Ltd., 1,440 acres of wooded land for which a price of \$13,200 was paid.

New Veneer Plant at Nashville.

Nashville, Tenn., is soon to have another large lumber manufacturing establishment which will turn out the finest grades of veneer. The Frederick W. Black Lumber Company of Chicago has purchased a double block of property located in West Nashville, between New York and Pennsylvania avenues, near the Illinois Central belt line, and is now having the ground staked off for the construction of a factory which will cost about \$15,000. In this building about \$35,000 worth of modern machinery will be installed, and when the entire plant is ready for operation it will represent an investment of about \$65,000.

Plans for the new enterprise are being pushed, and the machinery will probably be shipped within a few days. The company will employ about forty or fifty men at the start, many of whom are high-priced and skilled mechanics. Only the best grades of hardwood lumber will be used, and the finest kinds of veneer, such as is used in handsome furniture and piano work, will be produced. The company has been doing a wide business from its Chicago office but recognizes the advantages of Nashville for a factory, that city being near the base of supplies and enjoying excellent transportation facilities.

New Material for Lead Pencils.

It is predicted that in some factories potato-starch is to take the place of cedar in the manufacture of lead pencils. The history of the new product began about two and a half years ago when a small company was formed in Germany to perfect and exploit an invention which, instead of making use of cedar wood, substitutes a compact mass, the main ingredient of which is potatoes. The invention has finally been perfected and pencils are being manufactured preparatory to placing a stock upon the market. Consul Hannah of Magdeburg writes that he has used some of the pencils, which while slightly heavier, are of the same size, form and appearance as the wooden ones, more easily sharpened and much cheaper to manufacture.

A permanent company was founded in March at Berlin, acting under patents in fourteen countries, with a capital of \$154,700, of which \$95,200 represents the cost of the patents, while \$59,500 has been retained for a working capital; \$19,040 will be used in erecting a factory, with six presses and a daily output of 48,000 pencils. The cost of manufacture, all expenses included—rent, light, power, wages, composition, lead, selling cost, etc.—is estimated at \$0.00928 each. A second-quality pencil will be made whose cost will be only \$0.00595.

At the estimated production of 48,000 pencils a day the yearly production would be 14,400,000 pencils. According to recent statistics the export from Germany to foreign countries equaled 15,166 tons, with the total number of pencils at 3,033,200,000.

The cedar wood now in use is expensive, and the supply is exceedingly limited, while this question would not enter into the manufacture of potato-starch. It is possible that the new invention, if judiciously handled, will mark a new era in the production of lead pencils.

Consolidation at Cincinnati.

The Cypress Lumber and Veneer Company was recently incorporated with a capital stock of \$500,000 by J. E. Tuthill, S. Tuthill, William Mitchel, C. C. Archer and C. I. Bacon, all residents of Cincinnati. The new corporation is a consolidation of the Cypress Lumber Company of Cincinnati, the Fincastle Sawmill Company of Wardsville, La., and Tuthill & Pattison of Sheffield, Ala. Though the owners of the two southern companies will take considerable stock in the new company, it is understood that the control and management will be entirely with the Cincinnati people.

Manager J. E. Tuthill of the Cypress Lumber Company says: "I regret that the secrecy that has been necessary in this consolidation has led some persons to draw wrong conclusions, and I am quite aware that we have been subjected to insidious insinuations. I desire to answer this by stating that the interests I represent are doubly solvent, for we have assets twice as large as our debts."

The organization comes as a result of the meeting of the creditors of the company held in the Fourth National Bank last week. The bank officials stated that they and other creditors were in thorough accord with the plans of the company. No other change than above stated will be made in the new company and a larger business is expected to result as they now have a larger field to work on.

Miscellaneous Notes.

The Interstate Lumber Company has been incorporated at Oklahoma City with a capital of \$10,000. Arthur R. Rice is the promoter.

Fire in the yards of the Galion Lumber and Coal Company of Toledo, O., on June 7 caused a loss of \$25,000.

The Ayer & Lord Tie Company of Chicago has filed papers at Little Rock, Ark., showing a capital of \$200,000. J. S. Thomas of Clarendon is agent.

J. A. Petty, whose lumber mill at Sycamore, O., was badly damaged by an explosion some time ago, has purchased the McArthur & Grafton sawmill at the same place and will combine the two plants.

The heading factory managed by J. L. Preston at Grafton, Ill., was recently totally destroyed by fire. It was one of the leading industries of the town.

J. W. Maddux of the Thomas-Maddux Lumber Company of Calico Rock, Ark., will hereafter devote his time to the hardwood business, along the White River line, in the interest of the company.

With the completion of the buildings of the Western Lumber and Supply Company, which has just been incorporated at Council Bluffs, Ia., and the installation of its plant, combined with the lumber interests already there, that city will become an important wholesale lumber center for the West.

The Martin-Massey Lumber Company, which recently sold its mills and pine timber lands in Izard county, Arkansas, and elsewhere, will go into the hardwood lumber business, furnishing wagon and car material. The mills will be located in Lawrence county, where the members of the company formerly lived and where they own large timber holdings. They were in the hardwood lumber business several years ago and prefer that to the other line of operations.

Pennington & Evans, lumbermen of Barfield, Ga., were lately awarded \$6,190 of the claim which they brought against the Douglas, Augusta & Gulf railroad. The claim was made under the law which prescribes penalties for railroads which fail to furnish cars for prompt transportation of freight.

Receipts of lumber at San Pedro, Cal., June 3 were the largest of any single day in many weeks, not less than eight vessels having come into port bringing more than 6,000,000 feet. A

large portion of the cargoes received go to the different railroads for ties and other heavy timbers. From the fact that shipments from northern mills have been reduced nearly one-half the past month, this speaks well for southern California.

The Pacific Logging and Timber Company is arranging to build a mill to cut out a large tract of timber which it has acquired on Vancouver Island. The mill will probably be in the vicinity of the city limits. The Genoa mill, situated near Gowichan, has been bought by F. Hewett of Vancouver, and additions to be made will bring the plant up to date in every respect. The machinery will be overhauled and new kilns built.

The Domingo Lumber Company will enter business at Albuquerque, N. M., with a capital stock of \$200,000.

The Hobart-Lee Tie Company, capital stock \$50,000, has been incorporated at Little Rock, Ark.

Manager Andrew Olson of the Carbon Timber Company, Grand Encampment, Wyo., says the company's cut this season is 800,000 ties, 800,000 mining timbers, and 5,000,000 feet of logs for the box factory at Fort Steele.

A. Z. McHenry of Benton, Pa., has finished sawing over 400,000 feet of pine, hemlock and chestnut on the J. A. Myers tract, near Tivoli, Lycoming county, and will soon begin the sawing of between 400,000 and 500,000 shingles at the same place. He will then saw out over 1,500,000 feet of lumber in Luzerne county, near Harveysville.

The Wood-Galloway Lumber Company of Johnson City, Tenn., has gone into voluntary liquidation. The trustee is C. J. Morrow, representing William Whitmer & Sons, of Philadelphia. The assets are \$75,000 and the liabilities are in the neighborhood of that amount. The creditors are of the opinion that the assets will more than offset any liabilities and they will be paid dollar for dollar. The principal stockholders of the Wood-Galloway Lumber Company are Haskett Wood and T. J. Galloway.

S. Montgomery Smith has sold to the Spruce-mont Lumber Company his timber holdings on Jonathan Creek in Haywood county, North Carolina, for \$30,000, according to dispatches from Raleigh. The tract is located at the head of a flume recently constructed for the Waynesville Transportation Company and contains some valuable balsam and hemlock. It is understood that Mr. Smith retains the management of the company and of the flume line. It is estimated that the quantity of timber on the property is 30,000,000 feet.

The rebuilt and enlarged sawmill of the Paine Lumber Company of Oshkosh, Wis., which cost \$100,000, is now complete and being operated at half capacity. When the entire force is at work, the output will be enormous. The company now has 25,000,000 feet of logs ready to be run through the mill.

The Minnesota State Forestry Board will soon make arrangements for the opening of the state summer school of forestry at Itaska Park.

The machinery and supplies for a new hardwood plant were unloaded at Muskogee, I. T., week before last and are being set up six miles east of Atoka. In this vicinity the Colby Brothers of Richmond, Ind., have leased 2,500 acres of timber and will work up the oak and other hardwoods into dimension stock. C. L. McKee and Charles Cain will manage the business and will reside in Atoka.

About 10,000 acres of timber land in Sullivan county, Tennessee, has been purchased by the Whiting Manufacturing Company of Abingdon, Va., for development purposes.

The Roaring Creek Company, recently formed at Johnson City, Tenn., will build a flume six miles in length at a cost of close to \$10,000. It will be used for transporting lumber and tan bark.

The partnership heretofore existing under the style of Dobell, Beckett & Co. of Quebec, and known in London as Richard R. Dobell & Co., has expired by effluxion of time. T. Stevenson, L. Evans and W. M. Dobell retire from the firm, having made all necessary arrangements for the uninterrupted carrying on of the business by R. M. Beckett and N. Christensen. Mr. Dobell will continue to take an active part in the management. The West Virginian operations in sawn oak, etc., are assumed by Thomas Stevenson, who will carry on this branch of the business as a separate firm, under the name of Thomas Stevenson & Co., at the same London address.

Hall Brothers Cedar Company has been Charlotte, Mich., is installing a new dry kiln formed at Burnet, Tex., by D. C. Read, J. T. Hall and W. A. Hall. It is capitalized at \$5,000.

The Brazos Lumber Company is the name of a new concern at Paulding, Ohio, capitalized at \$27,500. Its principals are J. P. Glasser, C. H. Allen, D. J. Harkless, J. A. Mohr and T. F. Goodwin.

Thompson & Fleet of Wausau, Wis., have bought a 3,000-acre tract of timber on the Lake Superior shore, near Bell, for \$65,000. The land is covered with cedar and hemlock. An extension of the Bayfield & Western will probably be built to the mill at Cornucopia, where the timber will be manufactured. The land was bought from the Akeley Lumber Company of Utica, N. Y.

The Vandalia Chemical Company of Carrollton, N. Y., has been incorporated to make and sell products obtained from wood distillation, and to deal in wood, timber and lumber. The capital stock is \$100,000 and the directors are M. F. Quinn, F. S. Sherman, T. H. Quinn of Straight, Pa., R. W. Hilton of Smethport, Pa., and M. J. Collins of Olean, N. Y.

The Park City Lumber Company has been incorporated in Boyd county, Kentucky.

Advices from Mexico City announce that the Compania Maderera de la Sierra de Durango has just been organized in that city with an authorized capital of \$2,300,000. The corporation has acquired 280,000 hectares of forest land in the Durango Sierra, which it is claimed contain 4,000,000 square feet of lumber and at least 9,000,000 ties. It is thought the yearly production will be 160,000,000 square feet, and operations will be commenced as soon as the Durango railway is completed to the property.

The Anderson Creek Lumber Company has been incorporated at Fort Worth, Tex., with a capital of \$50,000. The incorporators are J. W. Rippe, O. P. Rippe and D. L. Irwin.

The Duck Lake Lumber Company has been formed at Green Bay, Wis., and is capitalized at \$50,000. Those interested are William and Austin Larsen and W. M. Taylor.

The Wallingford Art Novelty Company of Wallingford, Conn., manufacturers of articles in wood and metal, has filed a certificate of incorporation. The authorized capital is \$10,000 and the incorporators are Edwin T. Carter, Matthew Cunningham and Dwight T. Carter.

In 1905 the hardwood distilleries in the United States numbered sixty-seven, and the wood distilled therein amounted to 659,770 cords, valued at \$1,967,806. The output was as follows: 26,370,033 bushels of charcoal, 5,062,076 gallons of crude alcohol, 86,655,129 pounds of acetate and 677,480 gallons of tar and oil.

The Capitol City Casket Company has been incorporated at Columbus, O., with a capital of about \$50,000. C. M. Anderson, formerly with the Columbus Coffin Company, was elected president and treasurer and W. S. Hotcher, secretary. Karl T. Webber, B. F. Whipps, R. M. McCoy, C. M. Anderson and W. S. Hotcher constitute the board of directors. The company is now operating in a building at Armstrong and Nachten streets with the Columbus Show Case Company, which concern expects to move into a new factory on Mt. Vernon avenue soon.

H. W. St. John, who has been bookkeeper for the Columbus Coffin Company for the past eighteen months, has been elected secretary and treasurer of the company in place of C. M. Anderson, who resigned a short time ago. A meeting of the stockholders of the company will be held June

26, but no changes in the board of directors or officers will be made.

J. A. Petty has recently purchased the lumber yards and sawmill of S. B. Chesbro at Sycamore, O. Mr. Petty's sawmill was wrecked a short time ago by a boiler explosion.

J. H. Chesley, and will handle largely white pine, mostly eastern stock. Mr. Manning has also maintained a branch office at Hagerstown, Md., for the past year, under direction of Coleman Rogers, handling West Virginia and Maryland stock for that section.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

The South Side Interior Finish Company has been incorporated at Chicago, with a capital of \$10,000, to manufacture mill work and interior finish. Edw. J. Ruder, August Nowgren and August Newquist are the principals.

Ira B. Bennett of the Hume-Bennett Lumber Company, large operators in Pacific Coast woods at Sanger, Cal., was a visitor to this city last week.

The Carbolineum Wood Preserving Company has been incorporated to manufacture wood and stone preservatives and paints. The members are Morse, Ives; C. C. Bodenstab and Adam Lauth.

D. S. Hutchinson of the Nashville Hardwood Flooring Company, Nashville, Tenn., spent a week visiting the Chicago market recently.

The Billmeyer Lumber Company, a large operator at Cumberland, Md., is sending out to its friends in the trade a neat and useful advertisement—a brass-edged foot-rule, on the face of which reads "Don't talk—we haven't the time unless to buy or sell lumber"; the back tells the company's name and location, the line it carries, etc.

W. E. Delaney of the Kentucky Lumber Company, Cincinnati, O., was a Chicago visitor on June 20, en route to review a large timber property in Mexico, in which he is interested.

E. F. Sawyer, a prominent veneer manufacturer of Cadillac, Mich., was in the city on business June 21.

Frank J. Heidler, president of the Fink-Heidler Lumber Company, was quietly married the afternoon of June 19 to Miss Frances Anderson of 674 West Twenty-first street. On their return from a honeymoon among the Wisconsin lakes, Mr. and Mrs. Heidler will reside in a new house which Mr. Heidler has built at 201 South Humphrey avenue, Oak Park.

The Frederick W. Black Lumber Company, which purchased property in West Nashville recently, will have the only exclusive veneering plant in that city. A more detailed account of the new enterprise will be found in another section of this issue.

Charles L. Harrison of the Himmelberger-Harrison Lumber Company, Morehouse, Mo., was in Chicago a week ago. This concern is the largest handler of red gum in this country. Mr. Harrison still complains of bad logging conditions in the South, and says that their result is to make the cost of logging ninety per cent more than it should be.

John R. Davis of the John R. Davis Lumber Company, Phillips, Wis., was a visitor to this market recently.

Advices from the Cordesman Reichtin Company of Cincinnati, builders of woodworking machinery, state that they will enlarge their factory so as to increase their output fully fifty per cent.

W. A. Gilchrist of Memphis made a business trip to this city last week.

A. P. Waterfield of the Cherry River Boom & Lumber Company, Scranton, Pa., lately called upon a number of his friends in the Chicago trade.

Dr. Herman von Schrenck of the St. Louis Botanical Gardens, an authority on forestry matters, spent the latter part of the week in this city.

On Wednesday, June 19, there was celebrated the wedding of Ralph Edmund Gilchrist to Miss

Hester Hill, at the home of the bride's mother in Evanston. The ceremony was performed by Dr. Frank Gunsaulus, and was attended only by the immediate relatives and friends of the couple. Miss Hill is one of the charming belles of the Chicago suburb and Mr. Gilchrist is the third son of F. W. Gilchrist of Alpena, Mich., and is a well-known young lumberman of that city. Mr. and Mrs. Gilchrist left on Wednesday evening for an extended bridal trip in the East and upon their return will reside at Alpena.

Boston.

H. W. Bowler has recently been appointed inspector for the National Hardwood Lumber Association. This makes two inspectors now located in Boston. Mr. Bowler's headquarters will be at 88 Broad street.

One of the leading hardwood merchants in the East, who because of modesty does not wish his name mentioned, says: "The difficulty today is to get lumber, not orders. The high prices have made buyers conservative, and now when they are in the market they want stock as quickly as it can be had. It is not as easy to locate a desirable stock for quick shipment as it was." Another prominent lumberman reports all grades of beech as moving freely and says the present activity is the result of buyers seeking substitutes for higher priced woods.

L. L. King, sales manager for the W. H. White Company, Boyne City, Mich., has been visiting eastern markets. This firm makes a specialty of white rock maple flooring.

Hugh McLean of the Hugh McLean Lumber Company, Buffalo, N. Y., was a recent visitor in the Boston market.

E. L. Gedney, representing Richard P. Baer & Co., Baltimore, Md., was in Boston last week. This firm is a large handler of hardwoods.

Prominent among the visitors in Boston of late was J. B. Henderson of the Henderson Lumber Company, of Sanford, Ala.

Morris A. Hall of the Hall Lumber Company and secretary and treasurer of the Metropolitan Lumber Company of Boston, has been making a trip through British Columbia in the interests of business.

Charles C. Batchelder, treasurer of the Boston Lumber Company, is planning a trip abroad this summer. Mr. Batchelder intends sailing June 27. He will spend about two months in Switzerland and Germany.

Resolutions have been adopted by the Massachusetts Wholesale Lumber Association stating that since the association is in favor of uniformity in grading rules for all sections of the country, in so far as is practicable, it should approve any action on the part of other associations of lumber dealers which has for its object the establishment of uniform rules for the grading of lumber, provided, however, that such action does not in any way impair the usefulness, or disturb the efficiency of the existing Survey law, as at present administered in Massachusetts and interpreted by the surveyor general of Boston and his deputies.

C. W. Manning, the prominent wholesaler of 66 Broad street, New York City, has opened an office in this city at 415 Old South building. This branch will be in charge of

New York.

The latest acquisition to the wholesale hardwood trade in the metropolitan district is Bemis & Vosburgh of Pittsburg, Pa., with large milling interests in West Virginia, who has just opened a local sales office at 12 Broadway, Manhattan, in charge of W. W. Powell, Jr., who was previously associated with the Nicola interests of Pittsburg. This company is a large manufacturer of West Virginia hardwoods, spruce and hemlock, with mills at Bemis, W. Va., where it operates under the style of J. M. Bemis & Son. Although the concern has enjoyed considerable business in this vicinity previously, the opening of the local office is in the interest of extending the same.

George W. Henderson, for the past year or so secretary and treasurer of the Holcomb & Caskey Lumber Company, 12 Broadway, severs his connection July 1 to assume management of the extensive lumber interests of T. B. Basselin in the Adirondack region of New York state, with headquarters at Croghan. F. N. Loomis, brother-in-law of R. E. Holcomb of the company, will be the new secretary and treasurer, and will take up his active duties on his return from abroad September 1.

The Adirondack Fire Insurance Company, 84 William street, Manhattan, which is owned and operated by lumbermen in the interest of reduced insurance rates, has just closed its first year, and the reports of its condition show remarkable success. If there were any doubts in the minds of its managers as to the possibility of a second \$300,000 lumber insurance company establishing a sufficiently large volume of business to justify the capital and surplus investment, they were set at rest by the various successful results of the first year's business. The very general patronage of the new company by the lumber trade resulted in an aggregate business which equalled and slightly exceeded the first year's business of the Lumber Insurance Company of New York, which was placed in the field under the same administration and management two years before. And this result was accomplished on a basis of smaller lines on individual risks than were taken by the Lumber Insurance Company in its first year. To those lumbermen who have already experienced the benefits of insuring in the lumber specializing companies no argument is needed to prove the desirability of an Adirondack policy.

The lumber firm of George W. Jump & Co., Oakland and Newell streets, Brooklyn, is in the hands of a receiver, Charles D. Chase of 116 Nassau street, Manhattan, being appointed. The assets, plus secured liabilities, are approximately \$60,000, with total liabilities of about \$110,000. A composition settlement will probably be offered to the creditors.

Considerable stir was created in local hardwood circles on June 9 when a petition in bankruptcy was announced against the Ross Lumber Company, retailers at 317 West 115th street, Manhattan, with extensive wholesale hardwood interests at Jamestown, N. Y. Fred J. Moser has been appointed receiver in bankruptcy with bond at \$15,000, and will continue the business for a brief period, until such time as definite arrangements can be made. The assets of the company at first figures are placed at approximately \$100,000, with liabilities about \$85,000, and in view of certain circumstances which necessitated the action against the company, it is believed that it will liquidate its indebtedness in full in due course. At a meeting of the creditors held June 15 a committee was appointed to look into the affairs of the company and report at

another meeting to be held June 26. Schedules presented at the meeting showed liabilities of \$150,000 and assets of \$85,000.

Among the recent hardwood visitors to this market were: Hugh McLean, Hugh McLean Lumber Company, Buffalo; J. H. Jenks, R. H. Jenks Lumber Company, Cleveland, O.; R. P. White of Albany; W. A. Holt, Holt Lumber Company, Oconto, Wis., and Frank C. Rice, Rice & Lockwood Lumber Company, Springfield, Mass.

Patrick H. Moore of the well known lumber firm of Moore Bros., Twenty-fifth street and Eleventh avenue, Manhattan, was a successful contestant in the lumbermen's golf tournament at Baltimore last week, playing through the entire tournament up to the finals, where he won a handsome prize. He was the only New Yorker to reach the finals, and he is to be congratulated upon his excellent playing.

There was a false report in one of the Brooklyn papers last week stating that the E. H. Ogden Lumber Company of Manhattan had been petitioned in bankruptcy. This was entirely wrong, and those interested in the company are particularly desirous that same be combated and have taken steps to protect their interests in the premises. The facts are that the E. H. Ogden Lumber Company was one of the petitioners to have a concern in the borough of Brooklyn placed into bankruptcy, but through some error this fact was not made plain.

Irving B. Easton, for many years prominently associated with the Albany, N. Y., lumber trade, has returned to the metropolitan district to assume the management of the local office of the Robinson-Edwards Lumber Company of Burlington, Vt., at 1 Madison avenue.

Howard C. Jennings, the absconding former manager of the Newark Lumber Company, has been apprehended in the West, and will be brought East for trial. He is wanted on a defalcation of about \$40,000.

G. P. De Witt, general sales agent for Sam E. Barr, Flatiron building, was a recent visitor, going over matters at this end of the line preparatory to joining his family in Philadelphia, and thence on an extended business and pleasure trip through New York state and Canadian points.

Secretary Lewis Doster of the Hardwood Manufacturers' Association of the United States, with headquarters at Chicago, has been spending the past week in this city and Philadelphia in the interest of association affairs. He has had a most successful trip and reports progress all along the line. In speaking of the general business outlook in the hardwood trade from the sources available to him, he says he is exceedingly well satisfied with the situation.

The Prospect Park Sash & Door Company has been incorporated in the Prospect Park section of Brooklyn to manufacture sash, doors, blinds, etc., with a capital of \$5,000. The incorporators are P. E. Nolan, E. B. Nolan and S. F. Edmead, all of Brooklyn.

Elisha B. Merritt, proprietor of the hardwood firm of Alexander & Ellis, Brooklyn, announces that he is now nicely located at his new yard, recently purchased at Kent avenue and Hewes street, and has arranged same in an up-to-date manner.

A petition in bankruptcy has been filed against the Bailey Piano Company, 138th street and Canal place, Bronx. It is alleged that the company is insolvent and committed an act of bankruptcy by making an assignment. Lindsay Russell has been appointed receiver with a bond of \$40,000.

Philadelphia.

All honor to the Lumbermen's Golf Club, and all praise to the lumbermen of the Lumbermen's Exchange who generally come off winners, whether in the sober game of business or the festive competitive game of relaxation. The tournament of the Lumbermen's Golf Association, held at Roland Park, near Baltimore, Md.,

on June 12 and 13, was well attended by the Lumbermen's Golf Club of the Lumbermen's Exchange, Philadelphia, the members of which certainly distinguished themselves, carrying off five of the handsomest prizes. The rooms of the exchange for the last few days have thrilled with excitement, everybody waiting to see the prizes and to congratulate those who have brought honor to this famous organization.

Lewis Doster, secretary of the Hardwood Manufacturers' Association, was a recent visitor to the city.

William F. Robinson, the Philadelphia representative of Robinson Bros. Lumber Company, Tonawanda, N. Y., has just returned from a trip to California. On his way home he stopped at Salt Lake City, Denver and Detroit.

John J. Rumbarger of the Rumbarger Lumber Company is a busy man these days. He has moved to Ridley Park, Pa., for the summer, where he puts in considerable of his spare time as an amateur gardener, fast developing into an expert with spade and rake. As chairman of the Finance and Entertainment Committee in charge of the Hoo-Hoo annual, he reports everything moving along in fine style. Mr. Rumbarger is also working like a Trojan this year for the lumbermen's baseball club, of which he is manager, and the games of which have always been played for the benefit of charity. A great deal of interest consequently is manifested therein by the lumbermen. The game this year will come off on July 19 at the Athletic grounds and will be played between the lumbermen's baseball club and the master builders' club, of which latter Benjamin K. Nussbaum, Philadelphia representative of Toch Bros., New York, is manager. The proceeds will be given to the Red Bank Sanitarium, the Children's Country Week and the Philadelphia Modified Milk Association. These clubs up to date have already donated \$4,500 to these worthy charities. A special attraction this year, if it can be arranged, will be the engagement of the great and only Rube Waddell as umpire of the game.

The Rumbarger Lumber Company reports busy and is confident of good summer business.

C. E. Lloyd, Jr., vice president of the Boice Lumber Company, Inc., has just returned from a trip through the New England states with a goodly bunch of orders.

Benjamin C. Currie, Jr., of R. M. Smith & Co., admits the lumber situation a little quiet of late, but looks forward to a speedy reaction. He reports good orders coming in.

J. Randall Williams of J. Randall Williams & Co. has recovered from his recent illness and is spending a few days with his family at Buzzards Bay, Mass. He will return later to spend the summer. J. Randall Williams, Jr., reports business prosperous and their sales ahead of last year. They recently purchased some land in Salisbury, N. C., where they intend to have a large yard for stock accumulation, but have been delayed getting things into shape on account of the railroad company's being slow in building a siding into the yard.

The Kirby & Hawkins Company, handlers of railroad ties, etc., report orders on hand to cover months ahead and the outlook for this line very promising. They state that car and bridge building lumber is not so much in demand as formerly.

Horace G. Hazard & Co. report busy, but find it difficult to obtain hardwoods as freely as desired. They have been selling considerable lumber of late in cargo lots, which method they regard favorably.

The Owen M. Bruner Company is another concern whose sales are far ahead (to date) of 1906. Mr. Bruner is firm in his opinion that to the backward season alone is to be attributed the slight dullness complained of recently. He regards the outlook at present good for business.

Thomas B. Hammer reports business moving

along very satisfactorily. Last year was the best year he has had since he has been in business, and from present indications he is positive 1907 will surpass it in volume of business.

The Tomb Lumber Company, manufacturer of white oak, white pine and hemlock, is very busy; has orders to keep it going for the next six months. Its mills in Pennsylvania are all active and it is selling a great deal of white oak for export.

The prosperous Hindle Lumber Company has no fault to find with conditions. It has good orders on hand and looks forward to good summer trading. W. Alfred Hindle, who has been suffering with his eyes, his friends will be glad to know, has recovered.

The David Baird Company of Camden, N. J., was visited by a serious fire on June 17, which it was feared, at first would involve property for miles around, but through the aid given by the Philadelphia firemen and the crew of the Italian cruiser Etruria, lying opposite the plant, a great deal of lumber was saved. The loss is placed at about \$50,000.

Emil Guenther reports business holding its own, no perceptible weakening anywhere in values. He is receiving good orders and thinks business in the building line will brighten up now, with the advent of seasonable weather.

R. Lamont & Sons Company of Pittsburg, Pa., was incorporated under Pennsylvania laws on June 19; authorized capital \$5,000.

The Clearfield Millwork and Lumber Company, Clearfield, Pa., obtained a charter under Pennsylvania laws on June 19; capitalized at \$30,000.

The Codling Lumber Company, Twenty-second and Bellevue streets, has formed a combination with the McEwen Lumber Company of Asheville, N. C., and will hereafter trade as the Codling-McEwen Lumber Company, at 339 Land Title building, Philadelphia. In addition to the lines handled heretofore by the Codling Lumber Company, they will also sell the product of the eight mills of the McEwen Lumber Company, which are cutting all kinds of hardwoods, white pine, some shortleaf pine, etc. Their main yard is located at Azalea, N. C., where they carry several million feet of the better grades of lumber, under cover. A strictly up-to-date planing mill has recently been installed at this point, and the varied products of eastern Tennessee and western North Carolina give the new company unusual facilities for supplying from this yard, practically everything demanded by lumber yards in general.

Baltimore.

Advices received by Secretary E. M. Terry of the National Lumber Exporters' Association from New Orleans are to the effect that the New Orleans Lumber Exporters' Association has received word from the railroads that they would consider the representations made with respect to the enforcement of the new rule raising the port charge on lumber intended for export and reducing the time during which cars may remain loaded free of charge to ten days. This has opened the way for a discussion of the subject in all its bearings, and the association, being asked to formulate its demands, went back to the original position of asking for thirty days, as was the practice at Northern ports. The association represented to the Car Service Association that the new rules place New Orleans at a great disadvantage as compared with the northern ports and tend to divert traffic to other points. What the outcome of the discussion will be cannot at present be forecast. The Transportation Committee of the National Lumber Exporters' Association is to have a meeting June 26 in New York to discuss various business matters, and on the 27th it will hold a conference with representatives of the various steamship lines with regard to this matter. Principal among the questions to be

discussed will be the question of liability for breakage, which the steamship companies seek to evade, and which has resulted in serious loss to the exporters.

John Crow of Dinwiddie county, Va., a prominent lumberman and sawmill operator, about 60 years of age, was instantly killed at Wilson's on the Norfolk & Western railway early on the morning of June 15. He was driving in a buggy, having come from Petersburg, where he transacted some business, and the vehicle was struck by a train at the crossing. His companion was perhaps fatally injured.

What is considered one of the most important chancery cases to be brought up in southwestern Virginia was filed in the United States Court at Abingdon, Va., June 17, the plaintiff being the Buchanan Company, organized under the laws of West Virginia, and the defendants 39 residents of Buchanan county and 10 of Tazewell county. The contest involves the title to some 100,000 acres of the finest coal and timber land in the two counties, the property being claimed formerly by heirs of Frederick Pearson of Boston, descendants of the late Gen. Benjamin Butler. The process is made returnable on the first Monday in September, and the proceeding was instituted by the Norfolk law firm of Jeffreys & Lawless. If the suit is decided in favor of the plaintiff a number of people will be made homeless.

The Reitz & Martin Lumber Company of Parkersburg, W. Va., has purchased 2,000 acres of timber land on Burning Creek, W. Va., for \$20,000. The company owns a number of sawmills, which will be removed to the newly acquired tract and begins operations as soon as possible.

The Roaring Creek Lumber Company of Clearfield, Pa., has acquired a tract of timber land, including some 1,100 acres in Randolph county, West Virginia, and will erect two sawmills there. Work is being pushed as rapidly as possible.

The John Stack Lumber Company, recently organized in this city, has succeeded the firm of John Stack & Sons, mill and yard men, at the old location. The concern is extensively engaged in building and has an establishment at 2531 Oak street.

S. George and E. J. Wise of Cumberland, Md., are building a planing mill at Hagerstown, Md., and will also establish a yard there.

William M. Burgan, dealer in and manufacturer of cypress, is on a trip West as far as Yellowstone Park. He is traveling with Mrs. Burgan, and they will meet their son, who has been in the West some time. If conditions are favorable, the journey will be extended to the Pacific Coast.

John M. D. Heald of Price & Heald, Baltimore, has been on a trip to Memphis, Cincinnati, and other points. Everywhere he found a brisk demand for stocks and the mills busy.

The annual tournament of the Lumber Trade Golf Association at the Baltimore Country Club in Roland Park, a suburb of this city, has come and gone. The visitors had an enjoyable time, were made the recipients of a bounteous hospitality, and had an opportunity to try their skill over what was unanimously characterized as the most difficult course they ever tackled. How the redoubtable "Billy" Gill, retiring president and all around good fellow, ever managed it no one exactly knows, but he got there notwithstanding his more than 200 pounds. The match extended over two days and eleven prizes, all of them cups, were contested for. Baltimore had only three contestants and these were easily beaten by the cracks from a distance, Philadelphia landing a majority of the honors. Some excellent work was done and the Lumber Trade Golfers have every reason to feel proud of themselves.

Pittsburg.

Nearly 200 men worked for forty-eight hours

steady last week to save 80,000 logs and a large bridge in the flooded Guyandotte river near Middletown, W. Va. The boom was not calculated to hold over 25,000 logs and it had been greatly weakened by the winter's strain. To brace it from the unusual strain forty-eight cables were sent by a rush order from Cincinnati and rafts of logs wedge shaped were anchored to trees all along the bank of the river. Every part of the bridge over the Guyandotte was fastened with cables and sixty-five logs per minute were entering the boom. A few miles up the river the current was so swift that sixty-foot logs were whirled about like jack straws. The new bridge was swept away June 13 when the gorge broke from its moorings.

C. H. Edwards, buying agent for T. L. Gillespie & Co. of Pittsburg, spent a few days among the hardwood tracts of West Virginia recently. He says that the reports about the scarcity of timber in that state are considerably exaggerated and finds conditions very good throughout his territory.

A true bill was found against the W. M. Ritter Lumber Company in the West Virginia courts last week. The Federal jury of the Southern district brought in indictments for peonage, the charge being that the Ritter Company brought foreigners from the east and made them work in their plants until they had paid for their passage.

The Pittsburg Chamber of Commerce has gone on record as being in favor of the state legislature making a careful examination of the Allegheny and Monongahela river watersheds with a view to the preservation of the forests. William L. Hall, who has charge of the investigation of the watersheds on the Appalachian and White mountains, and Prof. J. A. Holmes of the geological survey, were present at a very enthusiastic meeting of the chamber two weeks ago and brought to light a large amount of valuable data regarding the loss of timber lands.

The Arlington Lumber Company has been incorporated at Beulah, W. Va. Its plant will be in Randolph county, W. Va., and its capital is \$200,000. The incorporators are: B. C. Allen, C. R. Wood, J. C. Bell, A. H. Bloom, C. H. Gardner, all of Wilkes Barre, Pa.

The Crescent Lumber Company from its new offices in the Machesney building is furnishing over one-half the locust posts that are sold in this territory. Its agents are just now having a hard time getting farmers to leave their regular work to cut timber in eastern Pennsylvania where much of its timber is secured. Another objection to the trade is that the pine factories are taking so much stock that it is hard to get seven foot posts.

William M. Pownall of the Colonial Lumber Company has been nursing a hard attack of measles for a period of two weeks. His company is now established in a fine suite of offices in the Ferguson building, where it has more room than in its old quarters.

D. B. Wagner, Windham, O., who formerly operated a basket factory there, has turned the plant into a baseball bat factory and has shipped 14 cars of bats this year to A. G. Spaulding of Chicago. He uses second growth white ash for his stock and has received another large order from Mr. Spaulding for next year's business.

The Lock Run Lumber Company of Pennsylvania, has been organized to acquire timber lands and manufacture lumber. Its capital is \$40,000 and its members are: Creed Collins, C. W. Sprinkle, E. M. Bonner, F. E. Smith and J. M. Yates, all of Pennsylvania.

The Parsons-Cross Lumber Company reports hardwood conditions first class. It is working the Pittsburg district very thoroughly and has just added A. B. Gabriel to its force of salesmen. Chestnut is leading its list of inquiries.

The annual picnic of the Pittsburg Wholesale Lumber Dealers' Association will be held at

Ross Grove on the Allegheny river, June 29. A ball game, aquatic sports and other events that will test the physical abilities of the 200 or more who will be there have been planned.

The West Virginia Lumber Company is working off its old orders and reports the yards in the city unable to take any large amount of hardwood. Some of them have their sidings full of cars and have been unable to get any of the lumber out to the contractors on account of the bad weather. Orders for finishing lumber can not be delivered because the buildings for which it is intended are hardly started.

According to William T. Monroe the railroads and manufacturing plants are once more showing a disposition to go ahead with their projects. Several jobs have come on to the boards lately for refiguring which were announced as off two months ago. Mill work men are having plenty to do, he says, and the general call for lumber in his line is excellent.

George W. Hayner of the Reliance Lumber Company has been taking a trip through West Virginia. He notes a weakening in prices in some lines but says that concessions are confined mainly to the pine and hemlock people.

The Pittsburg lumber wholesalers are hoping to reap quite a harvest in the rebates they will get on freight as the result of the ruling of the supreme court that the jump in freight rates on lumber from 33 to 35 cents in 1903 on all roads in the Central Traffic Association was illegal. One firm has counted up over \$12,000 which it is to receive.

The Cheat River Lumber Company has its representative, R. E. Chapin, in the East looking up the lath trade especially. This branch of the business is much improved of late with the Cheat River. It has also added another salesman to its force.

The Shaffer Lumber Company is getting ready to start operations on its big tract of timber in West Virginia August 1. Its present holdings amount to about 12,000 acres and mills and machinery are being placed.

T. W. Raine has bought the interests of his partners in the holdings of the Raine-Andrews Lumber Company on the Meadow river in West Virginia for about \$227,000. The timber will be cut off at once.

The C. P. Caughey Lumber Company is getting some fine orders for oak. It is receiving the output of several mills in Western Pennsylvania and in this way has been able to land and handle some of the best orders for oak that have been placed here this year.

Pole business is destined to get a hard blow in Pittsburg. Councils are debating the proposition of putting all telegraph and telephone wires under ground and as a result several firms are shivering in their shoes at the prospective loss of business.

One of the most disastrous floods for years swept mills and rafts around in bad shape in the vicinity of Irwin, Pa., 20 miles above Pittsburg, last week. The Shaffer plant was damaged most, but several plants on the Youghiogheny river had bad losses.

Secretary J. H. Henderson of the Kendall Lumber Company sees no reason to feel blue over the situation. Last week he sold 40 cars of lumber while on a trip to the East and he finds the market for maple and chestnut in better shape than it was two months ago. Oak is in "elegant call," says Mr. Henderson, which is enough to make any hardwood man feel good in view of the light stocks at the mills.

J. E. Melvain & Co. note a little slacker inquiry in general for hardwood but are selling their full share of ties and posts. Less piling is being marketed and the railroads are apparently holding back on projects that they expected to go ahead with in the spring.

The plant of the Galion Lumber Company at Galion, O., was burned June 7 with a total loss of about \$25,000. A lightning bolt did the business.

G. J. Evans, former president of the Iron City Lumber Company and secretary of the Willow Creek Lumber Company, died at his home in Pittsburgh last week of pneumonia. He was born in South Wales 50 years ago and came to this country when 12 years old.

The L. L. Satter Lumber Company has its box shoo factory at Blackstone, Va., nearly completed and will be ready to turn out a total of 150,000 feet a day by fall. The plant will be lighted and equipped with electricity. The company has just installed a new Mershon band re-saw and also two circular re-saws at its plant at Blackstone and has also contracted for 12 miles of steel rails to connect its main plant with a large tract of timber in one corner of its holdings.

Senator E. W. McKown and Upsher Higgonbotham of West Virginia have taken an option on 20,000 acres of hardwood timber in Breathitt county, Kentucky, and propose to close up the deal and develop the proposition in the fall.

I. F. Balsley of the Willson Brothers Lumber Company spent last week in New York looking after the interests of the hardwood department of which he has charge. He reports conditions in hardwood much better than in other lines of lumber and the trade feeling good.

The Linehan Lumber Company finds a strong market for poplar and oak. They see no surplus of stocks at the mills and believe that the better weather will soon bring the market up into the wind with a rush.

The Parkersburg Mill Company and the Little Kanawha Log & Tie Company have bought 2,000 acres of timber land in Calhoun county, West Virginia, for about \$50,000. The land is heavily timbered and this will be cut up into staves, ties and merchantable lumber.

The Babcock Lumber Company last week shipped a very choice lot of cherry from its plant at Davis, W. Va. It is beginning to market the stock from its big plant lately acquired and much of the lumber is going into the eastern market.

President J. B. Flint of the Flint, Erving & Stoner Company is back from a long stay at the company's plant at Dunlevie, W. Va., where he found things moving briskly. R. H. Erving of the same company has returned from a trip to the Northwest. The company has a fine trade in spruce this month.

P. C. Clark, assistant hardwood manager of the American Lumber & Manufacturing Company, is in Tennessee looking up market conditions. J. G. Darling, who has been in charge of the American's operations at Baxter, Tenn., has gone to the Southwest to look up hardwood stocks. General Manager J. N. Woollett reports the hardwood situation good but not so brisk as a few weeks ago. He has a fine lot of southern hardwood under contract and is getting it up into the middle states at profitable figures.

Buffalo.

The hardwood dealers are still meeting every Saturday, but do not appear to have much but sociability and general matters to look after. They have a way of going to the northern side of the city for a special spread and when it is racing day, as just now, it is handy to finish the trip in that direction. It has been planned to go down the river to the Bedell house for the annual outing. It is the old favorite resort, but has been neglected lately. The date is July 26.

Anthony Miller reports a good city trade and has plenty of good lumber to meet it. He is well located for promoting his trade and seems to be adding to it greatly of late.

J. N. Scatcherd is one of the stockholders in the proposed Buffalo, Rochester & Eastern Railroad, which is preparing to make the fight for a franchise before the state railroad commissioners.

Work at Beyer, Knox & Co.'s plant on the grade-crossing improvement at their street,

which will lower the regular Belt Line tracks at their yard several feet, has already begun.

The Pacific coast trade will be made the most of by T. Sullivan & Co. for a while, as there is promise of a very early shutting off of cars from that direction. A neat lot of spruce and fir is coming in now.

G. Elias & Bro. are adding to their already heavy yard stock a number of cargoes of white pine and other lumber by lake. They handle all kinds of hardwood and report business good in all departments.

The Standard Hardwood Lumber Company is pleased with the fine run of cars from the South, containing oak and poplar, which it received early in the season. The yard is now well stocked, but the supply has dropped off considerably of late.

Barges down the lakes and barges up the Mississippi and Ohio with large assortments of hardwood lumber are on the regular list of the Buffalo Hardwood Lumber Company this season.

Manager Janes of the Empire Lumber Company is off again on a short trip to the Arkansas mills of the company, which are apparently not so badly flooded as some of the others in that district.

O. E. Yeager has a fine assortment of poplar and cypress, which extends to both thick and wide cuts and includes sizes that are not usually found in collections of these woods in these days.

F. W. Vetter is making quite a stir in the white ash trade, which he is able to do through the connection he has had for some time in North Carolina.

One of the later specialties of I. N. Stewart & Bro. is chestnut, their list of inch being very complete, considering that this wood is hard to get in any sort of variety.

The Hugh McLean Lumber Company is making efforts to get its new Louisville yard into line, as it makes such a specialty of oak that ordinary research is not sufficient to keep up the former stocks.

Saginaw Valley.

The advent of summer weather has been attended with some fires in the upper part of the lower peninsula and considerable loss was sustained. Frank Buell lost two camps and some other property, valued in all at \$3,000. Lobdell & Bailey, an extensive hardwood manufacturing concern at Onaway, sustained a loss of \$12,000. Albert Lough lost \$3,000 by the burning of his camps and other firms in the aggregate lost \$20,000 worth of property.

Lumbermen who are on the market for stumpage state that there is a little weakening in values. In other words, those having timber to sell are not quite so stiff as they were and are willing to make concessions to bring about a trade. Deals involving some hundreds of thousands of dollars are pending here and will be closed this week. This will result in bringing a large quantity of timber here for manufacture.

Help is scarce both in the woods and in the mills. The S. L. Eastman Flooring Company has had a standing sign out the last four months: "Men Wanted," and about every firm operating in this section of the state is in want of help. Wages are high for this class of work. The car famine no longer disturbs the dreams of shippers, who are being well taken care of now, and a lot of stuff is being moved.

More hardwood is being utilized this year in the manufacture of box stuff than ever before. Almost everything in the line of hardwood culls is being converted into box shooks. The Kneeland, Buell & Bigelow Company is furnishing the Mershon-Bacon Company 5,000,000 feet of hardwood culls for conversion into box material. Maple, beech and basswood culls are mostly used and there is a sharp demand for them. Beech is quite strong and active. Besides going into boxes large quantities are being

used for screen doors. It is \$2 a thousand higher than early in the spring.

The Hanson-Ward Veneer Company is working up a large quantity of maple and birch into veneer work, having all the orders it can fill and doing a prosperous business.

The plant of Bliss & Van Auken, that of the Strable Manufacturing Company, the S. L. Eastman Company and W. D. Young & Co., all heavy manufacturers of maple flooring, are running full force and time and doing good business. There has been a fair movement in flooring. With possibly one exception all of these firms handle considerable quantities of hardwood lumber aside from flooring. Eastman will handle 20,000,000 feet in all and Young & Co. fully as much. Bliss & Van Auken always have a large trade in hardwood lumber.

A. C. White still dotes on basswood and carries a large line.

The Hay-McCormick Lumber Company is a stiff buyer, having recently picked up several million feet, a portion of which is to be cut for delivery later.

Cadillac produced 51,000,000 feet of hardwood lumber last year. Three of the largest firms there, Cobbs & Mitchell, the Mitchell Brothers Company and Cummer, Digins & Co., own enough timber to keep their mills running twenty-five years. Cadillac lumbermen also have extensive hardwood timber holdings in upper Michigan.

The St. Johns Table Company, which began business at Cadillac sixteen months ago, has trebled its output since that time and the company is making improvements to still further increase its output. At present the monthly output is valued at \$30,000.

The Boyne City-Gaylord road is constructing a three-mile spur to the Thumb Lake division for the purpose of reaching a tract of timber owned by G. von Platen of Boyne City.

There is hardwood timber yet standing in nearly every county in the lower peninsula. John W. Watkins has purchased twenty acres of Thomas Finley in Bedford, Calhoun county. During the winter and spring he cut 800,000 feet and he has orders for 600,000 feet more.

During the winter L. P. Mason of Saginaw cut several hundred thousand feet of mixed hardwood on land he owns at Bay Port. The lumber goes to Saginaw.

The H. M. Loud's Sons Company is shipping a large quantity of heavy timber to Port Arthur, Lake Superior, for the Dominion government for harbor work. It is also shipping timber and lumber to Lake Erie ports.

Grand Rapids.

Between 200 and 300 manufacturers of furniture put their fall lines on exhibition in this market June 17, and while only a few of the spaces were ready on opening day, the market was in very good shape by the close of the week, and there were 50 buyers on hand, largely from the big centers, New York, Chicago and Boston. The manufacturers are looking forward to a fair season. While the retail trade has been slow and backward, in sympathy with the weather during spring months, the advent of hot, sunshiny days, and seasonable weather about the middle of June, augurs well for trade. Oak and mahogany figure largely in the furniture woods as usual, though Circassian walnut in the better lines and maple and some other woods in the cheaper stuff are used to quite an extent. On the whole the present exhibit is the finest one ever made in this market, the improvement in the quality of the outside lines shown here being especially marked.

Thomas White and W. S. Martin of the W. H. White Company, Boyne City, have returned from a trip to the Pacific coast.

The Capital Furniture Company, recently organized at Lansing with \$100,000 capital, for the manufacture of parlor and library tables, has elected Henry Johnson president and man-

ager. Lansing is distinctively an automobile manufacturing town, this being the first furniture concern to locate there.

Governor Warner has signed the bill passed by the legislature removing the restriction against mining companies in Michigan owning more than 50,000 acres of land. Under the new law they are not limited to their timber holdings, the change being urged on the ground that millions of feet of timber must be used annually in timbering the mines, and that large areas were necessary if the cutting operations were to be carried on according to forestry methods, taking only the mature trees.

A bill that provides for a railroad commission has passed the legislature, after a long factional fight. Reciprocal demurrage is provided for, in the hope of relieving manufacturers and shippers from the embargo placed on business annually through car famines, though the demurrage clause does not apply to the upper peninsula. The matter of exchange of freight with electric roads is left to the commission.

Cleveland.

Burt Pero of the Sawmill Company of Chase City, W. Va., was in the city last week buying machinery for their new plant.

Albert R. Mason of Taylor & Mason, Buffalo, was a visitor in this market recently.

Hod Dunfee of the Marietta Lumber Company, Waverly, W. Va., was a caller here last week.

E. H. Walker, representing the Herman H. Hettler Lumber Company, Chicago, was in the city recently.

C. R. Gorham of Mount Pleasant, Mich., manufacturer and dealer in hardwood veneers, spent several days here recently.

F. L. Finkensteadt of Duluth, representing the Lord & Bushnell Company of Chicago, stopped off here for a day or two en route to Duluth from a visit at his old home in Buffalo.

Fred Ferguson of Ferguson & Clark, Cincinnati, stopped over in Cleveland on his return from the convention at Atlantic City. Mr. Ferguson started in the hardwood lumber business in 1893 as manager of the retail yard in Cleveland of the Kirk-Christy Company.

Gilbert Tickle, lumber dealer of Liverpool, England, looked over the stocks of hardwood in this market recently.

H. B. Cooper, manufacturer of hardwood in Buckhannon, W. Va., was a visitor among the trade this week.

W. H. Gillespie of Spitzinger & Co., New Castle, Pa., also J. C. Roane of Weston, W. Va., called on the trade this week.

The Gilchrist & Fordney Company, recently incorporated with a capital stock of \$1,200,000, is of especial interest to Cleveland lumber circles. F. W. Gilchrist, Frank Gilchrist, Ralph Gilchrist, A. W. Gilchrist and Congressman J. W. Fordney are the organizers, and Frank R. Gilchrist is a resident of this city. They have bought the mill of the Kingston Lumber Company of Kingston, Miss., which has a daily capacity of 150,000 feet of hardwoods and pine. They also purchased in connection with this 50,000 acres of pine and hardwood timber land.

The United Lumber and Supply Company, with a capital of \$10,000, was incorporated last week by Cleveland men—A. W. Ferguson, A. S. Krause, F. F. Krause, B. S. Kennedy and Levi S. Bauder.

The steamer E. A. Shores, belonging to the Cleveland Transportation Company, caught fire recently while on the way down with a cargo of hardwood and lath for this port. She sank at the Soo but was not seriously damaged. Efforts are being made to raise her and bring her to the Cleveland dock.

A wedding of interest to local lumbermen occurred Thursday evening, June 20, when Miss Cora H. Putnam, sister of Sam Putnam of Putnam & Savage, was united in wedlock to A. P.

T. Suffell. Mr. and Mrs. Suffell left immediately for an extended wedding trip.

Indianapolis.

A boiler house to cost \$2,000 will be built by the Interior Hardwood Company at its plant at the Belt railroad and Linden street. Work will be started immediately and new boilers will be installed when completed.

William Mote, a cut off saw man, was killed and two other employees seriously injured by the explosion of the boiler in the planing mill of Colbert Brothers' novelty works, Andrews, on June 17. The loss on the plant was about \$1,000, covered by insurance.

The North Vernon Lumber Company of North Vernon has asked the Indiana Railroad Commission to place the freight rate on lumber outright on a basis of 30 per cent less than the rate on logs. At present, it is said, such a rate is in effect, but that the Pennsylvania and B. & O. railroads compel the lumber to be shipped back over the same line that hauled the logs, and that the rebate is not allowed until all shipments are made.

J. C. Greer has bought an interest in the Federal Lumber and Stave Company at Evansville and will take an active part in the business of the company.

E. L. Aukerman has bought what are said to be the last giant walnut trees in Wabash county. The purchase consists of thirty trees from each of which about 6 logs 12 feet in length can be sawed. It is said that not a walnut tree remains in Wabash county over 12 inches in diameter and Mr. Aukerman says that within five years there will not be a sawmill remaining in the county.

Permission has been granted for switching rights to W. H. Coburn, proprietor of the Coburn Timber Company, by the Board of Public Works. The siding will be installed at once at the company's yard on Twenty-third street near the Monon railroad.

As trustee in bankruptcy, J. M. Neely has sold the plant of the Southern Indiana Lumber Company at Martinsville to W. K. Bellis, owner of the Martinsville sanitarium. The price paid was \$4,700 and the plant will be fitted up for an amusement hall for the sanitarium guests.

A purchase of 140 acres of timber land in Knox county has been made by R. O. James, a well known lumberman of this city. Mr. James has contracted for two sawmills to clear the land this summer. The property contains a choice assortment of hardwoods.

The Indianapolis Freight Bureau has received notice from the Interstate Commerce Commission that on July 15 new rates will be in effect on furniture to Peoria, Chicago and Milwaukee and on chairs to western points. New lumber rates are anticipated in the near future. The changes mean a reduction on furniture to Chicago and Peoria from 25 cents to 21½ cents on 12,000 pounds minimum, and from 25 cents to 17½ cents on the 20,000 pounds minimum.

Two loaded tie barges, one belonging to the Moss Company and the other to the Gray Company, were sunk in thirty feet of water at the Fulton avenue wharf, Evansville, a few days ago during a heavy storm.

It is announced that the Wells-Kreighbaum Manufacturing Company at South Bend has been succeeded by the Wells-Shidler Manufacturing Company, a reorganization of the old company.

An increase from \$50,000 to \$75,000 has been made in the capital stock of the Indiana Tie Company at Evansville. Allen Gray is president and R. R. Williams secretary of the company.

Herman Nauter, for many years the largest manufacturer of furniture in this city, died at his home a few days ago. He had been ill for some time. When a lad Mr. Nauter came to the United States from Germany and began as an ordinary workman in a furniture factory.

The Walkerton Lumber Company has succeeded Frank Quirk at Walkerton, a small town in northern Indiana. The business will be conducted along the same lines as formerly.

Bristol.

The Wood-Galloway Lumber Company at Johnson City has gone into voluntary liquidation. A meeting of the creditors was held last week and C. J. Morrow, representing William Whitmer & Sons, Inc., of Philadelphia, one of the heaviest creditors, was elected trustee and will take charge of the assets at once. The liabilities of the company are about \$75,000, while it is believed the assets will be sufficient to pay off all obligations in full. The firm is composed of Haskett Wood, T. J. Galloway and others. Considerable of the company's paper, bearing the endorsement of Mr. Wood's father, is in Bristol, Johnson City and Bakerville banks.

The new band mill of the Tug River Lumber Company of this city at Big Cherry, Scott county, Va., will be put into operation this week. This mill was built by the company to supplant several circular mills that were burned. It has a daily capacity of 40,000 feet and will be kept running to full capacity, as the company has a large boundary of timber in that region.

B. B. Burns of the Tug River Lumber Company and Boice, Burns & Offutt left last week for a trip through Ohio and West Virginia on business of importance.

J. H. Teneyck, treasurer, and P. T. Pohlman, vice president, of the Tipp City Lumber Company, were here last week from Tippecanoe City, Ohio. C. H. Kerr, who is interested in the company, was also here. The party visited the new operations of this company at Altapass, N. C., on the line of the South & Western Railway. Paul Cline, formerly with J. A. Wilkinson, E. A. Scott and J. M. Sanders have charge of the company's business at Altapass.

Walter J. Sharpe of Liverpool, England, last week was a visitor in the local market. Mr. Sharpe thinks the prospects in the foreign markets are very bright. He will shortly sail for home.

Frank Carrier of the Empire Chair Company of Elizabethton was in the city during the past week and confirmed the report that the company's big plant at Elizabethton, which was destroyed by fire about three weeks ago, would be rebuilt. The new plant will be completed and in operation by October 1. It will give employment to 125 men and the daily output will be between 800 and 1,000 chairs and rockers.

H. M. Hoskins and bride, nee McKinney, who were married at Lynchburg two weeks ago, arrived here the first of the week after a delightful honeymoon in the East and North. Mr. Hoskins will at once resume his work at the head of the H. M. Hoskins Lumber Company.

Dwight D. Hartlove, representing W. O. Price of Baltimore, bought and shipped several cars of fine oak stock for export near Chilhowie this week. Mr. Hartlove was in the city this week and returned to Baltimore to spend Sunday with his wife.

The heavy rainfall in this section during the past few weeks has kept the roads in bad condition so that heavy hauling has been impossible. This has caused logging and milling operations to fall to about the same unsatisfactory condition as was experienced last fall. Some of the mills report that they are handicapped by a shortage of logs and that the rains have prevented to some extent logging.

"Activity characterizes the business in Johnson county," said O. H. Vail, a representative lumber manufacturer of that county, who was in the city this week. "The rains have to some extent handicapped us, but the mills are nearly all running now and business was never better. The roads are improving fast and the country mills are getting their stock to market as rapidly as possible."

The lumbermen of this section are enthusiastic over their exhibit at the Jamestown Tercentennial Exposition. This exhibit, which is under the control of M. N. Offut of the Tug River Lumber Company and H. M. Hoskins of the H. M. Hoskins Lumber Company, is in addition to the regular Virginia lumber exhibit prepared by the Virginia Mineral and Timber Exhibit Association. The lumbermen have responded liberally toward the expenses of the exhibit.

J. B. Smith of Knoxville has purchased a tract of 6,000 acres of timber in Grainger county and will shortly begin the development of the same on a large scale.

The Laurel Branch Lumber Company, recently organized at Honaker, Russell county, Va., has purchased a tract of timber. The company is now installing a mill with a capacity of 35,000 feet per day and will build circular mills at other places on its property in addition to the band mill. The officers of the new company are: L. F. Jackson, president; C. A. Wallace, secretary-treasurer; L. F. Fletcher, general manager.

J. Gutman last week purchased the plant of the Bristol Manufacturing Company, located on the Virginia & Southwestern Railway, in South Bristol, and will operate same.

The Babcock Lumber Company, which recently purchased a tract of 43,000 acres of timber in Monroe county, Tennessee, is making preparations to begin the development of the property. The company will install at least a dozen mills, it is said.

W. H. Yates, representing the Rumbarger Lumber Company of Philadelphia, came to the city last week and will spend some time buying in this section.

W. L. Jeffries of Norfolk last week instituted in the United States District Court at Abingdon a suit involving the title to about 100,000 acres of timber land lying in Buchanan and Tazewell counties, Virginia. There are 543 defendants to the suit. The tracts embrace some of the finest timber in the Old Dominion. Jeffries claims under the late General Pearson of Boston, and he under General Benjamin Butler of Revolutionary fame, who, it is contended, held title to the property.

Cincinnati.

About 50,000 runaway saw logs, worth more than a quarter million dollars, swept past Cincinnati on the flood crest last week. They were carried out of the mountains of West Virginia by the cloudbursts and consequent freshets that swept everything before them in the Kanawha, Big Sandy and Guyandotte rivers. With the logs of walnut, oak, poplar and sycamore floated thousands of railroad ties, and the mass of timber made upstream travel impossible for about six hours. The current in the Ohio is faster than in years, and thousands of the logs will go on to the gulf. For the first hours of the run the river swarmed with rowboats and launches, towing the runaways to shore, but work in the swift current was so arduous that river men soon gave it up. C. Crane & Co. were the principal losers.

B. F. Dulweber, who has been ill at the Good Samaritan hospital for several weeks, has improved enough to be removed to his residence in Cumminsville. He expects to be back at his office in a couple of weeks.

J. H. Porter, of Middletown, O., formerly manager of the yellow pine department of Bennett & Witte, but now in business for himself, was in town recently and called on this concern. During his stay in the Queen City several business transactions were indulged in. His firm is known as J. H. Porter & Co. and deals in hardwood lumber. He reported that business with him at Middletown is highly satisfactory.

John J. Metz, who has been at the Memphis branch of Bennett & Witte, has been transferred

to Cincinnati to assist Manager E. F. Thoman, who has had more business on his hands than he could attend to. Bennett & Witte have been doing an unusually large business and William A. Bennett's being president of the Chamber of Commerce, which position needs a great deal of his time, has caused them to take these steps.

William E. Delaney, general manager of the Kentucky Lumber Company, has gone to Mexico, where he will look over the company's large timber field there. The tract contains 165,000 acres, and the company sent Mr. Delaney there to see what is best to be done with it. If it is ready to be cut it is highly probable that several sawmills will be erected on the site and the timber fitted for market.

The large boom of logs of the Kentucky Lumber Company at its mill at Burnside, Ky., was swept by a freshet a few days ago, and fully 5,000 logs set afloat. Most of them were stopped at Nashville, Tenn., and will be recovered by paying the small fee that is due to the one who captures them.

The Maley, Thompson & Moffett Company has floated several rafts of logs up the mill creek to within twenty yards of its mill at Eighth and Evans streets. The sudden rise of the Ohio swelled the creek, and the company has benefited materially through it. The logs were stacked around the mill and will be sawed as soon as the new sawmill is erected.

A conference was held at the Business Men's Club last week between Thomas J. Moffett and E. C. Williamson, representing the citizens' belt line movement, and Charles Hensel, a New York engineer, and Gwynne Dennis, capitalist, in reference to financing the project. John E. Bleekman of New York, who really represents the proposed financial interests and who was to have been here, could not attend. Engineer Hensel, who has made a cursory examination of the project, is enthusiastic over the plans. Mr. Bleekman will be here later and the matter will again be taken up.

Chattanooga.

So many big enterprises are being perfected in this city that lumbermen are kept busy all the time. The \$1,000,000 Patten Hotel is going up, much of the steel work being already in place, and Chattanooga's first skyscraper, the James office building, which is twelve stories in height, is nearing completion. Ground has been broken for the \$1,000,000 Southern passenger station, the contract having been awarded to Wells Bros. of New York City. The Southern railway is spending about \$5,000,000 on the Stevenson extension and on the double track system between this city and Ooltewah, Tenn. The contract for the new building of the Savannah, Augusta & Northern railroad from this city to tidewater has been awarded to W. J. Oliver & Co.

An excellent example of the business done by the lumbermen of this city is offered by the J. M. Card Lumber Company, probably the greatest exporters of lumber in this section, who handled 13,000,000 feet of hardwoods, amounting to three-quarters of a million dollars, in one year. This concern has five sawmills, one located in this city, one at Paint Rock, Ala., two at Tuscaloosa, Ala., and one near that point.

A deal has been closed whereby the city is to open several streets through the yards of Snodgrass & Fields and thus develop real estate purchased from F. W. Blair. Mr. Blair has sold his sawmill interests here and is now installing a new mill at Ramhurst, Ga. The Snodgrass & Fields concern was paid \$6,000 for the concessions made to the city. This concern recently rebuilt its mill, which was badly damaged by fire.

The Ramhurst Lumber Company, composed of F. W. Blair, J. F. and S. P. Loomis, H. D. Huffaker and Francis Martin, has almost completed

the installation of a band sawmill and planing mill at Ramhurst, Ga., and also of a circular sawmill near that place.

Captain A. J. Gabagan, treasurer of the Loomis & Hart Manufacturing Company, is taking a great deal of interest in county affairs these days. He is chairman of the County Finance Committee and was one of the men who awarded the contract for building a tunnel for highway purposes through Mission Ridge. The contract was awarded to T. J. Shea, a large lumber contractor of New Orleans, who has just completed a contract for the installation of a big sawmill plant and log pond at Bogalusa, La., to have a capacity of 600,000 feet of lumber per day. Mr. Shea's bid for digging the tunnel here was over \$122,000. He will use his own long leaf yellow pine in the construction of the tunnel.

W. J. Willingham of the Willingham & Co. Lumber Company has returned with his family from Florida, where they spent several months.

Fred Arn of the J. M. Card Lumber Company is out of the city.

W. M. Fowler of the Fowler Lumber Company of Birmingham was a recent visitor here.

The King-Baxter Lumber Company was the first in this city to conduct what it termed a mill-end sale. Several thousand feet of scraps and odd ends were sold at auction.

St. Louis.

The marriage of G. E. W. Luehrmann, president of the Charles F. Luehrmann Hardwood Lumber Company, and Miss Anna Verburg, both of this city, took place at the residence of the bride's mother on the evening of June 24. The wedding was very quiet and only the immediate families of the bride and groom were present. Miss Edith Verburg, sister of the bride, was her only attendant, and E. H. Luehrmann acted as his brother's best man. After the ceremony a supper was served and the couple departed for a honeymoon trip through the North and East. After an absence of several weeks they will be at home at the Buckingham until Mr. Luehrmann has completed a new house in the West End.

The International Hardwood Lumber Company has sent out its June calendar cards, which are as attractive as those they have formerly issued. The company believes in keeping its line before the eyes of its patrons.

R. F. Krebs of the R. F. Krebs Lumber Company has recently returned from a business trip to Milwaukee and Chicago. He finds it easy to sell every bit of mill stock upon which he can lay hands.

L. M. Tully, who has recently come to St. Louis, will soon open an office in the interests of the Louisiana Red Cypress Company. He is at present located at the Monmouth Inn.

Robert H. Jenks of Cleveland has made several trips to this city of late. He is an officer of the Tremont Lumber Company.

Harry A. Gorsuch of Kansas City was calling upon the trade here last week.

The hardwood market shows great stability of values, and there is no indication of weakness along any line at present, nor does there bid fair to be during the rest of the year. Production has been so hampered by bad weather conditions in the South that there is no possibility of a greatly increased output before fall. Large buyers are becoming pretty well convinced that prices will not diminish materially, and some have grasped the idea that the fall market may show an even higher range of values. They are consequently placing orders for delivery of stock before the anticipated fall car shortage, as far as possible. Red and white oak are selling well, particularly quartered stock, and the poplar market is particularly strong.

Nashville.

It is more than likely that the local lumbermen's association will combine with lumbermen from Memphis in a fight against the recent ad-

vance of the railroads on hardwood shipments between Nashville and Chattanooga to Buffalo and Pittsburg and points taking like rates. The Memphis lumbermen believe they can knock out the railroads in view of the precedent set in the case of the two-cent advance some time since on yellow pine. The advance on hardwood shipments of which they are now complaining was 2½ cents.

The lumber firm of Wistar, Underhill & Co. of Philadelphia has established a yard in East Nashville, with Robert Vernon in charge. The company will use it as an accumulating point.

The Nashville Tie & Cedar Company reports the loss of 5,000 cross ties in Harpeth river due to a sudden and unexpected tide. This river runs through the highland rim of middle Tennessee, emptying into the Cumberland between Nashville and Clarksville, and much hardwood timber grows along its route. Some 3,000 of the ties were afterwards caught near and below Clarksville.

Visitors to the city during the past few days were: J. D. Bixby, manager of the Bixby-Thiesen Lumber Company of Decatur, Ala., and J. A. Mathesen of the Central Lumber Company, Detroit, Mich.

The Chauncey Lamb, one of the towboats of the Nashville Transportation Company, came down the river this week with possibly the last tow of the season—five big barges of staves and lumber, picked up mostly at Highland, Taylor's Branch and Lee's Landing.

John B. Ransom of the big local lumber firm of John B. Ransom & Co., and president of the Hardwood Manufacturers' Association, was this week the recipient of another honor. He was elected a member of the Board of Trustees of Vanderbilt University, notwithstanding the fact that he is not an alumnus of the university. Mr. Ransom, however, has always manifested the keenest interest in the affairs of the university, and his only son is a student in the institution. William K. Vanderbilt, the New York millionaire, and E. S. Buffington, the Chicago steel magnate and millionaire, were among the others elected, as was also Charles N. Burch, general counsel of the Illinois Central railroad.

A bad sawmill explosion is reported this week from Lyles', on the Centreville branch of the N., C. & St. L. railway. The boiler at Blakeley's mill blew up and landed a hundred feet away, wrecking the plant. Wade Bates, an employee of the N. & C., had his skull crushed; Mrs. Quillie Tidwell, a bystander, had one leg crushed so badly that amputation was necessary, and Will Nelson and Race Goulden were badly scalded. No insurance was carried on the mill.

Reports from the upper Cumberland state that 4,000 fine saw logs have been swept away from the booms of the Kentucky Lumber Company of Williamsburg and are on their way toward Nashville. A heavy rainstorm came up unexpectedly and swelled the upper river. Immediately after the timber escaped local firms were wired not to buy any lumber bearing the mark of the Kentucky Lumber Company.

Local lumbermen this week in the criminal court at Nashville are prosecuting J. D. Miller and John Dodd on the charge of maliciously cutting loose four rafts because the lumber concerns refused to pay any more "bankage" charges to the defendants. Miller was a few weeks since convicted of breaking into places where local lumbermen had rope stored and stealing it, and got a sentence of three years.

Len K. Hart, administrator of the late Chalmers Vestal of Baxter, Tenn., will on Tuesday, June 25, sell at Cookeville 41,000 feet of lumber located at various sawmills controlled by the deceased at the time of his death. A portable sawmill is also to be sold.

Large numbers of saw logs adrift are reported as having passed Carthage, Tenn., during the past few days. It is believed some of these are the property of the Kentucky Lumber Company, which lost 4,000 as stated above.

H. S. Knox of the traffic department of the N., C. & St. L. railway was at Pond, Tenn., last week with a view to locating side-tracks for a new hoop factory to be established there.

Lumbermen cutting up a log of black oak in the woods near Charlotte, Tenn., struck something hard, which on examination proved to be a large minnie ball, a relic of the civil war. A troop of Confederate cavalry was pursued through Charlotte during the war and took refuge in the timber surrounding the town.

The new mill of the W. J. Cude Land & Lumber Company at Colesburg, Tenn., is a scene of great activity. Since the recent establishment of the plant at that point some 2,000,000 feet of lumber has been cut.

C. B. Benedict has returned from a trip to Polk county, where the Sylco Lumber Company recently began operations. Crews are hard at work building a spur track to the property and machinery for the new plant has been purchased.

The firm of Lieberman, Loveman & O'Brien is preparing to install about \$15,000 worth of new machinery at its plant in South Nashville. The mills and planing mill will shut down for a short while about July 1 in order that the new machinery may be quickly put in position.

Statistics compiled by the government comparing the production of lumber in Tennessee in 1906 as against that for 1905 show a steady increase during the past year in every line over the previous year. This is true of white oak, yellow poplar, red oak, chestnut, shortleaf pine, red gum, white pine, hemlock, ash, hickory, basswood, cottonwood, elm, cedar and walnut.

Loggers cutting up a tree at Greenfield, Tenn., struck something hard and were surprised to find a grindstone fifteen inches in diameter. The story goes that a settler in that community, way back in 1844, put the grindstone in a hollow tree to hide it and that the tree grew up and closed the hole, thus hiding its queer package.

The plant of the American Pencil Company at Murfreesboro, Tenn., is reported to be nearly completed. The plant will cost about \$35,000 and will work quite a force of men. Efforts are being made by Murfreesboro to get the Eagle Pencil Company to erect a factory there.

John B. Ransom of John B. Ransom & Co. is out in an interview in which he refutes the charge of a local paper that there is a lumber trust in Nashville. "There is no lumber trust here of any kind," says Mr. Ransom, "or even a combination of lumbermen for the purpose of fixing prices. The inexorable law of supply and demand fixes the prices of lumber in this and other markets, and lumber and timber are now so hard to get and the demand for them so large the lumbermen would have no incentive to make higher prices, even if they were so disposed. * * *

But lumber is not higher than other commodities as compared with the prices of a few years ago. In the past five years farm products and labor, wheat and cotton, have advanced as much or more than lumber. In regard to the influence of the price of lumber on building, it should be borne in mind that not more than twenty-three per cent of the total cost of any house is the lumber. Of course I do not include in this the finishings in a house, the larger part of which is the shop work and the labor."

A special from Sheffield, Ala., announces that the firm of Tuthill & Pattison of that city has just closed a contract with the government to supply a large amount of the heavy timber to be used in the construction of the Panama Canal. The material will be shipped as soon as it can be gotten out from the mill.

W. S. Bryant of Cookeville, Tenn., charged with the murder of Chalmers Vestal, late president of the Caney Fork Lumber Company, has filed a petition praying for his release from jail on a writ of habeas corpus. He was committed to jail without bond and claimed he was clearly entitled to bail. He called upon the prosecution

to show cause why he should be retained and was allowed bail in the sum of \$10,000.

A special from Crossville, Tenn., announces that the Coleman Lumber & Mining Company, which recently bought the property of the Powell Lumber & Mining Company and the Goodstock Dimension Company, is arranging to put in several mills on this property for its development.

The farmers of middle Tennessee are now hauling loads of red cedar rails to town and selling them to dealers in red cedar, mostly pencil factories. Some of the fences being sold thus have been in use for seventy years and are still well preserved.

Love, Boyd & Co. have bought a 300-acre timber tract in Smith county, Kentucky, and will attack it at once. It cost \$8,500.

Farmers around Decatur, Ala., are said to be clearing \$2.50 a rod in the sale of their cedar rail fences. They get \$3 a rod for them and are replacing them with wire fences costing \$5.50 a rod. The local stock laws are making the latter variety of fence very much in demand.

Three car loads of fine Michigan maple were shipped here recently through John B. Ransom & Co. to be used for flooring for the big coliseum skating rink at Glendale Park.

Memphis.

Distinct improvement is noted in weather conditions throughout the Memphis hardwood producing territory, and there is decided increase in the amount of timber being gotten out and in the amount of lumber being placed on sticks. Some mills, with limited facilities, are still unable to run, but the majority of the larger and stronger plants are running on full time and their output is now larger than it has been at any time within the last eight or nine months. Manufacturers generally express the hope that such favorable weather will continue indefinitely. They are of the opinion that it will require several months to make up for the shortage in production experienced during the past few months. No one suggests the probability or even possibility of the accumulation of anything like a surplus of hardwood lumber. In the extreme lowlands, where cottonwood is largely produced, the ground is still rather wet, but the prevailing impression is that most of the cottonwood plants will be going on full time by the first of July. Cottonwood mills in the larger cities are now turning out a good supply of this lumber.

While production is increasing, it may be also noted that there is a decided increase in the amount of hardwood lumber being shipped. This is due to the fact that weather conditions are such that lumber may be loaded promptly on cars, and to the additional fact that the railroads are furnishing all the cars necessary for the handling of lumber shipments. Reports received here from Little Rock, Nashville, Jackson and other leading centers indicate that the movement of hardwood lumber is exceptionally heavy. A great deal of this lumber would have been delivered long ago if weather conditions and the car situation had been as favorable as now.

Messrs. Gibson and Whitaker have formed a partnership for the manufacture of thin hardwood stock. The principals are W. G. Gibson, for some years deputy inspector of the National Hardwood Lumber Association, and J. D. L. Whitaker, who was for some years engaged in the railroad business but who has been the cashier of the Bennett Hardwood Lumber Company for the past five years. These gentlemen have leased the plant of the Art Wood Manufacturing Company in New South Memphis and have secured some machinery therefrom. This will be supplemented by new equipment, which will be installed within the next few days. The mill will be entirely new and will have a daily capacity of 60,000 feet. It will be ready for operation within the next two weeks. These gentlemen will also manufacture veneer, the daily output being estimated at 7,000 feet.

With the announcement of the leasing of the plant of the Art Wood Manufacturing Company comes a definite statement that this concern will retire from business. The company was launched more than two years ago, but experienced considerable trouble in getting its plant equipped and has never been anything like as successful as its promoters had expected. It was capitalized at \$250,000 and Dr. E. A. Neely was president.

W. S. Darnell, E. E. Taenzer and others have taken out a charter for the St. Francis railroad, which will be twenty miles in length and which will run from Round Pond, on the Rock Island, to Parkin, on the Iron Mountain. The company is capitalized at \$250,000, of which \$100,800 has been paid in. Messrs. Darnell and Taenzer, who are among the principal stockholders of the recently incorporated Darnell-Taenzer Lumber Company, hold practically all the stock, the other incorporators named having only a nominal interest. The Darnell-Taenzer Lumber Company has extensive timber and milling interests in the section through which the road is to run and the line is to be constructed for the purpose of facilitating their development. A large force has already been put to work clearing the right of way and the line is to be pushed to completion as soon as possible.

The Neal-Dolph Lumber Company, which was recently formed here, has taken out an amended charter under the laws of Mississippi. The amendment in effect changes the name of the Planters' Lumber Company to that of the Neal-Dolph Lumber Company. The capital stock is \$75,000 and the domicile is to be at Greenville, Miss. This company has offices and yards in Memphis, while its mill will be at Greenville. It will take possession of the Greenville plant July 15 and will operate it steadily after that time. Mr. Dolph, the secretary and general manager, is authority for the statement that the company is receiving numerous inquiries for hardwood lumber and is starting out very satisfactorily.

The new planing mill of the W. E. Smith Lumber Company and the Three States Lumber Company at Burdette, Ark., is now practically completed and is in partial operation. These interests state that a box plant will be added later.

W. H. Martz, manager of the Hoyt & Woodin Cypress Company, the Hoyt & Woodin Manufacturing Company and the Goodland Cypress Company, with headquarters in New Orleans, was in Memphis a few days ago. He announced while here that the interests with which he is identified had purchased a large tract of cypress timber land forty-five miles from New Orleans and that they would form a company and install a plant for the development thereof. He estimates that the tract contains approximately 200,000,000 feet of cypress. The same interests are making arrangements to dispose of one of the mills in Mississippi which has been operated by them for some years.

What will probably be one of the largest lumber contracts ever awarded in Memphis will be let in a few days by the Merchants' Cotton Compress and Storage Company. This concern proposes to erect numerous sheds for the storing of cotton and it is estimated that 3,000,000 feet of yellow pine will be necessary. A number of the more prominent lumber companies in this city and the Mississippi valley have submitted bids. The contract will go to the lowest bidder. Among the Memphis firms are the E. Sondheimer Company and C. D. Bridges & Co.

C. A. Ryan of Ryan & McParland, Chicago, has spent some time in Memphis recently looking after the improvements made in the mill bought by his firm from the Murdoch Lumber Company. When this work is completed it is estimated that the daily capacity of this plant will be 20,000 feet of lumber.

The Eaton Lumber Company has joined the

Memphis colony. E. R. Eaton is general manager of the company, which has had some experience in the handling of southern hardwood lumber. His headquarters for some time were at Clifton, Tenn.

The mill of the Rust Land and Lumber Company which is being constructed at Merrouge, La., is now nearing completion. Both the Three States Lumber Company and the W. E. Smith Lumber Company are interested in this corporation. The mill itself is comparatively a small one and will be used for cutting cypress.

Max Sondheimer, president and general manager of the E. Sondheimer Company, takes rather an optimistic position regarding general business conditions. In connection with hardwood lumber he states that, while the demand is less active than it has been heretofore, there is such a shortage of stock that prices will probably be well maintained. He states that if there should be any recession during the dull summer period this will be quickly recovered when the heavy fall buying sets in again. He estimates the shortage in hardwood lumber supply at something like forty per cent. He cites the fact that shipments are being made on a large scale and that considerable money that had been tied up by the banks on account of congestion in lumber traffic is now being released, thus making funds rather plentiful. He notes the exceptionally heavy buying of timber lands throughout the South and Southwest during the past few months and says that he does not believe there is a more profitable field of investment than timber lands, which are rapidly enhancing in value. As to the general financial situation, he states that the banks have plenty of funds—above the average for this time of the year—and are therefore in position to take care of all needs.

The Edgar Lumber Company of Wesson, Ark., and the El Dorado Lumber and Sash Company of El Dorado, Ark., have purchased the timber holdings of the Adams-Duson Lumber Company in Arcadia parish, La., paying therefor approximately \$55,000. It is the intention of the purchasers to erect a large mill and develop the timber on this property as rapidly as possible. In addition to erecting a mill a tramway will be built to facilitate the handling of both timber and lumber.

One of the most notable weddings which has occurred in Memphis lumber circles for some time was the marriage of Miss Stephanie Bendorf and Rudolph Sondheimer, secretary of the E. Sondheimer Company. The ceremony was performed at the Hotel Gayoso in the presence of about seventy-five friends and relatives. Following this an elaborate repast was served in the banquet hall. Mr. and Mrs. Sondheimer left the same evening and sailed June 15 on the Finland. They will spend their honeymoon in a motoring tour of the British Isles. There were a number of out-of-town guests, prominent among whom were the following: Mr. and Mrs. Sam Franklin of Chicago, Miss Marie Kahn, Boliyar, Tenn.; Mr. and Mrs. Montague Lessler, New York; Mr. and Mrs. Lee V. Marks, Cincinnati; Mrs. Sall Sondheimer, Chicago; Mr. and Mrs. Henry Sondheimer, Chicago; Moze Katz, Nassau, Wis.; Mr. and Mrs. Ed Sondheimer, Chicago; Mr. and Mrs. S. L. Dodds, Hickman, Ky.; Edward Werner, St. Louis; Dr. and Mrs. S. Bloomstein, Nashville, Tenn. Mr. Sondheimer is well known to the hardwood lumber trade of the country, while his bride is quite a favorite in exclusive Hebrew circles.

R. J. Wiggs, secretary and treasurer of R. J. Darnell, Inc., and the Darnell-Love Lumber Company, was married June 11 to Miss Ethel Reynolds, at Pulaski, Tenn.

George C. Ehenann, of Bennett & Witte, has returned from Jonestown, where he and Mrs. Ehenann spent their honeymoon. They were married here June 6.

There will be a meeting of the Lumbermen's

Club at the Hotel Gayoso Saturday at noon, at which luncheon will be served. This will be the last semi-monthly meeting until fall, it being customary to discontinue these during the summer.

At the last meeting Elliot Lang read an interesting paper on reciprocal demurrage, in which he took the position that state legislatures have no power to enforce the statutes they pass for penalizing railroads for failure to furnish equipment within a given period. He stated that he was endorsed in this position by the Supreme Court of the United States, which decided in the case of the Houston & Texas Central Railroad Company versus Mayes that the act of the legislature of Texas penalizing the road for failure to supply certain equipment was unconstitutional. Mr. Lang stated that the difficulties in the way of reciprocal demurrage might be overcome, in some measure, by amending the law relating to interstate commerce, but he pointed out in this connection opposition to such procedure on the part of some members of the interstate commerce commission. Mr. Lang further took the view that the railroads all over the country would resist any efforts by the state commissions in matters affecting interstate commerce, since ninety per cent of the traffic in each state is of this character. He says that the railroad business is conducted, in most cases, by men of exceptional ability and that much of the agitation against railroads is the direct result of the work of the sensational yellow press, and in conclusion declares:

"If the present policy of restrictive legislation is continued the result will be disastrous not to the railroads alone but to the entire business community, and we will find that we have accomplished the Samson-like feat of bringing the entire commercial structure tumbling in ruins about our own heads."

The following resolutions were adopted by the club regarding the late W. E. Smith:

"WHEREAS, It is with sincere regret that we have heard of the death of our friend and fellow-lumberman, W. E. Smith, affectionately known to all his friends as 'Billy Smith,' who was an honorary member of this club at the time of his death and who was respected and loved by all who knew him; therefore be it

Resolved, By the Lumbermen's Club of Memphis, that in his death we have lost a genial friend and brother, whose loyalty, kindness and good fellowship endeared him to all his associates and whose whole-souled, charitable character will be long remembered; and be it further

Resolved, That this club extend to his bereaved family our sincere and heartfelt sympathy in their distress; and be it further

Resolved, That these resolutions be spread upon the minutes of the club and that a copy be sent to his family and business associates.

THE LUMBERMEN'S CLUB OF MEMPHIS, TENN.

C. D. HENDRICKSON,

A. N. THOMPSON,

J. W. McCLARIE,

"Committee."

W. H. Russe of Russe & Burgess has just returned from a trip to southern Mississippi. He states that the mills are making fairly good headway, but that there is so much water in the lowlands that the work of getting out timber is not progressing as rapidly as the recent favorable weather would suggest.

L. E. Campbell, president and general manager of the L. E. Campbell Lumber Company, sailed from New York a few days ago for Europe, where he will spend five or six months looking after the interests of his firm.

New Orleans.

Louisiana hardwood mills are just now getting out of the rut of depression into which they were temporarily cast by the heavy rains that prevailed throughout the state a fortnight or so ago. All of the large Louisiana mills suffered from the effects of the rain during the latter part of May and early in June. Logging operations were seriously interfered with and

the mills were able to do little or nothing. Good weather has existed during the last fortnight, however, and conditions have improved somewhat. The hardwood exports are still in a somewhat unsatisfactory condition, and the market, though not weak, is not as strong as it was a month ago. There is still said to be a good interior demand.

A site for the 2,000-foot lumber wharf that the board of port commissioners will build for the New Orleans lumber exporters has been finally settled upon, and it is believed that in a short time actual construction work on the wharf will be started. The decision to build the structure has grown out of the fight made by the New Orleans Lumber Exporters' Association for a landing to be used exclusively for lumber shipments. The wharf will be near the head of Walnut street, just above the protection levee, and behind it the lumbermen will put a distributing yard with a capacity of 900 cars. With the aid of this wharf the lumber exporters of this city hope to divert a large amount of export lumber this way, and J. H. Hinton, president of the exporters' association, is authority for the statement that New Orleans, under the new order of things, will handle fifty to sixty per cent of the total amount of lumber exported from the South. The wharf will be 2,000 feet long and constructed especially to handle lumber exports. As soon as the plans have been approved the dock board will issue bonds to cover the cost of construction. The wharf, it is estimated, will cost \$250,000 to \$300,000.

Through the agency of William R. Taylor, a local timberman, the E. Sondheimer Lumber Company of Memphis has just closed a deal for the purchase of 15,000 acres of timber land in Louisiana, which includes a good deal of hardwood. The deal involves something over \$150,000. Max Sondheimer himself was here making the deal but would not talk about the matter. His company is negotiating for other holdings, and already is said to control in this state timber lands valued at more than \$1,500,000.

In a deal closed the other day at Lake Charles, La., the Evert Lumber Company, Ltd., of that place secured for \$43,200 a fine tract of hardwood timber lying along the Colorado Southern road north of Lake Charles. The tract includes 1,440 acres of land and the price per acre was \$30. This is among the highest priced timber that has been bought in that section in some time. The vendors were John S. Alley and wife of West Newton, Mass., and William H. Alley and Nellie G. Alley of Santa Barbara, Cal.

Meridian, Miss., has a new enterprise in the shape of a box and basket factory which will devote itself to the manufacture of boxes, baskets, wheelbarrows, ladders and other products of hardwood. The company which will operate the factory is capitalized at \$50,000, and a large part of the capitalization has already been subscribed for.

The crisis in the fight between the railroads and the exporters has been finally reached. The railroad companies have flatly refused to grant the request for thirty days' free time and another conference of exporters has been called to take up the matter. The fight for the free time extension has already attracted a great deal of attention, and the exporters hoped to be able to secure a ruling that would extend the free time and give them a better opportunity to handle export shipments. Some time ago a conference of exporters, in which the New Orleans Lumber Exporters' Association took a prominent part, formulated a demand for thirty days' free time on cars. This demand has been finally answered by the railroads with a flat refusal to grant the request. Another conference of exporters has been called, and it is now regarded as probable that efforts will be made to effect a compromise.

Charlotte, N. C.

That North Carolina is fast becoming one of the leading states in the Union in the lumber industry is being attested just now as never before. New concerns are being chartered every few days for cutting or sawing or marketing in some way or other the valuable forests of the state. In the western section of the state especially this industry is of importance. Interested parties who have looked into the situation have been convinced that a surprisingly large amount of the wealth of the state is to be found in the standing timber. "In Jackson county," said one gentleman recently, "I talked to a prominent lumberman who said that he purchased a walnut tree a few years ago for \$22. The tree was cut and measured 10 feet 2 inches at the base. It was hauled 22 miles to a railroad, placed on the cars and marketed. The net profit to the dealer by the sale of that tree was \$117. That same tree today would bring between \$300 and \$400. "On Caney Fork in Jackson county," he continued, "lumbermen told me that they had seen poplars standing which would measure nine feet in diameter. I believe that the United States government has found that these were the largest trees in the country aside from the redwoods of California. Last year a poplar was cut in Macon county that sawed out 18,000 feet of lumber, which at \$33 per thousand would make that tree good for more than \$600." The finest grove of poplar in the state belongs to the Highland Forest Company of Jackson county, situated in a little cove of several acres. Experts estimate that a million feet can be sawed out of this little bunch of poplars which would net the owners a small-sized fortune.

One of the largest deals in lumber made recently was consummated a few days ago when S. Montgomery Smith of Waynesville disposed of his holdings on Jonathan creek to the Sprucecum Lumber Company for \$30,000. The sale includes about 30,000,000 feet of timber, largely balsam, hemlock and spruce, together with the large mill erected by Mr. Smith at the head of the flume built for the Waynesville Transportation Company. Mr. Smith retains a large interest in the concern and is also manager of the flume line which promises to become one of a most active agency for the development of that part of the state. Other sales of timber in lesser quantities, however, have been made on the flume line and it now seems probable that within a short time as many as ten mills will be operating and offering their products for transportation. This is one of the largest lumber milling sections in the state. The company is now building a large planing mill which will handle the rough timber from the sawmills in operation. Mr. Smith has recently erected a big gang sawmill, the first in this section of North Carolina. The planing mill and the gang sawmill will produce all kinds of building material. In this vicinity it is said that there are 25,000,000 feet of spruce, hemlock and balsam, and 12,000,000 feet of hardwood. Enormous developments will follow the work of this company, in which Mr. Smith is so directly associated.

E. Lee Wilson of Dallas has about rebuilt and equipped the new plant which he has erected to replace the old building destroyed by fire some weeks ago. About 15,000 feet of fine lumber was burned together with a large amount of machinery and general equipment. Mr. Wilson operates a large sawmill.

Charles Edgerton, special agent of the Bureau of Corporations of the Department of Commerce and Labor, is making a tour of North Carolina inspecting the lumber industry. Mr. Edgerton is working in accordance with the bill introduced in Congress by Senator Kittredge asking for an investigation of the sawmills.

The Branning Manufacturing Company of Edenton has recently purchased a tract of 25,000 acres of timber land in Bertie county, the consideration being \$80,000. The property was bought from the South Atlantic Lumber Company, a corporation formed by the consolidation of the South Atlantic Lumber Company and the large holdings of B. E. Cogbill, with headquarters at Richmond, Va.

The mammoth plant of N. C. McDuffie, Inc., of Columbia, S. C., is about ready to begin work. This establishment will have an output of 50,000 feet per day. Heretofore, this company has been engaged in the wholesale and commission business, but from now on will devote much time to manufacturing. Several sawmills are now being run under the control of the interests of which Mr. McDuffie is the head.

The Champion Fibre Company of Hamilton, O., is building an enormous plant at Canton, N. C., which upon completion will stand as one of the largest in the world. A total of 33 buildings, covering 15 acres, will be erected, at a cost of about \$2,250,000. About 400 cords of wood will be consumed daily when the plant is in operation.

The plant of the hardwood firm of J. H. Wearn & Co. of this city is being improved and enlarged. About \$5,000 is being expended on a building in which mantels and other products will be exhibited. This is one of the most prosperous establishments of its kind in the state.

L. J. Peacock, Webster Koonts and other gentlemen of Lexington are contemplating the establishment of a company in the near future for the manufacture of fine upholstered goods and cedar products. A large amount of the capital has been subscribed. Two large buildings will be erected. Lexington is coming to be one of the first towns in the state in the industry. The Lexington Manufacturing & Development Company has just been chartered to manufacture furniture and hardwoods of various kinds. Demet Shomwell is the leading stockholder. The company is chartered at \$25,000.

The Kent-Coffey Manufacturing Company of Lenoir will be ready to begin business shortly. This company has just been organized with an authorized capital stock of \$50,000 for the manufacture of furniture, hardwood novelties and house building material.

Connelly & Teague of Statesville, whose large veneering plant was destroyed by fire several days ago, are preparing to rebuild and begin business anew. Machinery and a quantity of lumber and veneer were destroyed at a loss of about \$8,000.

Work is progressing on the new plant of the Statesville Safe & Table Company which was recently organized. The plant will consist of three buildings, two and three stories high. William Rhew of Wilmington has recently been made superintendent of the factory.

C. C. Teal of Wadesboro has completed his new woodworking establishment and has begun business. The plant is fully equipped with modern machinery. There is some talk of E. A. Waddell of Ansonville, who operates a large plant, combining with Mr. Teal. This would make one of the largest establishments in that part of the state.

The new woodworking factory of Asbury & Finger in this city, to replace the one recently destroyed by fire, is nearing completion. These gentlemen will be in the field again shortly with a new building and the latest machinery for turning out a high class of hardwood products.

The Cheek Lumber Company of Asheville is the latest addition to the manufacturing interests of that city. This company is chartered at \$100,000. H. B. Stevens and J. B. Anderson being the leading stockholders.

R. L. Loftin of High Point will shortly begin the manufacture of a high grade of hardwood products. He is head of a company that has recently been organized with a capital of \$20,000.

The Alma Lumber Company of High Point is also preparing to begin business with a capital of \$2,500. J. P. Redding, J. H. Petty and others are the incorporators.

The Williamson-Brown Land & Lumber Company of Cerro Gordo is rebuilding the sawmill which was burned the latter part of March. The loss was about \$25,000. The new plant will be equipped as extensively as the old one and will be modern in every respect.

One of the most important moves made in this state recently that will result in much advantage to shippers is that just inaugurated at Wilmington by the shippers of that city in behalf of a thirty-foot depth of water between the city of Wilmington, the largest North Carolina coast town, and the sea. The waterway thus established, it is believed, will be one of the remedies which can be applied to the freight rates in the state, and it is primarily for this purpose that the movement has been started. The fact that North Carolina has had no favorable seaports has been used by the railroads as an argument in favor of a higher freight rate in the state than prevailed in others. The support of the entire North Carolina delegation in Congress will be sought in behalf of the step and those who are pushing the matter believe that they will receive the backing of the representatives as the movement is in no wise antagonistic to other waterways in the state.

The dogwood of western North Carolina is being utilized in Jackson county by R. F. Jarrett in the manufacture of a shuttle pin that is being marketed with great readiness, being sold quite extensively in England for use in the cotton mills. Owing to the character of the work that the shuttles must perform it is necessary that they be made of a heavy, tough and hard wood. The dogwood of that section of the state is said to be the best wood available for the purpose. Mr. Jarrett is turning out about 1,000 shuttle strips a day.

Lumber shippers are united in action with the shippers of all other classes of goods in North Carolina in an effort to have freight rates remedied. The principal cities through chambers of commerce or boards of trade are organizing to lay the situation before the Interstate Commerce Commission this month. Nearly all will be represented at the meeting of the commission and the proposed plan is to have the cities, through their delegates, present a united complaint before that body. Considerable agitation has been manifested throughout North Carolina on alleged unjust discrimination in freight rates and shippers intend to do their best to better conditions.

The High Point Hardwood Manufacturing Company has been placed in the hands of a receiver. E. D. Steele has been appointed. The assets are given at \$5,900 with liabilities amounting to approximately \$5,000. This action was taken upon the demand of the Muse-Wilborn Electrical Supply Company, the largest creditor. This is the first lumber firm to go to the wall in this section in many a day. The universal condition is one of exceeding prosperity.

The plant of the United Lumber Company at Maxton was recently seriously damaged by a windstorm. A considerable loss on machinery and fixtures was sustained.

The Marler Hub Device Company of Greensboro has been chartered with a capital of \$150,000. This company owns a patent issued to cover a device that dispenses with the use of nuts on tops of vehicle wheels and also avoids the necessity of threads on the spindles of axles. The device becomes a part of the hub and is readily detached from the vehicle

for purposes of oiling. The use of wrenches is dispensed with entirely. The company claims that the patent is invaluable and that a large demand will be found in this section for the device which will be manufactured. Prominent men of capital are identified with the company.

Minneapolis.

John C. Hill of the John C. Hill Lumber Company, St. Paul, entertained Secretary of War William H. Taft during his stay in St. Paul last week. Owing to the illness which seized Mr. Taft at Fort Snelling, just before he reached the Hill residence, he was in St. Paul a day longer than was expected, and remained with Mr. Hill from Friday noon until Saturday evening, when he left for South Dakota. Fatigue from his trip, combined with the heat, brought on a temporary collapse, but after his rest in St. Paul Mr. Taft was quite himself again.

E. Payson Smith of the Payson Smith Lumber Company has gone for a business trip to the South, which will last about three weeks. He expects to contract for several mill cuts while on this trip, having about disposed of all of the dry stock in southern hardwood which they had on hand. George S. Agnew of the same company is in northern Wisconsin. A. S. Bliss, office manager, says May was the best month in their history. They have one man buying ties now in the South, and are finding a ready demand for them.

L. P. Arthur of the Arthur Hardwood Flooring Company, Memphis, Tenn., was in Minneapolis for a day this week. He has been on a business trip to the Pacific coast and was on his way home.

D. F. Clark of Osborne & Clark, the local hardwood wholesalers, has come back from a business trip into Wisconsin.

A. S. Bliss, representing the R. Connor Company of Marshfield, Wis., was a business visitor in Minneapolis this week.

W. M. Nutting, president of the Nutting Truck Company of Faribault, Minn., was in the city a few days ago looking for hardwood lumber. He says that in the past they have bought their timber supply near home from small portable mills, but they have cleaned out about all the available timber, and it becomes necessary to go into the general market for supplies.

The J. C. Hill Lumber Company of St. Paul has been made northwestern sales representative of George T. Houston & Co., the well known Chicago hardwood wholesalers.

W. H. Sill of the Minneapolis Lumber Company has returned from a short business trip to Chicago and Wisconsin points.

O. K. Hobe of the Hobe Lumber Company has been looking over the hardwood and hemlock situation over in Wisconsin.

Louisville.

The hardwood mills on the Point have been quite busy of late and the busy times have been added to by stray logs coming down the river. Some of the up-river mills seem to have lost quite a bunch. Quite a number passing are said to have escaped from the booms of C. Crane & Co. at Cincinnati. Just how many were caught here and how many passed by to be gathered up further down the river is not known.

H. J. Gates, formerly with the Hugh McLean Lumber Company of Buffalo, has not only concluded to become a citizen of Louisville but has also gone actively into the hardwood manufacturing business by purchasing a half interest in the Louisville Point Lumber Company. Mr. Gates succeeds J. E. Dowe as secretary and treasurer. The holdings represent an invoice value of \$100,000, besides logs and other assets. Mr. Gates is a young man in the lumber business, but he has already won his spurs, and did good service for the McLeans. He is a welcome addition to the Louisville lumber fraternity. The president of the company is E. S.

Shippen, who was one of the original organizers of the institution, and is too well known in the local trade to need any introduction.

There is a new veneer enterprise under way at New Albany, Ind., to be known as the McLean-Knight Veneer Company. The prime movers in this enterprise are E. V. Knight, formerly manager of the Indiana Panel and Veneer Company, New Albany, and W. A. McLean of the Wood-Mosaic Flooring Company, New Albany. The new enterprise will not manufacture veneer but will use it in the manufacture of table tops and similar products. The Wood-Mosaic company manufactures quarter-sawn veneer and it is very likely that a part of this product will be made use of in the new business.

J. E. Buscher of the A. P. Turner Lumber Company says the demand for hardwood is not so vigorous as it has been, but there is a fair volume of orders and they are getting along very nicely. They are equipping a new mill out on the L. H. & St. L. railway, about forty miles out of Louisville, that will add to their manufacturing facilities and enable them to handle a larger volume of business.

Albert R. Kampf says that while the demand for hardwood may not be as vigorous as it was, he has at times more orders than he can take care of, and while, of course, there is stock of some kinds that does not always move as promptly as he would like, still it is doing pretty well all around and he is fairly satisfied with the situation.

Wausau, Wis.

The Thompson-Flirth Lumber Company of Wausau has purchased 3,000 acres of mixed timber lands in Bayfield county, paying therefor \$65,000. The purchase means the erection of a sawmill.

In the Mark-Hessey mill at Iron River a 100-horsepower electric motor has been installed to operate the machinery.

The new C. & N.-W. railway depot being built in Chicago will require 15,000 pieces of elm and oak piling 20, 22, 24 and 26 feet in length. Frank Blandon of Crandon has been awarded the contract to furnish them.

The United States Leather Company has taken over the property purchased last summer from the Upham Manufacturing Company, consisting of a sawmill in Marshfield and large timber holdings. The mill in Marshfield was built in 1878 and, it is estimated, has cut 348,000,000 feet of timber since that time. In later years it has been almost exclusively a hardwood mill.

The Scott & Howe Lumber Company will build twenty-five dwelling houses for its employees this summer in Ironwood, at an average cost of \$1,200 each.

R. C. Merryman recently made a sale of 2,600,000 feet of hardwood logs to the Sawyer-Goodman Company. They are being cut in the mill of R. W. Merryman & Co. All are Marinette firms.

The Linden & Miller Company of Marinette is building two additions to its plant. The concern manufactures interior finishings, etc.

A. C. McComb of Oshkosh has disposed of a cypress brake near Lumberton, Fla., to the Raymond Land Company of Dade City, Fla., for \$25,000. This tract is in Polk county on the Plant railway system.

The Lake Nebagamon Lumber Company, controlled by the Weyerhaeuser syndicate, and the second largest logging concern in Wisconsin, with an annual output of 75,000,000 feet of mixed lumber, will abandon its logging operations and withdraw from Lake Nebagamon by September. The company is nearly if not the oldest lumber firm in Wisconsin and has stripped the surrounding country of timber. As a consequence the huge mills, valued at \$500,000, and the yards, containing two and one-half miles of tramways, will be sold, the machinery going to Canada for re-erection and operation. Nearly 600 men are employed by the company and the departure of the mill and its allied industries

will leave a big gap in the town of Nebagamon. It is an interesting fact that the steel rails owned by this concern will sell for more, after eight years of service, than they originally cost, owing to the advance in steel.

W. H. Hatten of New London has purchased of the John O'Brien Land and Lumber Company of Chicago 13,600 acres of timber land in Tallahatchie county, Mississippi. The purchase price was \$240,000.

All of the 200 employees of the N. Ludington Company of Marinette, controlled by the I. Stephenson Company, were agreeably surprised recently when receiving their pay envelopes to find an increase of ten per cent in wages. The increase was made without any request from the men and without any public announcement. The step is in accord with Mr. Stephenson's custom of profit-sharing with the men who have been with him from five to twenty years, though all the employees are included in the raise.

The Bean & Maxwell sawmill at Park Falls was destroyed by fire recently. No insurance was carried. This is the fourth sawmill to burn in that village within two years.

Frank Krieg of the town of Emmet has a contract to log 2,000,000 feet of hardwood for the Clifford Lumber Company of Stevens Point. It is located along the Eau Pleine river.

August Stecker of Marshfield has purchased the Nickolay hardwood mill near Rozellville. The mill is stocked this year, and will be for a number of years to come, by the Blodgett-Booth Lumber Company of Marshfield.

The Roddis Lumber and Veneer Company's mill erected this spring to replace the one burned last winter was put in operation June 24 with a full crew.

The Pelican Lumber Company of Rhinelander has purchased the Smith & Winkler sawmill on Pelican river. It has a capacity of 30,000 feet daily and the firm has a big cut ahead.

James W. Hickey of Rhinelander and Peter Mitchell of Plainfield have succeeded in interesting outside capital in a factory enterprise at Grand Rapids. It is the intention to manufacture all kinds of lumber products.

The Wausau Box and Lumber Company of Wausau suffered a disastrous fire last week. During a high gale a hot-box set the plant ablaze, and, being located in a remote section of the city, it was doomed to destruction before the fire department arrived. The large stock of mixed lumber on the yards was saved after hard work. The loss is about \$55,000, on which there was \$43,000 insurance. The company has had a strike on its hands for a month and was operating with a reduced crew. The firm suffered a similar loss at Eau Claire last winter.

The Langill mill at Eagle River was burned last week; loss \$10,000; no insurance.

The Collar-Stange Lumber Company was recently organized in Merrill; capital stock, \$100,000. The incorporators are W. G. Collar, A. H. Stange and John Van Hecke. The firm has purchased the old Merrill Lumber Company's plant and will remodel the same, starting to operate in the fall. A veneer mill and box factory will also be erected by the company.

Preparations are being made by the Menominee Indians to cut the dead and down timber on their reservation, they having secured permission from the government. Four millsites have been located on the line of the Wisconsin & Northern railway to take care of the timber. About 35,000,000 feet will be cut this year. Two years ago a cyclone blew down a large amount of timber on the reservation and much of this can be saved.

The Nash Lumber Company's plant at Shana-golden was burned recently; loss \$40,000, well protected by insurance. The entire hardwood cut had been contracted for by Volmar & Below of Marshfield. An effort will be made to have the logs sawed out elsewhere.

The new sawmill of the Beswick-Daley Manufacturing Company of Menominee is ready for

operation. It will saw out the lumber needed for the construction of a large factory building to be erected by the same firm. The latter will be built largely of concrete blocks. Wooden columns, casks, tanks, sash, doors and wooden novelties will be manufactured.

Charleston, W. Va.

G. G. Roberts, with D. G. Courtney, a prominent lumberman of this city, has been visiting the trade in Columbus, Cleveland and Toledo, Ohio, and Detroit, Mich. He reports that the lumber business is good in all of these places.

The Reitz-Martin Lumber Company has been incorporated at Parkersburg, W. Va., with a capitalization of \$24,000. The main plant of this company will be at Mingo, W. Va.

W. A. Cool of W. A. Cool & Sons, Cleveland, Ohio, is looking up stock in this locality this week.

I. F. Baisley, representing the Willson Bros. Lumber Company of Pittsburg, Pa., is visiting Charleston and vicinity and looking up stock for his company.

It is reported that the Flynn Lumber Company has purchased 22,500 acres of timber land from the People's Coal and Land Company and that it will begin operations there at once.

The Lick Run Lumber Company, which was recently incorporated at Pennsboro, W. Va., has purchased machinery and has a new plant in course of construction.

The Donaldson Lumber Company of Anthony, W. Va., has its new band mill running at full capacity. It has a large tract of Virginia forest to cut down and is doing good work.

Ashland.

The timbermen of Fourteen Mile, on Guyan river, will build a bridge over the stream at that place to transport their product to the Guyan Valley railroad. This will be the third structure of the kind along that river. The one at Adenville was destroyed about eight months ago, when scoundrels went at night and chopped the girders that held up the bridge, letting it fall into the river. These bridges are built of wire and swing nicely, but carry great weight.

One of the biggest if not the very largest saw logs ever taken from the forest of the Big Sandy valley came down on the last freshet. It is the property of John Bently and George Pelcher of Pikeville, who are owners of a large number of logs in the river coming from the Pond river section. The monster log is poplar, containing more than 450 cubic feet. It required twenty-six yoke of cattle to place the log in the stream. It is understood here that the log will be taken to the Jamestown exposition.

A. B. Priest, a prominent timber dealer of Martin county, Kentucky, brought to market eight rafts of about 100 logs each on the last rise of the Big Sandy. Mr. Priest has a tract of 300 acres of land on Wolfe creek, from which he will get over 3,300 logs of merchantable size. Mr. Priest tells of a pending deal in timber which is one of the biggest in this section of the state. The land formerly belonged to Mr. Goshoe of Williamson, W. Va., but according to Mr. Priest's information it now belongs to some company. Men are now on the ground measuring and counting the trees. The tract contains 8,000 acres, and the price to be paid for it will be in the neighborhood of \$65,000.

Noah Wells of John's Creek, Ky., was drowned while looking after his timber during the late rise. The current of the creek in its flooded condition was so swift that it carried him beyond the reach of rescue.

Sol Kimble of Ironton, an employee of the Fearon sawmill, recently had two fingers on his left hand severely mangled by a saw. The attending physician amputated one of the fingers, but hopes to be able to save the other.

An important deal is under headway in Pike

county by which John C. C. Mayo, the millionaire timberman of Paintsville, Ky., and Attorney Z. Taylor Vinson of Huntington, W. Va., may take over the holdings of the Northern Coal & Coke Company, east of Levisa Fork. The holdings, which consist of several thousand acres of timber and coals lands, are amongst the most valuable in that county.

It is reported that the Dawkins Lumber Company of Ashland, Ky., and N. Goodman, formerly of the Ironton Lumber Company, want to secure possession of the J. W. Pierce Lumber Company's plant, which was recently closed down. Should these gentlemen be successful in securing the lease Mr. Goodman will have charge of the planing mill, and the Dawkins people, the sawmill.

It is also said that a company of Ironton men, one of whom is a leading business man and another a practical lumberman, who recently returned home from the South, is being formed to take charge of the works.

The Fearon Lumber Company of Ironton, O., and the Wright Lumber Company of Ashland, Ky., had an enormous amount of timber break away from their moorings in the Big Sandy and pass out in the late rise.

Fifty thousand runaway saw logs were carried out of the mountains of West Virginia by the late cloudburst and consequent freshet that swept everything before them on the Kanawha, Big Sandy and Guyandotte rivers. With the logs of walnut, oak, poplar and sycamore floated thousands of railroad ties, and the grinding mass of timber made up stream travel in the Ohio impossible for several hours. The current of the Ohio was faster than for years, and thousands of the logs will go on to the gulf. For the first hours of the run the river swarmed with rowboats and launches towing the run-aways to shore, but work in the swift current was so hard that rivermen soon gave it up. C. Crane & Co. of Cincinnati, O., were the principal losers by the demolishing of the great log rafts in the mountain rivers. The Crane company's steamboat, Crown Hill, was sent out on rescue work, but her wheel was jammed by a log and she floated helplessly down the Ohio.

The R. G. Page Lumber Company has secured the services of a new lumber inspector, one of the most efficient in Pike county—J. L. Morgan—who has been engaged in the business for years. Mr. Morgan goes with the well-known concern at once. He will work along the Big Sandy division of the C. & O. railroad. This company has lately changed offices and now occupies handsome quarters in Broadway.

The Deltz-Martin Lumber Company, recently incorporated under the laws of West Virginia with a capital stock of \$24,000 has bought from Stuart Wood of Philadelphia and others 2,000 acres of timberland located on Burning Creek, Mingo county, W. Va. The price paid was \$20,000 in cash. The company now owns a number of sawmills and they will be removed to the new tract at once. The land is alongside the N. & W. railroad, making the shipping facilities the best. Nearly all of the timber is oak. By agreement the company must complete its work within six years, and then the land reverts to the original owners. Thomas G. Martin, W. D. Camden and Ralph D. Martin will go to the tract immediately and will remain there until all the timber is cleared away.

C. Crane & Co. of Cincinnati have made one of the largest trades in timber ever made in Mingo county, West Virginia. This was the purchase of some 30,000 trees situated on Pigeon Creek in the vicinity of Elk and Rock House, and those two tributaries of the larger creek. They will soon put in operation for marketing the timber. The land was owned by some forty people on the creeks named, and involved about 6,000 acres of land. The timber only was sold. The timber was sold in grades at about an average price of \$2 per tree, and the amount involved was \$75,000.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

Hardwood lumber trade conditions in Chicago are showing quite a little improvement during the last two weeks. Oak and poplar are in specially strong request and cottonwood and basswood are close seconds. There seems to be a little falling off in demand for maple and birch, and the good end of gum seems to have received quite a black eye locally. The particularly strong call in the market is for nearly every variety of box material and many orders have been placed for entire season's cuts, at top notch prices, during the last fortnight. The trade from the furniture factories is better than anticipated, as recent orders have placed this class of buyers in the market for lumber again. Local trade in maple, birch and oak flooring is excellent.

Boston.

Strength prevails in all branches of the hardwood market. High prices are the rule, but this does not appear to check the demand to any noticeable extent. Dealers all report a fairly satisfactory volume of new orders, although they say buyers are a little more conservative in some instances and confine their purchases to as near actual wants as possible. A feature of the demand is that many grades of low-priced stock are now moving much more freely than for several months. This is due to buyers using the cheaper woods as substitutes for the higher priced commodities wherever possible. For instance, beech has moved rather slowly in this market until recently, but now it is possible to sell everything obtainable. One large dealer says he finds no difficulty in disposing of beech, log run.

Manufacturers of furniture are fairly busy and are asking higher prices for their product. Now that they are getting better prices they are more willing to talk orders. As a whole the various consumers of hardwoods are doing a good business and are forced to replenish their supplies. The foreign demand has not been active of late, but some fair orders have been received. A Boston importer of mahogany is of the opinion that prices will be higher as offerings are below the average.

Oak is in very good demand. Plain oak, one inch, is quoted at \$57 to \$59 with sales reported at the outside figure. Quartered oak is in excellent request. Prices are very firm and some look for a higher level. One dealer, in speaking of quartered oak, says, it is no longer a question of being able to get orders, but it is a serious problem to know where to get lumber. No abatement in the strength of whitewood is found. The offerings of good stock are not large and prices rule firm. Reports indicate that there is plenty of stock back in the woods but not in proper condition for shipment. Ash continues firm and in demand. Veneers are wanted. A good call for black walnut is reported.

New York.

The demand for hardwoods in the metropolitan district continues of fair volume in all branches of the trade, and it is generally reported to be in as good demand as it has been for the past month or so. Notwithstanding this fact it is, of course, a well known fact that supplies are increasing in a number of stocks which for a number of months have been scarce. This increase has naturally been accompanied by a slight readjustment of values, but has tended to improve the market rather than otherwise, in view of the attraction which it presents to buyers to come into the market who have heretofore been holding off and buying from hand to mouth because of the high prices. The general

movement is good both in the retail and manufacturing line, and there is no indication but that prices will not only remain steady at the present range, but will likewise stiffen as fall approaches.

There has been considerable substitution going on where such procedure was possible in the matter of using lower grades in place of higher in certain lines of manufacture, but this, too, has had a beneficial effect, in that it has kept the low grade market active, while, of course, high grade lumber has taken care of itself for many months. This substitution is particularly noted in ash and poplar, but even at that all grades of both woods are in exceedingly strong and active demand, with every prospect of continuing so. Plain oak is very strong, and quartered oak fairly so. There seems to be an ample supply of the latter for all current wants, but as a general rule good, well manufactured and well figured average width stock is bringing satisfactory prices. Birch is in good call, particularly red, and prices are holding firm all along the line. Maple, basswood, chestnut and the balance of the list are holding their own. The poplar situation is very strong and there seems to be a slight increase in offerings, but no inclination to force the market, and the outlook for a continuance of firm conditions was never better in this wood.

Philadelphia.

The appearance of real summer weather verifies the statement made all along by careful and discerning merchants that the comparative dullness during the last few weeks is traceable directly to unfavorable weather conditions. Business is beginning to move under new impetus and the outlook for summer trading is promising. In the New York field the building trade has fallen off and there is a feeling, evidently unwarrantable, that if buying be suspended for a while hardwood prices will come down. High prices in hardwoods are evidently simply a matter of cause and effect. The recent continuous rains in the South have naturally proved a serious impediment to accumulation of stock. Mills have only been able to work half time, and seasoned goods are snapped up on sight, which fact alone would account for high values. West Virginia is also suffering from storms, the effect of which will be felt for some time. In the Pennsylvania mill district there is no serious handicap to contend with and, with the exception of the far Northwest, the railroads have been bringing out stocks with more regularity than for some months.

The railroads are still active consumers of tie material and orders are placed way ahead, but car building lumber is beginning to suffer on account of the gradual substitution of steel. The furniture factories of the eastern Pennsylvania district continue prosperous, and there is no sign of an early letup, though a slight decline in activity would not be surprising. Sash and door mills are running without intermission and indoor finish and flooring makers keep up a steady hum. Veneer and cigar box factories are working full force and report uninterrupted prosperity. The building trade is pushing work to make up for the tardy season. There is practically no change in hardwood values. Basswood, chestnut, ash and poplar are the leaders. Prices are high but stocks are very scarce. Oak is in good demand and, although a trifle more obtainable, holds steady prices. Cherry, birch and maple are running smoothly. There seems to be no weakening anywhere in the hardwood situation.

Baltimore.

The changes in the hardwood trade of this section are slight. A brisk demand for stocks

of all kinds continues, and while prices have eased off some, the entire range of values remains attractive. Common oak is easier to get, but with this exception delay is experienced in filling wants and the competition at the mills has hardly lessened. Manufacturers are in the market and readily take up any lots of lumber that are acceptable. The mills have experienced many drawbacks and have been hampered in their operations by the weather and other conditions, so that shipments to centers of distribution were rather restricted. There are lumbermen who maintain that with a decided improvement in the weather, so that the roads are passable, large quantities of lumber will be brought out and that some accumulation may be expected. However that may be, so far no decline has asserted itself and the outlook appears in the main reassuring. The exporters say that business on the other side of the Atlantic is rather quiet as a result of the heavy shipments which went over during the early spring. The stocks on the other side of the Atlantic are at present in the foreign market do not exceed moderate proportions, so that the competition for stocks has slackened. Prices are kept up quite well, however, and liberal withdrawals on the part of the buyers will tend to keep quotations from sagging appreciably. Poplar is being called for in liberal quantities and the mills have enough orders on hand to keep them going for an indefinite period. The weather has tended to restrict the output of poplar mills, and this has had a stiffening effect upon values. Ash is in good demand at figures that stimulate production and other woods are also called for with considerable freedom at prices that insure a good profit. The stocks in the hands of dealers here are not excessive; in fact, they might be larger to insure a free selection.

Pittsburg.

Trade keeps up fairly well and general conditions locally have improved. There is not the snap in the market that there was a year ago, but hardwoods are moving with a persistency that augurs well for the profits of the Pittsburg firms this year. In fact, most of them already maintain that if the next six months show such a volume of trade as the first half of this year 1907 will be their banner year in sales. The summer dullness is beginning to be noticed but wholesalers are not disposed to regard the condition at all seriously. They look for a resumption of buying in the fall that will put them away ahead of the game so far as sales outside of the city are concerned. The manufacturing and railroads are now taking more than their share of hardwood and most of the wholesalers have noted a disposition to increase their orders placed for summer delivery. Some customers are holding off on fall orders, demanding concessions in prices based on the supposition that there will be a general decline in the price of building materials. This argument is not gaining much headway with the wholesalers, most of whom look for a wholesome state of affairs in the hardwood market in the fall.

The local yards are taking on a little more stock. Favorable weather for a week past has greatly stimulated building operations and as a result contractors are beginning to take stock that was ordered months ago. Some of the yards have their sidings full of cars of lumber which has been sent to them because of the easier car situation. Many of these orders were placed early in the year and because they could not be filled they were duplicated by the yard men in the expectation that the lumber could be worked off in the usual spring season. This, on account of the weather and the slow building situation, has not been done. It will be nearly a month before the yards are free to buy much lumber and then it will be largely finishing stock.

There has been no break in the prices of

hardwoods such as has characterized the other woods of late. Oak in a few places is reported a little weaker, but in this particular case the market could stand quite a slump in demand and still be in good shape, for since January 1 the demand for oak has been fast and furious. Maple and hickory are, if anything, in better demand than a month ago. Chestnut is not moving so freely and stocks seems to be a little unwieldy in some quarters. This is especially true of the lower grades which a few months ago were selling with a wonderful pertinacity.

Buffalo.

The situation in hardwood is much the same as it has been for quite a long time, changes in it being much less common than in most branches of the trade. Prices are steady. With so much of the lumber sold by our hardwood dealers cut by themselves or bought before it is cut they have been able to make their prices and base them on cost, while the jobber in lumber is having a hard time of it, especially in the white pine trade. No jobber in that trade desires the prices to be as high as they are and it is generally held that the saw-mill owner is getting too big a profit, but the jobber is helpless and he must somehow manage to get a profit out of the business, no matter what he has to pay for his stock.

It is not easy to say why hardwood prices do not go up faster than they do, for the cost of production is higher every year. Putting the reports of the dealers together it would seem that it is not going to be possible to get a fair supply very long, and yet the yards are well supplied with oak, there is always birch and maple enough and if chestnut, ash and poplar are scarce there is at least some one of them to be had and there is promise of more poplar before long. Stocks of chestnut are of fair size, but can hardly be considered well assorted, and white ash is low, though there is not quite a fair lot of it going from the mills to the consumer direct. A steady increase in the use of elm and basswood from this time on is expected.

Saginaw Valley.

There is a fairly active demand for hardwoods and the movement is seasonably good to consumers with a firm range of prices. Ash lumber is scarce and beech is \$2 higher than sixty days ago. Basswood is also strong and wanted. Dealers report no accumulation of dry stock, which appears to be sold up closely. Mills are all in operation. Maple flooring is doing much better than it did last year. Cars are easier and yardmen who have made purchases are getting in stock. A number of dealers who handle stock extensively do a good deal of business through their offices direct from the shipping point to the customer. For instance, if a dealer buys stock at any milling point he sells certain grades of stock and ships direct from the mill to the customer, thus effecting a considerable saving in freight and handling.

The market is regarded as satisfactory at this time both as to the volume of business and prices.

Cleveland.

The demand for hardwoods continues good. Plain white and red oak and poplar are in good call. White ash is especially sought by manufacturers who find it difficult to supply their wants. Birch is moving more rapidly than it has for the past two or three months. The demand for box lumber has fallen off somewhat, as most of the boxmen seem to be well filled up with stock.

Indianapolis.

For the first time in many months local hardwood men are enjoying the distinction of having more empty cars offered them than they can

use. The railroad yards seem to be filled with empties and, according to one local company, the railroads are almost begging lumbermen to accept them. Such a remarkable thing can hardly be accounted for, except that little grain is being shipped and the uncertainty of Indiana crops is creating little demand for threshing machinery and implements.

Prices on hardwoods are steady, although it is said the tendency is toward a reduction rather than increase. There has been no change recently, however. There seems to be a plentiful supply of all hardwoods except quartered oak.

Bristol.

There is a slight lull in business in this section at this time, but prices are holding up remarkably well under the conditions. There is a slight falling off in the demand for oak. Poplar and chestnut are easily in the lead.

The present lull has made it possible for many shippers who were behind with orders to catch up. The supply of cars is now ample and lumbermen are able to make shipments promptly.

Local exporters report that market unsettled and the complexion of the situation is hardly as roseate as it was a month ago. The falling off in demand in the foreign markets is believed to be attributable to the shipment of too much stock on consignment by shippers anxious to keep up their trade.

Cincinnati.

The month of July always brings a dull season to the local market, and this year the demand has fallen off some. The demand, however, is still better than it was the same time last year. The receipts of lumber have been heavier than for some time and, coupled with the arrival of hot weather and the usual dullness at this season of the year, has caused the local situation to ease up a bit. The demand for poplar did not ease up any and sales are being made as usual, with the price still held firm. The weakest item in hardwoods at present is plain white oak. The demand has decreased so that dealers reduced the price slightly. Cypress is moving as usual with the demand a little lighter but the price the same. Furniture dealers are not urgent buyers as they were some weeks ago, which is responsible for the lack of demand for mahogany, oak and other woods used in this line. Prices on these woods have not fallen any, and it is stated they will not, unless a more serious problem hits the lumbermen. Cincinnati was visited by a slight flood during the past two weeks but it did not have any effect on trade in general. The general opinion of lumbermen is that the market will continue on this basis during the month of July and the early part of August, but at the latter part of August the demand is expected to pick up and the slackness of the past weeks will be entirely made up.

Chattanooga.

Dry stocks are scarce in this locality, but the demand for all grades of lumber is good. Hardwoods receive most call, although pine lumber and building material are taken readily on account of the great amount of building going on. Poplar, including all grades, is probably the strongest of the hardwoods just now. Plain oak is easy, a condition which is usual at this season of the year. Basswood is in good demand, although lumbermen have very little of this wood in their yards. One of the largest firms of this city sold only about 150,000 feet last year. Chestnut is active and is being used extensively by coffin concerns.

The export trade is quiet on account of the strikes on the continent, but prospects are that these troubles will be adjusted in the near future.

Lumbermen have experienced a great deal of trouble in getting log supplies on account of the heavy rains. Logmen were detained at their farms whenever they could get favorable weather for seeding and consequently mills depending especially on the railroads for supplies have fallen short of the log supply.

There is fine logging tide in the Tennessee river now and a bigger log supply here for the river mills than has been known for some time. The supply will probably run the mills until August or September. The car shortage is a little easier than it has been for many months and lumbermen have no "kick" coming in this respect. They say the railroads seem to use every effort to furnish cars on time.

Nashville.

The local market is getting livelier than it has been for the past few weeks for the reason that the arrival of fresh stocks and the return of pleasant weather have tended to help business wonderfully. The tide in the Cumberland has brought much timber to the city and the railroads report a heavy movement. Quartered oak remains scarce and its price is stiff and firm. Plain oak is a little more plentiful. It remains firm in price, however, and in good demand as well. Dry ash is well high unobtainable and the market is practically bare of it. Poplar continues scarce and in heavy demand. In fact, there is always enough demand ahead to promptly take up any new stock that may arrive. Chestnut is not in as heavy demand as usual.

Memphis.

The demand for hardwood lumber is quite up to the average for this time of the year, but there is not as much business doing as there was a short time ago. This statement applies to new orders. Buyers do not appear to be in quite as much of a hurry as they were several weeks ago, and the trade is therefore beginning to experience some of the usual summer dullness. There are large shipments of lumber in progress on old engagements, this being made possible by increased railroad facilities and by the excellent weather conditions which are facilitating loading operations. There is no evidence of weakness anywhere in the hardwood situation. Stocks in the hands of both manufacturers and wholesalers are relatively light, and, while production is increasing, it will be some weeks before this lumber will be available for use. Some members of the trade express the view that there may be temporary recession in values during the summer, but the prevailing idea is that, if there should be such a reaction, there will be a quick recovery before fall. The shortage in stock is estimated at from forty to fifty per cent, and it is felt that it will take a decided increase in output or a marked decrease in demand to materially affect values. There is some shading of high grade gum and cypress, but the lower grades of both woods are in good demand and are moving out very readily at satisfactory prices. The demand for oak of all kinds is good and values are well maintained at the recent level. Cottonwood is not bringing as high prices as recently in firsts and seconds, which are relatively plentiful. However, there is an excellent demand for boxboards and for the lower grades, both of which are exceptionally scarce and hard to buy. Box manufacturers are consuming enormous quantities and enjoying an almost unprecedented volume of business, and for this reason their wants are exceptionally full. There are only moderate quantities of poplar available and all offers are taken readily at current quotations. Ash is in excellent demand and all efforts to bring local holdings up to normal have proven unavailing. In high grade gum there is quite a call for special widths, the preference being given to stock running two or three and up. The export

demands appear to be only moderate, as advices here indicate, and these conditions will probably continue for some time.

Charlotte, N. C.

The hardwood situation in North Carolina and particularly in this immediate section is firm and steady. Dealers declare that prices are high and that they are able to demand a good price for their products anywhere. The indications are for increasing strength. Furniture and veneer plants are preparing for a heavy run within the next few weeks. The weather is becoming more favorable for work in the woods and the factories are making ready for the heavy rush that appears to be approaching. Freight congestion has been greatly relieved lately and shipments are moving freely, much to the gratification of manufacturers in this section who have been seriously handicapped on account of an admittedly unprecedented car shortage. A good market is being found for all hardwood products.

Minneapolis.

The factory trade in the Northwest is quiet, and there seems to be a disposition on the part of buyers to wait until the new stock is well launched on the market to see whether there will not be better prices. The situation is only normal for this time of year, but it excites notice because in two or three years past there has not been any dull season, and the demand has strung along through every season. There seems to be a disposition on the part of the large wholesalers to clean out what stock they have on hand. Prices are very little changed, but oak seems to have eased off a little from the top prices of the spring. While a good share of the new cut has been contracted, operations in that line are slow, and there is talk of lower prices before the new hardwood is moved to any extent. The turn of the market is being closely watched.

Northern hardwoods are cleaned up. There is no dry elm or ash, and basswood is exhausted, but the new cut is nearly ready to ship. Birch is sold low and is holding well in price. In southern stock oak is fairly plenty. The demand for car material has eased off a good deal. The railroads, however, are buying ties right along, and hardwood ties are going well. For the first time they are giving serious consideration to gum for tie material, and are buying some of it, along with oak and cypress.

Retail yards are not buying much lumber of any kind, and the demand from the country districts for hardwood is light and scattered. Flooring is the most active item. It is selling well in the cities, too, and the building activity in the large centers is helping hardwood, especially for future deals.

Louisville.

While the weather is more favorable now for crops and this is giving a better feeling all around, the demand for hardwood has slowed down materially. Dull spring trade in retail furniture is having its effect on the furniture lumber business. There are still orders coming for furniture stock, aside from unfinished orders already on hand, enough to keep most of the mills going, but the call is not active. In car material practically the same conditions exist. There is a fair volume of orders, but the car factories do not seem to be planning for as big times as was thought and talked of earlier in the spring. The strongest item on the hardwood list is hickory, which is moving in good volume, both in handle and vehicle stock. There is a splendid volume of hickory trade, and the supply of timber is so scarce that there is not much danger of getting too much of it.

Charleston, W. Va.

Heavy rains throughout this section during the past week have interfered seriously with logging operations. Bridges, trains and logging roads

have been badly damaged and it will be some time before they can be repaired so they can be used again.

Lumber of all kinds is moving satisfactorily, but no new developments have been reported in the last week. Inquiries from foreign countries, some offering good prices, especially for wide poplar, are being received. Coffin oak is scarce and commands good prices. High grade poplar is still in the lead, and firsts and seconds are selling at \$53; 18-inch to 23-inch are selling at \$65. Very few of the mills have good stocks of basswood on hand; 1-inch log run is selling for \$24.50. The call for oak timbers is heavy and good prices are being obtained when prompt shipment can be made.

Liverpool.

At the last mahogany sales, as was expected, prices showed a distinct advance over those of the previous sale. Those who made purchases have reason to congratulate themselves, and those who did not should buy up all the wood they can lay their hands on during the next few weeks or they may have trouble in covering their requirements. Mahogany is going to be one of the best features of the market this year, according to well-posted dealers on this side, and there is every indication that there will be a rise of from 15 to 20 per cent in values before long. One prominent lumberman of this city considers this a moderate estimate and says he considers a 50 per cent rise not unlikely.

The Whitsuntide holidays, which are among the most important here, have seriously interfered with business during the past few weeks.

Oak boards and logs are firm and hickory is stronger than it has been for some time. Ash logs and planks are in fair request, as they have been for some months. Poplar boards are somewhat weaker, the heavy import on consignment having had its usual effect. It does seem strange that shippers will persist in this manner of trading which is profitable to no one, except perhaps the agents on this side.

Edward Chaloner & Co.'s wood circular, under date of June 1, states that there has been a small import of oak logs from the United States during the past month. Consumption has been moderate and stocks are light but prices remain steady. Sufficient elm and ash have been received from Quebec and the United States to satisfy the demand for those woods. Ash has fallen in price during the month. The demand for good and prime United States walnut is active and high prices are cheerfully paid, though the request for other qualities is moderate. High grade walnut boards and planks bring good prices. Seasoned satin walnut boards are in fair demand but walnut logs are seldom asked for. Fresh whitewood logs bring good prices and enough of them can not be secured. The same condition holds with reference to whitewood boards and planks, but in this class all grades are accepted whereas only the best are asked for in walnut and whitewood. Values in birch remain steady and there is a call for more logs than the stock received will supply. Demand for hickory is steady and good prices are being paid for it. African and Mexican mahogany are active. Large to medium sized, sound, straight Cuban logs and richly figured wood would also bring high prices if they could be secured but only one parcel of mahogany has been received from Cuba during the month. Shipments of large to medium-sized and richly figured St. Domingan mahogany logs would also obtain high prices if there were any in the market but no stocks have been secured.

London.

There has been a great falling off in business consequent upon the heavy arrivals of lumber during the last four weeks. About a

thousand cars have arrived here (mostly oak) and buyers are one and all declaring that the end of high prices has come and that the shortage was only a "bluff." Be that as it may, the wood is here, and brokers are trying to make sales at practically any price, but most of the stock is being piled away and will incur an additional expense of say \$7 per 1,000 feet for dock charges. The arrival here of all this lumber is possibly the effect once again of the visit of some of the brokers to America who solicit consignments, for it certainly is a fact that these arrivals coincide with their visits and buyers must be excused if with all this stock to select from they refrain from giving firm orders at high prices. It looks as if the only people that will do any good with these parcels will be the dealers here and the dock companies, and shippers will once again have cause to complain what a bad market London is, but so is any market if it is flooded with stock on consignment for London buyers are quite capable of taking advantage of such a plethora of stock.

In whitewood there is a fair amount of business doing in the lower grades, which are arriving freely. There is a very good demand for firsts and seconds, but not many agents are in a position to offer.

The large quantity of oak boards recently arrived is slowly going into consumption. There is a good demand for strips in both plain and quartered oak.

In red gum the arrivals have been slight, but quite in keeping with the demand, and while this state of things lasts good prices will be maintained.

Wanted and For Sale -SECTION-

Advertisements will be inserted in this section at the following rates:

For one insertion 20 cents a line
For two insertions 35 cents a line
For three insertions 50 cents a line
For four insertions 60 cents a line

Eight words of ordinary length make one line. Headings counts as two lines. No display except the headings can be admitted.

Remittances to accompany the order. No extra charges for copies of paper containing the advertisement.

EMPLOYEES WANTED.

WANTED.

A first class man who understands manufacturing Hardwood Flooring in all branches. Permanent position, with good salary, to the right party. Address

BOX 57, HARDWOOD RECORD.

A GENERAL SUPERINTENDENT

Wanted for a miscellaneous hardwood proposition. One who thoroughly understands hardwood from the stump to the consumer, also the grading and working of poplar dimension and white pine, oak flooring, etc. for the yard trade. In a good healthy town of 1,000 inhabitants. Reply, stating experience and salary expected. Also want two good Hardwood Lumber Inspectors. Address "J. B." care HARDWOOD RECORD.

INSPECTOR AND BUYER

Of hardwoods wanted. One familiar with source of supply of southern districts, and section of country acquainted with. Give salary expected, experience, and last or present employer. Replies confidential. Address

BOX 44, HARDWOOD RECORD.

HARDWOOD SALESMAN

Wanted—An A1 hardwood salesman acquainted with New York state, Eastern Pennsylvania and Northern New Jersey trade. Sobriety and ability essential. Give age, experience and references. Address

BOX 45, HARDWOOD RECORD.

EMPLOYMENT WANTED

POSITION WANTED.

A lumberman of wide experience in logging, manufacturing, grading and sales in pine, hemlock and hardwoods, both in the North and South, seeks position as manager at the mill end or would accept other congenial employment. Address

BOX 50, HARDWOOD RECORD.

LUMBER WANTED

WANTED—ONE OR MORE CARS

of the following stock:
Qtd. & Plain Red & White Oak.
4/4" to 16/4" 1sts & 2nds, and No. 1 Com.
4/4" to 16/4" 1sts & 2nds, and No. 1 and No. 2 Com. Hickory.
4/4" to 16/4" 1sts & 2nds, and No. 1 and No. 2 Com. White Ash.
4/4" to 16/4" 1sts & 2nds, and No. 1 and No. 2 Com. Soft Elm.
4/4" to 16/4" 1sts & 2nds, and No. 1 and No. 2 Com. Hard Maple.
4/4" to 16/4" 1sts & 2nds, and No. 1 and No. 2 Com. Walnut.
4/4" 1sts & 2nds and No. 1 and No. 2 Com. Cottonwood.
4/4", 13" to 17" Cottonwood Box Boards.
4/4" to 8/4" all grades Poplar.
4/4" Log Run Basswood.
4/4" and 8/4" B & better Yellow Pine, Air, Smoke or Kiln-Dried.
One million feet Hardwood Culls.

HARDWOOD RECORD

- Reaches more manufacturers, jobbers and consumers of Hardwood Lumber than all the remainder of the lumber trade press combined.
- Prints more hardwood news than all the remainder of the lumber trade press combined.
- Is not only the only hardwood paper, but the best lumber paper printed.

WHAT HARDWOOD RECORD READER

From a Hardwood Manufacturer.

Bristol, Tenn., May 31, 1907.
The Improvement in this paper under the new management has been to such an extent that we feel that there is a great deal of attention being given along this line, and we feel sure that the present management is wholly capable of advancing the interest of the hardwood trade.
TUG RIVER COMPANY.
B. B. BURNS.

From a Texas Wholesaler.

Galveston, Tex., May 30, 1907.
We value the HARDWOOD RECORD greatly and think you are doing good service to the trade, both at home and abroad.
T. B. ALLEN & CO.

From a West Virginia Operator.

Jane-Lew, W. Va., June 1, 1907.
I certainly appreciate the interest that you have taken in building up a paper so well adapted in the hardwood industry as the HARDWOOD RECORD. Wishing you prosperity with your good work,
D. L. ARNOLD.

From a Manufacturer of Hickory Handles.

Rural Hall, N. C., June 1, 1907.
We think the HARDWOOD RECORD is all that can be expected. We have been benefited many times the cost of the RECORD.
SMITH-KIZER MANUFACTURING COMPANY.

From a Hardwood Wholesaler.

West Allis, Wis., May 29, 1907.
The HARDWOOD RECORD has been of more interest to me than any other journal, as I am dealing in hardwood exclusively. Therefore, with this interest in your journal I have watched its progress with satisfaction.
FAY L. CUSICK.

From a Mahogany Man.

Chelsea, Mass., June 2, 1907.
I sent you the names of some of my friends, and if you fail to get their subscription to your valuable paper it is because they are already subscribers or do not wish to get in touch with the interest they represent.
C. B. ROGERS.

From a Michigan Building Materials Company.

Scottville, Mich., May 28, 1907.
I take pleasure in saying that the HARDWOOD RECORD touches the right spot in relation to every lumber dealer's interests, and would not be without it for a good deal. We would advise every man who is in any way engaged in the lumber business to become a subscriber.
EDWARD QUIRK.

From a Black Walnut Specialist.

Frankfort, Ind., June 5, 1907.
Your paper suits me. I have no criticism to offer. The improvement has been great, and is entirely satisfactory to me. I consider it the best paper I get as far as hardwoods are concerned.
W. W. GARROTT.

From a Lumber Manufacturer.

Bradfordville, Ky., June 4, 1907.
I am well pleased with the journal.
W. F. COPPAGE.

From a Redwood Manufacturer.

Sanger, Cal., June 6, 1907.
You are publishing a first-class paper.
HUME-BENNETT LUMBER CO.,
T. W. DECKER, Gen. Mgr.

From a Timber Owner and Manufacturer.

Saginaw, Mich., May 30, 1907.
We congratulate you on the merit of your paper and its success.
ARTHUR HILL & CO.

From an Ontario Wagon Manufacturer.

Chatham, Ont., May 30, 1907.
We get most valuable information in most every issue, as it enables us to locate concerns with whom we may do some business. Besides it keeps us in touch with all the older institutions. Then after a good day's work we turn to the page of Pert, Pertinent and Impertinent, and forget our troubles of the day. You are certainly deserving of the support of every branch of the trade.
CHATHAM WAGON COMPANY, LTD.

From a Hardwood Wholesaler.

Rhineland, Wis., June 4, 1907.
I think that the HARDWOOD RECORD is the best paper of its class in the country, as its reports are more strictly on business matters.
C. P. CROSBY.

From a Plowhandle Manufacturing Company.

Farmville, Va., June 4, 1907.
You are publishing a good paper.
FARMVILLE MFG. CO.,
G. N. ROBESON.

From a Furniture Company.

Rockwell, N. C., May 30, 1907.
We find many things of interest to us in the HARDWOOD RECORD.
ROCKWELL FURNITURE CO.

From a New Orleans Exporter.

New Orleans, La., May 30, 1907.
I find HARDWOOD RECORD O. K., very impartial, and fully posted as to conditions of our trade. I always read it carefully and have always found valuable information in it.
A. COUSPEIRE.

From a Pittsburg Wholesaler.

Pittsburg, Pa., May 30, 1907.
We consider the HARDWOOD RECORD an up-to-date paper in every respect, and one that works earnestly for the hardwood trade in general. You are to be particularly complimented upon the service you have given your patrons in the form of the weekly sheets sent out, giving names of concerns, buyers and other requirements which most comprehensively covers the entire territory. You are certainly entitled to congratulation.
AMERICAN LUMBER & MANUFACTURING CO.
J. WOOLLETT, V. P.

From a Michigan Manufacturer.

Benzonia, Mich., June 3, 1907.
We value the RECORD very highly and your magnificent paper clearly represents the interests of the manufacturer, as well as the dealers, making the paper pretty nearly an ideal one.
CASE BROS. LUMBER COMPANY.

From a Porch Column Builder.

Columbus, Ohio, June 4, 1907.
We have been subscribers to the HARDWOOD RECORD for several years and find it a very satisfactory publication.
THE C. T. NELSON COMPANY.

From an Ohio Timber Company.

Rarendon, Ohio, June 4, 1907.
I do not know of anything that would improve your paper except we would like to get it often. We prefer the HARDWOOD RECORD to other papers because we believe the editor is more familiar with the lines he writes about.
TAYLOR, BROWN TIMBER COMPANY.

From a Big Wisconsin House.

Phillips, Wis., May 29, 1907.
As an advertising medium and as a source of information we have found the HARDWOOD RECORD of inestimable value, and a true reporter of the current market conditions.
JOHN R. DAVIS LUMBER CO.

From a Great Woodworking Machinery House.

Rochester, N. Y., May 29, 1907.
We wish to say a good word for the RECORD. We get considerable results from it, and no doubt will continue our advertisement in it for an indefinite period.
AMERICAN WOODWORKING MACHINERY CO.

From a Nashville Manufacturing Company.

Nashville, Tenn., May 29, 1907.
We find nothing in the HARDWOOD RECORD to criticize. If you should ask us to express an opinion, this would be easy, for it is so far ahead of similar publications that comparison would be ridiculous.
LOVE, BOYD & CO.

From a Manufacturer of Kitchen Cabinets.

Jeffersonville, Ind., May 29, 1907.
We are subscribers of the HARDWOOD RECORD, and find some very valuable information. It is read by the general foreman, and the mill foreman, and both seem to appreciate the points which pertain to their special work. We have no criticism to make, and wish you success.

THINK OF THE HARDWOOD RECORD

From a Veneer Panel Company.

Baltimore, Md., May 29, 1907.

We find the HARDWOOD RECORD a very valuable paper indeed, and cannot see how we could under the present conditions dispense with it.

BALTIMORE VENEER PANEL COMPANY.
CHAS. J. F. STEINER, Prest.

From a Piano Company.

Philadelphia, Pa., May 29, 1907.

The HARDWOOD RECORD is entirely satisfactory.
LESTER PIANO COMPANY.

From a Wagon Stock and Oak Dimension Maker.

Crofton, Ky., May 29, 1907.

We like your paper from the first to the last page, and read it even to all the advertisements. We like its general tone, its newsy records from different places, as well as market reports which are always of interest. In our opinion it is the best lumber paper that comes to our notice.

THE PRATT-WORTHINGTON COMPANY.
E. W. PRATT, JR., Sec'y and Treas.

From a Big Black Walnut House.

Cincinnati, Ohio, May 30, 1907.

We think the HARDWOOD RECORD is "it."
K. & P. LUMBER COMPANY.
MAX KOSSE, Prest.

From a Manufacturer of Farming Tool Handles.

Ada, Ohio, May 29, 1907.

We are very much pleased with the HARDWOOD RECORD and give especial attention to your article on general market conditions, which we regard as very valuable.

GEORGE H. KEPHART & SON.

From a Pittsburgh Jobber.

Pittsburg, Pa., May 29, 1907.

We often have occasion to refer to the RECORD for hardwood information and it is of benefit to us.

D. L. GILLESPIE & CO.

From a Kentucky Manufacturer.

Ashland, Ky., May 29, 1907.

It is indeed a pleasure to express ourselves as being perfectly satisfied with your very complete periodical. We feel that the market reports and statistics which it brings to us are as authentic as can be obtained, and published in an impartial way. We feel in need of this monitor and look forward with pleasure to its arrival.

R. G. PAGE LUMBER COMPANY.

From a St. Louis Manufacturer.

St. Louis, Mo., May 29, 1907.

Will say the HARDWOOD RECORD fills our requirements as a lumber journal, and that we feel no comments or criticisms from us are in order.

GARRETSON-GREASON LUMBER COMPANY.
W. W. DINGS, Sec'y.

From an Indiana Jobbing House.

Indianapolis, Ind., May 29, 1907.

We do not know of anyone in this part of the country who is not a subscriber to the HARDWOOD RECORD.

LONG-KNIGHT LUMBER COMPANY.
W. W. Knight, Prest.

From a Stave and Lumber Manufacturer.

Montgomery, Ala., May 30, 1907.

We are readers of the HARDWOOD RECORD and find it very valuable in our business.

ROBERT NIXON LUMBER COMPANY.

From a New York Wholesaler.

New York, May 29, 1907.

Your paper has been always very interesting to me, not only because of its condensed and highly efficient news service and trade reports, but because it is gotten up in a manner that inspires one to read it carefully from beginning to end. In this respect it is vastly different from the average lumber paper.

S. F. MINTER.

TESTIMONIALS

From a Wholesale Hardware House.

Sioux City, Iowa, May 31, 1907.

So far as our experience goes we feel that the HARDWOOD RECORD is a good investment.

THE SIOUX CITY IRON COMPANY.

From a Hardwood Wholesaler.

Milwaukee, Wis., May 29, 1907.

I really feel that the HARDWOOD RECORD is beyond criticism. I certainly take great interest in perusing its columns.

GEORGE P. NOBLE.

From a Walnut and Cherry Specialist.

St. Louis, Mo., May 29, 1907.

I have a high regard for your publication.

W. R. CHIVVIS.

From a Leading Michigan Manufacturer.

Grayling, Mich., May 29, 1907.

I think the HARDWOOD RECORD fills its place in the lumber world splendidly and has done all any lumber journal could expect to accomplish for the trade. Wishing you success and prosperity to the fullest extent.

R. HANSON.

From a Pennsylvania Jobber.

Williamsport, Pa., May 29, 1907.

I enjoy your paper very much, and have always considered it good stuff, and felt that it was edited by one who knew his cue on hardwoods. I have appreciated your "General Market Conditions," which seem to hit the right spot. You put up a good paper.

JAMES MANSEL.

From a Big Thresher Manufacturer.

Battle Creek, Mich., May 30, 1907.

We have no criticism to offer relative to contents of the HARDWOOD RECORD.

ADVANCE THRESHING COMPANY.

From a Wagon Manufacturing Company.

Stoughton, Wis., May 29, 1907.

We find the HARDWOOD RECORD a very valuable acquisition to all information on hardwood business generally.

MANDT WAGON COMPANY.

From the National Casket Company.

Hoboken, N. J., May 29, 1907.

We feel that the HARDWOOD RECORD today is the brightest and best edited paper published in the lumber industry.

NATIONAL CASKET COMPANY.

E. S. Foster.

From a Box Manufacturer.

St. Paul, Minn., May 29, 1907.

Your paper is interesting and covers the field nicely.

OSGOOD & BLODGETT MANUFACTURING COMPANY.

H. E. Osgood, Sec'y.

From an Ohio Jobbing House.

Columbus, Ohio, May 29, 1907.

Your HARDWOOD RECORD news usually comes from the fountain head.

M. A. HAYWARD & SONS.

From a Dimension Stock Manufacturer.

Clarendon, Ark., June 4, 1907.

We take a great deal of interest in the pages of the RECORD and would be at a loss to undertake to get along without it.

J. B. GALLOWAY COMPANY.

From a Veneer Manufacturer.

Louisville, Ky., May 29, 1907.

From our point of view there is no criticism to be made of your publication. It is quite satisfactory to us in all respects, and we believe it is the best of its kind that is published.

THE LOUISVILLE VENEER MILLS.

D. E. Kline.

From a Veneer and Spoke Manufacturer.

Kenova, W. Va., May 31, 1907.

Your publication would be certainly hard to improve upon. If your subscription list does not contain the names of all manufacturers of spokes, rims, gear-stock and wheels it should.

THREE STATES MANUFACTURING COMPANY.

W. W. Bruce, Treas. & Mgr.

WE KILN DRY LUMBER

In carload lots or smaller quantities. We have special facilities for handling carload lots. You can consign your lumber direct to us and it will be perfectly kiln dried and reshipped without extra charge to you for unloading and reloading. Our plant on the Chicago & Northwestern R. R., with switch track direct to our new modern dry kiln, is very convenient and accessible to all Chicago and vicinity. Our dry kiln has a capacity of 600,000 feet and contains every known device, the very best that money can buy, for the perfect seasoning of lumber. Write us to-day for prices on carload lots or smaller quantities.

HOLLOW BLAST GRATES

Haven't you often wished you had some device that would enable you to

**BURN YOUR SAWDUST,
SAVE YOUR WOOD,
KEEP STEAM BLOWING OFF ALL DAY?**

The GORDON HOLLOW BLAST GRATE represents the most perfect FORCED DRAFT SYSTEM on the market. With it you can obtain as good results with WET, GREEN or FROZEN SAWDUST as a draft grate gives with DRY WOOD. It saves LABOR IN FIRING. It COSTS practically

NOTHING FOR REPAIRS, the blast bars and pipe being kept cool by a current of fresh air. In most cases it PAYS FOR ITSELF EVERY MONTH.

Write for quotations, with due provision for TRIAL BEFORE ACCEPTANCE. Give number of boilers, width of furnaces or ovens and length of grates.

The Gordon Hollow Blast Grate Co.
GREENVILLE, MICH.

The largest manufacturer of blast grates, edgers and trimmers in the world.

This Truck—The Gillette Truck—with its Roller Bearing Axle—Unbreakable Malleable Iron Caster-Fork, Improved Stake Pockets and general Superiority of Construction is the Easiest Running Truck made. Strongest where other trucks are weakest. Best Truck to buy. Cheapest Truck to use. Invest money in these trucks. Do not waste it on others.

AUTOMATIC SWING SAW GAUGE.

☐ An inexpensive little device that *saves a dollar a day* and upwards.

☐ Stops one of the biggest profit leaks at the mill. Pays for itself several times over during a year.

☐ Isn't it worth investigating?

FRANCIS MARSHALL, - - Grand Rapids, Mich.

RAPID AND ECONOMICAL LOG LOADING

Largely depends on the independence of the loader.

¶ As logs are usually skidded to the nearest point on the railroad, they are necessarily scattered along the track and it's cheaper to go to the logs than move the logs to the loader.

That's just what makes the

McGIFFERT STEAM LOG LOADER

so rapid. Being self propelling, it can bring in its own empties, spot them and load the logs just as they lie.

¶ No waiting for anything or anybody—just logs. *Our booklet tells more*

CLYDE IRON WORKS DULUTH MINN.

ATKINS Silver Steel SAWS

cost more than other Saws, because they are BETTER. The First cost of a Saw does not count for much. What you want is your **Money's Worth**. Isn't it better to pay a fair price and get the best rather than a low price and get poor goods? Try an ATKINS SAW. They're better.

FLOORERS, PLANERS AND MOULDERS

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine: it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock 17½ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

Write for Full Description.

Manufacturers of
SAW MILL MACHINERY
 Indianapolis, Ind.

AMERICAN

12-in. and 14-in. Four Column Outside Moulder

Combining all the advantages of an Inside and Outside Moulder, together with several improvements not found on any other. Instantaneous locking and unlocking of side spindles and top arbor boxes, with micrometer adjustment of top arbor.

It has the most powerful feed ever placed on a moulder.

Superior to any moulding machine yet produced.

Write for a pamphlet. Our nearest salesroom will gladly furnish you with any information desired.

A floor to adore

For thirty-three years Wilce's Hardwood Flooring has been among the foremost on the market and because it stands today "unequaled" is the best evidence that its manufacturer has kept abreast of modern methods and the advanced demands of the trade. To convince yourself of the above statements, try our polished surface flooring, tongued and grooved, hollow backed, with matched ends and holes for blind nailing—you'll find it reduces the expense of laying and polishing. Our Booklet tells all about Hardwood Flooring and how to care for it—also prices—and is free.

MANUFACTURERS OF
MICHIGAN ROCK MAPLE AND OAK FLOORING
 BUFFALO, NEW YORK

CADILLAC

CELEBRATED FOR HIGH STANDARD OF QUALITY AND MILL WORK

Mitchells - Make

Rockhard, Maple and Beech FLOORING

The Northern part of the lower peninsula of Michigan is noted for the finest Maple and Beech timber that grows.

We own enough of this timber to keep our flooring factory running ten to twelve years.

We do our own logging, sawing and handling, and are so organized that we control every step of the manufacturing from the stump to finished product.

All of our lumber is first air dried and then kiln dried.

All of our 13-16 inch Flooring is thoroly kiln dried, end matched, machine scraped and polished, bored and bundled.

Our grades are of a high standard, and under no condition do we mix them to enable us to meet competition and low prices.

Please keep in mind also that especially is it true of Hardwood Flooring that

Quality is Remembered after Price is Forgotten

PLEASE SEND US YOUR INQUIRIES

BRUCE ODELL, Secretary.

General Market Conditions.

The reports of market conditions received from the numerous hardwood centers of the United States, as given in this issue of the HARDWOOD RECORD, bear little indication of any midsummer dullness in the trade. Manufacturers and jobbers at nearly all trade centers report a large increase in inquiries during the last two weeks, indicative of a coming demand of much strength. Again, it would seem that buyers are not going to be caught late in the fall without stocks and no way of transporting lumber to their yards and factories, as they were last year. There is every evidence that there will be as great a car shortage this fall as there was last, and the wise buyer is evidently trying to get himself in such a position that car shortage is not going to interrupt his business.

Undeniably every variety of dry stock is in short supply and there is very little indication that there will be enough lumber produced to fully care for the wants of the trade during the remainder of the year. Another spell of bad weather has prevailed in the lower Mississippi valley during the last ten days, which has again added an interruption of woods and sawmill operations to the many of the past season. Lumber, especially oak, poplar and chestnut, is being manufactured at a very fair rate in the mountain districts, but the totality of this will not compensate for the immense shortage in the great hardwood regions of western Tennessee, Arkansas and Mississippi.

Flooring manufacturers still have about all the business they can handle, and there is no indication of cessation in demand. The same can be said of veneer plants. The call for veneers and panels is increasing every day, as manufacturers of furniture and other lines recognize their cheapness and high qualities as compared with other lumber.

On the whole, the buying situation and its prospects are excellent. The general financial condition of both manufacturers and jobbers is good and banks seem to have plenty of money to assist in furthering any legitimate business enterprise. As a matter of fact, banking funds are at present not going into bond issues and long-time paper to any extent, but are being held for general and immediate commercial needs.

Distribution of Hardwoods.

For more than a year the HARDWOOD RECORD has been engaged in preparing a list showing the amount of hardwood lumber by kind, grade and thickness; dimension stock by kind, grade and size, and veneer and panel stock by kind, grade, size and thickness, used annually by the many thousands of hardwood consumers throughout the United States and Canada. This information has been issued in bulletin form, printed at regular intervals, and supplied gratuitously to the lumber advertising clients of the RECORD.

The work has thus far involved the sending out of nearly a half million letters, and it has progressed to the extent that the list already acquired comprises by far the largest and most comprehensive history of the hardwood consuming wants of the country that has ever been gotten together. As a matter of fact the RECORD has been the pioneer in this service, and it has been such as the clients of the paper have highly appreciated, as is evidenced by the advertising patronage enjoyed.

Specifically, the bulletins recite name of city and state; name of concern; name of lumber buyer; line of goods manufactured; kinds, grades and thicknesses of lumber used; kinds and sizes of dimension stock used; kinds and thicknesses of veneers; kinds and thicknesses and sizes of panels.

The paragraphs of these bulletins are cut out by the recipient and pasted on index cards having numbered tabs corresponding with various kinds of lumber. Such tabs as do not represent kinds of lumber employed by the given concern are cut off the card, and then they are filed in alphabetical order between state guide cards. No concern not in good commercial repute is listed. The many houses employing this system are enthusiastic over it, as it enables them to tell at a glance every user of every kind of lumber, dimension stock or veneer anywhere in the country. It is invaluable to every lumber sales department.

There are many deductions that may be made from a study of these card files, but one feature of particular interest is the popularity and universal use of some woods as compared with the relatively limited use of others. Of all hardwoods growing in the United States oak is the most popular. As an evidence of this 300 of these index cards, selected at random from Canada and the states of Arkansas, California, Connecticut, Delaware, District of Columbia, Idaho, Georgia, Illinois and Indiana, and carefully analyzed, show that of this number 153 buyers are users of plain white oak; 123 of plain red oak; 94 of quartered white oak; 54 of quartered red oak. The next most used wood is poplar, of which there are 136 users in the group named. Of the other woods, descending the scale of popularity, there are 87 users of hard maple; 85 of red gum; 80 of basswood; 71 of white ash; 69 of red birch; 63 of cypress; 60 of chestnut; 55 of cottonwood; 53 of hickory; 49 of mahogany; 48 of soft maple; 31 of white birch; 30 of gray elm; 29 of rock elm; 27 of black walnut; 27 of beech; 26 of brown ash; 25 of cherry;

19 of sycamore, 18 of tupelo gum; 16 of water elm; 8 of butternut, and 1 each of persimmon, willow, dogwood, locust and holly.

Of the same 300 buyers there are 49 users of plain oak dimension stock; 21 of hickory; 9 of ash; 7 of quartered oak; 6 of gum; 6 of birch; 5 of hard maple; 5 of soft maple; 4 of beech; 4 of poplar; 3 of elm; 2 of chestnut; 2 of cypress; 2 of mahogany, and 2 of basswood.

Of the above named group, the requirements in veneer and panel stock are represented by 39 using quartered oak; 34 plain oak; 22 mahogany; 21 poplar; 15 birch; 14 gum; 9 basswood; 6 maple; 5 ash; 4 bird's-eye maple; 4 gray elm; 4 walnut; 3 red oak; 3 curly birch; 2 rock elm; 1 cypress; 1 tupelo gum; 1 water elm.

Inspection Rights of the Seller.

In the news columns of this issue of HARDWOOD RECORD will be found recited a controversy that is now taking place between a prominent Memphis manufacturer and the National Hardwood Lumber Association over the seller's right to witness inspection of lumber sold by him, being made by a National Association's licensed inspector.

The manufacturer relates that he had an order requiring National inspection; when the inspector came to the yard to load out the lumber, he refused to allow one of the manufacturer's inspectors to go on the pile with him. The shipper refused to allow the inspection to proceed without one of his representatives being present, on the ground that the lumber belonged to him until it was delivered to the customer, and that he had a right to know the inspection and measurement were correct by reviewing it at the time it was done. He further contends that since licensed inspectors are under bonds to make good claims against them if they are at fault, the average inspector will favor the buyer to avoid any possibility of being mulcted. The Memphis gentleman asserts the president of the National Association advised him that the inspector had the right to refuse a seller permission to have a representative present when he was inspecting lumber. This, he thinks, is an attempt to take away from the seller a just right, as he contends that the seller of any goods has a right to know what he is delivering on a given sale. He contends that the ruling in the matter is absolutely unjust.

The HARDWOOD RECORD has invariably argued that it is a weakness on the part of any association to attempt to prescribe inspection rules in the interpretation of which all parties in interest do not have an equal part—i. e., a basis upon which the purchase and sale of lumber is conducted. It has repeatedly contended that buyers of lumber, whether they be jobbers or consumers, should be represented in the inspection system. The same arguments should certainly apply in favor of the sellers of lumber. They undoubtedly have the right to be represented when delivery of their lumber is being made, and it is doubtful if the National Association can maintain the opposite stand in this particular.

In contradistinction to the case cited is the attitude of the inspection bureau of the Hardwood Manufacturers' Association. It not only gives sellers and buyers the privilege of viewing the work of inspectors, but invites their presence, and every inspector is instructed to carefully explain his reasons for the classification of each separate piece of lumber if so requested.

Learning the Freight Business.

The agitation over railroad matters, especially concerning freight rates, that has transpired during the last six months is developing an avid desire on the part of lumbermen to thoroughly familiarize themselves with freight matters.

For many years past if one asked ninety-nine lumbermen out of a hundred what they considered a just rate to haul a ton of lumber a mile for a certain distance they would have told you that they did not know and that all they did know of the freight question was what they paid the railroad for the service. In the old days, if perchance a lumberman secured a cut of two cents a hundred on a certain shipment, he immediately conceived that he had obtained a freight bargain, regardless of what the tariff rate before had been.

All this agitation nowadays is causing the average lumberman to make some cost and profit figures for himself on his freight, just

as he does in buying a piece of timber land or a sawmill. He is trying to learn what constitutes fair railroad transportation cost, and to what profit the railroad is entitled on the business.

Incidental to this education in freight matters there are certain technical terms that must be acquired in order to make just estimates of value on bulk transportation.

"Average length of haul" in railroad parlance is compiled from records made up at every point where freight is received and covers the number of tons received for shipment and the distance to be transported. This item indicates the average distance which a ton of freight is hauled.

"Ton mileage" is indicative of the number of tons carried one mile.

"Freight train mileage" is the average number of miles traveled by each freight train.

"Freight trainload" is found by dividing ton mileage by the freight and mixed train mileage.

"Car mileage" shows the average distance traveled by each car.

To determine the average carload divide the ton mileage by the car mileage.

"Average number of cars per train" is compiled from car accountants' records.

To find the rate per ton mile divide the freight earnings by the number of tons carried one mile.

To determine "freight density," or in other words, tons carried one mile per mile of road, divide the ton mileage by the average mileage operated.

To find "train mileage per mile of road" divide the train miles by the average mileage operated.

"Earnings per train mile" are deduced by dividing the total earnings by train mileage; and for earnings per car mile follow the same method, only use car mileage as a divisor instead of train mileage.

Educating the Boys.

A great many lumbermen who are readers of the HARDWOOD RECORD have sons they are attempting to educate so that they shall enable them to earn their own living. Thousands of lumbermen's sons are students at high schools, academies, colleges and universities, learning Latin, Greek, higher mathematics, history and literature and acquiring a mass of other knowledge which is very valuable but of little utility in fitting them for the point in view—earning their living should occasion arise.

Perhaps this observation does not include such young men as are securing the basis of knowledge to fit them for entering one of the learned professions, but college training *per se*, for the young man who proposes to take up a purely business career, has not thus far proved such as adds materially to his ability as a money-maker. All these young men, in whatever sort of school, have a long vacation at this time of year which is usually frittered away in alleged sport and recreation.

The American youth loves the woods just for the woods' sake, and it goes without saying that the average lumberman would like to have his son know more about the trees from both a scientific and practical viewpoint than he ever had the opportunity to learn himself, and why should the boys not use at least this leisure time for profit as well as play? The trees are a most delightful study, and even though the knowledge gained of them should never be utilized in the practical life of later years, the study of them will prove far more satisfactory and entertaining than nine-tenths of the prescribed ones at academy and university.

Practical forestry is now becoming a recognized business pursuit that promises as much financially for the young man as electrical engineering did a decade ago. It is a pursuit well worth while, and it has the added advantage of the incomparable appurtenances of the forest—pure water, good air and the outdoor life that brings health and renewed energy to every young man engaged in it.

Where now there are but scores of young men learning forestry as practiced in the great Pisgah mountain estate in North Carolina, for instance, there should be thousands there and elsewhere taking this delightful, healthful and prospectively money making course.

Pert, Pertinent and Impertinent.

His Absent Darling.

I mourn my darling all day long; deserted by the muses
I try to tune my voice to song, but sadly it refuses;
It is my luckless lot to be condemned to useless waiting,
My loved one will not come to me, she's busy roller skating.

'Tis she with laughter in her eyes who is my inspiration;
She smiles at me and sadness flies from off my reservation;
She teaches me to cling to cheer and turn from futile hating,
But fretfully I linger here while she is roller skating.

Hark! From afar a rasping noise comes floating on the breezes;
My dainty fancies it destroys, my blood it fairly freezes:
The cheerful mood I had is gone—confound that awful grating
Produced by shouting children on the sidewalk roller skating.

Policy.

The first law of self-preservation—forgiveness.

Be One of the Few.

Gossips dislike everybody who refuses to supply them with raw material.

A Paradox.

If you move in a society round or swim in a social circle, it's hard to make ends meet!

Simple.

If you have a little brass, it's easy enough to make money; just exchange it for somebody's gold.

Let Him Alone.

A man's idea of a bore is somebody who continually butts in when he is talking about himself.

Vulnerable Spots.

Stuff a woman with compliments and a man with food, and they'll do most anything for you, if you strike while the iron is hot.

Our Age.

No matter how much we are inclined to extravagant speech, there's one thing we never exaggerate.

THE VACATION SEASON.

Hardwood Lumberman—The lumber business is all right—but it ain't nothin' like this!

Might Take Offense.

In condoling with a newly-made widow it isn't in good taste to tell her that her hubby is better off!

Disarmed.

An open door lets the knocker out of a job.

Plentiful.

A secret enemy—one who can't keep your secrets to himself.

Only Then.

Men enjoy farming—if they have enough money to hire it done.

Look Out!

Remorse is the back-handed slap Time gives the face of Folly.

Disappointed.

The man who hunts too hard for pleasure is frequently too worn out to enjoy it when it is found.

A Sure Sign.

When love becomes logical, the honeymoon is surely waning.

Settle Down.

Few "roving blades" are sharp enough to cut a wide swath.

In Love Affairs.

It often happens that where there's a will, there's a won't.

A Bachelor's Soliloquy.

To wed, or not to wed;
That is the question;
Whether 'tis better
To remain single,
And disappoint a few women—
For a time;
Or marry,
And disappoint one woman—
For life.

Smile.

He who smiles,
And laughs away
The little trials
Of life today
Shall live to smile
And laugh away
A greater trial
Another day.

ZANE THOMPSON.

Precocious Willie's Fate.

Little Willie hung his sister,
'Twas an hour before they missed her;
"Don't he do the cutest tricks?
Such a mind and only six!"

Little Willie fell down the elevator,
They didn't find him till a week later;
The neighbors all said, "Gee whiz!
What a spoiled child that Willie is!"

W. OF O. & N. A. OF C.

AMERICAN FOREST TREES.

FIFTY-SIXTH PAPER.

Eucalyptus.

Eucalyptus Globulus—Lab.

In the year 1856 the eucalyptus tree was first introduced into the United States. It belongs to a family which is native to Australia and neighboring islands, and which contains many species that have been widely transplanted; in this country, however, none of them have succeeded remarkably well outside of Florida and California; in the latter state they flourish with wonderful facility. The species *Eucalyptus globulus* is the one commonly meant when speaking of the trees which grow in the United States. It is the blue gum of Australia, which is also sometimes called the stringy-bark, iron-bark, grey gum and bastard-box.

In the semi-tropical parts of Florida and southern California, as well as along the Gulf in Texas, and parts of Arizona, climatic conditions are such as favor the best growth of eucalyptus, although the trees must be confined to regions which are free from biting frosts and sudden changes. If owners of barren land in such sections could be brought to realize the high value of the eucalyptus and the ease with which it can be cultivated successfully, it could be made a valuable acquisition.

The flowers of eucalyptus are beautiful and sweet, furnishing ample material for bees to work with. Its leaves are exquisitely shaded into blue, gray or green, those of the young trees being oval and stalkless and of a decidedly bluish tinge; as they grow older, stems appear, and the leaves elongate and change their shape and color to a considerable degree. The bark is a striking feature of the tree; it is gray, smooth in places, and in others stringy and easily stripped off. The fruit of eucalyptus is a nut.

Eucalyptus oil and eucalyptol, which are distilled from the leaves, are valuable for their medicinal properties, and are extensively used in the treatment of many disorders, particularly those of the throat. One ton of leaves will yield about 500 ounces of oil. The manufacture of these remedies forms quite an industry in regions where the trees grow in abundance.

The tree is especially noted for its great size, rapid growth, tough, durable wood, and its beneficial effect upon the health of people living in regions which would be damp and malarial were it not for the fact that its

calyptus adapts itself well to dry, rocky hill-sides, or other diverse conditions. Not the least of its excellent qualities is its remarkable beauty; it grows very tall and large, with graceful habit, richly loaded branches

and feathery, shaded leaves, ever-green and ever restlessly shifting hither and thither, even though no apparent breeze is stirring.

The recorded dry weight of eucalyptus wood is about forty-five pounds to the cubic foot. It has an astringent state, and when being worked has an odor resembling that of acetic acid. It burns well, and the embers glow in still air. The wood is moderately fine grained, the surface bright, with open pores, readily visible, and forming in oblique, straggling lines. In color the wood is a pale straw, pinkish or brownish, with reddish-white sapwood. A number of California homes are finished in eucalyptus, and one, at Watsonville, is particularly handsome; the wood takes an exquisite finish and is worthy of more extensive use for interior work.

One valuable characteristic of eucalyptus is that it is extremely durable under water and in the ground, so that it is particularly desirable in building wharves, and is useful as paving blocks, railroad ties, posts, telegraph poles and the like. The wood is specially adapted to the manufacture of piles on account of its long straight stem, as well as its resistance to rot and to the attacks of teredos and other marine creatures. On the Pacific coast eucalyptus or blue gum piles last twice as long as do those made from other woods—redwood and Douglas spruce, for example. Whole piers in southern California are made of it, and the demand for them is now becoming much greater than the existing groves can supply, although as long ago as 1874 there were said to be 1,000,000 specimens in the state.

With regard to the rapid growth of eucalyptus, it may be said that certain species are without doubt the fastest growing trees in the world. The

Bureau of Forestry reports that in one grove near Los Angeles, set in 1885 and cut for fuel in 1893, there were in July, 1900, some trees two feet in diameter and many over one hundred feet in height. A seventeen-

EUCALYPTUS OR BLUE GUM, CALIFORNIA.

great root system acts as a drain, removing miasma and otherwise improving the land. To this is due the Spanish name "fever tree," which is applied to it in southern Europe. Regardless of this feature the eu-

WILLIAM A. McLEAN
NEW ALBANY, IND.

acre tract set in 1880 and cut for the third time in 1900, produced 1,360 cords, or an average of eighty cords per acre. The best eucalyptus produces in twenty years a log equal to that of an oak which has been maturing for 200 years. Waste land planted to blue gum may show in five years a handsome grove ready to be cut for fuel. It has been used very extensively for this purpose in California, but is rapidly coming to be recognized as far too valuable. The trees may be propagated from seeds and they sprout readily from the stump. One grower says that from his 200-acre grove, set largely in soil too poor for crops, he can cut 1,000 cords of wood per year indefinitely, for which he receives \$2.50 per cord; this shows something of the financial profit with which the tree may be cultivated.

In trials of strength and endurance the University of California finds that green wood grown on the campus and used in automatic hammers, whose heads weigh 200

SPRAY OF EUCALYPTUS FOLIAGE.

pounds, is equal to hickory or oak, standing up against the severest tests that are ever required. Tests of seasoned timber are expected to produce even more favorable results.

Although the tree is a valuable one to use as windbreak, for shade, for ornament, for sanitary purposes, for distillation, or to provide honey, it is as an important commercial wood that it appeals mostly to lumbermen of the West. With the lessening of hardwood supplies in the eastern markets, prices have advanced at corresponding ratio, and the grades of timber offered have become lower. Attention should be called to this tree as a source of supply for hardwood to take the

place of some of the rapidly disappearing varieties of hickory and oak. Blue gum has long been used in Australia, its native home, as the chief hardwood timber; it enters into the construction of articles too numerous to mention at length—barrels, farm implements, vehicles, furniture, fences, paving, and particularly ships, piers and bridges. In London and in Paris it has been used with excellent satisfaction as paving. In the Santa Clara valley of California there is a large institution which is devoted exclusively to the manufacture of articles from eucalyptus. It is unexcelled for insulator pins for heavy transmission electric power lines, and the enthusiastic owner of the plant says that in his fifteen years' experience with eucalyptus he finds it as good as hickory for agricultural implements and tools.

The United States government finds the possibilities of this wood so great that it is taking up the work of reforestation in co-operation with the state of California. That the influence of forests upon rainfall is an important one is a well recognized fact, and in many parts of Arizona, Texas and New Mexico, now arid and abandoned to jack-rabbits and cactus growth, the eucalyptus would be a saving force. Planted close enough, in shallow furrows, about ten feet apart for example, the tree will take care of itself,

so that it may be raised easily and cheaply, bringing returns three times as quickly as will any other hardwood. The tie and timber department of the Santa Fe is making an extensive experiment with it, having planted seedlings on 700 acres—part of a 9,000-acre ranch to be devoted to the purpose. Eucalyptus was selected after careful consideration, chiefly on account of its extreme hardness and rapid growth. Seven hundred acres will be planted each year for twelve years, shortly after which the first nursery will be ready for harvest. Thus each succeeding year will see a new crop, and by the time the round is completed, it is thought the second cutting of the first tract may be commenced. If successful, as it undoubtedly will be, this gigantic undertaking will insure a perpetual source of supply of railroad timbers for the company, and will effect great economy over present conditions.

The pictures illustrating this article were made and loaned the HARDWOOD RECORD by John P. Brown, editor of *Arboriculture*, who has undoubtedly done more to advertise this oft-neglected and unappreciated tree than anyone else in the country. Like other trees growing in the open, the eucalyptus is prone to spread and branch, while in plantations or forest growth, it produces a tall, straight trunk and fewer limbs.

Builders of Lumber History.

NUMBER XLVIII.

William Archibald McLean.

(See Portrait Supplement.)

William Archibald McLean was born in Thurso, province of Quebec, Canada, thirty-nine years ago, of Scottish-Canadian ancestry. The McLean family, or MacLean, as they were known in their native country, were loyal adherents of the ancient line of Stuarts, fighting under Montrose for King Charles the First and under Dundee for King James. They were in the first line at Culloden, under Bonnie Prince Charlie, in 1746, when he made his gallant attempt to regain the kingdom of his ancestors. When the cause of the Stuarts was lost the MacLeans left Scotland for America.

Mr. McLean seems to have been predestined for the lumber business. Years ago his grandfather and father squared timbers and floated them in rafts down the Ottawa river to the St. Lawrence, through the Lachine rapids to Quebec, where they were sold for the European markets. However, Mr. McLean began his career when sixteen years of age, as clerk in a country store in Canada, where the post and telegraph offices constituted departments of the business, and where everything from a needle to an anchor was sold.

His first venture in the lumber field was with the L. A. Kelsey Lumber Company of North Tonawanda, N. Y., prominent wholesalers. Being determined to learn it in the right way and master every detail, he began at the very bottom of the ladder, handling

lumber, and continued with the company for three years, or until he felt he had acquired a thorough preparation to enter the trade on his own account. Then, with his brothers, Hugh, Angus and Robert, he became a member of the Hugh McLean Lumber Company, and was given charge of the buying of lumber and the manufacturing end of the business. He inspected the first car of lumber ever shipped by that company. Fourteen years ago he came West to buy timber and spent a great deal of his time looking up suitable purchases and contracting for the output of many small mills. Mills were built at Cloverdale, Bedford and New Albany, Ind., and at Louisville, Ky.

The Wood-Mosaic Flooring Company was formed in 1883 by Charles E. Rider at Rochester, N. Y. About six years ago this company and the Hugh McLean Lumber Company of Buffalo, jointly established a sawmill and flooring plant at New Albany, Ind., Mr. McLean having the management of this branch, together with the other interests of the Hugh McLean Lumber Company. The name of the Wood-Mosaic Flooring Company was afterward changed to the Wood-Mosaic Flooring & Lumber Company. The business of this concern grew rapidly and Mr. McLean decided to dispose of his interest in the Hugh McLean Lumber Company, taking a larger interest in the newer concern. By doing this he acquired the large band mill, yards and timber tracts of the Hugh McLean Lumber Company at Louisville, Ky.

The Wood-Mosaic Flooring & Lumber Company manufactures the finest kind of hardwood floors and also has a veneer department, where it cuts large quantities of oak and poplar. Besides the plants at New Albany and Louisville the company has a large factory at Rochester, N. Y., where fancy flooring and parquetry are made, and it has agencies in every large city of the United States for the sale of its product. Three large band mills are operated and kept running steadily the year round. Since the recent increase in capital stock and the acquisition of the Louisville mill from the McLean company the lumber and veneer ends of the business have become very important factors. The company specializes in the particular needs of its customers rather than in any one line of stock. However, its manager makes it a point to have a large assortment of choice Indiana white oak on hand at all times.

Mr. McLean is married and has five children. He is exceedingly popular socially, being a member of the Pendennis, Tavern and Country clubs of Louisville and a Knight Templar. In politics he is a Re-

publican and a strong admirer of Roosevelt and his policy. He is an adept with gun and rod, and his vacations are spent on a hunting and fishing preserve of more than a hundred square miles in Canada, which he and his brothers own and where they go every fall with a party of kindred spirits.

W. A. McLean is not only well liked and popular among his friends, but is held in exceeding good repute by the lumber trade at large. He is interested in association work, and is president of the Parquet Flooring Association. He is a tall man and very striking in appearance, as the handsome supplement to this issue of the *HARDWOOD RECORD* will testify. That he has made a success in his chosen line is not to be wondered at, for his energy and push are well known characteristics. In the words of a friend, "Will McLean reminds a person of one of those limited express trains—when he gets an idea he goes at it with a rush and keeps right on going—you can't hold him or catch up with him until he's carried it out; in personality he's just himself—different from anybody else in the world!"

Wood in the Vehicle Industry.

The following interesting and timely paper on the subject of the use of wood in the vehicle industry is by H. B. Holroyd, forest assistant, Forest Service of the United States government. The article is well worth a perusal by every one interested in the vehicle industry or in the woods entering into such construction work.

The steadily increasing scarcity of the woods largely used in the vehicle industry makes it important to ascertain to what extent it is practicable to substitute cheaper and more abundant woods, and to determine how a closer utilization of material may be secured.

Our knowledge regarding the stumpage of hardwoods used in vehicle construction is so meager that it is impossible to predict, with accuracy, the length of time the present supply will last. Many manufacturers roughly estimate that, at the present rate of consumption, it will suffice for only fifteen to twenty years. It is highly important for the trade to have accurate information upon the annual consumption of vehicle woods and the amount of the available supply.

Formerly the northern states adjacent to the Ohio river furnished most of the hickory and oak used. Since the depletion of the supply in this region the southern states have been heavily drawn upon for vehicle woods. It is generally held by the trade that much southern hickory is inferior to northern hickory so that manufacturers desirous of obtaining northern stock for special work have resorted to buying single trees or whole woodlots, providing there is a large enough percentage of the more valuable woods in them.

In spite of the fact that the popular woods are becoming so scarce as to make the use of substitutes in some cases imperative, the trade is largely tied down by prejudices on the part of consumers against the use of substitutes. And these prejudices, which manufacturers would now often be glad to overcome, are in some degree due to their own efforts, under the stress of competition, to create and strengthen a demand for the very woods which the depletion of supplies renders it more and more difficult to obtain. For

years the manufacturer made a point of the fact that his vehicles were constructed of certain woods and the consumer was led to believe that these woods, and only these, were satisfactory. Now that other kinds must be used the consumer, who has been an apt scholar, still insists upon having the old favorites. Under these circumstances, many manufacturers have chosen perhaps the only course open to them, that is, they have experimented in the use of substitute without taking the consumer into their confidence, in order that they might secure a wider knowledge of the utility of other woods. In doing this they have been justified not only by the scarcity of the supplies, but also by the excellent results given by the new woods.

Substitutions will become easier as the manufacturers acquire a better knowledge of the properties of different woods and learn the right methods of handling new woods. Numerous failures have occurred simply because one method was expected to apply to all species. Since the methods of handling have been improved the southern gums and western coniferous woods have had an increased use in the trade. The veneering of woods which have an inherent tendency to warp enables the manufacturer to handle them with greater ease.

In the manufacture of light vehicles there is probably little chance for substitution for gear and wheel work. So far as known no wood equals hickory for vehicle construction. In addition to hickory there is, however, a possibility of some of the tropical woods being used in vehicle construction when their properties are better known. Tests are now in progress, under the supervision of wheel manufacturers, to ascertain the value of eucalyptus for buggy spokes. There are at least sixty-two varieties of little known woods in the Isthmus of Panama, some of which have very similar characteristics to hickory.

There is yet much information to be gained regarding the drying of stock. From the manufacturer's point of view the greatest difficulty in drying lumber is the length of time required. New kinds of kilns are constantly being devised with special reference to the speed of drying. There is great need throughout the trade for methods of kiln drying lumber that will require no preliminary air-seasoning, since the latter

course necessitates a heavy investment for yard space carrying with it an increased fire risk.

Throughout the entire trade much attention is given to the saving of all useful material. The processes of manufacture have gradually been perfected until a high degree of efficiency has been reached in the conversion of the raw material into the factory product. Probably the greatest loss to the manufacturer lies in the inaccuracy of the grading system. Much good material is wrongly graded on account of popular prejudices founded upon an inadequate knowledge of the properties of wood. Controversies as to what constitutes a defect are constantly arising. The traditional prejudice against the use of red hickory is a good example of this. This prejudice has been so strong that very incomplete utilization of the logs in the woods has resulted. In a wood so valuable as hickory there should be complete utilization. There should be a uniform system of grading established, standardizing defects and sizes by mechanical tests. A system inaugurated upon this basis would insure fairness to both buyer and seller.

The growing of hickory upon a commercial scale has been advocated by some manufacturers while others have not endorsed the plan. Hickory is generally, though wrongly, considered to be a slow growing tree. While many of the hickories have only a medium rate of growth, several of them may be classed as rapid growers. In their silvical characteristics most of the hickories are light-demanding, but recent observations have brought out the fact that one species is shade-enduring and grows in close mixture with other hickories. Before commercial plantations are established the rate of rapid growth and silvical characteristics of the species best adapted for trade use should be determined in order to prevent any subsequent loss.

There is a growing need for more technical and scientific knowledge in the art of vehicle building. Many manufacturers are now seeking for men who have a technical knowledge of the properties of woods and the mechanics of wood working, together with a clear understanding of trade conditions.

New Michigan Hardwood Flooring Plant.

The Manistee Planing Mill Company, while a comparatively new factor in the flooring industry of the North, is rapidly becoming an important one. Its factory and dry kilns were completed and it began operations December 1 last, with an equipment which embodies all the latest features necessary for the production of a high-grade product. The company prides itself upon the expert workmen which it has secured for every department, and in the organization of its crew made it a point to engage only experienced men with a thorough knowledge of what constitutes a perfect product, and how to accomplish that result. This idea was carried out even to the least important hand about the plant, as the company determined not to take on inexperienced help with the object of teaching them the business and thus taking a chance of putting inferior maple flooring on the market. In following this plan it was found that during the first day's operation the flooring which was made was "right" in every particular, and the company believes that today its product is equal to any that is manufactured.

The capacity of the plant is about 5,000,000 feet annually, and a timber supply is available which will keep it running for many years to come. The best evidence of the fact that a fine product is being manufactured is the good volume of trade in maple and beech flooring that is coming in. While this department is as yet new, the company has had wide experience in planing mill work, and is now operating a mill in Manistee at which lumber is dressed for several of the largest local institutions.

The officers of the Manistee Planing Mill Company are John and Joseph Vollmer and W. H. Green, all of that city.

Meeting Wisconsin Hardwood Manufacturers.

The Hardwood Lumber Manufacturers of Wisconsin held a special meeting at the Pfister hotel, Milwaukee, Wis., on Wednesday, June 26. President Charles A. Goodman, of Marinette, occupied the chair, with Secretary George H. Chapman recording.

The meeting was held particularly to ratify or adopt the grading rules on hardwood lumber which were perfected some time ago by a joint bureau on grades representing the National Hardwood Lumber Association, the Michigan Hardwood Manufacturers' Association, the Indiana Hardwood Lumbermen's Association and the Hardwood Lumber Manufacturers of Wisconsin. The membership of the latter organization is now thirty-five, representing a total annual output of about 150,000,000 feet of hardwood lumber—a very excellent showing for an association yet in its infancy, it being at the present time considerably less than a year old. To the Wisconsin

The report of Chairman A. R. Owen, of the grading committee, is herewith reproduced, as being the most important paper presented to the gathering. After concluding his statement, Mr. Owen read the changes in the National rules adopted at Atlantic City, explaining clearly and minutely every detail in connection therewith.

Report of Grading Committee.

At the early meetings of your committee it became apparent that the first work we would have to do in order to give the members of our association all the benefits of an inspection system was the revision of the existing grading rules, which we found did not meet the present day conditions. At the time these rules were formulated the grades were made with a view to their uses at that time. Since then, however, lumber has become scarcer and more valuable, timber in the woods is being cut closer than ever before and consequently the lumber produced contains more low grades. Consumers have not only substituted less valuable woods than they have heretofore used, but they are also using poorer qualities of the same material.

ATTAINMENT IN VIEW.

Your committee, after taking these things into consideration, believed that the present rules should be revised, giving more grades, and that these grades should be made with a view to their uses. At one time we decided and did recommend some changes in the grading rules. We even went so far as to draw up and consider an entirely new set of rules. We came to the conclusion, however, that no hasty action in this matter should be taken, and that a set of rules drawn by us would simply be a local affair and would probably be known only in this section of the country. What we wanted, we believed, was a set of rules which would be as nearly universal as possible. Our members should know when a carload of lumber is graded in their yards and shipped to New York, San Francisco or any other place, that it will be inspected by the consumer or the one receiving it, under the same rules and along the same lines as it was in their own yards by their inspectors. This led to the conclusion that the best thing to do was to arrange for meetings with committees of other associations to find out what their views and requirements were.

GETTING TOGETHER.

With this in mind, your committee was represented at the meeting of the Michigan Hardwood Lumbermen's Association held at Grand Rapids, Mich., on May 5. We met with the grading committee of that association, presented the set of rules that we had drawn up and which we believed would fit the conditions in Wisconsin, and also received from them a copy of their recommendations to their association. We found that Michigan varied little from us in their views, but they did not go as far as we desired. After some negotiation it was arranged that a committee from Michigan, Indiana and Wisconsin should meet the inspection rules committee of the National Hardwood Lumber Association in the Rector building, Chicago, on May 19.

In addition to the committees present, various other lumbermen and members of other associations were present. The discussion was general in character, and was participated in by nearly all who attended. There was a disposition shown by the National committee to bring out as fully as possible every one's ideas with a view of obtaining all possible information. At the request of Mr. Fathauer, chairman of the National committee, a member of the Michigan and Indiana committees, as well as myself, were

requested to remain and to attend the meetings of the National committee. We met with this committee the following morning and remained in session with them four days. At this meeting every section of the country, its woods and requirements were carefully considered. The result was the formulation of the report as presented by Mr. Fathauer to the National association at its meeting in Atlantic City, a copy of which I have filed with your secretary and which I believe had best be read.

BUFFALO AGREEMENT.

As you doubtless all know, at the meeting of the National association above referred to the Buffalo resolution was rescinded and the recommendations changing their rules as made by its committee was passed to take effect December 1 of this year. I want to take this opportunity of saying that I was very well impressed with the manner in which all members and their views were received by the National committee. They showed a desire to be fair, to get all the information possible and at the proper time to consider this information in formulating their report. Unquestionably the reports and recommendations made by committees are only too often drawn up hastily and without proper con-

C. A. GOODMAN, PRESIDENT HARDWOOD MANUFACTURERS OF WISCONSIN.

sin manufacturers is due credit for having accomplished as much or more than any other faction in securing the revision of the National rules, and their acceptance by that body. As is well known, the rules submitted by the joint bureau of grades, were adopted by the National Hardwood Lumber Association at its Atlantic City meeting, and their ratification was practically the only business transacted at the Milwaukee meeting of the Wisconsin manufacturers. General reports were presented by the various officers regarding the work that has been accomplished by the association since its organization in December, 1906, and evidencing that it has the backing of practically all the hardwood manufacturers of Wisconsin; also that the jobbers as a whole approve of its methods and efforts to accomplish measures for the general good of the trade.

GEORGE H. CHAPMAN, SECRETARY HARDWOOD MANUFACTURERS OF WISCONSIN.

sideration, but I believe the above referred to committee has done its work thoroughly and with fairness to all.

PERFECTION NOT YET ATTAINED.

This report naturally does not meet the views of your committee in every way. There were some things that have been recommended that we do not like, and others that have been left out which we would like to have seen adopted; but we believe that it is better to have a set of rules approaching universality, even if in the getting of them we have to sacrifice some of our local ideas. We believe you will agree with us in this conclusion. We found after attending these meetings that it was a much larger proposition to make grades for four and one-half billions of lumber scattered all over the country than it was for us to make rules for the five hundred to six hundred million feet of hardwood lumber which is annually produced in Wisconsin.

COMMITTEE'S RECOMMENDATION.

Your committee respectfully asks and recommends that we adopt the Wisconsin or National

rules, revised in accordance with the recommendations of this joint meeting. We also recommend that these rules be called "the National rules as adopted by the Hardwood Manufacturers of Wisconsin."

I have already called your attention to the fact that these rules do not meet our ideas at all points, still we do believe that they are a long step in the right direction and doubtless the most radical that have ever been made in a set of grading rules in so short a time. We must not lose sight of the fact that all of the hardwoods of the country are competitors and it is an advantage to all of us to have them meet on the same basis of grading.

INSPECTION.

At the same time your committee was carrying on these negotiations and consultations in reference to the grading rules, it was working on an inspection system along the lines proposed by your organization. As you know, we have had an inspector calling at your yards and mills for something like four months. About six weeks ago we were able to send out another inspector and we proposed to keep as large a force of these men at work as may be required to give the information desired. Our intentions are that these inspectors will not only inspect the lumber in your yard and the grading of it, but will also go into your mills and recommend any changes in the way of the manufacture which they believe would make your stock more valuable. They will also have an eye to the piling and handling of your stock—in fact will give information on everything to do with the handling of lumber from the time it enters the mill in the form of a log until you have put it on the car.

We have been called on in several instances to reinspect shipments and are trying to get this bureau organized so as to be able to do more of this class of work.

SOLICITS COÖPERATION.

We believe that our system is far from perfect, but as you all know and realize it takes a lot of time and a lot of work to get it in proper condition. It will require the hearty support of our members to bring this work up to the high standard desired—we mean support in the way of recommendations or information in regard to your inspectors, mode of inspection or anything pertinent to the subject. We believe this will all tend to promote the best interests of our association and the work it has undertaken.

After considerable discussion concerning freight rates to the west coast, the work of southern lumbermen in securing refunds from the railroads, and the adoption of a motion instructing the railroad committee to act with other associations in an effort to have rates to the Pacific coast reduced, also one to the effect that grading rules on siding and ceiling be submitted to the association, the meeting adjourned.

Those present were:

Attendance.

J. R. Andrews, Andrews & Roepke Lumber Company, Birmamwood.

D. J. Arpin, Arpin Hardwood Lumber Company, Grand Rapids.

W. O. Barndt, Stolle Barndt Lumber Company, Tripoli.

O. H. Brightman, Bird & Wells Lumber Company, Wausaukee.

F. W. Buswell, Buswell Lumber and Manufacturing Company, Minneapolis, Minn.

W. H. Bundy, Rice Lake Lumber Company, Rice Lake.

Harry N. Carter, Daniel Shaw Lumber Company, Eau Claire.

George H. Chapman, Northwestern Lumber Company, Stanley.

John R. Davis, John R. Davis Lumber Company, Phillips.

C. K. Ellingson, Ellingson Lumber Company, Hawkins.

Frank F. Fish, National Hardwood Lumber Association, Chicago.

George E. Foster, Foster-Latimer Lumber Company, Mellen.

G. C. Flanner, Flanner-Steger Land & Lumber Company, Blackwell.

Frank A. Fuller, Edwards Lumber Company, Oshkosh.

L. E. Fuller, Lumber World, Chicago.

Charles A. Goodman, Sawyer-Goodman Company, Marinette.

Lee W. Gibson, Medford Lumber Company, Medford.

W. A. Holt, Holt Lumber Company, Oconto.

W. W. Heineman, B. Heineman Lumber Company, Wausau.

S. W. Hollister, Hollister, Amos & Co., Oshkosh.

Edward A. Hamar, Worcester Lumber Company, Chassell, Mich.

J. W. Kaye, Westboro Lumber Company, Westboro.

C. F. Lusk, assistant secretary, Thorp.

Guy Nash, Nash Lumber Company, Shana-golden.

George P. Noble, Milwaukee.

A. R. Owen, John S. Owen Lumber Company, Owen.

F. H. Pardoe, Fenwood Lumber Company, Wausau.

J. T. Phillips, Diamond Lumber Company, Green Bay.

M. J. Quinlan, Menominee Bay Shore Lumber Company, Soperton.

G. C. Robson, C. H. Worcester Company, Chicago.

W. H. Roddis, Roddis Lumber & Veneer Company, Marshfield.

P. H. Shafer, Ellsworth Manufacturing Company, Hawkins.

H. H. Stolle, Stolle-Barndt Lumber Company, Tripoli.

C. C. Uber, Bradley Company, Tomahawk.

Tom R. Wall, Wall-Spalding Lumber Company, Oshkosh.

A. R. Week, John Week Lumber Company, Stevens Point.

F. E. Wheeler, chief inspector.

Hardwood Record Mail Bag.

[In this department it is proposed to reply to such inquiries as reach this office from the HARDWOOD RECORD clientele as will be of enough general interest to warrant publication. Every patron of the paper is invited to use this department to the fullest extent, and an attempt will be made to answer queries pertaining to all matters of interest to the hardwood trade, in a succinct and intelligent manner.]

Who Wants Ebony and Cedar?

CINCINNATI, O., June 27.—Editor HARDWOOD RECORD: We are in correspondence with a gentleman in Maracaibo, Venezuela, who advises us that he has a lot of ebony and cedar which he would like to export to this country, as well as other woods, which he can deliver in very large quantities. The dimensions of these woods are 7 inches and upwards in diameter, and 11 feet and over in length, all of the best quality. We thought it might be wise to place this information before your readers, as it is sure to be of interest to someone, and we would also suggest that you send our Venezuelan friend a copy of your paper.

—MACHINERY COMPANY.

As the writer of the letter suggests, someone will doubtless be interested in the above item; the address of the gentleman wishing to dispose of the stock will be furnished upon application to this office.—EDITOR.

Wants Cypress Dimension Stock.

QUINCY, ILL., June 27.—Editor HARDWOOD RECORD: We are about to put a washing machine on the market, and are anxious to get in touch with cypress mills and arrange to secure the parts all cut out ready to be assembled. We will want this stock in carload lots. If you can furnish us with the addresses of several located in the South we will appreciate it.

—COMPANY.

The writer of the above will be supplied with names of any firms who wish to get into correspondence with him relative to supplying the cypress stock wanted.—EDITOR.

Dogwood and Persimmon Stumpage.

PORTSMOUTH, VA., June 22.—Editor HARDWOOD RECORD: Can you give me any information or the address of anyone from whom I might ascertain a locality where dogwood and persimmon grow in sufficient quantities to justify mills?

L. E. D.

The writer has been supplied with the names of several houses which control mills

on property containing more or less stumpage of these varieties, but they may not be able to give him the information he wants. Anyone who can do so will be conferring a favor by writing to this office.—EDITOR.

Chicago Wholesale Lumber Dealers' Association.

At a dinner given by the D. S. Pate Lumber Company and the George T. Mickle Lumber Company, at the Chicago Athletic Club on May 15 last, the idea of forming a new organization among wholesalers engaged exclusively in the sale of northern and southern pine and hardwoods was brought up, with the result that last week the new association became a reality, and articles of incorporation were filed at Springfield.

The objects of the association will be to promote the general welfare of the wholesale trade; to coöperate with other associations to mutual advantage; to protect members from unjust exactions or demands; so to correct abuses in the conduct of the lumber business as may be to the advantage of the members; to promote uniformity in the customs and usages of the trade and to diffuse reliable information among its members.

Before members are admitted to the new association every precaution will be taken to see that the moral standing of the applicant is all that it should be, in order that the class which ordinarily presumes upon membership in standard associations to practice irregular methods and chicanery may be excluded. Offices will probably be secured in the Rector building, and a permanent secretary will soon be secured to take up active management of affairs. The Chicago Wholesale Lumber Dealers' Association starts out with the following representative membership:

Frank B. Stone.

Turnbull-Joice Lumber Company.

Brookhaven Lumber Company.

D. B. Douglas & Co.

George W. Koehn.

Anguera Lumber Company.

Estabrook-Skeele Lumber Company.

C. D. Benedict & Co.

Buckner-Saunders Lumber Company.

W. A. Messer Lumber Company.

Nourse-Taylor Lumber Company.

Krum, Griffith & Co.

Marsh-Hathway Company.

Howard D. Casey & Co.

Schultz Bros.

Frank Porter.

W. A. Herbert & Co.

Chicago Lumber and Coal Company.

E. A. Thornfon Lumber Company.

George T. Mickle Lumber Company.

D. S. Pate Lumber Company.

Skiddoo.

By VAN B. PERRINE.

If you were down to Atlantic City about May twenty-three,
The date "skiddoo" applied to rules the old ones you will see
If you went down there intending to do what you could do
To help fix up inspection rules and see that they went through,
You were mighty glad to notice that most of them down there
Were very earnest and tried their best to make 'em fair and square.

This, of course, was the National meet, the jobbing men and all,
Including the fellow who cut the logs, with profits mighty small,
Who had to buy his timber while 'twas standing on the stump,
The cash right down for every piece, no matter how big the lump,
Who put his money in the same, where for several months it stays,
And then he sells to the other chap on terms of "sixty days"—

This is an old trade custom, established years ago,
But like a lot of other things must sooner or later go—
The millman once could stand it, when the timber didn't cost,
But now sometimes his profits go—in this discount if it's lost
Because it doesn't matter how much he happens to own,
He always has to borrow the cash and pay interest on the loan.

Does any millman figure? Does he keep it so he knows?
Just how much this interest costs, how mighty big it grows?
Does he keep the discount item? And add it to the same?
When he figures up at invoice time, his profits in the game—
Because it's quite important, and should be added to the price:
All the buyers want one per cent, when multiplied just twice.

But getting back to the inspection, it seems there's now a show
To figure out a set of rules that everywhere will go,
That will suit the manufacturer and please the jobber too,

Suit the wholesale dealer and the yardman through and through,
And suit the fellow who cuts it up, in furniture or in trim,
The differences now, as all can see, are getting mighty slim.

It doesn't make much difference about the inspection rules,
Or whether the man who buys the stock about the discount fools:
The fellow who cuts it out, you know, should figure on his cost
And make a price to cover things, so discount won't be lost,
So the sooner we get together and make all rules the same,
The better it'll be for everyone who's playing at the game.

If you belong to either faction, or association we will say,
Both the Manufacturer and the National man should pray
That they will come together and fix their troubles quick,
A lot of different inspection rules is making the buyer sick.
He's got to have our lumber, and we've got to have his trade,
So let's fix up the same set of rules, and call them any old grade.

While the man who buys the lumber wants it then and there,
He won't care much about the rules, if only they're fair and square,
So he knows what he's a-doing when he sends his orders out,
And can figure on what grade he'll get, or figure thereabout.
So, then, let's get together, Manufacturer and National man:
If we let old pride skiddoo outside, no doubt but that we can.

Just think the matter over and see what can be done
To figure out a good way, so things will smoothly run,
So one don't cuss the other if he isn't on his side,
And don't give up without hard work till everything's been tried,
Because just now I figure (if what I hear is true)
The only way to fix things up is to say to pride—"Skiddoo!"

News Miscellany.

Announcement.

Dr. Herman von Schrenck of the Missouri Botanical Gardens, St. Louis, announces under date of July 1 that for the purpose of establishing a technical laboratory and consulting office devoted to the prosecution of investigations into the uses of timber, he has resigned his position as pathologist in charge of investigations of timber diseases and methods for preventing them in the United States Department of Agriculture. Believing that such investigations can be more effectively carried on by direct affiliation with the actual users of timber in its various forms, he has opened an office and laboratory at Tower Grove and Flad avenues, St. Louis, and become associated with E. B. Fuls and A. L. Kammerer, who for several years have been conducting timber preserving experiments for various railway companies. The office and laboratory is prepared to carry on investigations and make reports on all problems dealing with the best methods for handling and utilizing timbers; the closer adaptation of the qualities of any and all kinds of wood to special uses will be looked into; determination as to the character and value of various preservative processes for increasing the length of life of timbers will be made. The office will be prepared to make reports on problems dealing with logging methods, the manufacture of lumber in its various phases, dry kiln operations, wood waste utilization, paper pulp industry, the manufacture of special articles, the seasoning and preservation of timber in its various forms, such as ties, telephone poles, mine props, posts, etc., the adaptation of various timbers for building purposes, and problems relating to railway track and bridge construction. In addition to these general problems of wood utilization, arrangements have been made with a prominent firm of consulting forest engineers to handle all problems dealing with the planting and management of timber lands. It is the aim of the office to stand ready to advise users of wood concerning all phases of forest operation and timber utilization, to the end that the longest and most efficient service may be obtained therefrom.

With the increasing scarcity of timber and its increasing cost it is becoming necessary to use improved methods of handling in order to obtain the greatest benefit therefrom, and it is believed that a technical office of this kind will appeal to all users of timber. Because of Dr. von Schrenck's past experience in charge of such a work for the United States Department of Agriculture, covering a period of ten years, and because of numerous connections with those interested in timber preserving and timber utilization problems, both in this country and abroad, he believes that he can call attention to the work to be carried on with considerable assurance.

Ottawa Valley Lumber.

This year's lumber cut in the Ottawa valley is going to be one of the largest on record. The lakes, rivers and brooks are full of water, and logs are coming down the Ottawa river in fine shape. Most of the mills are putting on extra gangs of laborers and some of them are running night and day. The demand for lumber from this region has been much in advance of the supply of late, and mills are being crowded to turn out every foot of marketable product that their machinery can take care of.

Stocks of high-grade lumber at milling points have been practically exhausted for some time in meeting foreign demand, and dealers are compelled to take up almost anything they can secure for local consumption, the high-class stock being retained for the export trade. Thousands of logs were held up in the upper reaches of the Ottawa and tributary streams all last year, on account of low water, but they are now coming down along with last winter's cut. The river during 1906 was much below its average depth, while it is now far above the usual stage.

New Mississippi Enterprise.

C. E. LeCrone, who for a number of years was connected with the Advance Lumber Company of Cleveland as southern representative, and his brother, F. B. LeCrone, formerly with W. E.

Kelley & Co., Chicago, in a like capacity, have, with W. M. Deffenbaugh, purchased the sawmill and timber holdings of the firm of Deffenbaugh & Berry, located near Ezra, Miss. As Mr. Deffenbaugh is from Springfield, Ill., and the LeCrone brothers from Springfield, O., they have called their concern the Springfield Lumber Company, and on account of the number of fine holly trees surrounding their plant, they have christened the place "Holly Park."

The company is exporting holly logs and since purchasing the plant have added a dimension mill which will be used in cutting cull stock into dimension stuff. Last week they closed a deal for an additional 5,000,000 feet of timber consisting of choice red and white oak, red gum, cypress and ash. They also have options on several more tracts which they expect to close up in the near future. This puts them in excellent shape to take care of their trade for some time, and in addition they control the output of several other hardwood mills. Mr. Deffenbaugh has charge of the mill and logging operations, F. B. LeCrone of the office and commissary, while C. E. LeCrone looks after the financial end of the business and the output of their other mills.

Death of William H. Perry.

William H. Perry of Cincinnati died July 1 of Bright's disease, after an illness of over a year. While his health has been failing steadily for many months, Mr. Perry continued in active business until Friday, when he took to his bed. He was president and director of the W. H. Perry Lumber Company and assistant general superintendent of the Baldwin Company.

Mr. Perry was a native of southern Ohio. He leaves a widow and two sons, Dr. Frank Perry and Dr. Ed. Perry of Indiana. During the exposition at St. Louis Mr. Perry was appointed a member of the commission of awards in the lumber exhibits, and after the completion of the work of that body it was said that he was the best informed man on the commission.

Mr. Perry will be sincerely mourned by a large circle of friends, who appreciated his many sterling qualities, and particularly by his associates in the lumber trade.

Walnut Burls for Veneers.

J. V. Hamilton of Fort Scott, Kan., has furnished the Record with a number of interesting photographs of walnut logs and burls, some of which are reproduced herewith. Mr. Hamilton is a well known lumberman and exporter and

FINE EXPORT WALNUT LOG.

what he doesn't know about walnut nobody else knows. In a little explanation accompanying the pictures he says:

"There are several kinds of figured wood in black walnut, in each one of which the grain of the timber is twisted or crinkled in a way peculiar to itself. One of the most popular figures used by cabinet makers, furniture manufacturers and others for veneering fancy panels is the black walnut burl. These are quite rare, so much so that they hardly average one to a hundred trees, and very few people have sufficient knowledge to enable them to form an accurate estimate of their value from their formation or general appearance; he must be an experienced dealer in veneers who can with much certainty fix a satisfactory price before the burl has been dissected by the saw or knife, and its interior exposed to view. The burl is sometimes confused with swirl or knurl, and is frequently known by these names, yet it is quite a different product and has a grain and texture peculiarly its own. It is a spinous knot, the surface of which is covered with little conical points which are its distinguishing feature. Only those that grow at the stump or root of the tree, called root burls, mostly covered beneath the earth and thus protected, are valuable, for almost invariably those growing high up on the tree, where they are exposed to the sun and rain, are bark grown and otherwise defective, being full of small cavities, forming habitations for insects which destroy their commercial value and render them worthless.

"A burl may grow in any conceivable form, but the most perfect specimens resemble in shape a huge turnip, the surface of which is covered with small cones or spurs, with points as sharp as a needle, and as it continues to grow in size year after year, these points are covered and others form. In this way the burl is built up and the spotted or dappled appearance called bird's eye is created, a figure which shows up beautifully when cut into thin sheets and highly polished. The roots run out from the under side and edges of the burl instead of from the tree, as usual, as the smaller these roots the better the quality of the veneers it will produce, for the reason that the roots lessen the quantity of straight grained wood it will contain. Special value attaches to them because of the peculiar twisted or distorted grain or figure, and the nature of the figure has all to do with the value, which in the rough ranges from ten cents a pound up to whatever value the dealer may think he sees in it. In tree anatomy an enlargement of this kind would be aptly termed a wood tumor, or morbid action of the sap fluid, producing abnormal or unnatural formation, or degeneration of the tree; at the same time it is a growth that possesses all the firmness and solidity of straight grained and healthy wood, susceptible to a high polish. The burl is caused by a bruise or some other mishap befalling the tree while it is young; nature begins to make good the accident by repairing the injury, but the growth is abnormal and graceful proportions

of the tree are never fully restored, but the blood of the tree, its sap, still flows, and a knot or bump is formed, which finally develops into a great irregular chunk of wood, the burl. The walnut variety is more numerous in localities where the timber is of a stunted or rugged na-

LARGE WALNUT BURL.

ture, and less frequent where it is large and thrifty, and the trees more magnificent in proportions."

The method of converting these burls into veneers is a difficult one, and it is also difficult to describe in such a way that the reader will

J. V. HAMILTON OF FORT SCOTT, KAN.,
THE WALNUT EXPERT.

get a clear idea of the process. They must first be sawn into pieces as one would cut an apple into quarters or halves, but care and judgment must be exercised in opening the burl in order to throw the best and largest flakes or figure on the same block. Special devices, stay

duce the largest sheet of veneers possible, of the most handsome natural pattern contained in the richly "figured" portion.

After the veneer has been produced and all the processes necessary for its creation have been completed, it is ready for the glue-room, where it is spread upon the panel or surface it is to adorn; and it is here that another fine art is rapidly developing. The skill of the artisan who lays and arranges the veneers on the piano case, the table top, or the large panel for the Pullman car, so as to produce the most pleasing appearance, is second only to the skill of the artist in painting a picture, and an equal if not greater amount of practice and experience is necessary. The sheets of veneer are trimmed and turned over, or reversed and arranged in many ways to enhance their attractiveness. Frequently the widest and most prominently figured ends of stump figure or crotch or feather are so nearly placed in conjunction with each other in the center of the panel as to blend perfectly and produce a most beautiful and striking appearance.

The Ideal Kiln.

It is safe to say that the subject of kiln drying has received more attention during the past two years than was given it during the preceding twenty years, with consequent improvement in methods and results, but that the ideal kiln is not yet in general use is proven by requests for information which pour into the offices of kiln manufacturers who advertise positive results by their processes.

The old saying, "Well begun is half done," applies very aptly to this, the first step in the manufacture of all wood products, for accurate records kept in a number of plants during the past year prove that proper drying saves not only the waste due to warping, checking and honeycombing, but permits of the lumber being worked much closer to knots and swirls; that it also reduces the cost of both power and labor by rendering the stock straight, soft and free from case hardening. One concern, cutting about 40,000 feet of hard and soft woods daily, estimated their saving last year, directly traceable to improved drying, at upwards of \$5,000, from which it will be seen that the perfect kiln has a field as wide as the lumber industry itself.

Investigation among a large number of plants also discloses the fact that much so-called drying, which is nothing more nor less than baking, is done on a "trust-to-luck" plan, stock being put into the kiln at irregular intervals, the heat turned on and the temperature allowed to go where it will, lumber being taken out when it looks dry, feels dry or smells dry, by someone who very likely has no idea as to the requirements of the plant, very few being found who had formulated any sort of test

BEAUTIFUL PANEL OF REVERSED CROTCH WALNUT VENEER.

blocks, etc., have frequently been arranged to hold the unshapely and irregular sections of wood firmly, though in a tilted or slanting position, so that the knife of the rotary veneer machine will operate in such a way as to pro-

for bringing their stock out in proper condition. Assuming that this lack of method prevails largely throughout the United States, especially with the smaller plants, the following suggestions may not come amiss.

METHOD OF TESTING DRY LUMBER.

Bone Dry, being the absolute test, is taken first. In loading each kiln car, arrange to have one board which you can take from the kiln without disturbing the car. When ready to make the test, saw about three inches from the middle of this board, and from this three-inch piece, cut another strip one-quarter of an inch thick, cutting across the grain, as before. Put this thin piece on an iron plate and keep on a hot steam pipe or the cylinder of your engine from ten to fifteen minutes, then compare it with the piece from which it was sawn and if it does not show shrinkage it is bone dry and the car is ready to remove from the kiln to the storage shed, where it should be dead-piled until used. This period of storage in normal temperature should not be less than forty-eight hours, but should vary to suit the requirements of the plant and can only be determined by experience. This is a point not generally understood, and those having difficulties, such as opening joints and warping in the finished product, may find that careful experiment at this point will overcome their troubles.

Factory Dry is a degree of dryness suited to the needs of the plant and varies with the factory, kinds of wood used and the article manufactured. This test requires more time, but a little experimenting will show the amount of shrinkage required and the test can then be made with as much accuracy as the bone dry test. To determine the amount of shrinkage, cut the three-inch piece from a board supposed to be ready for the factory. Dry and test the quarter-inch strip as before and it will be found to have shrunk a possible eighth of an inch in twelve inches. Now, allow these two pieces to remain in the factory twelve hours or more, where the temperature is in the neighborhood of 70 degrees Fahrenheit, and if they are again the same length, the stock is factory dry and ready for use. If the thin piece does not expand to the length of the three-inch piece from which it was cut, the lumber is not yet factory dry and the test should be made again on the following day.

Half Dry—The testing pieces are worked the same as before, but the shrinkage should be three-sixteenths or even one-quarter of an inch in twelve inches. Allow them to remain in open storage, with little or no heat, for forty-eight hours and if they are again found to be of the same length, the stock is half dry.

After becoming familiar with this method of testing, there is no difficulty in determining just the amount of drying necessary for any class of work, and much time and loss can be saved by testing out each car until experience has taught just what can be done with your kilns. Many manufacturers do not know that stock which is too dry can cause as much trouble as that which is not dry enough, but when the degree of dryness necessary for each class of work has been determined, it is simply the matter of putting someone in charge of the drying who has the ability to work out the solution along the lines above outlined and supplying him with a kiln from which he can obtain the results sought.

Samples of bone dry test pieces, with explanation and useful information, will be sent to interested kiln users upon request, by the Grand Rapids Veneer Works, Grand Rapids, Mich.

This concern became especially interested in the drying question about three years ago, when their business demanded more dry lumber and they discovered that they had no ground space upon which to build additional kilns. They were at that time using the most approved system of drying, having changed regularly as new ideas were put before them, but at the suggestion of their chief engineer, A. D. Linn, expensive testing and recording instruments were procured and a series of experiments started which continued for the greater part of two

years. Useful data was compiled from these experiments, but the discovery of the true secret of drying, the fundamental principle, which brought about a revolution in their methods and gave them results upon the first trial which were hard to believe, was purely accidental.

So absolutely different from anything else in existence are the principles of this process, as applied to drying, that the company decided to protect the same, and patents were allowed them upon the broadest claims without a citation of interference. As soon as they had demonstrated to their own satisfaction that the results first obtained could be duplicated, they began to install the process in the kilns of their neighbors, and wherever introduced the effect has been most satisfactory.

The only drawback to this work of installation is that the results they claim seem so marvelous to a woodworker that he is skeptical. Therefore, they are arranging to erect or remodel two or three ideal kilns in every state in the union—kilns wherein they will guarantee to dry all kinds of stock with the minimum of waste, with the smallest cost for operation and at the same time dry twice as much lumber in the same space as any kiln in existence, and they are now prepared to enter into a contract for an ideal exhibition kiln with a few conveniently located manufacturers in each state.

If you contemplate building a new kiln, if your old kiln is not giving perfect satisfaction or if you desire to double your output on an economical basis, it might be to your advantage to so state, if writing to the Grand Rapids Veneer Works for the bone dry test pieces. If your territory is already covered, they will doubtless write you where you can see the process in operation.

An Interesting Letter on German Forests.

The following communication is from C. A. Schenck, Ph. D., forester of the Biltmore estate of George K. Vanderbilt: it contains some interesting information and figures relative to lumbering as practiced in the oak forests of Bavaria. Dr. Schenck has studied all phases of the subject, both in this country and abroad, and is well known to our readers, both as the author of several valuable and authoritative brochures on forestry, and as director of the Forest School which he conducts at Biltmore:

"PISGAH FOREST, N. C., June 22. —Editor HARDWOOD RECORD: I have just seen an account of the large auction sale of oak logs annually occurring in the northwestern section of Bavaria, at a point some hundred miles from Frankfurt-on-the-Main, a place famous for the quality of its oak all over Europe. The section in question is the Rothenbuch range, and has been visited by many foreign foresters for the reason that its history is particularly interesting. The mountain range where these oaks are found contains, in the government forests, approximately 30,000 oak trees over 18 inches in diameter, the age of which varies between 200 and 500 years. These trees are considered sacrosanct, and are cut very slowly, according to a preconceived plan—say at the rate of 600 trees altogether per annum.

"The reluctance of the Bavarian government to cut these oak trees at a more rapid speed, has borne good fruits, as appears from the following statement of the prices of oak logs, obtained since 1860 at auction sales, in the woods, of logs cut and left at points approximately ten miles from the railroad:

"Prices of No. 1 oak logs in Rothenbuch range per M feet b. m.: 1860, \$29.60; 1870, \$36; 1880, \$40; 1890, \$77.60; 1900, \$200.

"During the winter of 1906-7, the Bavarian government had cut in the Rothenbuch range altogether 332 oak trees, which were between 350 and 480 years old, obtaining therefrom 777 logs averaging 430 feet b. m. per log, and selling at a price for the logs, left in the woods at points about ten miles from the railroad, averaging \$101 per M feet b. m.

"The best log was 23 feet long, with a diameter of 32 inches. The log was sold at the price of \$251 per M feet b. m.

"The ten best logs showed an average volume of 1,250 feet b. m.; average value, \$231 per M feet b. m.

"The 347 logs next in quality to those given above averaged 590 feet b. m., and brought an average auction price of \$125 per M feet b. m.

"The remaining 420 logs, averaging 275 feet b. m., were sold at an average price of \$52.50 per M feet b. m.

"The prices obtained for these logs—white oak of slow growth, fine texture and great softness—will amaze American producers of oak lumber, and still more American owners of white oak stumpage. The remnants of white oak stumpage in the old country of so-called primeval character, are very scant, and high prices are obtained, for the mere reason that the owners—mostly state governments—hoard and hoard their scant holdings with the utmost care, cutting only a small percentage of the trees in their possession each year, and offering to the market a smaller amount of stumpage than it desires and requires.

"Sooner or later the time must come in the United States, too, when white oak logs will be as rare as diamonds, and will bring prices similar to those now obtained abroad. The strongest argument in favor of conservative forestry lies in the rapid and sure advance of stumpage prices paid for primeval stumpage of good quality. Many of us, I hope, will see the time, not more than thirty years distant, when wise owners who have hoarded their stumpage will reap the reward of their wisdom. With kind regards,

C. A. SCHENCK."

New Classification and Grading Rules.

The Hardwood Manufacturers' Association of the United States has just issued its new handbook of the classification, official grading and inspection rules for hardwood lumber and logs. The pamphlet contains eighty-two pages and embraces general instructions for the manufacture, inspection and measurement of hardwoods, as well as the specific rules covering each variety; the rules of the Southern Cypress Manufacturers' Association on tupelo, adopted June 28, 1906; the same association's rules on cypress, adopted May 16, 1907; the official symbols for grade marks and the universal standard log scale.

The booklet bears a red stripe diagonally across the face and back, as a sign that it is the latest edition, and that all prior editions are now void and canceled. Copies may be had for 10 cents each, by applying to the secretary's office in the First National Bank building, Chicago.

Handsome New Catalog.

The Philadelphia Textile Machinery Company, Philadelphia, Pa., is just out with one of the finest specimens of catalog work that has ever been issued by a like concern, published in the interests of its Proctor Automatic Dryer, which is said to be an epoch-maker in the history of veneer manufacture. The company's idea in carrying out the scheme of its new catalog is that a trip, commencing from its shops and passing through various mills which have the dryer in operation, is the most convincing argument that can be presented in its favor; and that, it being impracticable to get all who might be interested to take such a trip, a reproduction of the scenes encountered, in photographic form, would give the observer a fair idea of what the machine is accomplishing. Accordingly views of not only the various departments of the Philadelphia Textile Machinery Company's plant are given, showing the means by which the apparatus is evolved, but also interior and exterior pictures of plants where

the Proctor dryer is in operation, with facsimile letters or testimonials showing the esteem in which it is held by many well known veneer manufacturers. The plants of the Schoenlau-Kukkuck Trunk Top & Veneer Company, St. Louis; the Williamson Veneer Company, Baltimore; the Wilts Veneer Company, Plymouth, N. C.; the Roberts & Connor Company, New Albany, Ind., and others are shown, as are also photographs of the dryer in operation in various other factories.

The company will gladly supply one of these handsome booklets to anyone interested in veneer production.

New Cincinnati Company.

The Bay Poplar Lumber Company of this city, with a capital stock of \$150,000, was incorporated last week by George Unnewehr, William J. Afsprung, Alfred H. Cohen, Alfred Mack, Elias H. Phillips and Godfrey J. Phillips. The company has acquired in fee a large tract of timber lands in southern Alabama, estimated to contain over 100,000,000 feet of timber. Three large veneer mills will be erected near Mobile and others will follow as necessity requires. The majority of the timber is cypress and poplar with a sprinkle of other hardwoods. All the lumber turned out by the new company will be shipped directly from the south to its destination. Offices will be established in Cincinnati, but Mr. Cohen states that it is not likely that the company will locate lumber yards here. Frank Unnewehr, now president of the Unnewehr Lumber Company, will probably be selected as head of the new company.

Starts Improved Plant.

The hardwood lumber and veneer mill of Charles Barnaby, Greencastle, Ind., which was shut down for thirty days, has opened again with much improved facilities in the way of power. Machinists have been working for several weeks installing a new boiler plant, which is one of the finest in the state. Three large boilers are enclosed in brick and concrete, and the tall stack rests upon a concrete foundation, while the rest of the plant is up-to-date in every particular and equipped to furnish all the power necessary should the works be considerably enlarged at any time. Mr. Barnaby has a large supply of fine Indiana oak logs on hand with the commencement of operations in his practically new plant.

Death of Prominent Indiana Lumberman.

Seth W. Cummins, a well known lumber manufacturer and mill owner of Indiana, died at his home in Petersburg, Monday evening, June 24, from injuries received in a runaway Sunday morning. His death was very unexpected, as it was thought his injuries were not of a serious nature.

The deceased was born in Delaware county, Ohio, July 26, 1845, thus he was nearly sixty-two years of age. The funeral services were conducted at the home Tuesday at 9:30 a. m. under the auspices of the G. A. R., of which he was a member, having served his country as a true Indiana soldier in the Seventy-fourth regiment. The remains were taken to his old home, Columbus City, Ind., for burial. Besides a host of friends to mourn his loss Mr. Cummins leaves a devoted wife, one daughter and four sons.

Mr. Cummins was a pioneer sawmill and lumberman, having been actively engaged in the manufacture of lumber at different points in this state before he came here, five years ago, and purchased the Dering Brothers' mill. He was a very live and energetic business man and an honorable, upright citizen. He made lots of friends here and was well known throughout his section of the state, for he drove far and wide in pursuit of timber, while his son and partner, G. L. Cummins, looked after the mill

and yard interests. He bought a tract of timber at Sebre, Ky., and operated the mill plant there until about the end of 1906, when he sold out his interests. He recently purchased a large tract of timber land in Arkansas and was perfecting arrangements to operate a sawmill plant at Stuttgart early this fall. Mr. Cummins was a man who enjoyed life and seemed much younger than he was. Confidence in himself and the firm belief in a bright future for the lumber business held this earnest worker to his cause and his achievements bear ample witness to the infallibility of his foresight and judgment. In the passing of this lumberman a shock is sustained by those closely allied to him which causes the deepest sorrow and a sense of irretrievable loss to his family and the community at large.

Marriage of Popular Lumberman.

Miss Mary E. Birge and Henry Ballou were married recently at the home of the bride's mother in Franklin, Pa. They will reside in Mr. Ballou's handsome home at Cadillac. Miss Birge was formerly employed in the State Savings bank, while Mr. Ballou is superintendent for Cobbs & Mitchell, Inc., the great Cadillac lumber and maple flooring concern. He is one

HENRY BALLOU, CADILLAC, MICH.

of the best known and best liked lumbermen of the north country, and is active in association affairs, being one of the prime movers in the organization of the Michigan Hardwood Manufacturers' Association; he is also prominent in Cadillac banking circles. Mr. Ballou's many friends and associates in the trade are extending him congratulations, in which the *HARDWOOD RECORD* heartily joins.

Handbook of the Trees.

A publication designed to meet the wants alike of the amateur observer of trees, the lumberman and the technical botanist has just been placed upon the market by its author, Romeyn B. Hough, B. A., of Lowville, N. Y., entitled "Handbook of the Trees of the Northern States and Canada." To accomplish this task, generally considered quite impossible, the camera has been depended upon to portray characters, and after a vast amount of experiment and field work, a series of illustrations has been perfected which fully meets the requirements. By their aid even a bright school child may know the trees, without reading a word, save the name, and yet the technical botanist finds in them points of equal interest.

The value of the work lies in its accuracy and completeness. Its illustrations cover the field in the following particulars:

Leaves and fruits are photographed against a measured background (a unique plan original with the author) by which the natural size of all parts of the objects is at once apparent. The specimens were photographed while fresh—even before their wilting—and minute characters, as nature of surface, etc., are shown with a distinctness of detail which is remarkable.

Leafless twigs in winter illustrate a method by which the trees may be determined while leafless, a display of characters being shown which is a revelation to those who have thought it possible to identify trees only in summer. The twigs, generally showing a full season's growth, were photographed while fresh, and magnification resorted to when necessary to give prominence to minute details, but natural size is always apparent.

Typical barks of trees, as they are found in field or forest, are shown with natural environment, a 1-foot rule being displayed to indicate size. They show the characters by which the woodman knows the trees.

Wood structure of at least one species of each genus is shown by a series of photo-micrographs of transverse sections magnified fifteen diameters. This interesting feature has been added to furnish a means of identifying woods by comparison, with the aid of a simple magnifier. It is of special value to the woodworker, lumber dealer and all who have to do with woods, and who desire a reliable means of identifying same, as well as to the nature student.

Maps indicating distributions of the various trees carry out the idea of making the work as graphic as possible and these, prepared with great care and based upon all available sources of information, indicate at a glance the area of country over which a tree grows.

The region covered by the Handbook is that lying north of the northern boundaries of North Carolina, Tennessee, Arkansas and Oklahoma and east of the Rocky mountains, extending southward in the Appalachian region to northern Alabama and Georgia. The work represents several years of study, field work and experiment. Nothing but the author's love of the subject and his peculiar vocation could have enabled him to prosecute the work with such care and publish results in so neat a volume at the price at which it is offered. As he is required to be much in the field, gathering the specimens used in the publishing of his wonderful volumes of American Woods—this being a duty which he makes peculiarly his own, in order to be positive of authenticities—he has had unusual opportunity for consummating the elaborate plan of the Handbook. Its illustrations represent 690 negatives, all made on account of scientific value, and its maps 191 line-engravings.

The book in green buckram binding costs \$8, express prepaid; in half morocco, \$10.

Forestry at Michigan Agricultural College.

This department of the Michigan Agricultural College was established by the state board in 1902, and since that time it has been in operation and has made rapid and substantial progress.

It is one of the four 4-year courses offered by the college and has enjoyed popularity from its beginning.

The opportunities for the study of forestry here are exceptionally good for there are several plantations of forest trees that have been established under forest conditions at various times during the past thirty years. These plantations speak for themselves and demonstrate beyond question what these trees will do under like conditions.

The laboratory of this department covers 175 acres of the college farm devoted exclusively to

the use of this department. There are three wood lots in which different methods of treatment are demonstrated. In these pieces of timber the student has actual practice in determining the growth of trees, making valuation surveys, thinning of timber and other features of forestry work such as the recognition of species, habits, habitats and so forth. There are five acres devoted to a forest nursery where thousands of coniferous and deciduous seedlings are grown every year. The student becomes experienced in the different phases and methods of nursery practice. Plants of suitable size are allowed each student for his personal use. The student learns how to collect and store forest tree seeds and makes and stores cuttings of trees that are best propagated in that manner. Sufficient practice is given with the camera and in the dark room to enable the student to make photographs suitable for the illustration of forestry work. The student has enough practice with the transit so that he is able to locate boundaries, determine grades and perform the work of an ordinary surveyor. Topographic drawing is a valuable feature of the work, as it enables the student to put upon paper a suitable map of his field determinations.

Every student candidate for a degree chooses a subject for special investigation on which a thesis is prepared and placed on file in the department.

The instruction is given by lectures, laboratory and field work, bulletins, reports, current literature, and text books.

An interesting and proper feature of the work is a trip that is taken by the combined junior and senior classes each alternate year. The trip covers nearly 500 miles, and visits are made to forestry plantations, furniture and other wood-working factories, alcohol plants, iron smelting works where charcoal is used, lumber and logging camps, pulp and paper mills, and other places of interest to foresters.

The graduates of this department have entered into forestry work before or soon after graduation. The opportunities for engagement in forestry pursuits seem to be on the increase. The field for private work is always open and some of the graduates have engaged in it. Others are employed by private parties or companies. The United States Forest Service may appoint such men as pass the examination.

Whether or not a man should study forestry depends upon the man. If he is sure he would like the work, and is willing to make the necessary preparation there are as good chances for success in this as in other similar occupations.

The Fourth in a Mexican Lumber Town.

CHIHUAHUA, MEX., July 1. The seven or eight hundred Americans in the new lumber town of Medera are preparing to pull off a big Fourth of July celebration that will be about the liveliest event in the state that day. Broncho busting, steer roping, horse racing, baseball and a big ball at night will be the principal attractions. The Sierra Madre & Pacific railroad, in connection with the Chihuahua & Pacific, has arranged a train schedule so that those from Chihuahua who attend can leave here on the night of the 3d and get back on the afternoon of the 5th.

Miscellaneous Notes.

The Edwards-Fair Lumber Company of Wisconsin has incorporated at Little Rock, Ark., with W. A. Fair of Lansing as agent, and a capital of \$50,000.

The Texas Planing Mill & Manufacturing Company has been organized at Fort Worth, Tex., with a capital stock of \$50,000.

The Hardwood Lumber Company's yards at Denver, Colo., were damaged considerably on the morning of July 2 by fire of unknown origin. The loss was about \$150,000.

The Prewitt-Spurr Manufacturing Company of Nashville has decided to add a hardwood flooring department to its plant. A building for the purpose will be erected and all necessary machinery installed. About \$10,000 will be invested.

Owing to overproduction of spruce lumber the Bangor (Me.) mills may shut down for a time in July. Logs cost as much as they did last year and labor is as high or higher, so that there has been no reduction in the cost of producing lumber; still buyers are hanging off with the hope that prices will fall. The price on wide spruce is \$2 to \$4 lower than a year ago and Penobscot mill men claim that no further reduction can be made without wiping out profit entirely.

The Beck Keithley Lumber Company has been incorporated at Little Rock, Ark., with a capital stock of \$20,000.

F. L. Keister of Bowling Green, Ky., is enlarging his planing mill and adding new machinery for the making of high-class furniture.

Winsboro, La., is soon to have another industry in the shape of a pole and shaft factory. Hickory will be the wood used, and about fifty men will be employed.

J. H. Marsh of Oshkosh, Wis., is already com-

mencing to contract for his supply of Christmas trees for next winter. He handles about 20,000 every season and buys the stumpage in June or July. In Forest county, Wisconsin, he finds the finest trees for his purpose, having heavy foliage and beauty of coloring such as are requisites in a pretty Christmas tree.

The Shelby Lumber & Land Company has been incorporated at Little Rock, Ark., capitalized at \$25,000. C. W. White is state agent.

Hardy & Cole are completing the installation of a plant and mill at Gainesville, Ark., and will at once begin the manufacture of hickory handles.

Smith, Garbut & Co.'s large sawmill near Lyons, Ga., was destroyed by fire lately, entailing a loss of \$100,000.

The Wausau Box & Lumber Company of Wausau, Wis., recently burned down. The plant was the property of C. E. Turner and W. B. Schofield, who will rebuild it.

The Elmira Veneered Door Company has been formed at Elmira, N. Y., to make lumber, wood-working machinery and woodwork; it is capitalized at \$40,000.

The New Rochelle Woodworking Company has been organized at New Rochelle, N. Y., with a capitalization of \$15,000.

Hardwood News.

(By HARDWOOD RECORD Special Correspondents.)

Chicago.

E. C. Atkins & Co., Inc., the big saw manufacturers of Indianapolis, are sending out to their friends a handsome little announcement inviting them to make themselves entirely at home in the company's Norfolk office while attending the Jamestown Exposition. Robert B. Nixon is in charge and will place desks, stationery, stenographer and all the conveniences of the office at the disposal of guests.

The Lumbermen's Association of Chicago is attacking the Chicago city ordinance passed June 24, prohibiting the accumulation or storage of shavings or sawdust in any quantity exceeding 3,000 pounds within the city limits. The association has pointed out that this measure virtually prohibits conducting a woodworking plant, which will often accumulate several thousand pounds of offal within an hour's time. It is hoped that the ordinance will be repealed.

In accordance with a provision of the last legislature of Kentucky a contract has been made with the Forest Service for a forest survey of that state, including a complete map showing the location of timber, descriptions of the various varieties, an estimate of the amount standing in different counties, study of logging methods with a view of prolonging the producing power of timber lands, a study of forest fires, their causes and effects, and the various markets for Kentucky timber products. The improvement of the state's timber lands will be recommended, and the passing of a law for their protection.

Frank B. Stone with his wife and children, is spending the month of July in seeing the sights of Alaska and Yellowstone Park.

John P. Wiborg of Cincinnati, of the well-known house, the Wiborg & Hanna Company, was a Chicago visitor several days last week.

Fire which the police attribute to the discharge of fireworks destroyed the plant of the Smith Woodworking Company, 5332 to 5340 Armour avenue, July 4, causing a loss estimated at \$20,000. Smoldering paper or lighted punk dropped in a pile of shavings at 6 o'clock in the evening started the blaze.

The National Wagon Manufacturers' Association, of which E. W. McCullough is secretary, has moved its offices to rooms 417-19 Home Insurance building, Chicago.

The first annual tournament of the Lumbermen's Golf Association of Chicago occurred

Tuesday, June 25, on the golf grounds of the Glen View Club near Evanston. Percy F. Stone of Rockford, Ill., won the challenge cup presented by the American Lumberman, which will be his until the next tournament, a year from now, when he will be compelled to defend it in order to retain the title of lumber golf champion of the Middle West as well as the cup itself.

The Lumbermen's Association of Chicago has entered the opposition forces which are arrayed against the Chicago Telephone Company in its proposition to put through an ordinance providing for measured telephone service throughout the city. At a recent meeting the organization passed resolutions protesting against the renewal of the company's franchise, and requested that the Manufacturers' Telephone Company be given favorable consideration by the city authorities.

A meeting of the car stake equipment complaint committee was held at the offices of Walter W. Ross, its attorney in Chicago, this week, and brought a number of distinguished lumbermen visitors to the city, among them F. R. Babcock and J. M. Hastings of Pittsburg, E. F. Perry of New York, George K. Smith of St. Louis, C. A. Doty of Doty, Wash., A. W. Seeley of Saginaw, Mich.; O. O. Agler and L. L. Barth of Chicago were also present. The Interstate Commerce Commission will hear the car stake matter Oct. 16.

D. W. Briggs of the Briggs & Cooper Company, Ltd., Saginaw, Mich., was a visitor to this market last week. The company also has an office in Memphis.

H. C. Atkins, president of E. C. Atkins & Co., Inc., Indianapolis, Ind., was recently in Chicago on business.

Francis Beidler of the well-known house of Francis Beidler & Co. left on June 21 for a lengthy tour of Europe. His family accompanied him and they expect to spend three or four months abroad.

I. Stephenson, Jr., manager of the Ludington, Wells & Van Schalek Lumber Company, of Ludington, La., spent a short time in the city last week, en route home from New York, where he had been to receive his family on their return from a European trip.

George Sawyer, a well-known lumberman of Helena, Ark., called upon a number of his Chicago friends recently relative to the timber business in which he is interested.

The Gilchrist-Fordney Company, a new yellow pine enterprise recently formed at Memphis, Tenn., announces that although its mills are located at Laurel, Miss., its sales department will be maintained at 1406 Tennessee Trust building, Memphis, and all inquiries for stock should be directed there. The new company is allied with the Three States Lumber Company. An account of its organization was given in the RECORD of June 10.

Frank F. Fish, secretary of the National Hardwood Lumber Association, is spending the week in Michigan among the lumber trade.

S. G. McClellan, recently manager of the Earle Lumber Company at Simmons, Mich., and previously of the Simmons Lumber Company for many years, has resigned his position to embark in the lumber business on the Pacific coast. He is succeeded by John C. King, formerly of the King & Bartles Lumber Company of Cleveland, O.

Henry Thayer, the well known lumberman-capitalist of Ridgeway, Pa., accompanied by his wife, daughter and Mrs. Hyde, spent last Sunday in Chicago. The party was en route to the Pacific Northwest. Mr. Thayer has extensive timber interests in Idaho and he and his associates have recently acquired large West Virginia hardwood holdings.

N. L. Heaton, assistant to Secretary Doster of the Hardwood Manufacturers' Association, is in the East taking a well earned rest.

There has just been added to the forces of the Hardwood Manufacturers' Association W. L. Jones, an experienced and thoroughly competent hardwood lumberman of St. Louis. Mr. Jones will make his headquarters at the general offices of the association and will have personal charge of the inspection bureau and the handling of the traveling inspectors.

Boston.

Joe Kennedy, well known as the representative of the Berlin Mills Company in this section, has severed his connection with this concern and has become associated with Wendell F. Brown & Co., who are the selling agents for the Conway Company of Conway, N. H. The latter is a new company and is well equipped to do an extensive business.

M. F. Amorous of the Union Pinopolis Saw Mills, Atlanta, Ga., has returned South from his recent visit to Boston. Mr. Amorous came North for the purpose of installing his family for the summer at Cotuit, Mass.

The Child Lumber Company, Putnam, Conn., has been incorporated with a capital stock of \$10,000. The promoters are Chester E. Child, John W. Shipple, Hiram S. Whipple and John F. Carpenter.

The Dohis Lumber Company, Fitchburg, Mass., has been incorporated with a capital stock of \$30,000. The promoters are Seth L. Low, Albert M. Low and Albert L. Walker.

The Keene Manufacturing Company has been incorporated to do business in Keene, N. H. The company will manufacture chairs and other articles of hardwood. The capital stock is \$12,000. The incorporators are Charles Giffin, Merrill D. Parker, Fred A. Ellis, John A. Knight and Charles O. Whitney.

Daniel W. Pingree, who for the past 15 years has been engaged in the lumber business in South Lawrence, Mass., died at his home June 19 at the age of 75 years. He conducted this business under the name of the D. W. Pingree Lumber Company.

A recent shipment of 3,009 logs of mahogany has been received by George D. Emery Company at their yard at Chelsea, Mass. The vessel was loaded at Prinzapulco and Port Limon.

The B. S. Pond Company of Foxboro, Mass., has been incorporated with a capital stock of \$25,000. The company will deal in lumber. The incorporators are B. S. Pond, Harry B. Leavitt and Adella O. Drake.

It is reported that E. E. Dickinson, Essex, Conn., has been in Huntington, Mass., looking over the proposed site for a birch plant. He was accompanied by the manager of his Connecticut plant, William P. Gladwin.

A new lumber firm has been formed under the name of Morrow & Paton, A. H. Paton, Danvers, having purchased the interest in the lumber business of Roscoe Morrill of Amesbury.

The drying room of P. Derby & Co., Gardner, Mass., was destroyed by fire recently, causing a loss of \$5,000. Only hard work on the part of the fire department prevented the fire from spreading through the entire plant. The fire was confined to a basement in the rear of the plant, in which oak and chestnut were being seasoned.

The Wellington Piano Case Company has filed its annual statement. This concern is located in Leominster, Mass., and has a capital stock of \$30,000.

On July 1 the Jones Hardwood Company, Inc., 147 Milk street, moved to new and very commodious quarters at 33 Broad street, in the Employers' Liability building.

New York.

Members of the National Lumber Exporters' Association met the Executive Committee of the trans-Atlantic Freight Conference, 19 Broadway, last week for the purpose of considering matters affecting the exportation of lumber. The lumbermen present were J. L. Alcock and E. M. Terry, Baltimore, president and secretary of the National Lumber Exporters' Association; Harvey M. Dickson, Norfolk, chairman Transportation Committee; Richard W. Price, Baltimore; E. Stringer Boggess, Clarksburg, W. Va.; and W. E. Wheatley, traffic manager for the W. M. Ritter Lumber Company, Columbus, O. The lumbermen were well received and the Executive Committee of the trans-Atlantic conference agreed to recommend to their lines certain suggestions for adoption, and it is expected some interesting announcement will be made later by the Exporters' Association.

Hugh McLean of the Hugh McLean Lumber Company and the Haines Lumber Company, Buffalo, N. Y., was in town a few days last week calling on his customers and looking over the hardwood situation. He states that all hardwoods are in good demand and that prices are strong except a slight easing off in birch which appears to be coming in a little faster than formerly. Mr. McLean is very sanguine of a good trade in July and says his companies have all the business they can comfortably handle.

R. H. Downman, New Orleans, La., has been in this neighborhood for a week or ten days, spending a day or two at Atlantic City. He was on his way to Loon Lake, N. Y., where he expects to spend part of the summer. He said that he regards the cypress situation very strong and believes there is every prospect of a further advance in prices; also that available supplies at mill points are lower than usual for this time of the year.

The affairs of the Ross Lumber Company, 317 West One Hundred and Fifteenth street, against which a bankruptcy petition was filed last month, are progressing slowly. Shortly after the filing of the petition a meeting of creditors was called and a committee was appointed to investigate and report to the creditors, the committee consisting of J. D. Moir of Christy, Moir & Co.; F. J. Johnson of Bliss & Van Auker; T. A. Uptegraff of the Red Cliff Lumber Company; H. S. Dewey of Dixon & Dewey, and a representative of a bank in Jamestown. The liabilities amount to about \$153,000 with available assets of \$85,000, and it appears that the discrepancy is due to accommodation paper of which the Ross Lumber

Company is an endorser, and as the result of which suits were instituted by banks forcing the bankruptcy petition. A second meeting of the creditors was held July 2 and the committee above named suggested that five creditors be elected directors in the Ross Lumber Company to continue the business, restock the yard and operate the finances until the creditors have received sixty-five per cent of their claims. This will be placed before the creditors for consideration.

The woodworking plant of the Weisberg & Mark Company, 92nd street and East river, New York, was badly damaged by fire last week, causing a loss of approximately \$10,000 over insurance. The company states that business will be resumed, and that the only loss will be that resulting from the delay in making deliveries.

J. S. H. Clark of the wholesale firm of J. S. H. Clark & Co., Newark, N. J., and president of the retail concern of Clark & Co., Newark, died June 27 after a few days' illness in the Memorial Hospital at Long Branch. Mr. Clark was born in Germantown, Pa., fifty-seven years ago, and leaves a widow and five children. He was one of the organizers and the first president of the National Wholesale Lumber Dealers' Association, the first president of the New Jersey Lumbermen's Protective Association, and besides his interests in the lumber concerns above mentioned was an organizer of the Wood Fireproofing Company, 29 Broadway. He was a member of the staff of Governor Werts and General Joseph W. Plume. Several years ago Mr. Clark moved his wholesale lumber interests to Tonawanda, N. Y., and then to Bay City, Mich., but for a long while he has been operating at Newark. The funeral services were held on June 29 at the home of his mother in Elizabeth, N. J.

Howard C. Jennings, formerly manager of the Newark Lumber Company, Newark, N. J., who was arrested in the west a short time ago, was brought to trial last week on the charge of defalcation to the extent of about \$35,000. He pleaded guilty and is to be sentenced next week.

Ernest M. Kenna, 66 Broadway, has just returned from the Pacific Coast where he chartered a steamer to carry a cargo of about three million feet of redwood to Glasgow, Scotland. Through his New York office Mr. Kenna is also making some redwood shipments to Germany to be used by piano manufacturers there in making sounding boards. Experiments in the use of redwood for this purpose have proven satisfactory and Mr. Kenna is developing a good trade in this line.

The Sea Coast Lumber Company, 1 Madison Avenue, cypress wholesalers, report a strong cypress situation. E. J. Marsh, secretary, was in the South recently, and he figures on an increase in demand this month, saying that while heretofore trade has been slow, local assortments are rather bad and inquiries indicate that buyers will need stocks quickly. Mr. Marsh does not hesitate to say that he looks for a substantial advance in prices.

The Vacherie Cypress Company, Jersey City, N. J., is the name of a new lumber company, organized under the laws of New Jersey with a capital of \$600,000. The incorporators are William H. Wooden, John S. Hoyt, and Francis L. Slade. The hardwood trade will recall the first two as members of the Hoyt & Wooden Cypress Manufacturing Company of New York and Memphis, Tenn.

Frank R. Whiting of the Janney-Whiting Lumber Company, Philadelphia, Pa., and the Whiting Manufacturing Company, Abingdon, Va., made a few calls on the hardwood trade in this market last week. He looks for a good trade during July and says orders are now coming in at a very satisfactory rate.

The Oyster Bay Lumber Company has been incorporated under the laws of New York with a capital of \$25,000, to succeed the retail lumber firm of A. C. & E. N. Hendrickson, Oyster Bay, Long Island. The incorporators are G. M. Stevens, Jr., New York; A. C. Hendrickson and F. D. Kellum, Oyster Bay.

On July 10, at 11 o'clock, the assignees of the New York Lumber & Storage Company will sell at public auction, at their lumber yard, corner 58th street and 11th avenue, the entire stock of lumber of the company, consisting of whitewood, mahogany, yellow pine, white pine, North Carolina pine, oak, quartered oak, ash, butternut, maple, birch, basswood, cypress, elm, cherry, cottonwood, hazel and spruce, in all about 500,000 feet.

Philadelphia.

The Philadelphia Hardwood Lumber Company reports busy. It has had a prosperous year, and is preparing to meet increased demands. H. N. Pattison of this concern recently returned from a trip through the Pennsylvania mill district, where he made a contract for 400,000 feet of beech, and is making a deal for his house for about 2,000,000 feet of white pine.

Joseph P. Dunwoody of Jos. P. Dunwoody & Co. reports the Norva Land and Lumber Company of Wallaceton, Va., in which his firm is largely interested, fast getting into good working shape. They have already made several shipments of poplar for export. This concern is also going in largely for manufacturing barrel stock. Mr. Dunwoody is spending some time at the mill looking up the situation.

Frank F. Rambo is a busy man. He admits some are crying dull times, but he, personally, has no fault to find with conditions; good orders are coming in right along and from present indications this will be his banner year.

The Pennsylvania Lumbermen's Mutual Fire Insurance Company has verified its prediction of a few months ago that this year would surpass all preceding ones in volume of business. The company reports that it has written twice as much new business for the first six months of this year as its average annual increase since the organization of the company. The Board of Directors' meeting will be held on July 23, at the company's office.

Benj. Ketcham, Jr., reports business good, both in the building and furniture line. He has quite a large stock of lumber on hand and predicts a good fall season.

The Stokes Bros. Company, Inc., does not complain of dullness but is moving along with the busy firms. The headway made during the past few years has been most encouraging.

Sheip & Vandegrift report all departments in their local plant busy and their mills all active. Asa W. Vandegrift, with his wife and Albert Kramer, one of the company's salesmen, is attending the outing of the Western Cigarbox Manufacturers at Detroit, Mich.

The Philadelphia Veneer and Lumber Company does not cry dull times. F. Goodhue, Jr., of this company states that he has just received news from his manager at the mills that they have had a tide of about eighteen feet, something unprecedented, which has brought out a great many logs, consequently they are in shape to supply all demands for months to come. Mr. Goodhue recently took a pleasure and business trip through New England. He visited his home in Attleboro, and at the same time gathered in a good bunch of orders.

The estate of Daniel Buck, one of the largest hardwood retailers in the city, always carries a heavy stock of seasoned material. They state that business is a little quiet just now, as the consumer is cautious in making

purchases, believing a drop in values must come. Stanley E. Buck of this concern left for a three months' tour of Europe on July 2.

Soble Brothers report their mills at Honaker and Okeeta, Va., working right along and the firm's business creditable for this time of year. John J. Soble has just returned from an extended trip through New York state. With the exception of a few lines he found business in fair shape, consequently was able to gather in some good orders. Harry L. Soble is on a fishing trip in Potter County, Pa., where brook trout fishing is of the finest.

Mr. Cumming of the Columbus Saw Mill Company, Columbus, O., and Fred J. Cronin of the Yellow Poplar Lumber Company, Coalgrove, O., were recent visitors to the trade.

The Producers' Lumber Company considers the trade situation fair and as the builders are in full swing, owing to the settled weather, the company recently has closed some good contracts.

The Henry H. Sheip Manufacturing Company was visited by a severe and stubborn fire a few days ago, which at one time threatened the entire works. The fire was confined to the two-story building at the corner of Sixth Street and Columbia Avenue, which was seriously damaged. It is impossible to obtain any definite information as yet regarding the loss, but it can safely be said that the figures will not run over \$60,000. The concern is fully insured. The large five-story building, in which they have their offices, and the new building on Randolph Street, which was recently erected in place of the one destroyed by fire some few months ago, escaped without injury. Repairs will be started in the burned quarter as soon as possible. As the company is very busy at this time they will be inconvenienced somewhat by the loss of room and machinery.

The J. G. Brill Company is rushed with work. They have received an order for 150 double-truck cars from the Chicago City Railway Company. They have also recently shipped a train of cars, nine in number, for the Inland Empire System of Spokane, Wash., comprising two combination passenger, smoking and baggage cars, four passenger trailers, two parlor cars and a combination express car and electric locomotive, all mounted on the Brill high-speed trucks.

The wagon works of Wilson & Childs, Manayunk, was visited by fire on June 20; loss about \$500.

A real estate deal was announced on June 13 in which the old buildings at 974 to 980 Delaware Avenue and 967 to 973 Beach Street were conveyed by Thos. J. Campbell to Frank Buck for \$35,000, then reconveyed to James M. Irwin of James M. Irwin & Co. for \$40,000. The lot measures 80 by 200 feet. The buildings will be razed and the plot occupied as a lumber yard.

The woodworking factory of the York Bending Works of York, Pa., were partly destroyed by fire on June 22. Loss is estimated at \$8,000; insurance \$3,800.

A charter was applied for in Camden, N. J., on June 26 by Michael P. Howlett, John J. Howlett and Archibald Garvin of Camden, under the style of the M. P. Howlett Company, shipbuilders, capitalized at \$300,000.

On June 27 from the yards of the Harlan and Hollingsworth corporation, Wilmington, Del., was launched the steamship St. Helens for the Dodge Lumber Company of San Francisco. Another new steamship, the Olsen and Mahoney, built for the Olsen and Mahoney Lumber Company of San Francisco, was launched on June 29.

Baltimore.

A meeting of much importance to the export lumber trade was held in New York

June 27 by the transportation committee of the National Lumber Exporters' Association, which assembled to confer with the representatives of the trans-Atlantic steamship lines from Montreal to Norfolk. The whole range of subjects involved was discussed and the exporters backed their requests with such emphasis that the representatives of the steamship lines decided to recommend the adoption of the demands without material change. Until this is done no detailed information will be given out.

Thomas Hughes of Carter, Hughes & Co. is on a fifteen-day visit to his partner, David T. Carter, at Troutdale, Va., where the latter is superintending the operations of the mills run by the Iron Mountain Lumber Company, an allied concern. The Iron Mountain Company has now not less than five mills at work, the fifth having been started a short time ago. The combined capacity of these plants is from 80,000 to 85,000 feet of hardwoods per day, and to expedite operations seven miles of tram road has been built. The new plant is located at Jothmada, some distance from Troutdale. Much rain has fallen in that section of late, and from June 5 to 19 not a train arrived at Troutdale. The company's tram road was also washed out by a freshet. Mr. Hughes will return by way of the Jamestown Exposition.

Arthur A. Asendorf, a brother of J. H. Asendorf of J. H. Asendorf & Co., wholesale lumber dealers with offices in the Stewart Building, went to the morgue on the evening of June 20, let himself in with a key kept in a hiding place by the keeper whom he knew, and turned on the gas. As the process of asphyxiation was not rapid enough he went into the bathroom, closed the door and window, drew the blind and lay down to die. When found on the following day he had been a corpse for many hours. Asendorf was 26 years old and unmarried. He spent much of his time among the lumber piles of the Back Basin and it is reported had been very melancholy for some time previous to his death.

H. B. Olmsted, a traveling salesman for the Lyon Cypress Company of Garyville, La., killed himself on June 30 in his room at the St. James Hotel. He seems to have stood in front of the mirror and sent a bullet through his head, dying instantly. Mr. Olmsted had been at the hotel since last February and seemed to have no worries, as business was good and he frequently exhibited large orders. He was married and about 34 years old.

Holger A. Koppel, a hardwood exporter here and Danish vice-consul, sailed today from New York for Copenhagen to visit his parents.

C. E. Williamson, general sales agent for Carter, Hughes & Co., will start July 15 on a two weeks' trip to Cincinnati and other points in the Middle West.

Among the visiting lumbermen here recently was H. W. Fugate of the Fugate Lumber Company of Richlands, Va. He called on various hardwood firms.

C. B. Houston, a wealthy and prominent lumberman of Wilmington, Del., died at Atlantic City June 27 of a complication of diseases from which he had suffered for two years. He was 60 years old and is survived by his wife. He was prominent in democratic state politics and served a term in the legislature, being speaker of the senate.

Pittsburg.

The Miller Lumber Company has applied for a Pennsylvania charter. Those interested are Joseph C. Miller, Francis E. McGillick and S. S. Robertson. The company has opened offices in the House building, this city, and will be managed by J. C. Miller, who was for two years Pittsburg man for the Robert H. Jenks Lumber Company of Cleveland.

Bemis & Vosburgh, who have managed all their business from their headquarters in the Farmers' Bank building, this city, have opened a New York office at 12 Broadway. It will be looked after by William W. Powell, Jr., who was formerly associated with the Nicola interests in Pittsburg. Hardwood will be a specialty of the firm's new departure.

The Lanham Hardwood Flooring Company of Louisville, Ky., has advised its Pittsburg customers that it will build a plant for the manufacture of three-eighths inch tongue and groove oak flooring and five-sixteenths inch strips and parquetry.

The Wilburine Oil Company is preparing to build a large cooperage plant at East Butler, Pa., thirty miles north of Pittsburg on the Pittsburg and Western railroad. The output of the plant will be 8,000 finished oil barrels a month. It will employ 250 men and will make a market for a big lot of hardwood for the small mills of western Pennsylvania and eastern Ohio.

The Central Pennsylvania Lumber Company is progressing rapidly with its concrete sawmill near Williamsport, Pa., which is the only one in the state. It will have a daily capacity of 200,000 feet for a single crew and will be operated by electricity. Although the mill is costing the company much more than the ordinary plant the fact that there is a fifteen years' operation here in hardwood and hemlock justifies the outlay in the minds of experienced lumbermen.

The Whitmers are busy in Pittsburg. Manager W. P. Craig says that it is hard to get enough oak to supply the demand, especially in timbers. There is quite a call for their hardwood mill culls this month and beech, birch, maple and oak are "going some."

The People's Coal & Land Company has been chartered in West Virginia with a capital of \$1,000,000 to develop 23,000 acres of coal and timber land along the Gauley river. It is reported in this city that the timber rights have been sold to the Flynn Lumber Company of Charleston, W. Va., which is well prepared to clear off the big tract.

J. N. Woollett says for the American Lumber & Manufacturing Company that the hardwood department is most active in their business. The past month the railroads have been better buyers and the only cause for the slight weakening in hardwood demand seems to be a sympathetic feeling based on the lower prices for white and yellow pine and hemlock.

West Virginia is getting alarmed about her rapidly decreasing timber supply. Lumber has been for the past ten years one of the greatest revenue producers in the state and with the enormous investments of capital on the mountain tracts made by Pittsburgers and other capitalists this income will soon vanish. Now officials are clamoring for a state forestry commission and the influence that they are bringing to bear on the matter may result in such a commission being appointed in the fall. No state is better prepared to grow good timber than West Virginia and with a little legal help it is said that the state's period of lumber producing could be prolonged many years.

The Webster Creasey Lumber Company has a mill at Emlenton, Pa., cutting hardwood and another in Indiana county, Pennsylvania. Its sales of ties along the Pennsylvania railroad and the Pennsylvania Lines have been very satisfactory of late and its chief difficulty has been in getting enough labor of the right sort. Poles are dropping off a little in current demand, it reports.

The Tabor-Harmon Lumber Company, capital \$25,000, has been chartered at Brownell, W. Va., by A. M. Tabor and A. W. Harmon of Freeman, W. Va., and Abram Witt, C. B. Witt and William Walters of Brownell.

Pennsylvania lumbermen are much interested in the report, which seems to be authentic, that the Susquehanna boom is to go. For twenty

years this has been regarded as the largest and strongest lumber boom in the United States. Now it is said that the Susquehanna Lumber Company, having not over two years' cut on the mountains above the boom, will erect a sawmill and cut up all the timber that was used in the construction of the boom. This consists of hundreds of thousands of feet of the finest oak and white pine which went into the boom sticks, pliers and cribs and which will require at least one year to manufacture.

Fred R. Babcock of the Babcock Lumber Company spent a few days at Chicago recently in the interest of the car stake conference. E. V. Babcock of E. V. Babcock & Co. has been at Ashtola, Pa., and has moved his family there for the summer.

J. L. Kendall of the Kendall Lumber Company, who has moved to Obiopolle, Pa.; J. B. Flint and R. H. Erving of the Flint, Erving & Stoner Company have moved to their summer homes on Lake Simcoe, Can.

The Pittsburg Lumber Company has arranged for the building of three miles of narrow gauge railroad near Redwood, N. C., to connect the mills of the Pickett Lumber Company with a large tract of timber. Its capacity at this point is about 40,000 feet a day.

The Lock Run Lumber Company of Pennsboro, Pa., is getting well started and announces that its daily output will be 25,000 feet. The company has a fine tract of timber and most of its lumber will be oak, poplar and chestnut.

R. Lamont & Sons Company is the name of another new concern with a capital of \$50,000 that has appeared in Pittsburg. Its incorporators are: Robert F. Milton, A. and E. J. Lamont. The company will make a specialty of hardwood lumber.

The State Forest Academy at Mont Alto has announced conditions for admission September 1 next. All candidates must be not less than 18 and not more than 25 years of age. Examinations will be held at Harrisburg July 10 and 11 in all the common school branches and a bond will be required of every applicant conditioned to his carrying out faithfully the terms of his contract with the state.

The well known stave mill of J. C. Parsons at Cortland, Ohio, burned two weeks ago. For two years past it has been used as a nail keg factory by Sample Bros. It was for many years the largest mill of its kind in that section and has always been a big consumer of hardwood from the Western Reserve mills.

According to statistics from the bureau of manufactures at Washington, D. C., Pennsylvania lumber mills last year increased from 714 to 1,482 and their output increased from 1,397,164 feet to 1,620,881 feet.

Fred Wilmarth & Sons, who are Pittsburg agents for the Kaul & Hall Lumber Company, are doing a good business in dimension stock. They have a fine lot of mine lumber on hand at their mills at St. Mary's, Pa., where they cut about 140,000 feet a day.

The tie market is brisk enough to keep J. J. T. Penney of the firm of J. E. McIlvain & Co. on the road most of the time hunting stock. He has been in West Virginia for two weeks.

The Clay Schoppe Lumber Company has three mills operating at Ligonier, Pa., cutting oak and chestnut. The prices on the latter are off about \$1 compared with two weeks ago. The company recently filled one of the best hardwood orders of the season in record time, shipping to the eastern market 200,000 feet of firsts and seconds in just twenty days from the time the order was landed.

The Pittsburg Wholesale Lumber Dealers' Association held its annual picnic at Ross Grove June 29. The national game was foremost in the program. Four separate games were played, varying from the initial "lobster ball game" to the final base ball game of three innings between the winners of the preceding two of two innings each. Lunch and dinner were served

on the ground and the crowd of over 100 returned late in the evening to hunt drug stores and physicians to mend the sore spots and relieve the prospective aches.

Buffalo.

The Lumber Exchange is prolonging its meetings into the summer in order to take possession of its new club rooms in regular session. The rooms are now promised by July 15.

The Buffalo Hardwood Lumber Company is still getting oak and other southern lumber from Mississippi by river barge, and adds to it by shipments down the lakes of birch, basswood and the like.

The development of the business of the Empire Lumber Company in the Southwest seems to demand the presence of Manager Janes in that territory much of the time this season. He reports plenty of oak and ash going through the mills there.

O. E. Yeager is still able to get a good lot of oak lumber from his headquarters in Ohio and Kentucky, and his yard is always well rounded out with cypress and poplar.

When I. N. Stewart & Bro. add a new specialty to their old standby—cherry—they make it just as complete as possible. They first added oak and later took up chestnut, making it one of their leading yard stocks in spite of its scarcity.

The Hugh McLean Lumber Company will not fail to keep the shingle situation in mind and if the Pacific coast carries out its plan of a further advance it will be easy to ship in some of the company's white cedars from the St. Lawrence.

G. Elias & Bro. are carrying a large assortment of heavy timbers along with their general assortment of woods and are getting an addition to their yellow pine stock by canal from Virginia.

The new milling center of Beyer, Knox & Co. in Missouri is doing all that was expected of it by way of turning out a supply of oak, most of which is sold in markets not dependent on the Buffalo yard.

A. Miller now has a good lead on basswood and is finding it one of the really good sellers in hardwood.

The Standard Hardwood Lumber Company is one of its own good customers this year, by way of supplying its new table factory with stock. The orders for work at once ran far ahead of the production.

The lake fleets keep the dock yard of T. Sullivan & Co. overflowing with stock, bringing first a full cargo of black ash and then of birch, most of which is sold before it arrives.

Scatcherd & Son are casting about for stock with which to fill their oak orders, a great part of which come from abroad. The Memphis mills of the firm are active, but logs are often very scarce.

When F. W. Vetter took up business on his own account he set out to fill his yard with an all round stock and the fact that he has ash in assortment shows how well he succeeded.

Saginaw Valley.

The Richardson lumber mill and chemical plant at the lower end of Bay City is now above the second story and progressing rapidly. The company expects to have the plant finished and ready for operation in November. The machinery is furnished by the M. Garland Company of Bay City. This company shipped a complete machinery outfit last week to Tower, Mich., for the Keys & Warboys sawmill being constructed at that place.

S. L. Eastman of the S. L. Eastman Flooring Company states that the flooring business is fairly good now and prices are satisfactory. His company is carrying about 1,500,000 feet or more of the finished product in its warehouses, and some 8,000,000 feet of unfinished lumber in the yard. It is also carrying 8,000,000 feet of rough lumber at Bay City.

Bliss & Van Auken are operating their plant day and night and experience a very satisfactory volume of business. They produce flooring and hardwood lumber and are doing a large wholesale and retail business.

W. D. Young & Co. are operating their plant day and night. Trade is fairly good. The firm has acquired enough stock in the tree for a fifteen years' cut and is negotiating for a lot more.

The taking over by the Vanderbilt interests of the Detroit & Charlevoix or Ward railroad, extending from Frederic to East Jordan, will bring several hundred million feet of hardwood timber to the Saginaw river mills. A short line is to be built southeast of Deward, twelve miles west of Frederic, in order to effect a change in the eastern terminal of the road from Frederic to Grayling, and this spur will run through a large body of standing timber owned by Salling, Hanson & Co., which will be cut and hauled to the Salling and Hanson mill at Grayling.

The White Bros. of Boyne City have placed all their standing timber east of the Mackinaw division of the Michigan Central on the market. This indicates that they have abandoned their project for extending their road now running from Boyne City to Gaylord, east to Alpena, as was expected some time ago. Bay City parties are negotiating for some of this timber.

The McCormick-Hay Lumber Company at Saginaw has been doing a good business in native hardwood stocks and in southern hardwood. The company buys heavily in the South and ships direct to customers. It has also purchased a number of million feet of hardwoods at Bay City.

The Kneeland, Buell and Bigelow plant is manufacturing hard maple lath extensively. They are used largely for crating, fitting the purpose finely, and a good trade has been worked up. Several million pieces have been sold this season.

The H. M. Loud's Sons Company is shipping a large quantity of hard timber to Detroit for the Michigan Central tunnel under the Detroit river, and a number of million feet to Port Arthur on the north shore of Lake Superior for harbor improvement work.

The Mershon-Bacon Company is cutting out a large quantity of box material from beech and other hardwood culls.

Grand Rapids.

E. N. Salling and wife of Manistee, were in the city July 1. Local hotels are well filled with furniture people in attendance on the furniture exhibits.

A. L. Dennis of Dennis Bros. has opened a family cottage at Highland Park for the summer.

"Ren" Barker, veteran editor of Reed City, speaking of the recent visit to that city of Ben Wolf, the Grand Rapids lumberman, says: "Ben and the editor were friends back in the days when Cadillac was called Clam Lake; Lake City, Muskrat Lake, and Falmouth, Pinhook. These pioneer days, from 1877 to 1884, were the happiest of our lives."

Bankruptcy proceedings have been started in the United States district court here by a number of creditors, mostly Muskegon men, against the Square Clothes Pin Company of Muskegon. The company is charged with selling the property without reference to the creditors. The case will probably be heard in August. The petitioners are: W. W. Barcus, Henry A. Bauknecht, J. G. Bauknecht, Paul E. Bauknecht, F. A. Backstrom, East Shore Woodenware Company, J. J. Howden Company, Charles S. Clover, B. W. Ladd, C. A. Ladd, Adam Pyle, Towner Hardware Company, Morton Manufacturing Company and the Morse Livery and Transfer Company.

Lewis M. Curry has organized a \$10,000 stock company at Howell for the manufacture of refrigerators.

Charles M. Hackley, son of Muskegon's great benefactor and philanthropist, has bought Mrs. C. H. Hill's residence, said to be the finest home in Muskegon, and will spend his winters there.

C. J. Wilson, for many years with the Grand Rapids & Indiana railway in this city, has accepted a position as assistant superintendent and general freight and passenger agent of the Boyne City, Gaylord & Alpena railroad and has removed to Boyne City.

The Michigan Wagon and Manufacturing Company, which is removing its plant from Jackson to St. Johns, Mich., will soon start operations in the new location.

Cleveland.

C. S. Chesbro, secretary of the Louis Werner Sawmill Company, St. Louis, and family, are spending a few days in this city.

C. H. Mead, master car builder of the Panama Canal & Railroad, was a visitor in this market recently. He reports operations moving along rapidly on the isthmus.

Several local lumbermen joined the Builders' Exchange excursion on a trip to Mackinac Island on the Fourth.

Poplar remains firm and the demand is greater than the supply. White and red oak are moving satisfactorily; prices about the same. Basswood finds ready sale in this market at good prices. Thick white oak and ash are being sought by manufacturers who are having considerable trouble supplying their needs.

Indianapolis.

Another new veneer plant is announced for this city—the Central Veneer Company, which will begin business within the next few weeks. The company was organized by James E. Pitts, Edmund M. Thornton, John A. Hartman, Herman J. Bernard and Henry C. Thornton with \$20,000 capital stock. It expects to manufacture and sell veneers on a large scale.

With a new and modern plant, the Francis Brothers' Woodworking Company has begun business at Rushville. The company went to Rushville from Cincinnati and received a substantial bonus.

Heirs of the late Herman Lauter, well-known furniture manufacturer of this city, have reorganized the company as the H. Lauter Company and will continue the business as formerly. The new company is incorporated at \$150,000 with Alfred, Helena, Flora, Eldina and Sara Lauter and Carolyn L. Robinson as the incorporators.

A planing machine at the factory of the Hoosier Cabinet Works, Newcastle, was ruined a few days ago by a piece of shell found in the heart of an oak that had been obtained in West Virginia. The shell was undoubtedly one that had been fired during the Civil War and was in an excellent state of preservation.

It is announced that the company formerly known as the Heath Morris Company of New Albany is hereafter to be known as the New Albany Box and Basket Company.

July 23 has been set by the Indiana State Railroad Commission as the date for hearing the lumber shippers and railroad men on the question of a revision of log freight rates. The commission has addressed a number of questions to the railroads bearing on the subject, asking whether shippers should be charged for the weight of or be required to furnish the standards used on loading or be required to furnish other appliances for loading. It is charged in the complaint before the commission that the present rate is excessive and that the classification is improper.

On the morning of July 4 Peter Lommel, superintendent of the plant of the Connorsville Furniture Company at Connorsville, was found dead in the wheel pit in the factory engine room. His body was badly mangled and it is believed that his death was accidental.

S. B. Detwiler and C. A. Kupfer of the Forestry Service are in Indiana, preliminary to a forestry survey of the state. The rapidly disappearing timber supply has caused the government to start a movement that will interest farmers of Indiana in forestry. The experts will study the conditions surrounding the successful growing of different hardwoods in various parts of the state.

Frank P. Abbott, the energetic son of F. T. Abbott, a well-known lumberman of Goshen and East Chicago, has entered the political game. Young Abbott seeks political honors as the mayor of "Boyville," the summer camp for boys to be opened at Winona Park. Master Abbott is confident that he will poll at least 500 votes from the cities of Goshen, Elkhart, Mishawaka and South Bend alone. There will be approximately 3,000 boys in the camp for the summer.

Dealers and contractors state that there is a constantly increasing demand this season for oak for finishing purposes in house construction. During the present scarcity of oak, hard pine is being used largely with an oak stain. Although locally lumber prices are at the top notch, there is no falling off in building operations, as evidenced by the fact that during June building permits in Indianapolis reached \$1,054,600.51, as against \$469,017 in June, 1906.

An increase in capital stock from \$50,000 to \$75,000 has been made by the Indiana Tie Company of Evansville.

The Muncie Lumber Company of Muncie, the Case-Fowler Lumber Company of Rushville, the Donner Lumber Company of Greencastle, and Joseph Binford & Son of Crawfordsville have discontinued business.

Bristol, Va.

The Tug River Lumber Company of this city will charter its new railroad from Elberton, Wise county, Virginia, to the headwaters of Powell river. This road is a narrow gauge line and extends back to the company's timber property. The company's big band mill, recently erected on the headwaters of Powell river, has been placed in operation and is now running regularly.

O. H. Vial, a prominent lumber manufacturer of Mountain City, Tenn., was in Bristol this week.

W. G. McCain, head of the well known lumber firm of W. G. McCain & Son of Neva, Johnson county, Tennessee, was a visitor at the local market this week. Mr. McCain's firm has extensive operations in Johnson county, including a big band mill at Neva.

Another Johnson county lumberman was here last week, T. K. Garland, head of the T. K. Garland Lumber Company. This concern owns a large tract of timber in Shady and has begun cutting same.

James Denman of the W. M. Ritter Lumber Company of Columbus, O., was here this week on business. Mr. Denman has charge of the company's big operations at Saginaw and Pineola, N. C., where it has a big band mill and an extensive tract of timber.

Paul Cline of the Tapp City Lumber Company at Altapass, N. C., was a visitor in the city this week. This company is beginning to cut near Altapass on the South & Western on a large scale.

F. Y. Fellows of Philadelphia, representing Soble Bros., well known hardwood dealers of that city, was a visitor in the city this week.

A. H. Miller and others, who are at the head of the Hagerstown Table Works, one of the biggest furniture manufacturing plants at Hagerstown, Md., are in the city with a view to making heavy purchases of hardwood.

Irving Whaley, general manager of the East River Lumber Company of Tamrosh, Giles county, Virginia, was in the city this week and took part in the Fourth of July celebration. Mr. Whaley was formerly with the Tug River Lum-

ber Company of this city. He recently purchased a big interest in the East River Lumber Company, which owns a large tract of timber in Giles county. Mr. Whaley has charge of the company's mills at Tamrosh. He reports business in that vicinity active.

C. H. Smith, Jr., local representative of R. A. & J. J. Williams of Philadelphia, has just returned from Nashville, where he spent a ten days' vacation. He reports the hardwood trade in Tennessee's capital city good, despite the dullness of the business over the country generally.

The Montezuma Lumber Company, which was recently organized in Bristol by George H. Mell of Kane, Pa., and others, has begun operations in Montezuma, N. C. For the present the company's cutting will be let to contract. Mr. Mell will handle the entire output.

Emil Guenther of Philadelphia has become largely interested in lumber operations in Johnson and Carter counties, Tennessee, and has representatives at Butler.

"The prospects are very bright," said Paul W. Fleck, head of the Paul W. Fleck Lumber Company of Philadelphia, who was in the city this week. "The present dullness of the market is, in my opinion, temporary, and I think the next few days will see business pick up and start off with fresh impetus. The prospects in the East in domestic and export hardwood circles are very bright."

J. R. Williams, a well known wholesale lumber dealer of Philadelphia, Pa., having offices in the Land Title building, was a visitor in the local market this week. Mr. Williams is buying considerable hardwood stock in this section. He left for points south and will return via Bristol and spend several days in the city.

The Ralston-Wilson Lumber Company of Parkersburg, W. Va., opened offices in the new Phipps building on Fifth street last week. The company has received the contract for supplying all the cross ties used in the construction of the South & Western railroad from Kingsport, Tenn., to Dante, Va., a distance of fifty-seven miles. E. E. Wilson, vice president of the company, is in charge of the offices here. "We have three mills running on the Clinch river and the present daily output of our own mills is about 700 ties," said Mr. Wilson. "We expect to install other mills and will probably complete our contract with the South & Western in a year. The contract will call for about 200,000 ties. These ties are being made from sound white or chestnut oak, walnut and locust. We will manufacture them ourselves on a large scale and let special contracts." The company expects to remove its general offices to Bristol later and do an extensive lumber manufacturing business in this immediate territory.

E. L. Edwards of Dayton, O., and C. H. Vogle of Cincinnati, the latter representing the Wiborg-Hanna Company, were visitors in the city this week.

The lumbermen of western North Carolina report a lively time at the Battery Park Hotel, Asheville, N. C., on July 3, at a Hoo-Hoo celebration and banquet. There was a large class of "kittens" initiated and the banquet, of course, was the feature of the occasion. The menu was attractively printed on poplar veneer with a Hoo-Hoo cat on either side.

Cincinnati.

The Cypress Lumber & Veneer Lumber Company, formed by the consolidation of the Cypress Lumber Company of Cincinnati and Tutthill & Pattison of Sheffield, Ala., began business under the new name last week, and judging from the way things are coming, the new corporation will be a good business proposition. Orders are coming in as fast as the company can supply them, and J. E. Tutthill, manager of the company, is highly pleased.

The United States Lumber Company has secured new offices on the Walnut street side of the Mercantile Library building, located between

Fourth and Fifth streets. The removal of the offices gives the company better facilities in every way, and increased business is looked for.

W. W. Magoon, formerly connected with C. Crane & Co., has left the lumber business and returned to railroading. He is now general manager of the Camden lines in West Virginia, with headquarters at Huntington.

J. F. Dietz & Co., manufacturers of desks, were visited by a fire recently which caused the death of one employee. The damage sustained by the company was trifling.

Henry Flesh of Cron, Kills & Co., manufacturers of furniture and desks, at Piqua, Ohio, and president of the Piqua bank, was in town during the bankers' convention, held here during the last three days of June. Mr. Flesh reported business in good condition at Piqua.

Thomas J. Moffett, president of the Maley, Thompson & Moffett Lumber Company, is one of the busiest lumbermen in Cincinnati. On committees his name always leads. His last appointment was as president of the Park League, which proposes to beautify Cincinnati at a cost of about \$15,000,000. Mr. Moffett and William A. Bennett constitute a class by themselves, and are two of the hardest workers in the lumber organization, always willing to give of their valuable time to help others.

Joseph Wehry of the Littleford Lumber Company left recently on a business trip through Indiana, Kentucky and Illinois. He will be gone several weeks, as he has a great deal of business to look after.

The records of the Chamber of Commerce for receipts and shipments of lumber during the month of June show a big increase over the year previous. The receipts of lumber this year amounted to 8,685 cars, as compared with 7,522 for the same month last year. Shipments this year were 6,149 cars, while last year they numbered 6,086.

William E. Delaney, general manager of the Kentucky Lumber Company, has returned from a three weeks' trip through Mexico, where he was looking after a tract of land owned by the company. Mr. Delaney will submit his conclusions to the president of the concern and action will be taken later.

F. B. Tolson of Soble Brothers of Philadelphia was in town recently in quest of lumber.

Richard McCracken of the Kentucky Lumber Company has returned from a week's business trip to Nashville, Tenn. Mr. McCracken went to Nashville to attend to several business transactions and also to see that the logs which floated away some weeks ago were sent to the mill at Burnside, Ky.

The chief speaker at the summer dinner of the Lumbermen's Club, which will be held at the Altamont hotel, will be Prof. L. M. Schiel of the Cincinnati public schools. The wives of the members will be among the guests. The club will leave Fountain Square at 4 p. m. in special cars, will witness dress parade at Fort Thomas and will then go to the Altamont hotel.

William H. Perry, president of the William H. Perry Lumber Company, and assistant superintendent of the Baldwin Piano Company, died at the residence of his son, Dr. Frank Perry, of Norwood. He had been ill for only a few days and the end came as a surprise to all his family.

Nashville.

W. E. Norvell, of the local firm of Norvell & Wallace, has been elected by the county court of this (Davidson) county as trustee, to fill out the unexpired term of the late Major John J. McCann. Mr. Norvell won over the hottest kind of opposition. He will still retain his interest in the lumber firm. The office is worth between \$12,000 and \$15,000 a year. Mr. Norvell was for several years a member of the city council and for the past five years has been a member of the county court.

Lewis Doster, the popular secretary of the Hardwood Manufacturers' Association, was in Nashville a few days since conferring with President John B. Ransom relative to moving his headquarters to Nashville. Offices have been secured in the Stahlman building and Secretary Doster and his 'force' of men will remove here in the next few days.

"General lumber conditions the country over have undergone a decided change for the better," says Secretary Doster. "There was some apprehension among lumbermen several days ago as to the outlook. The Wall street flurry was followed by a very late spring which retarded building everywhere and decreased the demand for building material. At the same time there was a let-up in the car shortage and stocks crowded the market beyond demand. Wall street, as far as it relates to the lumber interests, is now in good shape. Weather conditions have become normal and the renewed activity in building promises to soon recoup the lumbermen for the previous losses they may have sustained. Climatic conditions in the South have caused a shortage in the output. There will be a reappearance of the car shortage later in the season. There has been an advance in poplar and hardwoods and all items will keep up normal values. I look for a material increase in the price of certain kinds of lumber on account of decreasing supply."

The Cohn & Goldberg Lumber Company of this city is completing a new mill at Elmore, Ala., where the company has acquired large timber interests. A sawmill of large capacity and a big planing mill are about ready for operations. Mr. Goldberg will go to Elmore to take charge there while the main offices at Nashville will still be in charge of Mr. Cohn.

A reciprocal switching arrangement has been secured by President John B. Ransom of the Hardwood Manufacturers' Association, by appealing directly to the State Railroad Commissioners. The Nashville Terminal Company had delayed matters but the commission straightened everything out satisfactorily. The reciprocal arrangement took effect June 25 and rates have been fixed at \$3 a car.

Arthur B. Ransom of the firm of John B. Ransom & Co. has sold his big brick residence on Hayes street and purchased a large lot on West End. On the latter he has erected an elegant stone residence, into which he will move in the near future.

John B. Ransom a few days ago purchased the famous old Cheatham homestead on the Harding road for \$35,000 and will make it his summer home. It has a fine lawn and grove of forest trees, is on a fashionable pike, and will make an ideal country residence.

Judge W. M. Hart of the criminal court has overruled the motions of J. D. Miller and John Dodd asking for new trials and each has been sentenced to three months on the county road and given a fine of \$25 in each of three cases charging them with malicious mischief, consisting in cutting loose rafts belonging to local lumbermen.

A special from Centerville, Tenn., announces the sale of the Aetna Furnace property of Hickman county to J. J. Gray. The price was \$16,000 and the transfer includes timber rights to some 11,000 acres of land on which is much valuable hardwood.

A peculiar strike is recorded from Jackson, Tenn. The pinners went out at the Coleman heading factory because the matchers demanded an increase of 5 cents a day from them. The pinners, it seems, employ the matchers and pay them at a fixed rate. The management of the plant declined to take any action in the matter.

Report has reached here of a big sawmill explosion at the mill of H. Vandolah, near Palmersville. Charles Brooks was instantly killed and two other men badly injured. Brooks left five children.

McClain & Cook of Lebanon, Tenn., who for many years have been manufacturers of telephone poles, have just closed a deal whereby they get for \$15,000 a tract of 1,274 acres of land in Louisiana. There is said to be enough locust on the tract to meet the demands of the firm for the next ten years.

John T. Crain, representing the P. G. Dodge Lumber Company of Chicago, has purchased the Stokeley-Black sawmill and logging outfit in Dickson county near Charlotte. The timber on the tract is mostly oak and chestnut.

The Lesh Land & Lumber Company has recently been organized at Jackson, says a special from that point. The company is capitalized at \$25,000. Incorporators: H. H. Lesh, W. A. Caldwell, Lawrence Taylor, H. P. Tomlinson, J. C. Edenton, H. Russell and B. C. Edenton.

The stove and heading factory of V. R. Harris at Arlington has been burned. The main factory, dry kilns and stock sheds all went. Loss \$4,000, no insurance.

The new veneering plant which is being established here by the Frederick W. Black Lumber Company of Chicago will be ready for operation by August 1.

Joseph Scheffer & Bro. report a rather unusual experience. Seven months ago a car of red cedar shingles was ordered from a firm in the state of Washington. The bill of lading came long ago but the shingles only arrived a few days ago. When they reached here they were worth \$700 more than when bought. The firm is building a large dry kiln at its north Nashville plant.

C. B. Benedict, general manager of the Sylco Lumber Company in Polk county, reports great progress in operations on its new holdings. The circular saw is now running full time and the big sawmill will be ready in a few days. A line of railroad to the plant will be finished in a few months also. In addition to valuable timber on the tract Mr. Benedict says he has found enough iron ore to rebuild all the railroads in the South. Another company will be organized later to handle the iron.

Recently the Baker-Jacobs Company sold to the American Hardwood Lumber Company a half million feet of common and better poplar for \$17,000. The Baker-Jacobs Company has recently decided to increase the capacity of its sawmill in Lewis county from 15,000 to 20,000 feet a day by adding another saw and rearranging the plant.

The A. H. Card Lumber Company has recently bought a tract of fine white oak timber near Winchester, Tenn.

The Beattie Lumber & Building Company of Shelby county, with a capital stock of \$50,000, has been chartered. Incorporators: E. B. Le Master, T. B. Beattie, S. E. Learnard, J. F. Hunter, Clayde Richert and G. Tidwell.

Memphis.

Lumber manufacturers throughout this section are very much interested in three suits which have been filed with the Interstate Commerce Commission through W. A. Percy, an attorney of this city, in the matter of unjust rates. The suits are: (1) George D. Burgess et al. vs. Transcontinental Bureau et al.; (2) J. W. Thompson Lumber Company et al. vs. Illinois Central Railroad Company and Yazoo & Mississippi Valley Railroad Company et al., and (3) James E. Stark & Co. vs. Missouri Pacific Railway Company et al. The amount involved is said to be about \$100,000 and it is expected that other lumbermen will join in these suits and that the amount may be brought up to a million dollars.

Weather conditions throughout this section have been favorable of late and the mills are making good headway in putting lumber on sticks. There is a good supply of timber on hand and in most cases mills are operating steadily.

The Paepcke-Leicht Lumber Company, which

has offices and yards in this city, has purchased the sawmill of the Helena Box Company. The box plant of the latter concern was burned at Helena some time ago and the mill has not been operated since that time. The Paepcke-Leicht Lumber Company has installed a large box plant at Helena and this is now being operated. The mill will be used in connection therewith.

The Ford-Johnson Company of Helena has changed its name to the Helena Manufacturing Company. It is installing a large plant for the manufacture of chairs and chair stock, and this will be ready for operation in a short time.

The Home Lumber Company of Binghampton, a suburb of Memphis, has been incorporated with a capital stock of \$10,000. Among the incorporators are R. B. Sullivan, A. Y. Aydelot and J. P. Carter.

The Beattie Lumber and Building Company has filed application for a charter with a capital stock of \$50,000. The company will buy and sell land and build houses. It is incorporated as a lumber company so that it may buy building material to better advantage. Among the incorporators are T. B. Beattie, Clyde Richert, James F. Hunter and George M. Tidwell.

The E. Sondheimer Company has purchased 16,000 acres of timber lands in Avoyelles parish, Louisiana. It is estimated that this tract contains 100,000,000 feet of cypress timber. President Max Sondheimer states that no mill will be put in at present. The company has two mills located in that territory, but neither one is close enough for the development of this property and a new mill will have to be installed when the timber is to be prepared for the market.

W. H. Greble of the Three States Lumber Company and the W. E. Smith Lumber Company has returned from Laurel, Miss. The Gilchrist-Fordney Lumber Company, which recently purchased the plant of the Kingston Lumber Company at Laurel, has taken over the mill already and is now operating it. Mr. Greble states that additional machinery will be installed. The Kingston Lumber Company manufactured flooring almost exclusively, but the new management proposes to manufacture also finishing material and has installed machines for this work. The company is bringing in timber from the farthest point from Laurel. It has four trains operating on regular schedule over the Mobile, Jackson & Kansas City. It has a number of spur tracks running out into its timber lands. With these facilities the development of the timber will go forward rapidly. The mill has a daily capacity of 150,000 feet.

S. B. Anderson, president of the Anderson-Tully Company, has returned from attending the convention of the National Veneer & Panel Manufacturers' Association, recently held at Chicago, where he delivered a strong address on securing a price for veneers commensurate with that obtainable for lumber.

Sawmill interests of Mississippi are getting behind the railroads. They have filed suits in the Federal court charging the railroads with discrimination, the claim being made that the rate is higher than in the North. The aggregate of the suits already filed is something like \$10,000. They are styled: C. E. Myers vs. the Mobile & Ohio Railroad, Carter Lumber Company vs. the Mobile, Jackson & Kansas City, Carter Lumber Company vs. the Mississippi Central, P. M. Ikler vs. the New Orleans & North-eastern, Lake Lumber Company vs. the Alabama & Vicksburg, Williamsburg Lumber Company vs. the Gulf & Ship Island.

The Mississippi and Alabama Lumber Exchange has been organized at Meridian, Miss., for the express purpose of protecting the interest of mills having a capacity of 10,000 to 20,000 feet. The exchange will appoint a manager to assist in marketing the output of these mills. This has been done heretofore through the lumber brokers and wholesale dealers. This official

will keep posted on market conditions and assist in securing good returns on all lumber sold. Another meeting will be held at Meridian, July 13, for the purpose of giving other sawmills interested an opportunity to join the organization. W. H. Seymour has been elected chairman and a committee has been appointed to draw up a constitution and by-laws which will be submitted at the next meeting.

Lumber companies throughout this city and West Tennessee are vigorously opposed to the payment of the corporation tax ranging from \$5 to \$100, according to capitalization. The corporation law was passed at the last session of the legislature and requires the payment of the foregoing amount by each corporation at the time of filing its statement showing officers, place of business, capital stock and other features. A strong effort is now being made among the lumber companies and other interests to test the constitutionality of this law. Those companies making payment before July 1 have done so under protest. The date for payment of the tax has been extended to September 1.

Lumbermen here are interested in the announcement that construction work, which was recently stopped on the Delta Southern, is to be resumed. The stoppage of work was ordered on the ground that the railroad company could not, in view of the hostile attitude of the railroad commission, secure money for construction and improvement work. This road, which will extend southward to Jackson and northward to Memphis, will open up a splendid section of hardwood territory.

Chicago capitalists, according to advices received here, are backing a movement for a railroad connecting Aberdeen and Columbus, Miss. This is a splendid hardwood territory and the building of such a road would facilitate its development.

E. E. Taenzer, first vice president of the Darnell-Taenzer Lumber Company, is one of the incorporators of the Curry-McCraw Company, which is capitalized at \$150,000 and which proposes to engage in the wholesale grocery business.

Leland P. Arthur, president of the Arthur Hardwood Flooring Company, has returned from Pacific coast points and the northwestern markets, where he has spent some time recently in the interest of his firm.

Contractors for building the road-bed of the Missouri & North Arkansas Railroad from Helena to Brinkley have started about fifty teams to work. This is the first dirt broken on this line between Helena and Searcy, but the contract stipulates that the work must be completed by December 1. This road, when completed, will run through the greater part of eastern Arkansas and will prove an important factor in the development of the hardwood lumber resources of that state.

R. J. Darnell of R. J. Darnell, Inc., has written a letter to the leading lumber interests of this city, detailing his experience with one of the deputy inspectors of the National Hardwood Lumber Association. He sold some lumber, subject to national inspection, and when the inspector went to his yards in South Memphis the latter refused to allow one of Mr. Darnell's inspectors to work with him in inspecting the lumber. He was immediately ordered to leave the yards. Mr. Darnell states in his letter that the seller has as much right to representation in the inspection of lumber as the buyer and that, if this is not correct, there is no place in the association for him. President Russe of the National Hardwood Lumber Association has upheld the inspector. Different views are expressed by lumbermen here in regard to the matter, some claiming that Mr. Darnell is in the right and others supporting Mr. Russe in his position. There is no doubt that Mr. Darnell will take the matter up with the association at an early date and some interesting developments are anticipated.

New Orleans.

The famous two-cent lumber rate case recently decided by the United States Supreme court in favor of the lumber shippers east of the Mississippi river, has been carried into that territory west of the Mississippi and now practically every railroad south of the Ohio and west of the Mississippi is a defendant in a suit to force the reduction of alleged unreasonable and unjust rates on lumber shipments. Gen. T. Marshall Miller of New Orleans, associate counsel for the lumbermen in this case, has just returned to New Orleans with the announcement that suits have been filed with the Interstate Commerce Commission to force the railroads west of the Mississippi into line.

A new lumber company which will very probably establish a large furniture manufacturing plant has been organized at Natchitoches, La. It is the D'Quin-Williams Lumber Company, Ltd., and its authorized capital is \$25,000. The incorporators are: J. L. Logan of the National Lumber Company, Texarkana, Tex.; Noble W. Williams of the Montrose Lumber Company, and John T. D'Quin of Natchitoches. The company holds options on several desirable hardwood tracts in the vicinity of Natchitoches.

The Baton Rouge Manufacturing Company has been organized in Baton Rouge, La., to operate a big woodworking plant in conjunction with a sash, door and blind factory. The company will manufacture office fixtures and other articles of hardwood. The authorized capital is \$40,000. T. M. Walker, formerly of Atlanta, will manage the big plant.

Advisers from Lake Charles, La., state that the Smith-Trotti Lumber Company, Ltd., has been organized there with an authorized capital of \$25,000. The officers are: Thomas J. Trotti, president; John L. Trotti, vice president; Fleming T. Smith, secretary-treasurer.

The Mississippi-Alabama Lumber Exchange has been temporarily organized at Meridian, Miss. The exchange will be permanently organized at a meeting to be held July 13. The object of the exchange is to protect those mills which have an output of from 10,000 to 20,000 feet. The mill men in the exchange will appoint a manager to help them market their output. This was formerly done by the lumber brokers. W. H. Seymour is temporary chairman of the organization.

Minneapolis.

E. Payson Smith of the Payson Smith Lumber Company recently returned from a business trip into Missouri, Arkansas and Tennessee. He says of the situation down there: "Hardwood manufacturers have enough orders on hand to keep them busy for some time. There is some weakness noted in a few items, but oak is still strong. Hickory people can not get nearly as much stock as they need."

The Waterman-Hunter Company, sash and door manufacturer of this city, has assigned for the benefit of its creditors. This concern has been making doors and millwork for the mail order trade and failed to make a success of the business. A meeting of the creditors was called June 22 and Robert Dobson of the Pittsburg Plate Glass Company was selected as trustee. The creditors' interests will also be looked after by a committee consisting of George H. Tennant, the hardwood flooring man; C. A. Barton and C. D. Huyck. No new business will be taken, but all old orders will be filled and the stock closed out as expeditiously as possible.

W. H. Sill of the Minneapolis Lumber Company has returned from a business trip to Winnipeg, where he spent a week.

W. C. Meader of the Hawkins Lumber and Land Company, this city, is back from Hawkins, Wis., where their mill is located. He superintended the installation of machinery in the mill, which will have a capacity of 30,000 feet a day and will turn out hemlock and hardwood lumber. The company owns 4,000 acres of land adjoining the mill.

A. H. Barnard, the local wholesaler of hardwoods, is back from an extended vacation trip which he took in connection with the convention of the National Hardwood Lumber Association.

D. F. Clark of Osborne & Clark is on a short business trip to Chicago and other points.

Toledo.

A. M. Felgate of the Cuyahoga County Engineering Department says that along Independence road in Breckville chestnut fence posts have taken root and sprouted. "The county will evidently have a line of chestnut trees where the commissioners expected only an unsightly wall," said Mr. Felgate. "The posts were green when they were set last fall, and the unusually wet season did the rest."

The sawmill, sash factory and lumber yard of Leander Bloker of Lindsey, O., were destroyed last week by fire, entailing a loss of \$7,500, partially insured.

The Park Street Lumber Company of Columbus, O., was incorporated recently with a capital stock of \$35,000 by Edgar W. Hedges, Lewis K. Park, Harry W. Stewart, M. V. Hull and Josiah R. Hedges. The company will do a general lumber business.

Ashland, Ky.

On the afternoon of July 5 the plant of the Lanham Lumber Company at Lebanon, Ky., was destroyed by fire, nothing being saved but the office and one warehouse. The company manufactured hardwood lumber exclusively, employing thirty-five men. The loss is placed at \$35,000, with \$7,500 insurance.

J. S. Holmes and Wesley Bradfield of the Forest Service were in Ashland several days ago on their way to Pike county, where they will commence a forest survey of the state, following the line laid down in an agreement recently executed between the commissioners of agriculture, immigration and statistics of Kentucky and the Forest Service. The work so far outlined comprises the making of a forest map of the state, a study of forest conditions, a study of markets, demand and supply of timber, a study of the causes and means of preventing forest fires, etc. Information in regard to the timber supply, transportation, manufacture, etc., will be collected and compiled and a report along these lines prepared, in hope that our depleted

forests may be saved for the use of coming generations.

The Queen City Lumber Company of Ashland has been incorporated with a capital stock of \$30,000. The incorporators are: O. F. L. Beckett, M. W. Thomas, J. M. Craig and M. L. Meridith. J. W. Craig is manager of the business, which is located in Cincinnati. It consists of a planing mill and dry kilns, and at present is doing commercial work exclusively.

Hon. W. H. Counts, manager of the extensive mountain interests of Vansant, Kitchen & Co., shot and killed himself on the afternoon of July 4 at his home in Olive Hill, Ky. It is not known whether the killing was intentional or accidental. The decedent was 48 years of age and was quite prominent throughout north-eastern Kentucky. He was at one time superintendent of schools in Carter county and represented Carter and Elliot counties in the state legislature in 1889 and 1891. Mr. Counts was a cousin of Charles Kitchen, of this company.

Reports from the timber districts in the mountains state that the prevalence of snakes of the deadly variety is creating consternation among the lumbermen and loggers. Rattlesnakes and copperheads are said to be common sights and are causing no little trouble.

The Walker Lumber Company will in the near future erect a large lumber plant at Kenova. The firm will receive logs from the mountains by rail, and will cut them into lumber. The mill will be erected on the river front. Mr. Corn of Ironton, superintendent of the company, has leased a house in Kenova, and will remove his family to that place at once. The Kenova Sawmill Company's plant is another enterprise for that thriving little town. Lumber is being cut, and the work will be rushed to completion.

The new plant of the Ironton Lumber Company is completed, and the machinery was given a trial June 1. The mill was destroyed by fire some time ago. The new plant has no planing department, for the company intends to deal largely in unfinished material for the time being. The machinery is the most modern on the market, and when in operation the capacity of the mill will be about 50,000 feet of lumber a day. One feature is the boiler room, which is situated about twenty feet from the main building. The boilers have the Quinn patent Dutch oven, which consumes all waste material.

Hardwood Market.

(By HARDWOOD RECORD Exclusive Market Reporters.)

Chicago.

There is no particular evidence of midsummer dullness in the local hardwood market. While trade is not rushing, there is a fair demand for lumber of nearly all varieties. The furniture manufacturers are buying with considerable freedom in anticipation of a very satisfactory July market for their goods. With the large volume of building still going on in Chicago, the interior finish, trim, and flooring producers are having about all they can do to keep up with their sales. On the whole trade is good with every prospect of its being better as the season progresses.

Oak is still in the lead, with remarkably strong demand, as well as the good end of poplar. All varieties of northern woods are moving very freely. The local call for mahogany is as good as it has been at any time during the past year.

Boston.

During the past two weeks the Boston and New England hardwood markets have developed a fair volume of business. Prices continue firm and no prospects of easier values are found. In part the rise in prices during the past few

months has been due to the demand, but the chief cause has been the short supply of suitable lumber. All mills have found it difficult to give their customers just what they wished for and in many sections the heavy rains have resulted in mills not being able to get a sufficient quantity of logs. From some sections of the South car shortage is reported. This is more especially true in North Carolina. Not so much trouble of this nature is heard of from the West, still some is being experienced. Consumers of hardwoods in this section have been busy and their close manner of buying has kept them in the market. An unusually good demand for veneers has been reported for several weeks past.

The demand for export is not of large volume, as prices quoted when inquiries are received appear to be above buyers' views. The market for whitewood holds fairly steady at the high level. Buyers confine their purchases largely to lots to cover nearby wants. Several believe prices of whitewood will be lower a little later. For one-inch \$59 to \$60 is quoted. Sales have been made at the outside figure. Manufacturers of maple flooring report a larger demand with prices firmly sustained. A strong call for beech is reported and prices are stiffer. In a few months' time beech has sprung into active call. Black walnut is still in good request. Plain oak

is selling well. Prices hold steady at \$56 to \$58 for inch stock. Dealers are not willing to make any concessions for large orders. Quartered oak shows no abatement in strength and a fair demand is in progress. Mahogany is in steady demand. A large business is being done in veneers. Birch is in demand, quotations ruling \$41 to \$43 for one-inch stock.

New York.

Hardwoods are firm with few exceptions and the run of new business is satisfactory, although there is not the snap to the situation there was early last month. Some new building plans filed within the last two weeks will require a large amount of hardwood trim, especially birch, and factory orders are about holding their own. Prices have eased off slightly, but as a rule wholesalers say they are entirely satisfied with the way business develops. Supplies come in at a better rate than last month and while there is no lack of confidence in the outlook buyers claim there is not so much difficulty in getting the orders filled promptly, indicating that millmen are in better position to handle their new business more expeditiously than heretofore.

Ash is in good demand and stocks are scarce. There seems nothing in view to keep this stock from continuing the strongest item on the market. A good demand for poplar is springing up and only moderate supplies of desirable grades and sizes are available. Birch sales are more voluminous, but there is more than enough of the stock offered just now than necessary, and prices are easier. Plain and quartered oak are strong, especially the former, and oak ship timber is regarded as one of the scarcest stocks on the market. The call for chestnut is as good as usual for this time of year, and whenever possible manufacturers substitute chestnut for plain oak. Basswood and maple hold their own.

Philadelphia.

The situation of the hardwood market is at present a little peculiar. It is admitted that there has been a slight falling off in business in certain lines, but the general condition is fair, and the hustler is gathering in the orders. Those of pessimistic tendencies seem surprised that the bottom has not dropped out of business, but reasonable weather is here at last and the builder is pushing every department, and those lines depending upon the trade are rushed to get out orders. The furniture factories of the eastern Pennsylvania district still continue busy, consequently are all buying. Indoor finish, flooring makers, etc., are working on orders and the boxmaker, who has been making raids on the hardwood market, still hammers away, which has naturally kept the values in culls and rejects high. It is but natural that the woodworking industries should show a falling off in activity at this time, but notwithstanding the lapse the season has apparently been the longest and most successful in the history of hardwoods. There is no sign of weakness in any of the hardwoods discoverable at present, although the feeling prevails among some that a drop in values must inevitably come soon; but judging from the condition of the mill districts and the possibility of another car famine as soon as the crops are ready for removal, the indications are that hardwood prices will hold steady, at least for months to come. Poplar, basswood, ash and chestnut keep old status. Oak runs easy, with no weakening in price. Cherry and maple are in good call. Gum and cottonwood are selling well, and cypress is in good demand. Cedar, on account of a considerable amount of small logs of inferior quality recently thrown upon the market, has fallen off somewhat in price, but it is predicted that values will soon be up again. The cigar business has improved greatly during the last few weeks and cigar box industries profit accordingly. Veneer holds firm and the outlook for trade is good.

Baltimore.

Hardwood stocks continue to be in brisk demand and the mills are unable to fill all the wants of dealers and consumers promptly. The range of prices, as might be expected under the circumstances, is as high as ever. Every now and then a record price is reported, local shippers having lately realized high figures on exports to England. Stocks in the hands of dealers are quite low and desirable lumber can be disposed of without difficulty. Oak in particular is called for and the mills have orders ahead, notwithstanding the reported disposition of such big consumers as the railroads to hold back for a while. Predictions made some time ago that an easing off might be expected before long have not been realized. The millmen experience much difficulty with labor, the supply of competent hands being scarce and the temper of the available force rather uncertain. This is in large part responsible for the advanced quotations. All the woods are in excellent demand both in the domestic market and abroad. Stocks in foreign hands are somewhat depleted and the calls for lumber are now more numerous than was the case even one month ago. A fair trade is being done at satisfactory figures. The exceptional activity among the boxmakers is absorbing large quantities of bay poplar, which wood has come into extensive use of late, and under the influence of this brisk movement prices have advanced sharply. Ash, chestnut and other hardwoods are in good demand and there is every indication that the present state of affairs will continue.

Pittsburg.

The hardwood market is beginning to feel the effects of midsummer heat. Not until the past week has there been any perceptible slackening in trade. It is expected that the bulk of orders for the next sixty days will show some falling off. All look for a big business in the fall, for general conditions seem to warrant a resumption of hardwood buying on a large scale. Very few firms have any surplus of hardwoods. In fact most of them report low stocks.

The railroads seem to be taking more lumber than two months ago; also the big manufacturers, which are going ahead with improvements that were sidetracked in the early spring. Ties, poles and timbers are all in good demand. Bill stuff is selling well. Boards and planking are in fair demand and are bringing good prices. The furniture trade is taking its full quota of hardwood, especially of the better grades, and in spite of the lateness of the season the implement factories are still ordering. Stocks are small and timber buyers are scouring the country with a spirit that shows their eagerness for more good hardwood timber.

Buffalo.

Hardwood lumber moves well and the season is sure to be a good one. Stock is fair as a whole, with certain of the plentier woods in fine assortment. While oak is not plenty, the dealers manage to keep enough of it on hand to meet their everyday needs.

The amount of lumber coming in by lake is small compared with last season and hardwood dealers are not doing as much as was expected. Considerable birch, elm and black ash has arrived at the yards and the flooring mills are busy receiving maple.

Reports from the Southwest are becoming more favorable but it will be some time before there is much new dry stock to be had there. Most of the oak and about all the poplar comes from that direction and it is hard to see how the supply in yard can be kept up at all.

Poplar seems to be running down faster than any other wood. Mills that up to this time have run on that as a specialty are now giving it up, except in a general way, and have gone into other hardwoods.

There is always a supply of birch, as birch comes from all directions and is carried by all the yards. Without it a great deal of hardship would be experienced in filling orders for finishing woods.

Woods from the district directly south of Buffalo, especially oak and cypress, are plenty.

Saginaw Valley.

Hardwood lumber is moving fairly well for the midsummer season. Basswood and ash are particularly firm and there is a call for all that is being offered. Beech is considerably stronger than it was earlier in the season and is selling freely. Maple is in better form than it was a year ago and some higher, with a fair movement. In other grades the market is steady and firm. There is some oak reaching this market, but the supply is not large. There appears to be enough hardwood stock available to supply the trade and the outlook for the fall is healthy. The output will be about as large as that of last year.

There is not a great accumulation of lumber stocks despite the fact that all mills are in operation. One thing that may affect the activity of the trade is that the entire cut of the year was sold at the beginning of the year by a number of firms and this takes so much stock out of the market.

Indianapolis.

Local lumbermen generally are remarking on the steady condition of the hardwood market. There seems to be no break in sight, although the demand has continued practically unchanged for some weeks. Quartered oak continues scarce but this is taken as a matter of fact and substitutes are being used largely.

Railroad conditions continue good, with an ample supply of cars and shipments coming in nicely. The car situation promises to be relieved still more by an order to the effect that old freight cars must be repaired and continued in service on branch lines with the coming of new equipment. Heretofore when local roads received new equipment old cars were destroyed.

Bristol, Va.

There has been no material change in conditions in the hardwood trade in this city and section during the past two weeks. The demand is only fair but values are firm. This condition is chiefly attributable to the summer season, and there are unmistakable indications of an early acceleration of business.

The lumbermen of this city and section do not seem to have been affected by the dullness of the market as much as in other sections, probably because the dull season found them with more business on their hands than they could handle. The car supply continues ample, and no complaint has been heard for several weeks on this score.

Cincinnati.

The hot weather of the past few days has not had as weakening an effect on business as was first thought. The dull season in the lumber trade is the latter part of June and the month of July, but as it now appears the month of July will not be as dull as is usually the case. The demand for all grades of hardwoods is good. Logs are plentiful here and the sawmills are all working busily. The same good demand still prevails for poplar, and consumers are all willing to pay the price asked for it. Oak, both quartered and plain white, is keeping up nicely, and the same can be said for cypress. Mahogany has showed added spirit during the last fortnight but prices have not been increased. Cedar posts have been in good demand and the cuts made several weeks ago are being readily absorbed under firm prices. The lumber situation here as a whole is about steady, with the inquiry good and receipts the same.

Nashville.

With plenty of fair weather, plenty of cars, plenty of orders and a good supply of lumber on hand Nashville dealers seem well satisfied with the situation at this time. Good weather has prevailed here for some time and has had a tendency to enliven building interests, and that in turn has served to increase the demand for lumber. Adequate transportation facilities have enabled dealers to meet orders and make shipments without delay. Many of the local lumbermen are now engaged in taking stock and figuring on the results of the business for the past six months. Gratifying reports are received from many of the largest firms here. There is generally reported a substantial increase for the first six months of this year over a corresponding period of last year.

The demand for poplar and ash is a noteworthy feature of the market just now. There have been unusually heavy drafts upon these stocks coming principally from manufacturers of automobiles, carriages, pianos and agricultural implements. A steady and increasing demand for the low grades of lumber is noted. Heavy shipments of gum have been made recently. The demand for plain and quartered oak is holding up well and the firm and steady market on such wood is noted. The mills around Nashville are running at full capacity and all of them are selling stuff as fast as they can get it out.

Memphis.

There is considerable slackening in the demand for hardwood lumber in this center. This, however, is nothing more than was expected as it happens every year at this time. There is some new business doing but most of the shipments made are on engagements entered into some time ago. The railroad service is splendid. One of the reasons for the slowness of demand is that many consuming firms take inventories of stock at the close of June and, pending definite knowledge as to the status of their affairs, are inclined to be slow in making new commitments. The crop outlook throughout the south is decidedly better than it has been at any time this season and this is regarded as a hopeful feature.

The export demand for hardwood lumber is rather quiet. In fact, some exporters say there is almost nothing doing in that direction just now, but there is a rather cheerful tone to the discussions of lumber interests here regarding the outlook for fall and winter business, the view being held that there will be a good demand and that prices, even if they should recede some during the summer, will be fully restored when active business is resumed. There is an excellent demand for ash in all grades and thicknesses and there is only a limited supply available. Prices are firmly maintained. Plain oak sells without difficulty and there is a very satisfactory movement in quarter-sawn. Narrow firsts and seconds cottonwood are in only moderate request, being slower than recently. Boxboards and the lower grades, however, are in excellent call. One of the largest manufacturers in this market is authority for the statement that he is receiving orders for this class of material which he did not expect this side of September. Production of cottonwood has been curtailed more than any other lumber in this section, because of the low-lying land on which it grows. This accounts in some measure for the scarcity of this lumber. In the meantime the demand has been phenomenally heavy, as the box factories have done a record-breaking business. Gum is being shaded somewhat in the higher grades, except in wide stock. The low grades, however, are in good demand and are selling satisfactorily. There is only a moderate amount of poplar available in this market and there is sale for most of the stock offered. Cypress is also somewhat slow in the upper

grades. The lower grades are moving better than the upper, but they are hardly in as active demand as they were a short time ago.

Minneapolis.

With northern hardwoods as to dry stock reduced almost to the vanishing point there is not much doing in this section. The factory trade is taking a little stuff occasionally, but if a real active demand should develop it could not be supplied without shipping green stock. Some oak and basswood are being shipped green now.

Low grade stuff is in good demand and most of the new cut has already been contracted for by the box factories, while what is left is held at high figures. Cull basswood easily brings \$20 a thousand. Basswood in all grades is proving a good seller. Low grade birch and elm are being used quite extensively for boxes. Oak and birch are selling well. Factory stocks are quiet. Some offerings of southern oak are made again with the assurance that conditions are better now in the South and that deliveries will be more prompt. However, prices are even stiffer down there than here. The new crop of ash is almost all contracted for and that wood is practically out of the market.

General indications are good in the northwest and wholesale dealers are busy placing contracts for the new stock, feeling assured of a good fall trade, though there is some feeling that prices may fall off in the next month or two. Retail yards are not doing much and country trade in hardwoods is dull.

Local demand for hardwood flooring and interior finish was never better and factories are all consuming a good amount of stock. The building movement is the heaviest known in years, the June record of building permits showing a total value for the buildings authorized of \$1,001,985. The total for June of last year was \$685,915. The total for six months this year was \$5,060,365, with 2,546 permits issued. The first half of last year showed 2,484 permits, with a total value of \$4,153,550.

Toledo.

Hardwoods seem to be the exception to the rule in the local lumber market, which is very quiet. Early in the month there did not seem to be much activity in the hardwood market, but this has changed somewhat through the month and now all stocks are in fair demand with some decidedly active. This is particularly true in the manufacturing lines, where there is considerable demand for all grades. Box men once more are howling for material and stave men report some trouble in getting good stave stock.

Plain oak, both red and white, is moving slowly at fair prices, while quartered stocks are holding firm at high prices.

Basswood is the one wood the demand for which is nowhere met. Local dealers say they simply can not buy any stock anywhere and one man is quoted as saying that he has been hunting in Michigan for a month for 2,000,000 feet without being able to get it. This is true not only in the low but also in the high grades.

There is not a great deal of southern ash in sight, but the demand is not very brisk. Heavy timbers are active in all grades.

The car situation does not show material change and any sudden demand for stocks that would cause a rush of orders would probably see the conditions just as bad as they have been for months.

Liverpool.

Trade is not as active as was expected at this time—everyone, brokers and merchants alike, are afraid of a slump in prices, especially as regards poplar and ash lumber. Shippers should hold firmly on prices. It is certain that before many months much lower prices will prevail. It is reported that many shippers, although quite firm in their prices, are urging brokers to secure

orders well ahead for them. This looks as if they did not believe in the talk of still higher prices and that they are anxious to get orders on the present basis of prices.

Mahogany is very firm, but as far as the American market is concerned considerable trouble is caused to merchants here by the New York dock strike, the steamship companies on this account refusing to take the heavy cargo. One firm here has two logs, valued at over \$5,000 each, lying idle, while another has 600 logs which they have sold to American buyers but cannot get delivered. Labor troubles are also in evidence here and no doubt are keeping the leading railway companies from buying largely in timber goods. As they are the principal buyers in the North here, this is rather a serious matter.

HARRY RANKIN & CO. Kansas City, Mo.

WHAT HARDWOOD RECORD READER

From a Hardwood Manufacturer.

Bristol, Tenn., May 31, 1907.
The improvement in this paper under the new management has been to such an extent that we feel that there is a great deal of attention being given along this line, and we feel sure that the present management is wholly capable of advancing the interest of the hardwood trade.
TUG RIVER COMPANY.
B. B. BURNS.

From a Texas Wholesaler.

Galveston, Tex., May 30, 1907.
We value the HARDWOOD RECORD greatly and think you are doing good service to the trade, both at home and abroad.
T. B. ALLEN & CO.

From a West Virginia Operator.

Jane-Lew, W. Va., June 1, 1907.
I certainly appreciate the interest that you have taken in building up a paper so well adapted in the hardwood industry as the HARDWOOD RECORD. Wishing you prosperity with your good work,
D. L. ARNOLD.

From a Manufacturer of Hickory Handles.

Rural Hall, N. C., June 1, 1907.
We think the HARDWOOD RECORD is all that can be expected. We have been benefited many times the cost of the RECORD.
SMITH-KIZER MANUFACTURING COMPANY.

From a Hardwood Wholesaler.

West Allis, Wis., May 29, 1907.
The HARDWOOD RECORD has been of more interest to me than any other journal, as I am dealing in hardwood exclusively. Therefore, with this interest in your journal I have watched its progress with satisfaction.
FAY L. CUSICK.

From a Mahogany Man.

Chelsea, Mass., June 2, 1907.
I sent you the names of some of my friends, and if you fail to get their subscription to your valuable paper it is because they are already subscribers or do not wish to get in touch with the interest they represent.
C. B. ROGERS.

From a Michigan Building Materials Company.

Scottville, Mich., May 28, 1907.
I take pleasure in saying that the HARDWOOD RECORD touches the right spot in relation to every lumber dealer's interests, and would not be without it for a good deal. We would advise every man who is in any way engaged in the lumber business to become a subscriber.
EDWARD QUIRK.

From a Black Walnut Specialist.

Frankfort, Ind., June 5, 1907.
Your paper suits me. I have no criticism to offer. The improvement has been great, and is entirely satisfactory to me. I consider it the best paper I get as far as hardwoods are concerned.
W. W. GARROTT.

From a Lumber Manufacturer.

Bradfordville, Ky., June 4, 1907.
I am well pleased with the journal.
W. F. COPPAGE.

From a Redwood Manufacturer.

Sanger, Cal., June 6, 1907.
You are publishing a first-class paper.
HUME-BENNETT LUMBER CO.,
T. W. DECKER, Gen. Mgr.

From a Timber Owner and Manufacturer.

Saginaw, Mich., May 30, 1907.
We congratulate you on the merit of your paper and its success.
ARTHUR HILL & CO.

From an Ontario Wagon Manufacturer.

Chatham, Ont., May 30, 1907.
We get most valuable information in most every issue, as it enables us to locate concerns with whom we may do some business. Besides it keeps us in touch with all the older institutions. Then after a good day's work we turn to the page of Pert, Pertinent and Impertinent, and forget our troubles of the day. You are certainly deserving of the support of every branch of the trade.
CHATHAM WAGON COMPANY, LTD.

From a Hardwood Wholesaler.

Rhineland, Wis., June 4, 1907.
I think that the HARDWOOD RECORD is the best paper of its class in the country, as its reports are more strictly on business matters.
C. P. CROSBY.

From a Plowhandle Manufacturing Company.

Farmville, Va., June 4, 1907.
You are publishing a good paper.
FARMVILLE MFG. CO.,
G. N. ROBESON.

From a Furniture Company.

Rockwell, N. C., May 30, 1907.
We find many things of interest to us in the HARDWOOD RECORD.
ROCKWELL FURNITURE CO.

From a New Orleans Exporter.

New Orleans, La., May 30, 1907.
I find HARDWOOD RECORD O. K., very impartial, and fully posted as to conditions of our trade. I always read it carefully and have always found valuable information in it.
A. COUSPEIRE.

From a Pittsburgh Wholesaler.

Pittsburg, Pa., May 30, 1907.
We consider the HARDWOOD RECORD an up-to-date paper in every respect, and one that works earnestly for the hardwood trade in general. You are to be particularly complimented upon the service you have given your patrons in the form of the weekly sheets sent out, giving names of concerns, buyers and other requirements which most comprehensively covers the entire territory. You are certainly entitled to congratulation.
AMERICAN LUMBER & MANUFACTURING CO.
J. WOOLLETT, V. P.

From a Michigan Manufacturer.

Benzonia, Mich., June 3, 1907.
We value the RECORD very highly and your magnificent paper clearly represents the interests of the manufacturer, as well as the dealers, making the paper pretty nearly an ideal one.
CASE BROS.' LUMBER COMPANY.

From a Porch Column Builder.

Columbus, Ohio, June 4, 1907.
We have been subscribers to the HARDWOOD RECORD for several years and find it a very satisfactory publication.
THE C. T. NELSON COMPANY.

From an Ohio Timber Company.

Raredon, Ohio, June 4, 1907.
I do not know of anything that would improve your paper except we would like to get it often. We prefer the HARDWOOD RECORD to other papers because we believe the editor is more familiar with the lines he writes about.
TAYLOR, BROWN TIMBER COMPANY.

From a Big Wisconsin House.

Phillips, Wis., May 29, 1907.
As an advertising medium and as a source of information we have found the HARDWOOD RECORD of inestimable value, and a true reporter of the current market conditions.
JOHN R. DAVIS LUMBER CO.

From a Great Woodworking Machinery House.

Rochester, N. Y., May 29, 1907.
We wish to say a good word for the RECORD. We get considerable results from it, and no doubt will continue our advertisement in it for an indefinite period.
AMERICAN WOODWORKING MACHINERY CO.

From a Nashville Manufacturing Company.

Nashville, Tenn., May 29, 1907.
We find nothing in the HARDWOOD RECORD to criticize. If you should ask us to express an opinion, this would be easy, for it is so far ahead of similar publications that comparison would be ridiculous.
LOVE, BOYD & CO.

From a Manufacturer of Kitchen Cabinets.

Jeffersonville, Ind., May 29, 1907.
We are subscribers of the HARDWOOD RECORD, and find some very valuable information. It is read by the general foreman, and the mill foreman, and both seem to appreciate the points which pertain to their special work. We have no criticism to make, and wish you success.

THINK OF THE HARDWOOD RECORD

From a Veneer Panel Company.

Baltimore, Md., May 29, 1907.
We find the HARDWOOD RECORD a very valuable paper indeed, and cannot see how we could under the present conditions dispense with it.
BALTIMORE VENEER PANEL COMPANY.
CHAS J. F. STEINER, Prest.

From a Piano Company.

Philadelphia, Pa., May 29, 1907.
The HARDWOOD RECORD is entirely satisfactory.
LESTER PIANO COMPANY.

From a Wagon Stock and Oak Dimension Maker.

Crofton, Ky., May 29, 1907.
We like your paper from the first to the last page, and read it even to all the advertisements. We like its general tone, its newsy records from different places, as well as market reports which are always of interest. In our opinion it is the best lumber paper that comes to our notice.
THE PRATT-WORTHINGTON COMPANY.
E. W. PRATT, JR., Sec'y and Treas.

From a Big Black Walnut House.

Cincinnati, Ohio, May 30, 1907.
We think the HARDWOOD RECORD is "it."
K. & P. LUMBER COMPANY.
MAX KOSSE, Prest.

From a Manufacturer of Farming Tool Handles.

Ada, Ohio, May 29, 1907.
We are very much pleased with the HARDWOOD RECORD and give especial attention to your article on general market conditions, which we regard as very valuable.
GEORGE H. KEPHART & SON.

From a Pittsburg Jobber.

Pittsburg, Pa., May 29, 1907.
We often have occasion to refer to the RECORD for hardwood information and it is of benefit to us.
D. L. GILLESPIE & CO.

From a Kentucky Manufacturer.

Ashland, Ky., May 29, 1907.
It is indeed a pleasure to express ourselves as being perfectly satisfied with your very complete periodical. We feel that the market reports and statistics which it brings to us are as authentic as can be obtained, and published in an impartial way. We feel in need of this monitor and look forward with pleasure to its arrival.
R. G. PAGE LUMBER COMPANY.

From a St. Louis Manufacturer.

St. Louis, Mo., May 29, 1907.
Will say the HARDWOOD RECORD fills our requirements as a lumber journal, and that we feel no comments or criticisms from us are in order.
GARRETSON-GREASON LUMBER COMPANY.
W. W. DINGS, Sec'y.

From an Indiana Jobbing House.

Indianapolis, Ind., May 29, 1907.
We do not know of anyone in this part of the country who is not a subscriber to the HARDWOOD RECORD.
LONG-KNIGHT LUMBER COMPANY.
W. W. Knight, Prest.

From a Stave and Lumber Manufacturer.

Montgomery, Ala., May 30, 1907.
We are readers of the HARDWOOD RECORD and find it very valuable in our business.
ROBERT NIXON LUMBER COMPANY.

From a New York Wholesaler.

New York, May 29, 1907.
Your paper has been always very interesting to me, not only because of its condensed and highly efficient news service and trade reports, but because it is gotten up in a manner that inspires one to read it carefully from beginning to end. In this respect it is vastly different from the average lumber paper.
S. F. MINTER.

COM M E N D A T I O N

From a Wholesale Hardware House.

Sioux City, Iowa, May 31, 1907.
So far as our experience goes we feel that the HARDWOOD RECORD is a good investment.
THE SIOUX CITY IRON COMPANY.

From a Hardwood Wholesaler.

Milwaukee, Wis., May 29, 1907.
I really feel that the HARDWOOD RECORD is beyond criticism. I certainly take great interest in perusing its columns.
GEORGE P. NOBLE.

From a Walnut and Cherry Specialist.

St. Louis, Mo., May 29, 1907.
I have a high regard for your publication.
W. R. CHIVVIS.

From a Leading Michigan Manufacturer.

Grayling, Mich., May 29, 1907.
I think the HARDWOOD RECORD fills its place in the lumber world splendidly and has done all any lumber journal could expect to accomplish for the trade. Wishing you success and prosperity to the fullest extent.
R. HANSON.

From a Pennsylvania Jobber.

Williamsport, Pa., May 29, 1907.
I enjoy your paper very much, and have always considered it good stuff, and felt that it was edited by one who knew his cue on hardwoods. I have appreciated your "General Market Conditions," which seem to hit the right spot. You put up a good paper.
JAMES MANSEL.

From a Big Thresher Manufacturer.

Battle Creek, Mich., May 30, 1907.
We have no criticism to offer relative to contents of the HARDWOOD RECORD.
ADVANCE THRESHING COMPANY.

From a Wagon Manufacturing Company.

Stoughton, Wis., May 29, 1907.
We find the HARDWOOD RECORD a very valuable acquisition to all information on hardwood business generally.
MANDT WAGON COMPANY.

From the National Casket Company.

Hoboken, N. J., May 29, 1907.
We feel that the HARDWOOD RECORD today is the brightest and best edited paper published in the lumber industry.
NATIONAL CASKET COMPANY.
E. S. Foster.

From a Box Manufacturer.

St. Paul, Minn., May 29, 1907.
Your paper is interesting and covers the field nicely.
OSGOOD & BLODGETT MANUFACTURING COMPANY.
H. E. Osgood, Sec'y.

From an Ohio Jobbing House.

Columbus, Ohio, May 29, 1907.
Your HARDWOOD RECORD news usually comes from the fountain head.
M. A. HAYWARD & SONS.

From a Dimension Stock Manufacturer.

Clarendon, Ark., June 4, 1907.
We take a great deal of interest in the pages of the RECORD and would be at a loss to undertake to get along without it.
J. B. GALLOWAY COMPANY.

From a Veneer Manufacturer.

Louisville, Ky., May 29, 1907.
From our point of view there is no criticism to be made of your publication. It is quite satisfactory to us in all respects, and we believe it is the best of its kind that is published.
THE LOUISVILLE VENEER MILLS.
D. E. Kline.

From a Veneer and Spoke Manufacturer.

Kenova, W. Va., May 31, 1907.
Your publication would be certainly hard to improve upon. If your subscription list does not contain the names of all manufacturers of spokes, rims, gear-stock and wheels it should.
THREE STATES MANUFACTURING COMPANY.
W. W. Breece, Treas. & Mgr.

Wanted and For Sale -SECTION-

Advertisements will be inserted in this section at the following rates:

WE KILN DRY LUMBER

In Carload Lots or Smaller Quantities

We have special facilities for handling carload lots. You can consign your lumber direct to us and it will be perfectly kiln dried and reshipped without extra charge to you for unloading and reloading. Our plant on the Chicago & Northwestern R. R., with switch track direct to our new modern dry kiln, is very convenient and accessible to all Chicago and vicinity. Our dry kiln has a capacity of 600,000 feet and contains every known device, the very best that money can buy, for the perfect seasoning of lumber. Write us to-day for prices on carload lots or smaller quantities.

HOLLOW BLAST GRATES

Haven't you often wished you had some device that would enable you to

**BURN YOUR SAWDUST,
SAVE YOUR WOOD,
KEEP STEAM BLOWING OFF ALL DAY?**

The GORDON HOLLOW BLAST GRATE represents the most perfect FORCED DRAFT SYSTEM on the

market. With it you can obtain as good results with WET, GREEN or FROZEN SAWDUST as a draft grate gives with DRY WOOD. It saves LABOR IN FIRING. It COSTS practically

NOTHING FOR REPAIRS, the blast bars and pipe being kept cool by a current of fresh air. In most cases it PAYS FOR ITSELF EVERY MONTH.

Write for quotations, with due provision for TRIAL BEFORE ACCEPTANCE. Give number of boilers, width of furnaces or ovens and length of grates.

The Gordon Hollow Blast Grate Co.
GREENVILLE, MICH.
The largest manufacturer of blast grates, edgers and trimmers in the world.

GARLAND

Special Hardwood 7-ft. Band Mill

There are many good features about this mill that we will be glad to tell about. Write for catalogue and descriptive circulars.

Simplicity, Capacity, Economy on Saws. We manufacture a full line of Sawmill and Conveying Machinery.

NO. 105-A, EXTRA HEAVY 12-INCH MOULDER

IT HAS been our purpose during the last half century to develop a line of wood working machines containing the best workmanship and material that American skill and wisdom can afford. This fact we are proud to say is well established in the minds of our many patrons. We have, however, now exceeded ourselves by the development of a remarkable Moulder, the excellence of which is due to our obtaining written suggestions from more than a thousand operators throughout America. This machine stands alone as being the composite idea of the thinking operators of this country. One year's test of its work has convinced us that it is impossible for you to compete successfully against the Smith Moulder with any other machine. Can't we send you prices and literature?

PICKING UP LOGS ALONG THE TRACK
IS RAPID WORK FOR THE
McGIFFERT LOG LOADER

- ☐ It can either move along the track with a car and pick up scattered logs, or it can stay in one spot and load a whole train, because it is self-propelling and independent under all conditions.
- ☐ It loads any kind of cars on any gauge track, and is a mighty good machine to pick up dollars for you, too.

ATKINS Silver Steel SAWS

cost more than other Saws, because they are BETTER. The First cost of a Saw does not count for much. What you want is your Money's Worth. Isn't it better to pay a fair price and get the best rather than a low price and get poor goods? Try an ATKINS SAW. They're better.

Lidgerwood Combination Hardwood Logger

(Patented)

Especially Designed to Log the Hardwood Flats Bordering on the Mississippi River. A Machine that Can be Used Twelve Months in the year.

RIGGED AS A CABLEWAY SKIDDER.

To be used in sloughs, swampy places and during the wet season, especially where the timber runs high to the acre per thousand feet, or where the timber is thick and small with lots of underbrush.

RIGGED AS A SNAKER.

Should be used when flats are dry enough for a horse to return logs into the woods, especially where the timber is large and scattering.

RIGGED AS A SLACK ROPE MACHINE.

To be used only when impossible to operate either the snaking or cableway system, or when the railroad is so located that a slough or low swampy place must be crossed, thus preventing the return of line by horse.

THE "HOOSIER" SELF-FEED RIP SAW

The cut shows a front view of our Hoosier Self Feed Rip Sawing Machine; it has a square raising table, easily operated by a crank in front of the machine and is always firmly locked, at any point, thus preventing any jarring or falling down and doing away with all clamp bolts and screws. The machine has our patent feeding device, with two feed shafts, one in front of the saw with a thin star feed wheel and one in the rear with a corrugated roll, the advantage of which can be readily seen.

This machine will rip stock 6 inches thick and by using the saw on the outer end of the mandril will take in stock $17\frac{1}{2}$ inches between guide and saw. It can be used with a gang of saws by the use of spacing collars on the mandril. It has no equal in the rapid production of slats, cleats and dimension material of all kinds. Price \$175.00.

We also build the machine with a movable saw, at a slightly higher price.

Write for Full Description.

The Sinker-Davis Co.

Manufacturers of
SAW MILL MACHINERY
Indianapolis, Ind.

No. 53 Double Surfacers—Works 30" wide by 6" thick. Six Feed Rolls

A machine of large capacity, especially suited to dressing boards in quantity. Equipped with broken rolls or our patent sectional rolls for feeding a number of pieces of varying thickness simultaneously.

Relative positions of heads insures best planing. Patent adjustable wedge platen means a saving in stock. The belt release saves time and belts. Usual gear train eliminated.
